A Program for Small Business

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK
OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. BLATNIK. Mr. Speaker, it is a well-recognized fact that the small individually owned and operated form of business enterprise is the cornerstone upon which our free competitive economy is built. Small business also provides the economic foundation for liberal capitalist democracy in the United States. This is why I have always been very much concerned with the welfare of small business, and, as a Member of Congress. I have always urged the adoption of those governmental policies which would create the conditions necessary for the growth and prosperity of the small business unit.

Since coming to Congress I have noticed that nearly everyone gives lipservice to the needs of small business. At the same time I have observed that no one does anything about finding solutions to the specific problems confronting the small businessmen in America. Hence it seems proper that I take this opportunity to discuss the position of the small business form of organization within the American economic system, and outline what I believe to be a sound program for the preservation and expansion of this form of business enterprise.

THE PLACE OF SMALL BUSINESS IN OUR ECONOMY

Before beginning this discussion, it is proper to define precisely what is meant by small business. According to the Committee for Economic Development, a small business enterprise differs from big business in that its management is independent—usually the manager is also the owner—and its capital is supplied and ownership held by one individual or a group. Moreover, its area of operation is local, and its position is strictly competitive rather than monopolistic.

This last-named characteristic is the one which makes small business so important to the consuming public, and its continued existence so vital to the general welfare. Functioning as a competitive unit in a free market, small business tends to provide better service to the public at lower costs, than does big business operating under semimonopoly conditions.

The relative importance of small business within the American economy may be demonstrated by the following statistics. According to the United States Bureau of the Census, there were approximately 3,317,000 business units operating in the United States in 1939. Of this number over 1,500,000 firms—about 45 percent—were one-man establishments where the owner was the manager, and himself did all the work without benefit of additional employees. Another 1,221,000 firms—about 40 percent—employed three workers or less, and an additional 305,000 firms employed between 4 and 7 employees. Big business—those firms employing more than 50 workers—adds up to only about 52,000 firms.

In other words, 98 percent of all business firms in America employ less than 50 laborers, and can therefore be definitely classified as small business, as compared with 2 percent of the total number of firms representing big business (i. e. those firms employing 50 or more workers). Forty-five percent of all persons employed in business are engaged in small business operations—55 percent are working for big business. Thirty-five percent of the total dollar volume of the Nation's business is conducted by small business firms, as compared with 65 percent on the part of big business. Surely that portion of the American business system which employs 45 percent of all persons in the business world, and does 35 percent of the dollar volume of business transactions deserves consideration by the Congress.

THE SPECIAL PROBLEMS OF SMALL BUSINESS

Small business, operating within the framework of an economic system which is rapidly becoming less competitive due to the continued growth of monopoly, is confronted with special problems and difficulties that are very real. These problems fall under one or another of the following categories:

First. The problem of protection of small business from the inroads and unfair competitive practices on the part of chain stores and monopolies;

Second. The problems of small business management, which includes the problem of securing adequate information on business trends, market conditions, and the need for obtaining the results of economic research in the business field; and

Third. The problem of financing small business, which includes the question of tax relief, and the problem of securing capital and commercial credit for the small business firm.

It is logical to assume that any sound governmental program designed to foster and protect the small businessman, will recognize and be based upon these three special problems which confront him.

A PROGRAM FOR SMALL BUSINESS

The program for small business which I am outlining, is based upon my own study and observations of the special problems of small business, and the advice of outstanding leaders in this field of economic endeavor. It is my opinion that such a program should include the following major proposals:

PROPOSAL NO. 1: STRICT ENFORCEMENT OF THE ANTITRUST LAWS

The strict enforcement of existing antitrust laws, and the strengthening of these laws, in order to check the further growth of monopoly and protect small business from unfair competition on the part of the great chain stores and business monopolies.

The monopoly problem is one of the basic and central questions affecting the welfare and future of the small form of business enterprise in America. During the last 75 years the economic pattern of our society has been changing, and this change is marked by the long-continued trend toward the concentration of economic power in the hands of fewer and larger corporations. This fact is borne out by the report of the Temporary National Economic Committee, and the 1946 Report of the House Committee on Small Business (the Kefauver committee). In this last report entitled "The United States versus Economic Concentration and Monopoly," the following conclusions are set forth:

First, that 250 great corporations and trusts now hold approximately two-thirds of the Nation's usable manufacturing facilities.

Second, that the 250 largest corporations have gained control of 70 percent of the new publicly financed war facilities.

Third, that eight banking houses now control 106 of the 200 largest corporations. The du Pont, Mellon, and Rockefeller families alone control 11 percent of the 200 largest corporations.

Fourth, that the growth of economic concentration which has been taking place is slowly destroying small business enterprise; some 500,000 small businesses folded up during the war, and there are today 160,000 fewer small business units operating than in 1941.

These great monopolies are the No. 1 threat to the continued existence of small business. As a result of the unfair business practices of the great corporations and chain stores, small businesses find it difficult to maintain its competitive position and often many go bankrupt. Many small businesses fall victims to the monopolies as a result of merger and acquisition. According to the report of the United States Federal Trade Commission, some 1,800 small businesses were swallowed up through mergers and acquisitions between 1941 and 1945; the total combined assets of these 1,800 firms was $4,100,000,000 or about 5 percent of the total combined assets of all manufacturing firms in 1943. The Federal Trade Commission also reports that the rate of merger in 1946 was increasing in tempo.

MONOPOLIES A THREAT

In addition to being a threat to small businesses which are so vital to the public welfare, monopolies are definitely detrimental to the entire consuming public. Monopolies mean higher prices on commodities of public consumption, which means exploitation of the consumer. Monopolies also restrict production and employment, and suppress inventions which might be utilized to raise the American standard of living. They are a threat to our free competitive system. As the Kefauver report stated, monopolies are becoming more dangerous, and unless they are checked, there is the danger that the industrial titans will use their economic strength to gain too much power over the political and social life of the Republic, and will eventually stifle our traditionally American free and independent enterprise.

Up to this time, the Federal Government has been unable to check this trend toward monopoly. This failure is due largely to the lack of adequate information facilities to study and discover monopoly practices; the lack of funds for the enforcement agencies of the Antitrust Division of the Department of Justice, and the Federal Trade Commission; and existing loopholes in present antitrust laws.

ANTIMONOPOLY PROGRAM

The correction of these weaknesses in the present antitrust policy, and the development of a sound Government program to check the further growth of monopoly, requires that the following steps be taken:

First. A Presidential Directive should be issued laying down an over-all Government policy regarding monopolies to activize all Government agencies whose work either directly or indirectly touches on the monopoly problem, and to coordinate the work of these agencies in checking monopoly. There is a lack of such a policy at the present time. Some agencies not only have little interest in checking monopoly, but actually follow policies which promote concentration. For example, the War Assets Administration has favored big business in the disposal of surplus war property; the War Production Board and the Army and Navy Departments have favored monopolistic companies in the letting of Government contracts.

A general order from the office of the President would discourage those departments now helping the growth of monopoly, and would coordinate the antitrust policies of the Federal Trade Commission and the Antitrust Division of the Department of Justice. Better liaison between the Department of Commerce, the Federal Trade Commission, and the Antitrust Division could also be accomplished by such an order.

Second. There should be an increase in the research and information facilities of the Department of Commerce to study and report on the growth of monopoly, and the existence of monopolistic practices, as well as follow-up studies on those cases involving antitrust suits to discover whether previous actions actually had the desired effect.

Third. There should be an increase in the appropriation of adequate funds for the Antitrust Division of the Department of Justice so that existing antitrust laws may be enforced effectively. The Antitrust Division of the Department of Justice has always been understaffed, and short of funds, and this has prevented that agency from meeting its responsibilities. For example, the total staff of this agency on April 1, 1947, consisted of 333 persons, of which 143 were functioning in field units, 190 were lawyers, 20 were economists, and the remainder being clerical help. Due to the lack of staff, only 50 antitrust actions take place each year from among an annual average of 650 complaints—a ratio of 1 case to 13 complaints of monopolistic practices.

The annual budget of the Antitrust Division has never exceeded $2,000,000 except on one occasion—yet the Hartford Empire Co. spent over $2,000,000 to defend itself in one antitrust action taken by the Government. In the Madison oil case, the Antitrust Division had five lawyers against 103 for the defendant.

In my opinion, the Antitrust Division of the Department of Justice should have a minimum budget of $5,000,000 per year—the budget of the Federal Trade Commission should also be increased commensurate to their antimonopoly efforts.

Fourth. The present antitrust laws should be amended to plug all loopholes which permit big business to continue certain monopolistic practices. Most certainly section 7 of the Clayton Act should be amended to cover acquisition of assets as well as stock, and other loopholes in these laws should be plugged. Another needed reform is the increasing of penalties for violation of the antitrust laws. Under the present law, a monoply may make a million dollars as a result of illegal practices and then get off with a fine of $10,000. It is a common practice for such companies to set aside funds for the payment of such fines in advance and then calmly proceed to violate the law, knowing that profits from their illegal acts will more than offset fines imposed.

It is recommended that civil penalties be provided for violations of antitrust laws which will be proportionate to the illegal gains—for example, twice the monopoly profits. This would remove the present opportunity for profit from continuous and deliberate violation of the antitrust laws.

The law should also be amended to provide a mandatory increase in criminal penalties for repeated violations of antitrust laws. Few monopolists ever go to prison for violation of these laws; the courts have authority to prescribe prison terms but they have not exercised this power. If prison terms were mandatory on a second violation, monopolists would be discouraged from breaking the law.

In my opinion, the adoption of these reforms in the Federal Government's antitrust program would go far toward the checking of monopoly, and would remove this threat to the future of small business in America.

PROPOSAL NO. 2: REVISE EXISTING PATENT LAWS

The existing patent laws should be revised to prohibit the present misuse of patent rights by big business to suppress inventions, to restrict production, and to stifle competition.

It is common knowledge that the great corporations, monopolies, and cartels are able to utilize present patent laws to limit the production of new products, or to prevent the production of products which are needed by the public.

The example of the German firm of I. G. Farben and Standard Oil of New Jersey may be cited. These two companies entered into a cartel agreement in 1929 regarding the trade secret for the production of synthetic rubber, and cooperated in preventing the use of this secret to build up the American synthetic rubber industry. This monopoly in synthetic rubber was not broken until World War II when the need for such action was necessary to win the war. For many years the patent on fluorescent lighting was held off the market because it would provide more light per kilowatt-hour than ordinary light bulbs, and thus affect the profits of private power companies.

The Congress should enact statutes preventing further restrictions of use of a patent in violation of antitrust laws, and prevent monopolists from collecting royalties under such patents. Legislation should also be enacted to require compulsory licensing of patents that are not put to full use.

PROPOSAL NO. 3: A FEDERAL PROGRAM OF SCIENTIFIC RESEARCH

The Federal Government should embark on a comprehensive program of scientific research, the results of which would be the common property of the people of the Nation, and be made available to all business. At the present time, one-third of all applied research is conducted by 12 corporations, and big busi-

ness generally controls most of the results of all research for their own profit.

Recently the Eightieth Congress adopted the Science Foundation law, which provides Federal funds for research in the fields of medical, physical, and biological sciences. This program might well be extended to research in applied science and industrial technology, with the findings being made available to the small businessman. I want to say also that the "pork barrel" policy of giving the results of Federal-financed research to a few great corporations should be stopped.

PROPOSAL NO. 4: A SPECIAL BUREAU OF SMALL BUSINESS

A special Bureau of Small Business should be created in the Department of Commerce to provide needed services for small business alone. At the present time there is an Office of Small Business in the Bureau of Foreign and Domestic Commerce, but this agency is understaffed and unable to meet the needs of small business.

This office should be expanded into a well-staffed bureau, which would develop an information program on the facts of business, on improved business methods, on marketing information, and so forth. In other words, this agency would provide facts to business on all phases of their activity, and should be a vigorous and aggressive protagonist for strengthening the competitive position of small business enterprise.

PROPOSAL NO. 5: LIBERALIZE RFC LENDING POLICIES

The lending policies of the Reconstruction Finance Corporation, and other Federal credit agencies, should be liberalized so as to provide capital and credit to small business and equal terms with big business.

One of the major problems of the small businessman is that of finance. It is often difficult to obtain investment capital to start or expand small business; during hard times the great private financial institutions often destroy small business by the indiscriminate withdrawal of commercial credit. The major burden of furnishing investment and commercial credit to small business should of necessity remain private, yet it is desirable that direct Government loans should be available to the small businessman when private funds dry up due to depression.

The present RFC small-business loan program does not meet the needs of small business. The RFC lending policy has been to favor big business, but has ignored the financial requirements of small business. According to the September 1946 RFC field-office report, only 265 direct loans to small business were approved during the month out of 5,518 applications—95 percent rejections as compared to 5 percent loans granted. This alone reveals the anti-small-business bias of the RFC.

It is time that the RFC realizes the importance of small business in our economy, and develop a liberal loan policy with respect to the small businessman. Congress can contribute to such a program by providing additional capital resources to the RFC for such purposes.

PROPOSAL NO. 6: TAX RELIEF FOR SMALL BUSINESS

Congress should adopt a Federal taxing policy whereby the taxing power is used as an instrument of social policy to: (1) Give tax relief to small business establishments so that they may use their profits for expansion, and to maintain their competitive position within our economy; and (2) impose heavier levies on the great family fortunes and giant corporations as a means of checking monopoly.

Under the present Federal tax structure for business, corporations with net assets over $50,000 per year are subject to a 38-percent normal and surtax rate, while business firms with net assets below $50,000 are taxed at a rate of 21 percent on the first $5,000, 23 percent on the $15,000, and increases in percentage up to $50,000 total net assets. The excess-profits tax has been repealed, and undistributed profits are taxed only when such undistributed profits are held to be unreasonable accumulations beyond the needs of the company.

I am convinced that small business would benefit if a greater tax differential is provided. The present corporation tax should be reduced on business firms with net assets of less than $50,000 to enable them to plow back into the business their earnings, and thus help them compete against their chain-store competitors. At the same time, the taxing power might well be used to check monopoly by reimposing the excess-profits tax on the great corporations and broadening the application of the undistributed earnings tax.

PROPOSAL NO. 7: FULL EMPLOYMENT AND BUSINESS PROSPERITY

The best guaranty for the future of small business is—in the last analysis—a program of full production, full employment and general prosperity for the Nation. During periods of depression small business has the highest casualty rate, while the monopolies increase their economic power. On the other hand, during periods of prosperity small business flourishes and prospers.

The proper method of promoting small business, therefore, is to maintain a stabilized economy and maximum production. Congress should enact those policies needed to maintain high purchasing power in the hands of the farmer and the laborer which will, in turn, guarantee prosperity for the businessman. The key to business prosperity is a prosperous citizenry who have money in their pockets to buy the products of the business.

Such a program for national full employment should include the extension of social-security benefits, old-age pensions, a good wage policy, a Federal health program, and long-range Federal housing program. In addition, the Government should formulate a program designed to develop the Nation's national resources—the MVA and the St. Lawrence waterway would be included in this category—and extend the Roosevelt farm program—soil conservation, farm tenant, REA, and farm marketing programs—to provide prosperity to the farmer.

Mr. Speaker, I am convinced that this eight-point program which I have outlined would do much in the way of solving the problems of over 3,000,000 small businessmen in America, and would protect and preserve the small business type of organization which is so essential to the future of American democracy and our free competitive economy.

Polish Soldiers Should Be Allowed To Enter the United States

EXTENSION OF REMARKS

OF

HON. GEORGE MacKINNON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. MACKINNON. Mr. Speaker, while Congress is in recess a Judiciary Subcommittee on Immigration and Naturalization, will make an investigation in Europe of displaced persons in connection with their study of the Stratton bill, H. R. 2910. In this connection I wish to direct the attention of the Immigration and Naturalization Subcommittee to my bill (H. R. 3620), which deals with a similar problem with respect to former Polish soldiers. This bill proposes that we permit the immigration to the United States of those Polish soldiers now outside the Communist-dominated countries, who left their country to fight the Nazis and who cannot now return because of the Communist Government in their home country. This is an exceptionally meritorious group of prospective citizens. They would make excellent citizens for America. If H. R. 3620 is adopted we may find our fair land again favored by a Kosciusko, a Pulaski, and a Paderewski.

Many Members of Congress and of the general public have asked me why these people want to come to the United States. They wonder why these young men are not satisfied in England or Italy, or in some other European country. Since I have received many letters from Polish soldiers and their friends in this country and from Polish soldiers overseas in areas not covered by the Stratton bill, I believe I have the answer to this question.

If these Polish soldiers live in England, they live entirely among strangers of strong nationalistic background. The same is true if they live in Holland, Belgium, France, Italy, or any other European country. But in America they feel they have millions of friends, because here there are millions of their former countrymen. They feel that they would be more at home here than in any country other than their native land. This is the reason they wish to come to America. And I submit that the fine record of citizenship that has been made by the Americans of Polish ancestry in this country is an excellent reason why we should welcome and encourage their immigration.

There is an additional feature that bears on the consideration to be given H. R. 3620. That is the treatment and

consideration they are receiving in England, where most of them are now located. From the information I have received on this subject it appears that many of these former Polish soldiers are occupying the barracks formerly occupied by prisoners of war and that many of them are prevented from going into business. Thus they are more or less restricted to occupations involving physical or manual labor and they are living only slightly above a subsistence income. If these assertions are true is it any wonder why these former fighting men wish to come to America. I request the Immigration and Naturalization Subcommittee during their trip to Europe to go to Great Britain and investigate the status of these former Polish soldiers. We owe that much to our former fighting allies, who showed so much courage during the war. Moreover, I want them to meet and become acquainted with some of these Polish soldiers. I am satisfied that if they do they will report favorably on H. R. 3620.

Under leave to extend my remarks I include the following copy of H. R. 3620:

A bill to provide for the admission to the United States of certain persons who served in the Polish Army, and for other purposes

Be it enacted, etc., That any person (1) who served in the Polish Army under honorable conditions during the period beginning September 1, 1939, and ending May 8, 1945, and (2) who on May 15, 1947, did not reside in Poland, the United Soviet Socialistic Republic, or areas occupied or administered by the United Soviet Socialistic Republic, shall be admitted as a nonquota immigrant to the United States for permanent residence. The wife, and the unmarried child or children, of such person, who are accompanying or following to join him at his request shall also be admitted as nonquota immigrants to the United States for permanent residence.

SEC. 2. As used in this act—

(a) The term "Polish Army" means (1) the armed forces of the government and people of Poland during the period beginning September 1, 1939, and ending September 30, 1939, and (2) the armed forces of the Polish Government-in-Exile which was formed in 1939 in Paris, France; and

(b) The term "Poland," when used in a geographical sense, means the territory subject to governmental control by the Republic of Poland as of May 15, 1947.

SEC. 3. Admissions under this act shall terminate on December 31, 1951.

American Military Strength

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of July 25, 1947:

PATTERSON DEPARTS WITH WARNING UNITED STATES LACKS READY FORCE

Robert P. Patterson headed today for a rest on his New York farm after warning in a farewell press conference as Secretary of War that potentially powerful America is low in "ready military strength."

He said that as a private citizen he would do his utmost to see that universal military training is adopted.

Describing the atomic bomb as "a strong asset" for the time being at least, he urged that the United States continue making atomic weapons until international accord is reached.

SCROLL AND TRAY PRESENTED

Mr. Patterson was honored at a farewell dinner in the Pentagon last night by President Truman and military and civilian leaders of the War and Navy Departments who had worked closely with the retiring Cabinet member.

A scroll and a silver tray—which Mr. Truman personally polished with his handkerchief—was presented to Mr. Patterson by the Army General Staff as a token of high esteem and in appreciation of the privileges of serving "under the inspiring leadership of a great American and a good and loyal soldier."

The tray was engraved with the names of General Eisenhower, Chief of Staff, and other officers.

PLANS TO PRACTICE LAW

Mr. Patterson, who swore in Kenneth C. Royall as his successor yesterday, planned to leave Washington today for his farm at Cold Springs, near Poughkeepsie, N. Y. He said he would "rest" at farming for a few weeks before returning to the practice of law in New York City.

At his farewell press conference yesterday, Mr. Patterson pointed out that the United States "has potential strength of a military character not equaled by any other nation."

But, he said, "on the point of ready military strength the picture is not the same." He added that American armed forces "are scarcely adequate to the discharge of our occupation tasks."

My Report to You on the Record of the Eightieth Congress

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. BENNETT of Missouri. Mr. Speaker, it is a real pleasure that, with all due humility, I can report to my constituents with just pride upon the work of the Eightieth Congress and the part I have had in it as their Representative.

As I look back in my mind's eye upon the historic first 7 months of 1947, I realize that no single oral or printed statement could encompass all that I should like to report upon. Anticipating that is one reason why I have tried to keep my district informed, on a weekly basis, through reports over the radio and in the press. Today, however, it is my purpose to summarize the high lights of accomplishment of the first Congress to have a Republican majority since 1930.

We can understand what has been done only by viewing it in its true perspective as it looms up against the background of what has gone before. In November 1946, the people of America overwhelmingly voted for a change—a change for the American way of life. The issues in that campaign were summarized by the historic phrase which appeared on billboards across the land, "Had enough? Vote Republican!"

The bill of particulars epitomized by that short statement was a long and sordid story of mismanagement in Washington. That mismanagement was characterized by confusion, corruption, controls and communism in high places. Sixteen years of New Deal had led us from WPA to war and to a shortage of everything including shortening. Strange to find, after 2 years of peace there was an increasing scarcity of sugar, meat, automobiles, white shirts, toilet tissue, gasoline, soap, farm machinery, lumber, nylon hosiery, and apparently everything else we thought should be a part of American life, including freedom. In place of the necessities of life we were given propaganda, black markets, regimentation, bureaucracy, class exploitation, deficit spending, machine politics, labor violence, questionnaires, CIO dictation and political answers to economic questions.

Republicans promised to get the Government out of the people's hair and back into the people's hands. Republicans promised lower taxes, a labor law putting labor and management on equal footing before the law, elimination of unnecessary wartime controls, a reduction in Federal spending, a balanced budget, and elimination from the public pay rolls of thousands of bureaucrats, especially those with Russian accents or philosophies. Those were the promises. How about the performance? As Al Smith used to say, "Let's look at the record."

The Eightieth Congress elected last November took office January 3, 1947. The record of that Congress will not be complete until its life expires on January 3, 1949. Next January 3 the second session of the Eightieth Congress will take up where the first session, which adjourned as required by law this July left off. The first session broke the ice. I might say, in the beginning, that it is the first time within the memory of most living voters that a political party kept its promises after it won a victory. This elates Republicans and Independent Democratic voters. But, many New Deal radio commentators and news columnists have very red faces indeed. They had said we would fail. They said we were too slow. They tried to make political capital out of the magnitude of their own misdeeds. But, they have been disappointed. No Congress ever worked harder, faster, and accomplished more for the people of America. This was not a rubber stamp Congress for the President or the pressure groups. The Republican Congress this year has:

BUDGET AND DEBT

First. Balanced the budget and reduced the national debt for the 1947 fiscal year by over $11,000,000,000. This debt reduction is the first step necessary to restore the value of the dollar. The budget was unbalanced, the debt grew and your dollar got cheaper every year for 16 years under New Deal control of Congress.

INCOME TAX REDUCTION

Second. The Republican Congress twice voted to reduce personal income taxes for 49,500,000 American citizens. The New Deal Congress in 1946 gave a $6,000,000,000 reduction to corporations but President Truman vetoed the Republican bills for tax relief for individuals in 1947 and 1948 and the Republicans did not have the two-thirds majority necessary to override the vetoes. Had these bills become law, the little taxpayer would have received the biggest saving, which was 30 percent. The average taxpayer would have been given a 20 percent reduction and the largest, 10½ percent. Citizens over 65 years of age would have had an additional $500 exemption. Sixty-three percent of the total reduction would have gone to those citizens earning less than $5,000 per year. This class of taxpayers constitutes 96 percent of the total number of taxpayers thus demonstrating that, contrary to New Deal propaganda, this was genuine tax relief for the small taxpayer. One million two hundred and thirty-four thousand six hundred and forty-four Missouri income taxpayers were denied tax reductions by the President's vetoes. Missouri taxpayers would have saved over $95,000,000! The President's partisan vetoes of the tax reduction bills cost the little taxpayers of the 11 counties of the Sixth Missouri District the following savings, according to the House and Senate Joint Committee on Internal Revenue and Taxation:

Barton	$145,000
Bates	243,000
Cass	286,000
Cedar	111,000
Greene	3,316,000
Henry	359,000
Johnson	246,000
Pettis	628,000
Polk	183,000
St. Clair	94,000
Vernon	323,000
Total	5,934,000

It is to be hoped that in 1948, being an election year, the President will change his mind on this subject. The British people, whose experiment in socialism and whose Government is being maintained with American gift-loans, have had their wartime taxes reduced. Our Canadian neighbors have enjoyed two tax cuts since VJ-day. One wonders how it is that if we cannot afford to give American citizens relief from heavy wartime taxes the administration feels we can afford to give so many billions away to the foreigners. A constituent wrote me the other day suggesting that the so-called flying disks or flying saucers we have been hearing so much about are actually round, silver American dollars being thrown across the Atlantic by this administration.

LABOR LAW

Third. The Republican Congress has passed, over Presidential veto, a bill to put labor and management on equal footing before the law, reduce the causes of industrial strife, to increase production, prevent workers from intimidation from any source, and preserve collective bargaining. This bill specifically exempts railroad labor which is covered by a law enacted by a previous Republican Congress and which has worked so well no responsible person has ever proposed its repeal. The new labor law, among other things, provides for a congressional committee to make a continuing study of the law and changes which may be required in this field in the future to promote friendly industrial relations and full production. How well the law works, however, depends largely now on how fairly the President, as Chief Executive, administers it.

Fourth. The Republican Congress has enacted a law making illegal the portal-to-portal lawsuit racket, which would have bankrupted industries and destroyed jobs.

PRESIDENTIAL TENURE

Fifth. The Republican Congress has passed and submitted to the States a constitutional amendment to limit to two terms the tenure of any man holding office as President. Half of the States necessary to make this amendment effective, including Missouri, have already ratified it.

CONTROLS

Sixth. The Republican Congress passed legislation abolishing approximately 270 wartime controls. Already this action has given the American people more sugar, more housing, and other necessities of life. Dates have been set for an early end to remaining controls.

Seventh. The Republican Congress has completely reorganized and streamlined the legislative branch of Government, pursuant to direction of the Legislative Reorganization Act. It will thus serve you more efficiently and effectively than in the past.

ECONOMY

Eighth. The Republican Congress has kept its promise to reduce unnecessary Government spending, the greatest single cause of inflation. It has reduced all departments of Government, requiring, in spite of the determined opposition of pressure groups and the administration, that every department bear its proportional share of the reductions which total approximately $3,000,000,000. We have reduced the high price of Government without impairing essential services. This is a good start and I hope to see further reductions made next year. It is pertinent to note right here, that by opposing any substantial reduction in Government expenditures and by vetoing the tax reduction bills, the President presumes to lay down the principle that he, the Executive, and not the people's Congress, shall control the Nation's purse strings. A substantial majority in Congress does not accept that principle which is contrary to our system of constitutional government.

BUREAUCRACY

Ninth. The Republican Congress has eliminated from the public pay roll thousands of unnecessary employees, over 1,000 of them Communists. It is continuing its investigation of all Government employees suspected of subversive activities, either Communist or Fascist.

Tenth. The Republican Congress has supported a bipartisan foreign policy.

VETERANS

Eleventh. The Republican Congress has done well by the veterans of America by increasing Spanish, Indian and Civil War pensions 20 percent, to bring them in line with World War I and II pensions. Over opposition of the President, we voted to pay the World War II GI terminal leave bonds in cash to 9,000,000 veterans. We increased the Federal grants to veterans in agricultural training to put them on the same basis as those taking industrial training. We doubled the amount of Federal money authorized as a revolving fund for loans to veterans for vocational rehabilitation courses and passed some 24 other veterans' bills, one appropriating $35,500,000 for construction of housing for veterans, supplementing $438,462,814 already provided for this program.

The President in his budget message recommended that Congress quit passing veterans' legislation because the cost of these benefits now exceeds $8,000,000,000 per year, the largest cost of our Government except maintaining the armed forces. Congress did, however, pass those bills which seemed necessary to do justice to the veterans and made very little, if any, economy in the Veterans' Administration budget. Veterans are agreed, however, that the greatest benefit their Government can provide is an economically strong and prosperous America.

ADEQUATE NATIONAL DEFENSE

Twelfth. The Republican Congress has provided the strongest Army, Navy and Air Force in this Nation's peacetime history and has united these branches of armed service as recommended by the Secretaries of War and Navy and the Joint Chiefs of Staff. In 1939, just before the war, our annual military expenditures were $1,074,000,000. In 1948 they will be $11,256,000,000. It will be seen that victory in the war did not lessen the crushing burden of armaments but increased it over eleven fold. However, in the unsettled state of the world, Congress felt it necessary to maintain our national defenses. Congress hopes that the Administration will promptly conclude the peace treaties and take steps to promote world disarmament.

CORRUPT ELECTIONS

Thirteenth. The Republican Congress has investigated instances of political graft and corruption and has conducted an honest audit, insofar as records to audit were available, thus saving the taxpayers millions of dollars and bringing many culprits to justice. While demanding free and honest elections in countries abroad we have demanded investigation of stolen elections in our own country, such as the latest disgraceful Pendergast-Truman scandals in Kansas City, Mo., where gangsters have stolen the fraudulent ballots constituting evidence necessary adequately to prosecute election thieves, as demanded by a grand jury. The Democrats in the Senate and House filibustered for 2 weeks and thus prevented congressional investigation of this national scandal which was whitewashed by the Attorney General, the district attorney and the President who admittedly

restricted the FBI investigation. It was only the demands of Congress which resulted in appointment of a special prosecutor to take the matter out of the hands of the Attorney General and district attorney. This filibuster was a confession of guilt. If the Administration had nothing to hide it would raise the iron curtain of concealment and welcome this investigation of corruption in the Justice Department.

SCIENTIFIC PROGRESS

Fourteenth. The Republican Congress has established a National Science Foundation to help keep America in the lead among nations of the world in all scientific developments important to national health and security. This Foundation which will provide funds for scholarships for the brightest young minds of America and for research projects of a military nature, will also wage an all-out fight to abolish those killers of mankind such as cancer and heart disease. I am especially proud of this progressive achievement because it was accomplished by the Committee on Interstate and Foreign Commerce, of which I am a member, and is in accord with the recommendations of reputable educators, scientists, and others who have studied public policy along this line. Confiscatory tax policies of the New Deal have made it impossible for many years for huge gifts to be given to scientific research by private individuals and government must now sparkplug such efforts. While America is leading the world in applied science, we do not lead it in basic science.

IMPORTANT MISCELLANEOUS LEGISLATION

Fifteenth. The Republican Congress has many other legislative accomplishments to its credit which are too numerous and technical for discussion here. Some of these which I will just mention in passing include:

Reincorporation of the Export-Import Bank to aid war-devastated countries and to stimulate our own foreign trade.

Amendment of the Federal-Aid Highway Act to give States more time to develop road plans and utilize funds allocated under the act.

Provision was made for retirement and other inducements to stimulate voluntary enlistment in the Regular Army after expiration of the Voluntary Recruitment Act of 1945.

Extended the life of the Commodity Credit Corporation which carries out the commitments of Congress with respect to the farm price-support program.

Froze present postal rates, saving $205,000,000 in postal revenue.

Authorized our participation in the International Refugee Organization which will take over the duties of UNRRA in dealing with displaced persons and require other nations to share this burden with us.

Established a bipartisan Commission of 12 members to investigate and report to the Eighty-first Congress in 1949, on the present organization and methods of operation of all executive departments, agencies, boards, bureaus, and so forth, with recommendations for change.

Froze the social-security taxes at the present 1 percent rate through 1949 and continued the State-Federal program of old-age assistance and aid to blind and dependent children.

Retained and extended veterans' preferences in Federal employment and housing.

Passed the Presidential succession bill providing that the Speaker of the House and then President pro tempore of the Senate shall be next in line of Presidential succession after the Vice President.

Provided for a national stock pile of strategic minerals.

Appropriated adequate funds for flood control.

Consolidated the duplicating Federal Housing Agencies into one bureau to be known as the Housing and Home Finance Agency.

Established a Congressional Aviation Policy Board to study and encourage development of a national aviation policy and safety in air navigation.

Extended until June 30, 1948, Federal aid to schools still overburdened with war-incurred enrollments.

Extended the scope of the Federal mine safety code.

Passed a bill to permit home owners to borrow up to $1,500 for property repairs and alterations from Federal savings and loan associations without having to take out mortgages.

Established several investigating committees to inquire into matters which will be the subject of legislation next year. These subjects include, among others, housing, foreign aid, labor racketeering, agriculture, occupation policies, surplus property, social security, immigration, and aviation.

The Republican Eightieth Congress has enacted around 400 laws in the 7 months of the first session. While we cannot correct in 28 weeks all the mistakes of 728 weeks of New Deal control of Congress, this is a commendable beginning. It might be noticed in passing that there have been 133 roll calls in the House this year. I have not missed a single vote on a bill.

PRESSURE GROUP LOBBYING

My friends, I would be less than frank and honest if I left the impression that this list of impressive accomplishments, and others which could be outlined if time permitted, was unattended by difficulties. There is a trait of human nature to demand something and then to be dissatisfied when you get it. There was a cartoon in the newspaper the other day picturing a delegation of constituents demanding that their Congressman vote for economy. But it also pictured the same delegation after the election, denouncing their Member for cutting out of an appropriation bill some worthy project in his own district. They suggested he start the economy wave somewhere else.

All Members of Congress know how much to the point that cartoon is. Most people have not learned to take the "me" out of economy. They want Government economy at expense of the other fellow. They say: "Don't cut the funds for this and that. Don't cut the funds for subsidies. Don't cut the funds for new post offices. Don't cut the funds for airports, and so forth." Everyone seems to have some pet project which allegedly should not be cut and seems to be getting Federal checks or aid in one form or another. If all of these requests for exceptions were granted, there would be no economy. The Government is indeed engaged in many worthy projects it is a shame to have to cut. But we cannot have our cake and eat it, too. We cannot reduce taxes and the debt and restore the purchasing power of the dollar and at the same time maintain the past high rate of Government expenditures. Do not forget that was agreed on November 1946. If we get this Government back on its feet financially and the Nation on a sound basis economically, maybe we can restore some of these programs. But this is the acid test of whether or not a people's government can survive or whether it will be wrecked on the rocks of unsound fiscal policy. Every Republic in history has died when its people insisted that it live beyond its means and that the government support the people instead of the people supporting the government. We are fortunate in that we have the object lessons of history before our eyes. Let us profit by them. To do otherwise is the arithmetic of folly, which will surely lead to socialism, which is the politics of poverty. If the spending bug has bitten so deep that we are cash-crazy and beset with an allergy toward saving money, we will have to go back to the deplorable conditions of 1946 which I outlined in the fourth paragraph of this speech. It requires political courage and devotion to the common welfare to practice democracy as well as to preach it.

COMMITTEE AND OFFICE WORK

I have been talking about the work of Congress as a whole. I want to make brief reference to my own committee work. For 4 years I was a member of the Committee on Veterans' Affairs and in that capacity helped write the GI bill of rights and all other basic legislation now on the lawbooks for veterans of World War II. This year I was promoted to membership on the Committee on Interstate and Foreign Commerce, the third oldest committee in the House, and the one with widest jurisdiction. Our work concerns all legislation touching such vital subjects as aviation, telephone, telegraph, radio, interstate commerce, foreign commerce, public health, the Weather Bureau, interstate oil and gas, securities and exchanges, railroad labor and railroad retirement and unemployment, inland waterways, Bureau of Standards, and all the other numerous bureaus and commissions touching the aforementioned subjects.

We have worked very hard on this committee this year. Of the 173 measures referred to my committee, 34 were reported and 12 have become public law. Forty-one other bills and resolutions were disposed of in connection with these. Hearings on 20 will be continued at the next session. Thirteen hearings covering 35 bills and resolutions and one investigation have been printed as public documents, representing a total of 6,247 pages. Ten additional hearings are later to be printed.

In consideration of the measures before the committee it held hearings on 112 days involving sitting for 361 hours.

Beyond this, of course, the committee has engaged in time on the floor of the House, in conference sessions, with the Rules Committee, in the writing of reports and in numerous informal conferences and discussions obviously not subject to tabulation.

In addition, the work of my congressional office has been unusually heavy. I have three competent clerks who have put in long hours, 6 days per week, helping to carry this load. Correspondence has been especially heavy this year, at a rate of around 8,000 inquiries per year, which must be answered by first-class mail.

My office will remain open in Washington throughout the congressional recess and I will divide my time between it and the district. A congressional recess is not a vacation. It is required by law in order that Congress may be as close as possible to the people it represents. During the recess I will visit each of the 11 counties of the Sixth Missouri District on dates to be announced through the press. I will be available for personal consultation on official business by any constituent who does not desire to take his problem up with my office by correspondence.

FOREIGN AFFAIRS

I will close this brief report by reference to foreign affairs which cast their shadow across the future. It is some years since the end of war to stop tyranny and assure freedom from want and fear, freedom of speech and religion, for all people everywhere in our time. While it might be too much to expect that complete world peace and prosperity would be restored so soon, it was proper that we should expect substantial progress along the road.

Our hopes have not materialized. Our expectations have been frustrated. Our good intentions have been maligned. Our generosity seems to have earned only ill will. Our candor has been met with stubbornness. Our insistence on self-determination for small nations has been sabotaged by secret diplomacy, police terror, infiltration and psychological aggression. Generously have we provided out of our own assets to soften the obstacles to peace, but we have had poor cooperation. One loan or gift seems to call for another. We have given the foreigners $20,000,000,000 since VJ-day and are still shelling out to them at a rate of $21,000,000 per day. This money comes out of the pockets of American taxpayers. This assistance seems to have left foreign nations just as close to hunger and in many cases closer to communism than before. The results we hoped for are meager indeed. It would further appear that war is still in progress and that its operations have merely been transferred for the time being from the military to the diplomatic front. Conduct of foreign affairs is not the province of Congress for the Constitution puts that duty on the President. But, as a practical matter of fact, Congress has a great deal to do with foreign policy after it has been determined by the President for Congress must provide the money to make it effective, if money is involved.

In the years of New Deal control of our Government the same party in power has led us from its original position of extreme isolation to extreme intervention and internationalism. It is leading us, apparently, from appeasement of Russia as practiced at the big power secret conferences, to a get-tough policy with Russia just as we followed the same appeasement-to-fight policy with Japan and Germany. Where are we now?

Under foreign policy set by the administration and followed in good bipartisan spirit by Congress, we have been slapping Russia and kissing her at the same time. I have cast some protest votes against this confusion in purpose and against a bypassing of the United Nations. I have voted to help starving and homeless people of the world but I would like to see more consistency, plan, and purpose in our dealings with them. It is important not only to the peace of the world, and to the freedom of the world, but to the budget of the family which has to buy its groceries at the corner food market. Inflated prices of food, goods, and services in this country cannot and will not be brought down as long as we export, at expense of the American taxpayer, all of those things of which we are in short supply. There are some people who are for the continuation of huge gifts of goods and dollar credits to keep surpluses off of our own markets and to keep prices high. Under this policy we lose both goods and dollars. Prices are now too high. They are at the peak which often precedes the fall into depression. We must make a choice, and soon. It is a difficult decision for those of us with Christian compassion for those less fortunate than our own citizens and with a desire to stop the ruthless march of communism. Constituents would do well to express their views on this choice to their Congressman for it will be the great issue of the next session.

KEEPING FAITH WITH THE PEOPLE

In conclusion, I would suggest the thought that there is good reason for the common man to have high hope in a political party which knows where it is going and actually goes there, and which looks before it leaps. It has also given new hope to millions of Americans to know that political promises once made will be kept, that with due regard for the demands of one's neighbors in the world, we have now a Congress which has not forgotten the folks at home.

It is weaning time for the bureaucrats and they are crying loudly. Their cries should be music to yours ears. The Republican Congress has delivered.

The Senate's Visitor

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STIGLER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of July 25, 1947:

THE SENATE'S VISITOR

There seems to be some doubt whether President Truman's surprise visit to the Senate was unprecedented, or whether George Washington paid a similar call on the legislators on a hot August day back in 1789. But if Mr. Truman is the first to break down the unwritten rule that a President must avoid the Senate floor as a burned child avoids the fire, he has achieved something for which he merits a figurative pat on the back.

After all, why should not the President—especially when he has been a Senator himself—drop in on the Senate from time to time for a friendly visit? Surely that is not going to break down our form of government or wipe out the constitutional distinction between the Executive and legislative branches. Yet, giving George Washington the benefit of the doubt, it had not been done for 158 years until Mr. Truman called on his former colleagues this week.

This is not an incident from which one can distill any significant conclusions. It does not herald the dawn of a new day in the relationship between President and Senate. Nor does it mean that party lines have been broken or party divisions closed. The President is still a Democratic President and the Senate is still securely in control of the Republicans.

All that this incident signifies is that our President and Senators are human beings. Sometimes we tend to forget this. Upon occasion or so it seems, we expect of our high officials a perfection of performance that could come only from supermen. So it is a good and wholesome thing to be reminded that they are pretty much like the rest of us, to know that the President of the United States, with all of the cares and responsibilities of that office, can yearn for his old associates and find time to drop in for a visit with them.

Address of Archibald Henderson

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

ARCHIBALD HENDERSON IN ADDRESS BEFORE DUKE BAR—LEGAL PROFESSION FROM LAYMAN'S STANDPOINT APPROACHED BY SPEAKER; ATTITUDE IS ATTACKED

Archibald Henderson, retired head of the University of North Carolina mathematics department, approached the legal profession from a layman's standpoint in a speech before a luncheon meeting of the Duke Bar Association yesterday and, taking cases from the early history of the State of North Carolina, pointed out what, to him, was the fundamental difference between the equities of law and natural justice.

Taking his citations from the famous property disputes immediately preceding and following the American Revolution, involving the title to the territory now comprising North Carolina, Tennessee, Kentucky, and the vast mass of the other Southern States, Dr. Henderson pointed out that natural justice did not triumph when faced with the technicalities of the law. He stated that there are "three great events in North Carolina history, the War of the Revolution,

landed estates, and the Grand River district case."

Dr. Henderson gave some of the historical background of the land holdings of the Earl of Granville's family, as a result of a grant from the Crown, which included most of what is now the State of North Carolina. It was in this territory, at what is now Hillsboro, that the War of the Revolution broke out in 1765 as the result of overcharges by certain court officials in the drafting of deeds to property. The case, which was carried to the highest court of England, resulted in absolving the court officials involved on legal technicalities, despite the open unrest and rioting of the defrauded public. "This," said Dr. Henderson, "illustrates to me, as a layman, a basic difference between equity and justice."

Dr. Henderson then explained the problems which arose when the courts decreed that all English landowners who had held land in this country could reclaim their land following the American Revolution. The claim of the Granville family to their property in North Carolina was pursued through the courts for a long period of years, Dr. Henderson said, before it was finally dropped, and only by that unexplained event did it happen that North Carolina property today is not subject to the power of absentee owners in England.

The last great event discussed by Dr. Henderson was the purchase by North Carolina businessmen of most of what now comprises the State of Kentucky, bought by a Hillsboro firm from the Cherokee Indians. During the American Revolution, the courts of Virginia decided that the State of Virginia could exercise complete sovereignty over that territory, basing its claim upon original grants by the Crown. And so, Dr. Henderson explained, this property was confiscated by the State of Virginia, without a cent of the purchase price ever having been paid to the Indians, the courts treating the purchase by the North Carolina firm as having put an end to the title of the Indians, but ignoring the debt which was still due them. Dr. Henderson said, "This is another great example of the difference between equity and natural justice."

Presiding at yesterday's luncheon was Robert Horne, Cordele, Ga., president of the Duke Bar Association, student organization at the Duke University School of Law. Prior to the main address Henry Foss, Salisbury, chairman of the athletic committee of the organization, presented the association tennis trophy to Manley Fuller, Whiteville, for winning the association tennis tournament.

Dr. Henderson was introduced by Frank Snepp, Raleigh, chairman of the professional committee of the law students' organization.

Working Farmers From Europe

EXTENSION OF REMARKS

OF

HON. THOMAS L. OWENS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. OWENS. Mr. Speaker, on July 18, 1947, the gentleman from South Dakota [Mr. CASE] extended his remarks at page A3618 of the Appendix and included therein an article from the Saturday Evening Post of July 19, 1947, entitled "Europe Can Send Us Working Farmers." I advocate that the article be read carefully by Members of the House because it constitutes a brief but accurate statement that thousands of competent workers can be found in many countries of Europe, particularly in Germany, Belgium, Holland, Austria, Czechoslovakia, Hungary, and France, and may I add Poland, who could come here to work on our farms, and who are thoroughly tractable. The author of the article points out that they have had too much of political and economic isms and that they now want food and an opportunity to work and live. He did not mention the Scandinavian countries, probably because he feels that they would not desire to leave their homelands at this time.

At the conclusion of the article the author asks a question. He says:

> We have brought many scientists and technicians from Germany to assist in fields in which we already lead the world—physics and chemistry. Is there any reason why we cannot bring more humble Europeans to help us till our soil? Is there any reason why we should import scientists to help us prepare for war, when we can't at the same time bring in farmers to help us feed a hungry world?

Therefore, I support the suggestion made with reference to our securing working farmers from Europe. However, I say we should exercise a very careful screening process, to the end that all persons who espouse any theories that are Nazist, Communist, or subversive in any way to our theories of government, may be rejected. Only a comparatively small number can be admitted, and we can afford to be very careful in our selection. When I say careful in our selection I do not mean with regard to educational standards, as is now being stressed by our State Department. The past has proved that possession of diplomas by emigrants is not proof of either their character or their ability to work. The vast majority of those who came here had little education, but they loved freedom and desired to be citizens of a nation which would grant that love and which would give them a chance to work, build their homes, and raise a family. Our Nation was built by such type of people, and no mistake can be made if we now open our hearts and our homes to many of those in Europe who are worthy and deserving, but whose outlook for the future is dark and dreary. We can aid ourselves by aiding them.

Restoration of Powers of the States

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the RECORD a very fine article entitled "States of the Union: Time To Start Restoring Their Powers," written by Hon. Julian P. Alexander, a member of the Supreme Court of the State of Mississippi, and published in the January issue of the American Bar Association Journal.

This article exceeds in length the limit of material which can be printed without an estimate from the Public Printer. I have obtained such an estimate. The Public Printer estimates that the cost will be $213. I ask unanimous consent that the article be printed in the RECORD notwithstanding the cost.

Without objection, the article was ordered to be printed in the RECORD, as follows:

STATES OF THE UNION: TIME TO START RESTORING THEIR POWERS

(By Julian P. Alexander, of the Supreme Court of Mississippi)

In a plethora of magazine articles and speeches, many leaders of our public thought have bewailed the gradual eclipse of the rights and functions of the States of the American Union. The time is now ripe to stop merely viewing with alarm and to begin to act with vigor. A new Congress and a reconstituted Supreme Court challenge us to action. Through the action or acquiescence of these distinguished bodies came the processes of evolution and erosion. They chiefly hold the key to the return of the States into the domains whence they have been evicted.

Before offering some specific suggestions, I shall sketch briefly the scope of reserved powers, the processes of their gradual erosion, and the means available now for their restoration.

The Declaration of Independence recognized the solemn truth that unalienable rights are possessed, by natural or divine endowment, by men only and not by governments. The designation of the Colonies as "States" had not yet taken place. The declaration was that "the United Colonies are, and of right ought to be free and independent States." The Colonies eagerly and proudly assumed both the name and the status. "The United States of America" was here born. The Constitution was ordained to form a "more perfect Union" of the component States than the Articles of Confederation had been. Its chief novelty was its Federal system.

The coagulation of the people into colonies was natural; the machinery for the complete Union of States was artificial. Later the people were to find that the barriers they built against Federal aggression hedged them within a stockade and that the keys were taken over by the central government and deposited for safekeeping with the Supreme Court.[1]

"States rights" was not a slogan of a particular section but the fetish of all.[2] The sovereignty which had created the States created the Union. To it "we, the people" vouchsafed such powers as pertained to a nation. All other powers were expressly reserved to the States, respectively, or to the real sovereignty—the people of the States. Their reservation bespeaks their prior possession.

Under the Constitution[3] the geographical boundaries of the States cannot be changed without consent of the people acting through the Congress. Yet their boundaries of political power have not infrequently been changed by shifting the solid foundations of

[1] This tribunal was true to its trust when in *Texas* v. *White* it not only refused to unlock the bonds of their union, but held that they had not of their own volition severed the forged links because they could not. That the union was held to be indissoluble was of no less significant than that it was composed of States that were indestructible. In the handwritten original of the Declaration of Independence its title significantly makes illegible, save upon close view, the qualifying phrase "of the thirteen united" (States).

[2] Compare Woodrow Wilson's observation: "It (the right of secession) was an assumption the theory of which would hardly have been questioned while the generation lived which made the Union." (A History of the American People, vol. IV, p. 201 (1902).)

[3] Art. IV, sec. 3.

the Constitution with the powerful leverages of judicial construction.[4]

GREAT VOICES FROM OUR HISTORY

Upon the beetling granite heights of Mount Rushmore a grateful people have carved in stupendous grandeur the faces of four great Americans. Both the medium and the magnificence symbolize truths which, like these eternal hills, are "rock-ribbed and ancient as the sun." Let us give those massive lips a voice.

Washington speaks: "If in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no usurpation."[5]

We hear Jefferson as he dictates the Kentucky resolutions: Each State "shall take measures of its own for providing that neither these acts nor any others of the general government, not plainly and intentionally authorized by the Constitution, should be exercised within their respective territories."

Now Lincoln: "Whatever concerns the whole must be confided to the whole, to the general government, while what concerns only the State should be left exclusively to the State."[6]

Finally Theodore Roosevelt is heard: "Both jurisdictions (State and Federal) together composed only one uniform and comprehensive system of government and laws; that is, whenever the States cannot act, because the need to be met is not one of merely a single locality, then the National Government, representing all the people, should have complete power to act. * * * It was in the same spirit that Marshall construed the law."[7]

THE STRUGGLE OF THE STATES FOR THEIR INTENDED POWERS

Throughout the years the States have wrestled with the Federal Government in an arena in which their chosen referee has been seen from ringside seats in the role of antagonist rather than arbiter. It is true that now and then the gong of war or depression has sent each to his corner for a brief respite while the demand for a common effort suspended the match.

The exceptional powers needed in great national emergencies must be isolated from the problem. The safety of the people must remain the supreme law. Yet it is in such emergencies that centralized power has so successfully consolidated its gains. Peace often leaves the Government with a lot of surplus laws along with war matériel. Somehow the tendency has been to redistribute the cannon to the lawns of the State capitols, but to retain the new laws in Washington. Power, like wages, turns on a ratchet, it follows a one-way course. The loss of State power in 1865, 1898, and 1918 was one of the casualties of those wars, even as it is proving to be at the end of World War II.

Among the powers delegated by the States to the Union there were no "unalienable rights." We have delayed too long in emphasizing that no rights were vouchsafed to the Union but only powers. The retained right of amendment, rising, if need be, to the abolition of its governmental structure, gave to the National government only solemn yet revocable privileges.

The ninth amendment was an attempt to forestall invocation of the doctrine of "expressio unius est exclusio alterius" in the enumeration of rights retained by the people. Let us suggest some that were considered as reserved by the States since not prohibited: Police powers in the accepted sense; immunity from coercion by the Federal Government; establishment of religion; abolition of trial by jury; limitation or extension of qualifications for suffrage.[8] There was no demand for uniformity among the States. Its later tendencies thereunto have been dictated by expediency in which the several States found mutual advantage.

The States may not secede from the Union; may the Federal Government secede from the States? Accession of undelegated power by the Union has much in common with secession by the States.

THE EXERCISE OF DELEGATED POWERS

The body which alone had authority to roam the shadowy no man's land of dispute and to make effective its views was the Supreme Court. At the first opportunity, this tribunal showed that it did not have to put its identifying finger upon a definite provision to justify the assertion of national power. The moving finger of the Court could not only point but could write, and having written moved on to expanding opportunities for enlargement.

John Quincy Adams satisfied both parties when he said in his first annual message to the Congress: "The exercise of delegated powers is a duty as sacred and indispensable as the usurpation of power not granted is criminal and odious."[9] Yet he saw to it that Marshall, the able high priest of federalism, was named to be Chief Justice.

There are many, of course, who assert that the Supreme Court has not added any new powers to the Union.[10] It may save the personal integrity of the Court, although not the political integrity of the States, to phrase it that if the Court has not added new powers to the Union it has discovered many which the States did not know had been delegated.

THE STATES ABDICATED THEIR POWERS

The reasons for these accessions of power cannot be simply stated. As safe a judgment as any is that the Union has expanded its powers because the States have spoken too often of States' rights when they should have been pondering States' duties. Usurpation of power by the National Government has developed because: (1) It has recognized new duties; and (2) because the States have ignored old duties. The Union has picked up a lot of loose powers which the States left lying around.

The multiplication of national activities, bewailed as harbingers of dictatorship or heeded by sensitive ears as the rumble of the distant drum of advancing State socialism, must be diagnosed as to their causes before we seek panaceas. The bureaucrat is not implausible when he pleads in his defense both laches and estoppel against the States. It is increasingly difficult to accuse with vehemence those who have reclaimed fields abandoned by the States and who have occupied them for the general welfare beyond a reasonable prescriptive period.

Between the admitted sectors of powers granted and powers reserved lay a disputed area of "implied powers" and of powers deemed "necessary and proper." Into this penumbra, the judiciary guided the steps of the executive and legislative branches with a flickering light which, while sufficient to locate and stake its claims of preemption, unfortunately cast foreboding shadows.

The "interstate commerce" clause[11] has been a golden gate of opportunity through which have poured the forces of Federal usurpation under the aegis of "implied powers." Practically every activity is seen as being "affected with a public interest." I need not trace the history of a tendency that has been given repeated impulses and only token set-backs throughout the intervening years.[12]

By 1935, a Federal court had asserted boldly that the States had virtually surrendered all powers they could not efficiently exercise.[13] It was held in June of 1942[14] that Congress can regulate the wages and hours of work of anyone engaged in any occupation necessary to the production of goods not in, but for, interstate commerce.

THE SUPREME COURT AND "NEW FEDERAL AUTHORITY"

No one need question the integrity and open frankness of the Supreme Court in pronouncing, without circumlocution, that legislation must be construed "in the context of the history of Federal absorption of governmental authority over industrial enterprise"[15] and the admission, nay the assertion, that the act is one of those which "radically readjusts the balance of State and National authority."[16] To press these disclosures to a consistent though thought-provoking climax, I quote further: "To a considerable extent the task is one of accommodation as between assertions of new Federal authority and historic functions of the individual States."[17] Whence this "new Federal authority"? Were such powers reserved, not to the States, but to the Union, after all? Bryce was right—the Constitution has not been broken—but its elasticity has met every requirement of the Federal Bureau of Standards.[18] Well may the States bewail the disclosure that the Union is more "indestructible" than they. These observations upon

---

[4] There is moderation in the prophecy of Bryce: "We must be prepared to expect that the American Constitution will, when its present condition is compared with its firenew condition, prove to have felt the hand of time and change." (The American Commonwealth, vol. 1, p. 362 (1892).)

[17] Id. at 520.

[18] President Roosevelt had given no little impetus to this tendency in a radio speech March 2, 1930: "The United States Constitution has proven itself the most marvelously elastic combination of rules of government ever written." A lone dissent by Justice Roberts in the cited case voices the protest that since every local activity somehow affects interstate commerce, the Government has pre-empted the field of labor and industry. Or is the inference from the controlling opinion justified that labor and industry have taken over the Government?

judicial trends are not criticism but comment. For the moment I am not concerned with theories but conditions.[19]

Bureaucracy cannot be destroyed simply by railing at it; nor is it justly accused by those who refuse to trace its paternity. Those who would cast the first stone would be wiser to use their own legislatures as practice targets.

THE STATES HAVE AN INFERIORITY COMPLEX

The States are distinctly in the grasp of an inferiority complex. They have allowed themselves to become short-circuited so long and so often that the people have begun to lift their eyes unto the hills of Washington, whence cometh their help. This has developed in the citizens a sort of chronic farsightedness which has thrown out of focus their own State capitols.[20] There are already those realists who seriously advocate the abolition of the States as such.[21] Others have proposed a reduction of the number of States to only a few provinces. The States are denied due process of their own laws under the Federal Government's guise of assuring due process to its citizens. Federal control or discipline in such matters will have to involve the concession that the States as such have the primary duty to act, because they have the primary right.[22]

The conventional function of the States under the Constitution involved administrative cooperation in such matters as tended to preserve the integrity of the Union as a political entity. There are, however, inherent functions which the States must perform if they would preserve their sovereignty at all. I do not refer to measures which are designed to foster a formal adherence to a sentimental concept of States rights. I refer to functions which are a part of the duty of the States to their own citizens, the performance of which increases the weight of power upon the scales in favor of State authority. Indeed, the purpose of the Constitutional Convention was to devise a plan whereby the States could be held to their duties, while at the same time restraining Congress.[23] The tendency of Congress has been to restrain the States by assuming their duties. For appearances, it has kept some of these powers in the States' name.

THE STATES SHOULD NOT BE DEPRIVED OF LIFE

The Union ought not to deprive the States of their life as they choose to develop it, their liberty as it was in the beginning, and their pursuit of happiness according to the temper and ethos of their own people. The problems of labor, including wages, hours, collective bargaining, and picketing, and the social economic needs, including relief, old-age pensions, child labor, housing, compensation and social security, are of national concern only in the sense that they are of universal interest. It was repeated with the regular insistence of a refrain during the debates on the Constitution that government of the people was to be left to the States as far as possible.[24]

The mores of the people, the diversity of climate, industrial conditions, traditions, and religion not only gave to each State an individuality which is at once its heritage and its destiny, but suggested the inadvisability of adjusting these diversities to a common pattern. They were to be left free to work out their own salvation, albeit in the occasional fear and trembling of their sister States.[25]

It was not contemplated that there should be a complete separation of Federal and State administration. On the contrary, it was the view of Madison that the central Government would avail itself of the States in administering its affairs. Charles Pinckney, who was one of the signers of the Constitution, felt that the States would be "the instruments upon which the Union must frequently depend for the support and execution of its power." Even Hamilton thought that the States would be "rendered auxiliary" to enforce the laws of the Union.[26]

FEDERAL FUNDS HAVE BOUGHT SUBSERVIENCE

Federal aid to the States has contributed much to the States financially and has purchased much from them in dignity and sovereignty. The fields preempted are no longer those involving a national concern. The peculiar function of the State was to administer its police powers for the welfare of its own people. Such powers comprise every activity and every avenue along which the citizen may proceed in his pursuit of happiness, which indeed is the end of all government.

Charity, which reputedly should begin at home, begins in Washington. If all our roads do not lead to this eternal city, they at least originate there. The immediate personal needs of our people are ministered to, not by their natural parens patriae, the State, but, by their uncle on the Union's side. The benefactions, placed in outstretched hands which should have been attending to their own business, are marked "Made in Washington." Highways are Federal highways; Federal aid and Federal loans are freely given, regardless of how much the States have contributed.

The fact outweighs the propriety of its analysis here. Let it suffice that the central Government, aware of the growing atrophy of State government with respect to the general welfare of its citizens, has "first endured, then pitied, then embraced" them. Its attitude has progressed from presumption to prerogative, seen successively as expediency, then need, and finally as a right. One should not hastily criticize the national Government for taking over these functions. The point is that we should criticize the States for allowing it to become necessary. Concededly, there are fields of assistance that are national in scope and beyond State ability to administer. However, these fields are fewer than the States today seem willing to admit.

Federal spending for non-Federal causes received its accolade in *Massachusetts* v. *Mellon*,[27] and the Federal Government left unbolted the gates of its Treasury. The eager, outstretched hands of the States have been tied with Federal purse strings. It is a difficult and embarrassing feat for a mendicant State to reach for largesse and draw the sword of States' rights at the same time.[28]

SOME PRACTICAL EXPEDIENTS

The growing acceptance of regional compacts between States having common problems is to be commended, not only as an efficient method for administering regional interests but as a means whereby mere geographical lines can be ignored without losing autonomy or invoking Federal aid and its consequent control. Such compacts were known to the colonists[29] and are not only practical but form regional pill boxes against Federal invasion.

The adoption of uniform laws to effectuate a common procedure demonstrates that there is a fundamental distinction between unanimity and unity. Such laws standardize practices, and rather than subtracting from State power, stress that they must be established by the States as such to enforce powers which belong to them.[30]

The States lose no dignity nor prerogative in lending themselves as laboratories in what Justice Holmes called their "insulated chambers"[31] for worthy social experimentation. Yet they should do so as States; not as a prelude to national regimentation, but as a means of qualifying their leaders for greater independence as political experts. It should be recognized that the Union becomes stronger when the States themselves become stronger.

The conferences of the governors of the several States are harbingers of a growing unanimity of sentiment which tends to the solution of problems which are not confined within State borders and which can be solved without impairment of, but rather in the recognition of, State sovereignty.

Normally, the functions of the States and their powers should be coextensive. There is no reason why the reserved and inherent rights of the States should not be kept adequate by the invocation of powers "necessary and proper" to their exercise. It was never contemplated that inalienable rights (and the power to assert and guarantee them) were being delegated. The Constitution did not seek to create State power, but sought rather to restrain the States from denying such rights to the citizens. To assure full sovereignty to the States to this end, the Constitution guarantees to them a republican form of government.[32]

The time is ripe for the States to take action upon the guaranty.

THE STATES MUST RESIST CENTRALIZATION

The States must foster a spirit resistant to the tendencies of centralization, not in deference to a sentimental regard for the rubrics of a political ritual, but because of the simple truth that, though the National Government is the head of the body politic, the State is its heart. The States should not allow a system whereby they are mere dues-paying members of a benevolent or fraternal organization. The rights of the States are no greater than their power to enforce or utilize them. It is time for the States to examine, not what the Government cannot do, but what they can do. Let us

---

[19] For a compilation of decisions indicating the trend, see *A. B. Kirschbaum Co.* v. *Walling*, supra, note 14, at 522, note 2.

[20] Prof. J. W. Burgess sees the Nation and the people as the only natural elements in our system. The States are ground between the upper and lower millstones. Cf. Holcombe, The States as Agents of the Nation (1921) I Southwestern Pol. Sci. Quart. 307.

[21] The suggestion was first made, however, in the debates on the adoption of the Constitution. 5 Elliott's Debates 182, 194, 211, 256. See also Wallace, Our Obsolete Constitution (1932) 185. See Graves, the Future of the American States (1936) 30 Am. Pol. Sci. Rev. 24.

[22] The subject of antilynching legislation is too controversial for discussion here. Let it suffice that any control effective against human conduct must be exercised, if at all, against the States or those who as their agents act under color of their laws. A helpful discussion is found in 28 Am. Pol. Sci. Rev. 436 (1934). See ante note 8.

[30] Mott, Uniform Legislation in the United States (1940) 207 Annals 79.

[31] Such also was the view of Mr. Justice Brandeis in *New State Ice Company* v. *Liebman* (1932), 285 U. S. 262.

[32] U. S. Constitution, art. IV, sec. 4; Corwin, The Constitution and What It Means Today (7th ed. 1941) 140, 141.

distinguish between Federal assistance to the States and State assistance to the Federal Government. The States lose neither dignity nor integrity in the latter function.

STATE AND LOCAL RULE IS NEEDED

In an age when novelty is acclaimed as wisdom, it is no wonder that in the realm of government, political heresies should masquerade in the garbs of freedom. When change is confused with progress and license is confounded with liberty, the problem becomes one peculiarly for solution by home rule. This means of course, by those units of government which alone are capable of moral consciousness. Such units are primarily the people themselves and their localities.

The big controversial questions of child labor, disease, poverty, wages, and the problems of capital and labor, are too completely integrated with morals and the ethos of the people to be separated. It is fanatic to insist that the salus populi, which is the supreme law, is lacking in the ingredient of plain justice of which morals is the core.[33]

It is the undoubted function of the States in this field to employ as much of their administrative machinery as the Constitution and the laws will vouchsafe to their police powers.[34]

The States must reexamine both their rights and their duties. They have the right to discharge all their duties. They have equally the duty to assert all their rights.

Such is a too brief sketch of trends and their explanation. We must now be practical. As heretofore stated, the governmental powers, wisely separated into executive, legislative, and judicial, have become strangely united in a common cause, albeit not by connivance, to further the absorptive processes of Federal power.

WHAT WE CAN HELP DO NOW

Since the States themselves are chiefly to blame, they should lead their own fight to reclaim what was constitutionally theirs. Most of the attacks on the taking away of State powers have been made with the sword of the Constitution, but by individual litigants. It has not been difficult for the Supreme Court to view each assertion of the constitutional boundaries as the isolated wail of individuals who, advancing singly, can be easily disposed of. Yet it must not be overlooked that so long as the Constitution stands, true sovereignty remains with the people who have the power of amendment.

The States as such speak through their legislatures and act through their Representatives in the Congress. Concerted action can come through them. Legislative resolutions and memorials have value as expressions of public opinion and ought to be encouraged, not only as a defense against estoppel by the States, but as a legitimate demand for action.

The power of the press is no less an effective weapon. Its influence upon national spokesmen has been too frequently exercised to be discounted. The Supreme Court, composed of wise humans, need not be expected to be immune to the presence and pressure of public opinion when recognizable as a definition of public welfare. In those areas in which "domestic tranquillity" is to be defined, not by precept, but by policy, the Court would be neither wise nor human not to borrow from the people their own concepts.[35]

It is the Congress which has been chiefly responsible for crystallizing these trends into statute. The power of these enactments has been expanded by judicial interpretation. It is obvious, therefore, that public opinion must challenge Congress to action. The States must utilize the forces which have undermined them and turn them to their own ends.

The Sherman Act has been a dam against which the increasing floods of Federal power have been impounded. When insurance was judicially declared to be a subject of interstate commerce,[36] the Court, although divided upon the legal phases, was practically united in its anxiety lest existing State structures, erected with its tacit approval, be dislocated. Congress thereupon passed the McCarran Act[37] which practically suspended the force of the decision in the South-Eastern Underwriters case until the several States could readjust their tax structures. The Court eagerly and unanimously sanctioned this practical expedient.[38] The Congress, with the aid of the Court, has power to give force and vitality to the tenth amendment, yet its will to do so must be controlled or influenced by those whom it represents.

Apathy must yield to action, words to deeds. The Union must again become beholden to the States. Today the States by a unique inversion of logic consider themselves beholden to the Federal Government because of its accommodating discharge of functions with whose surrender by the States passed also their own powers.

The States by neglect of their functions and duties have created a need which has been the mother of Federal invention. The States owe it to themselves and their own citizens again to shoulder all local burdens. The Federal Government owes them the duty to allow them to do so. Bureaucracy itself is a symptom of diseased function.

Congress can, of course, undo what it has done. Our representatives may well borrow the vigilance of those who in the past have assayed each bit of legislation for traces of Federal usurpation, and then, alert to the dangers, firmly reject any which give aid and comfort to the enemies of the rights of the States.

It is the duty of the States as life tenants of this magnificent estate to commit no waste thereon of our rights and dignity, and in the interest of good husbandry to hand it over to the coming generations, which are our remaindermen, in the condition and spirit in which we took possession. The excepted wear and tear upon its institutions must be only that which is reasonable. There must be no dissipation by our neglect, nor may the use of new growths be denied to the States which would mark their boundaries anew with identifying fences. Encroachment upon their domain must still be accounted a trespass.

Those symbols in the blue field of our national banner are stars, in which galaxy none gleams more brightly than its fellow. They are not mere planets blinking with a borrowed light. They lose neither brilliance nor identity by acknowledging obeisance to a central sun, about which they revolve and which should be content to exert no greater control than necessary to keep them in their ordained and glorious orbit.

[33] "The standards or patterns of utility and morals will be found by the judge in the life of the community." (Cardozo, The Nature of the Judicial Process (192), p. 105.)

[34] Many State constitutions contain provisions correlating good morals with good government. For example, Miss. Const. (1832) art, 7, secs. 5, 14: "* * * religion, morals, and knowledge, being necessary to good government, the preservation of liberty and the happiness of mankind, schools and the means of education shall forever be encouraged in this State." See also Delaware Const. (1776), art. 22; Massachusetts Const. (1780) part I, arts. II, III; *Chance* v. *Mississippi State Textbook R. & P. Board*, 190 Miss. 453, 200 So. 706 (1941).

[35] "Judges must let the welfare of society fix its (justices) path." (Cardozo, op. cit. supra, p. 67.)

United Nations Charter Amendment

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. HOLIFIELD. Mr. Speaker, there has been in recent months much criticism of the United Nations. Much of it stems from the inability of the United Nations to take action because it is blocked by the excessive use of the veto power. I have joined in the chorus of those who deplore such a state of affairs. However, since the United States was one of those nations which insisted upon retaining the right to a veto, I feel that we as a country share to some degree, the responsibility for the uncertain functioning of the United Nations, I would like to see the United States, by action of her Congress, announce to all the world that we are ready to learn from experience, and are now willing to work out with all other member nations a revised Charter of the United Nations, in which we reserve to ourselves no absolute veto. There are other resolutions before the Congress suggesting other changes in the Charter. All such suggested changes will come to nothing without removing the present veto provisions. I think an official statement from the United States reversing the position we took at San Francisco on the veto, would be a most heartening event to all people everywhere who believe, as I do, that we must hold to the United Nations, working always to strengthen it, only recognizing its faults in order to correct them.

I submit the following resolution:

Whereas all the peoples of the world desire to live in peace; and

Whereas the United Nations was formed as a means of settling those differences between nations which finally end in war; and

Whereas the experience of the United Nations in its present form has shown that a one-power veto is an insuperable barrier to its successful operation: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that the President of the United States should immediately inform the United Nations that the United States is ready to waive its right to a veto at such time as all other nations relinquish the same right. The President should further state the willingness of the United States to take such steps with other member nations as are necessary to amend the charter of the United Nations to that end.

Ode to the People of the Missouri Valley

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1947

Mr. RANKIN. Mr. Speaker, in view of the attacks now being made on the Tennessee Valley Authority, and the apparent attempt to turn us back to the

days of Insull, I think the following ode to the people of the Missouri Valley is not inappropriate:

When dust storms sweep from every field and fill your eyes and nose and throat,
When all your steamboats are aground or all your houses are afloat;
When your communities have grown as primitive as Noah's Ark;
When all your industries are dead and all your people in the dark;
When all your soil is washed away and all your livestock starved to death;
When all the opposition's gone and all their speakers out of breath;
The Congress then may see the light, for which we plead, "God speed the day"
When the people of the Middle West at last will get an MVA.

Federal Research Agency

EXTENSION OF REMARKS
OF
HON. J. M. COMBS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. COMBS. Mr. Speaker, I call attention to a bill, H. R. 4356, I introduced to provide for the establishment by the President of a Federal Research Agency for determining explosion and fire hazards of chemicals, explosives, gases, dusts, etc., and for the development of effective safety measures. I have introduced the bill in these closing hours of the session and call attention to it at this time in order that those interested in the subject may have ample opportunity to study it and make suggestions between now and the time the second session of the Eightieth Congress convenes.

The horror of the disaster at Texas City, Tex., last April, in which several hundred people were killed, including many firemen engaged in fighting the fires, and in which the property loss has been estimated at $40,000,000, has aroused the entire Nation. The tragedies resulting from this unfortunate occurrence will long be remembered and create constant anxiety as to when and where the next similar disaster may occur.

This catastrophe at Texas City has been attributed by the various investigators to explosions of ammonium nitrate fertilizer aboard two ships where it was being stowed. Ammonium nitrate is an excellent source of nitrogen for all crops and is one of the most concentrated forms of nitrogen fertilizer. The investigations of the Texas City disaster indicate that the violence of these ammonium nitrate explosions under the conditions of stowage was unparalleled. We are told that there have been no previous explosions of this material in the United States to compare with this disaster, and it is very evident from the reports of the various investigations that the determination of the fire and explosion hazards of ammonium nitrate fertilizer require further research and investigation. Further technical knowledge must be required regarding the handling and storing of ammonium nitrate and all other chemicals of this nature, and further research investigations are necessary to develop effective methods for fighting fires involving chemical materials of this character to afford proper protection to our firemen in the performance of their duties. A large number of firemen were killed during the fire fighting operations at Texas City.

We are living in a chemical age in which the discovery of new chemicals is of almost daily occurrence. The fire and explosion characteristics of many of these new chemicals is not known. The investigations of the Texas City disaster indicate that it would not have occurred had those handling the shipping and dealing with harbor regulations known that under certain conditions the fertilizer materials with which the French ship was loaded would explode with such terrible force. This matter is of vital importance and urgency to the entire Gulf coast area of Texas and Louisiana and the congested areas of the Atlantic seaboard, where so many great chemical industries are located, and it is also of importance to every section of the Nation. In this day and time chemicals of one kind or another are stored in warehouses in every city, town, and hamlet of the Nation, and are being handled and transported daily.

Realizing the national importance of this matter, I have today introduced H. R. 4356, which authorizes and directs the President, in order to provide technical and research assistance to the fire-fighting services of the Nation in fighting fires involving explosive materials, to establish, equip, and maintain a research laboratory to conduct researches and investigations on the explosion and fire hazards of chemicals, fertilizers, and agricultural materials, explosives, gases, dusts, and similar flammable and explosive materials endangering life and property, and for the development of effective safety measures for the prevention of explosions and fires in chemical, agricultural, and other industries and in shipping areas where flammable and explosive materials are being handled in shipping and transportation.

Some years ago the gentleman from Illinois [Mr. DIRKSEN] did some fine work promoting the establishment of a small research organization in the Department of Ariculture on dusts, explosives, and fire prevention. Much good resulted from the work of that organization. I feel certain that he, as well as many others of you, are vitally interested in the objectives of this bill.

The bill would provide a Government agency which could and would serve the fire departments of our Nation in much the same way as the FBI now serves the law-enforcement agencies, by acting as a clearinghouse of information in making scientific tests to determine the causes of fires and explosions and in disseminating information concerning the latest approved fire-fighting methods and techniques—particularly in dealing with fires and explosions caused by chemicals. Such a program would save untold millions of dollars' worth of property and safeguard the lives of our firemen as well as the general public.

As stated previously, I introduced this bill at this time with the thought that between now and the convening of the second session of this Congress next January, ample time will be afforded for the study of this bill by the fire departments, fire-prevention associations, industrial research organizations, Government agencies, and others interested in the subject.

In introducing this legislation, I am following out the recommendation of the President's Conference on Fire Prevention held in Washington last May in which it was recommended that continuous research in the field of scientific development and in human behavior with respect to fire and safety to life is essential in order to provide the latest information for intelligent fire-prevention work and for the modernization of law, ordinances, and regulations.

This bill would authorize the President to cooperate with State agencies and institutions, counties, cities, business organizations, universities, technical, and scientific societies in the establishment of research and service programs to promote full cooperation among Federal and State agencies, manufacturers, industrial organizations, labor, fire services, and the public in research on fire and explosion prevention.

Taking Sex Out of Pay Checks

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mrs. DOUGLAS. Mr. Speaker, why should women be discriminated against?

Why should women be paid less for doing the same work that men do?

This is neither just nor equitable.

The following is an article by Malvina Lindsay which appeared in the Washington Post on November 12, 1946. This is what she had to say on the matter:

TAKING SEX OUT OF PAY CHECKS

(By Malvina Lindsay)

The old argument over whether a woman is worth as much as a man in the same type of job has been touched off again by the British Royal Commission's unfavorable report on the equal pay issue.

American women, who are rallying their forces for a drive on the next Congress for an equal pay bill, had been happily thinking that opposition to their cause had gone the way of the dodo. In hearings on the bill in the last Congress, not a single witness appeared to protest. The bill was reported favorably in both Houses, but missed a floor vote in the legislative jam before adjournment.

Now, women leaders in the equal-pay fight are on the alert to rebuff any echoes of the Royal Commission's pronouncements that might drift here. British women workers, who tangled early in the war with Prime Minister Churchill on this issue, also are vigorously continuing their fight, despite their set-back.

Women's organizations and unions pushing the equal-pay bill have not as yet sighted

any definite opposition in the new Congress. But they well know there are some Congressmen, and some employers, secretly eager to roll on their tongues the Royal Commission's phrase "unsound in principle" when the equal-pay issue comes up. Also, they recognize that a conservative tide is running.

What is more, if England, sorely pressed for workers, can hold out against equal pay for women, opposition in this country would likely come out in the open if a business recession brought a drop in employment. That is why Labor Secretary Schwellenbach has advised the equal-pay proponents to strike while they have the power.

The familiar argument that men workers are more adaptable and versatile than women figures in the Royal Commission's report. This largely ignores the extent to which machinery is taking over the heavy work in industry. Moreover, the equal-pay proponents are asking only that a woman be paid for what she produces, that she receive the same pay as a man when her job content equals his. Industry committees would set up work standards and judge job performance.

They cite particularly the injustice of paying men more than women to teach school, fit shoes, sell goods, be clerks, secretaries, supervisors, operate drill presses, do mechanical work in which skill is more important than strength.

Some British employers gave adverse testimony before the commission against women as compared with men workers. Probably they were of the old-fashioned type, prevailing more generally in England than in America, that finds women employees extra trouble in their need of rest rooms, dressing room, special safety and hygienic precautions, and even tactful handling. But modern industry is recognizing that men workers need conveniences and understanding direction quite as much as women, and increase their output when they have these.

At the back of much opposition to equal pay for women is the tradition that women are dilettantes who work for pin money, and are not so urgently in need of pay checks as men. Yet 75 to 80 percent of all working women support themselves, and in most instances contribute to the support of others. The last census showed women the sole support of more than 5,000,000 families. This is increased now, due to war's toll.

Equal pay proponents are now stressing that the removal of sex discrimination from pay checks is urgently needed to protect men workers and the whole national economy. If women have to undercut men in wages to stay in the business world, men's wages and jobs will be imperiled.

Also, lower wages for women mean lower living standards, less consumption and buying. American production, when it gets into high gear, will need above all, purchasing power—unless 1929 is to be repeated.

I have introduced a bill, Mr. Speaker, which provides equal pay for equal work for women.

I hope this bill will have the attention it deserves from the Republican leadership of the House.

For the convenience of the Members, I include at this point in my remarks the text of the bill:

A bill providing equal pay for equal work for women, and for other purposes

Be it enacted, etc.—

PURPOSE AND TITLE OF ACT

SECTION 1. (a) The Congress hereby finds that the existence in industry of wage differentials based on sex is an inequity in compensation standards which constitutes an unfair wage practice and (1) leads to labor disputes; (2) depresses wages and living standards of employees, male and female; (3) interferes with and prevents the maintenance of an adequate standard of living by such workers and the families dependent on them for support, and in particular has serious detrimental effects on the standard of living of families of deceased or disabled veterans; (4) prevents the maximum utilization of our available labor resources and plant capacity essenttial for full production, and (5) endangers the national security and the general welfare, and thereby burdens, affects, and obstructs commerce.

It is hereby declared to be the policy of this act, through the exercise by Congress of its power to regulate commerce among the several States, to correct and, as rapidly as possible, to eliminate discriminatory wage practices against women based on sex.

(b) This act may be cited as the "Women's Equal Pay Act of 1947."

PROHIBITION OF WAGE-RATE DIFFERENTIALS BASED ON SEX

SEC. 2. It shall be an unfair wage practice for any employer engaged in commerce or in transactions or operations affecting commerce—

(a) to discriminate in the payment of wages between the sexes by paying wages to any female employee at a rate less than the rate at which he pays wages to male employees, except where such payment is made pursuant to a seniority or merit increase system which does not discriminate on the basis of sex—

(1) for work of comparable character on jobs the performance of which requires comparable skills; or

(2) for comparable quality and quantity of work on the same or similar operations; or

(b) to lay off or discharge or in any other manner discriminate against any employee because such employee has filed any charges or instituted or caused to be instituted any proceeding under or related to this act, or has testified or is about to testify in any such proceeding, or has served or is about to serve on an industry committee.

ADMINISTRATION

SEC. 3. (a) The Secretary of Labor may, subject to the civil-service laws, appoint such employees as he deems necessary in order to carry out his functions under this act, including an Administrator, and shall fix their compensation in accordance with the Classification Act of 1923, as amended.

The Secretary may utilize the service of Federal, State, and local agencies and may establish and utilize such regional, local, or other agencies, and utilize such voluntary and uncompensated services, as may from time to time be needed. The Solicitor of the Department of Labor may appear for and represent the Secretary in any litigation, but all such litigation shall be subject to the direction and control of the Attorney General.

(b) The Secretary shall have authority to make such expenditures (including expenditures for personal services and rent at the seat of government and elsewhere, for lawbooks and books of reference, and for paper, printing, and binding) as he may deem necessary for the administration and enforcement of this act.

(c) The Secretary of Labor shall have authority from time to time to make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of this act and to issue rulings, interpretations, and bulletins relative to the scope, meaning, and application of this act which shall be entitled to recognition as being prima facie valid in judicial proceedings hereunder.

(d) The Secretary shall submit annually a report to the Congress covering his activities for the preceding year, including such information, data, and recommendations for further legislation in connection with the matters covered by this act as he may find advisable.

INVESTIGATORY POWERS

SEC. 4. For the purpose of all hearings, surveys, inspections, and investigations, which, in the opinion of the Secretary, are necessary and proper for the exercise of the powers vested in him by this act—

(a) The Secretary or his duly authorized agent shall at all reasonable times have access to, for the purpose of examination, and the right to copy any evidence of any person being investigated or proceeded against that relates to any matter under investigation or in question, and shall have power to issue subpenas requiring the attendance and testimony of witnesses and the production of any evidence that relates to any matter under investigation or in question, before the Secretary or his duly authorized agent conducting the hearing or investigation. The Secretary or any agent or agency designated by him for such purposes may administer oaths and affirmations, examine witnesses, and receive evidence. Such attendance of witnesses and the production of such evidence may be required from any place in the United States or any Territory or possession thereof, at any designated place of hearing.

(b) In case of contumacy or refusal to obey a subpena issued to any person, any district court of the United States or the United States courts of any Territory or possession, or the Supreme Court of the District of Columbia, within the jurisdiction of which the inquiry is carried on or within the jurisdiction of which said person guilty of contumacy or refusal to obey is found or resides or transacts business, upon application by the Secretary shall have jurisdiction to issue to such person an order requiring such person to appear before the Secretary or his duly authorized agent, there to produce evidence if so ordered, or there to give testimony touching the matter under investigation or in question; and any failure to obey such order of the court may be punished by said court as a contempt thereof.

(c) No person shall be excused from attending and testifying or from producing books, records, correspondence, documents, or other evidence in obedience to the subpena of the Secretary, on the ground that the testimony or evidence required of him may tend to incriminate him or subject him to a penalty or forfeiture; but no individual shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter, or thing concerning which he is compelled, after having claimed his privilege against self-incrimination, to testify or produce evidence, except that such individual so testifying shall not be exempt from prosecution and punishment for perjury committed in so testifying.

(d) Complaints, orders, and other process and papers of the Secretary or his duly authorized agent, may be served either personally or by registered mail or by telegraph or by leaving a copy thereof at the principal office or place of business of the person required to be served. The verified return by the individual so serving the same setting forth the manner of such service shall be proof of the same, and the return post-office receipt or telegraph receipt therefor when registered mail and mailed or telegraphed as aforesaid shall be proof of service of the same. Witnesses summoned before the Secretary or his duly authorized agent shall be paid the same fees and mileage that are paid witnesses in the courts of the United States, and witnesses whose depositions are taken and the persons taking the same shall severally be entitled to the same fees as are paid for like services in the courts of the United States.

(e) All process of any court to which application may be made under this act may be served in the judicial district wherein the defendant or other person required to be served resides or may be found.

(f) The several departments and agencies of the Government, when directed by the President, shall furnish the Secretary, upon his request, all records, papers, and information in their possession relating to any matter before the Secretary.

RECORDS AND REPORTING

SEC. 5. Every employer subject to this act or to any order issued under the act shall make, keep, and preserve such records of the persons employed by him and of the wages and wage rates thereof, job classifications, and other terms and conditions of employment maintained by him, and shall preserve such records for such periods of time, and shall make such reports therefrom as the Secretary shall prescribe by regulation or order as necessary or appropriate for the enforcement of the provisions of this act or the regulations or orders issued thereunder.

ENFORCEMENT

SEC. 6. (a) The Secretary is empowered as hereinafter provided to prevent any person from engaging in any unfair wage practice as provided in this act or any order issued thereunder. This power shall be exclusive and shall not be affected by any other means of adjustment or prevention that has been or may be established by agreement, code, law, or otherwise.

(b) The Secretary, or his duly authorized agent, on his own motion or a charge to that effect, shall have power to issue and cause to be served upon any employer a complaint stating that the employer has engaged in or is engaging in an unfair wage practice in violation of this act or any order issued thereunder, including any provision of any order issued pursuant to section 7 (c) of this act, and containing a notice of hearing before the Secretary or before a designated agent, at a place therein fixed, not less than 10 days after the serving of said complaint. Any such complaint may be amended by the issuing officer or the designated agent conducting the hearing at any time prior to the issuance of a final order based thereon. An employer upon whom such complaint has been served shall have the right to file an answer to the original or amended complaint and to appear in person or otherwise and give testimony at the time and place fixed in the complaint and, where the complaint alleges violations of an order issued under section 7 (c) of this act, shall have the right, by a timely pleading, to assert any defense which he may have against the application of such order to him. In the discretion of the issuing officer or the designated agent conducting the hearing, any other person or organization having a substantial interest may be allowed to intervene in the said proceeding and to present testimony. In any such proceeding the rules of evidence prevailing in courts of law or equity shall not be controlling.

(c) If, upon all the testimony taken, the Secretary shall be of the opinion that any person named in the complaint has engaged in or is engaging in an unfair wage practice in violation of this act or any order issued thereunder, he shall state his findings of fact and shall issue and cause to be served on such person an order requiring such person to cease and desist from such violation and to take such affirmative action, including reinstatement of employees with or without payment of back pay, as will effectuate the purpose of this act. Such order may further require such person to make reports from time to time showing the extent to which he has complied with the order. If, upon all the testimony taken, the Secretary shall be of the opinion that the person named in the complaint has not engaged and is not engaging in such an unfair wage practice, he shall state his findings of fact and shall issue an order dismissing the said complaint as to him.

(d) The Secretary shall have power to petition any circuit court of appeals (including the United States Court of Appeals for the District of Columbia) or, if all the circuit courts of appeals to which application might be made are in vacation, any district court of the United States (including the United States District Court for the District of Columbia), within any circuit or district, respectively, wherein the unfair wage practice in question occurred, or wherein the person in violation resides or transacts business, for the enforcement of such order and for appropriate temporary relief or restraining order, and shall certify and file in the court to which petition is made a transcript of the entire record in the proceeding, including the pleadings and testimony upon which such order was entered and the findings and the order of the Secretary.

Upon such filing, the court shall cause notice thereof to be served upon such person, and thereupon shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to grant such temporary relief or restraining order as it deems just and proper, and to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the Secretary. No objection that has not been urged before the Secretary or his duly authorized agent shall be considered by the court, unless the failure or neglect to urge such objection shall be excused because or extraordinary circumstances. The findings of the Secretary as to the facts, if supported by substantial evidence, shall be conclusive. If either party shall apply to the court for leave to adduce additional evidence and shall show to the satisfaction of the court that such evidence is material and that there were reasonable grounds for failure to adduce such evidence in the hearing before the Secretary or his duly authorized agent, the court may order such additional evidence to be taken before the Secretary or his duly authorized agent, and to be made a part of the transcript. The Secretary may modify his findings as to the facts, or make new findings, by reason of additional evidence so taken and filed, and he shall file such modified or new findings, which, if supported by substantial evidence, shall be conclusive, and shall file his recommendations, if any, for the modification or setting aside of his original order. The jurisdiction of the court shall be exclusive and its judgment and decree shall be final, except that the same shall be subject to review by the appropriate circuit court of appeals if application was made to the district court as hereinabove provided, and by the Supreme Court of the United States upon writ of certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

(e) Any person aggrieved by a final order of the Secretary granting or denying in whole or in part the relief sought may obtain a review of such order in any circuit court of appeals of the United States in the circuit wherein the unfair wage practice in question was alleged to have been engaged in or wherein such person resides or transacts business, or in the Court of Appeals of the District of Columbia, by filing in such court a written petition praying that the order of the Secretary be modified or set aside. A copy of such petition shall be forthwith served upon the Secretary, and thereupon the aggrieved party shall file in the court a transcript of the entire record in the proceeding, certified by the Secretary, including the pleading and testimony upon which the order complained of was entered and the findings and order of the Secretary. Upon such filing, the court shall proceed in the same manner as in the case of an application by the Secretary under subsection (d), and shall have the same exclusive jurisdiction to grant to the Secretary such temporary relief or restraining order as it deems just and proper, and in like manner to make and enter a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part; the order of the Secretary as to the facts, if supported by substantial evidence, shall in like manner be conclusive.

(f) The commencement of proceedings under subsection (d) or (e) of this section shall not, unless specifically ordered by the court, operate as a stay of the Secretary's order. The court shall not grant any stay of the order unless the person complaining of such order shall file in court an undertaking with a surety or sureties satisfactory to the court for the payment to the employees affected by the order, in the event such order is affirmed, of the amount by which the compensation such employees are entitled to receive under the order exceeds the compensation they actually receive while such stay is in effect.

INDUSTRY COMMITTEES

SEC. 7. (a) With a view to eliminating unfair wage practices in violation of section 2 of this act, the Secretary or his duly authorized agent may appoint an industry committee for each industry or subdivision thereof in which such practices may exist. The provisions of section 5 (b), (c), and (d) of the Fair Labor Standards Act shall govern the establishment, functioning, and procedure of such industry committees.

(b) The appropriate industry committee in the designated industry or subdivision thereof shall consider the problem of eliminating wage-rate differentials based on sex in the industry as well as any particular questions relating to this problem that the Secretary, or his duly authorized agent, may propound. The Secretary, or his duly authorized agent, may require such industry committee to study and report on practices related to the training for employment of persons of either sex, as such practices affect their ability to qualify for and obtain jobs in such industry at wage rates customarily paid to the opposite sex. To this end the committee may conduct investigations and may hear witnesses and receive evidence. It shall report findings and make recommendations to the Secretary, or his duly authorized agent, which in its judgment will eliminate or tend to eliminate wage-rate differentials based on sex. Such findings and recommendations may include evaluations of job content, job classifications, standards for training and employment, and appropriate wage-rate ratios between job classifications or defined units of work.

(c) The industry committee shall report to the Secretary, or his duly authorized agent, its findings and recommendations with respect to the matters referred to it. On the basis of the report and recommendations of the industry committee and subject to section 4 of the Administrative Procedure Act (Public, No. 404, 79th Cong., 1st sess.), the Secretary, or his duly authorized agent, may frame one or more orders to carry out the purpose of this act in the industry or subdivision thereof, which may include provisions prohibiting employers in the industry or subdivision thereof to which the orders may be applicable, from engaging in any practices which the Secretary finds may result in the commission of an unfair wage practice as defined in section 2 of this act. The Secretary or his duly authorized agent may reconvene the industry committee or appoint a new industry committee in the same industry at any time.

(d) Due notice of any hearings before an industry committee may, and before the Secretary, or his duly authorized agent, shall, be given in the Federal Register and may be given by such other means as the Secretary deems reasonably likely to give general notice to interested persons.

CRIMINAL PENALTIES

SEC. 8. Any person who shall (a) willfully resist, prevent, impede, or interfere with any

officer, employee, or agent of the Department of Labor in the performance of his duties prescribed by this act or (b) willfully violate section 5 thereof, or who shall make any statement, report, or record filed or kept pursuant to the provisions of such section or of any regulation or order thereunder knowing such statement, report, or record to be false in any material respect, shall, upon conviction therefor, be subject to a fine of not more than $5,000 or to imprisonment for not more than 1 year, or both.

GOVERNMENT CONTRACTS

SEC. 9. Unless the Secretary shall otherwise determine and permit in an order issued by him, no contract shall be awarded by the United States or any agency thereof to any person found to have violated any of the provisions of this act or to any firm, corporation, partnership, or association in which such person has a controlling interest, until 3 years have elapsed from the date when it is determined that such violation has occurred. The Comptroller General is authorized and directed to distribute a list to all agencies of the United States containing the names of such persons.

DEFINITIONS

SEC. 10. When used in this act—

(a) The term "person" includes one or more individuals, partnerships, associations, corporations, legal representatives, trustees, trustees in bankruptcy, or receivers.

(b) The term "employer" includes any person acting directly or indirectly in the interest of an employer in relation to eight or more employees, but shall not include the United States, or any State or political subdivision thereof, and shall not include any labor organization, except when acting in the capacity of employer.

(c) The term "employee" includes any individual employed by an employer.

(d) The term "wages" means all remuneration for the performance of service for an employer by an employee whether paid by the employer or another, including the cash value of all remuneration paid therefor in any medium other than cash.

(e) The term "wage rate" means the basis of remuneration for the performance of services by an employee for an employer and includes time, piece, commission, or any other basis of remuneration.

(f) The term "unfair wage practice" means a practice in violation of the provisions of section 2 or an order of the Secretary issued under the authority of section 7 of this act.

(g) The term "commerce" means trade, traffic, commerce, transportation, or communication among the several States, or between the District of Columbia or any Territory of the United States and any State or other Territory, or between any foreign country and any State, Territory, or the District of Columbia or within the District of Columbia or any Territory, or between points in the same State but through any other State or Territory or the District of Columbia or any foreign country.

(h) The term "affecting commerce" means in commerce, or burdening or obstructing commerce, or the free flow of commerce, or having led or tending to lead to a labor dispute burdening or obstructing commerce or the free flow of commerce.

SEPARABILITY

SEC. 11. If any provision of this act or the application of such provision to any person or circumstance shall be held invalid, the validity of the remainder of the act and the applicability of such provision to other persons or circumstances shall not be affected thereby.

Veterans' Legislation

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. MACKINNON. Mr. Speaker, attention should be directed at this time to certain veterans' legislation upon which action has not been taken during this session. I refer particularly to the bill to increase the subsistence allowances to students under the GI bill and to modify the on-the-job-training limits and to my bill, H. R. 3974, to authorize the RFC to acquire GI home loans. I feel that both these bills are necessary to a well rounded veterans' program and am hopeful that when the Members return they will bring with them a conviction that this legislation is necessary.

An Appreciation—And To Keep the Record Straight

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. MURDOCK. Mr. Speaker, I cannot let pass this opportunity to express my appreciation to the leadership of the House and to my colleagues on the committee for the support given me in this session toward the passage of H. R. 1597, known as the Gila reclamation project bill. Hearings were held this spring by the committee, toward the very end of the session at a time when the program was crowded. Had it been necessary to present Arizona's side of the whole Colorado River controversy, much more time would have been devoted to the hearings. Therefore, the committee was considerate in reporting on the bill without such extensive hearings as were held in the last session on a similar bill. By moving swiftly and taking advantage of every opportunity to have final action on the bill—which was only possible through the consideration and consent of the leadership—the measure was brought to the House and passed on July 23 in the closing hours of the session. In view of the tremendous significance of this legislation, the people of Arizona and of the Nation have reason to be grateful as I am grateful for all help given.

And now to keep the record straight, let me comment on some matters connected with this Gila bill which undoubtedly will be referred to later in connection with other measures for reclamation in the lower basin of the Colorado River. I notice in the Appendix of the CONGRESSIONAL RECORD, pages A3715–A3716, our colleague the gentleman from California [Mr. POULSON] extended his remarks under the title "Colorado River Controversy Should Be Settled in the Courts," in which the gentleman put forth his views, with some of which I differ. It is to point out these differences that I wish to conclude this statement. Congressman POULSON, in the first two paragraphs of his extension, has indicated the basis of the controversy. I must take direct issue with him in his statements in the third paragraph, especially with these sentences, "But Arizona, after vigorously supporting the Mexican treaty, is not willing to stand the consequences of her generosity" and "She is desirous of improving her economy, even though, to get more water from the Colorado put to use within her borders, she must invade the water supplies long set apart by contracts made by the United States for projects in California." I have repeatedly said that to supply the Gila project with the water required for it will in no wise take from California any of the water which is rightfully hers. The gentleman himself practically concedes that fact, showing plainly that he is afraid other legislation may harm California.

Furthermore, it is my contention and my firm conviction that when the Gila project is fully developed under the law which we passed on July 23, the treaty burden of water to be furnished Mexico can be furnished without the harmful effects which the gentleman from California assumes to be inevitable. He chides Arizona for supporting the water treaty with Mexico, but he must be aware that because of that treaty there are some distinct benefits to our country which will benefit each and every one of the seven Colorado River Basin States, as well as the whole Nation. Yes, supplying that quantity of water to Mexico will be a burden, but the burden will be lessened and minimized by the proper handling of the newly developed Gila project which our recent enactment makes possible. The secret of this benefit coming from the Gila project through lessening the treaty burden is that a large share of Mexico's water can be furnished her after it has been used for irrigation in the United States on the Gila project. Accordingly, there will be just that much less of the very scarce and precious water which must be supplied Mexico out of storage on the river. That fact has an important bearing on later developments on the river.

Further on in the statement of Congressman POULSON, he quotes a part of the committee report on the Gila bill and leaves the impression that the language of the report was unanimously adopted. Before quoting the two paragraphs from the report, our California colleague says, "After full deliberation, the subcommittee unanimously adopted and the full Public Lands Committee approved and placed in its report the following statement: * * *". This would indicate that both the bill and the report were unanimously voted. Not so. I voted for the bill but not for all the language of the report quoted because part of it was superfluous and part had no bearing on the bill.

Having been present at the closed session of the Subcommittee on Irrigation

and Reclamation which considered this bill on Saturday morning, July 12, sending the bill to the whole Committee on Public Lands, and also having been present at the Public Lands Committee's open session on July 14, which reported the bill to the House, I feel it my duty to make a statement for the record. Now, these are the pertinent facts: The subcommittee on July 12 did vote without a dissenting voice to recommend the Gila bill to the main Public Lands Committee. On July 14 the Public Lands Committee in open session, as the record will show, did vote to recommend the bill to the House without a dissenting voice. Please note that in both votes just mentioned the unanimous vote was on reporting the bill without a change in language. But this is not to say that any specified language in a report was accepted unanimously. The language of the bill itself was approved unanimously, but not all of the language put into the report was unanimously approved. I myself protested the language of the report quoted by Congressman POULSON, and voted against it. Why did I oppose that language?

I think it is hardly fair to say that the subcommittee after full consideration and debate agreed upon the language which is quoted from the committee report. When I myself heard suggested language that this water controversy between Arizona and California should be settled by court determination, I protested the use of such a statement on the ground that it was not germane to this bill—and for other reasons. One of the other reasons was that the subcommittee hastily suggested that language for a tentative report, had not heard Arizona's side of the whole water controversy. Another reason was because there was need for haste if this emergency bill was to be enacted this session, and because the passage of the Gila bill did not involve all the legal technicalities of the whole water controversy between Arizona and California, I and the Arizona witnesses had not seen fit to present Arizona's side of the total controversy. Our feeling all along has been that existing law is sufficiently clear to be carried out without any need of Supreme Court action. Therefore, I feel that a clever attempt was made by opponents of another bill to have the committee prejudge a case which did not involve this bill, but rather involved another bill which was not before the committee, and therefore the language was illogical and not germane.

Therefore I protested against the suggested language and voted against its being made a part of the report in the subcommittee. However, the vote carried to include it as an expression of opinion of a majority of the committee. The proceedings of the full committee on July 14 are a matter of record. The language of the tentative report was not read at that time. I want to make clear that the unanimous vote in both cases, that is, in the subcommittee on July 12 and the full committee July 14, was to recommend that the bill be passed as it passed the Senate. I at no time approved the language in the report which recommended court action as the final means of solution of this problem in controversy between Arizona and California, if agreement could not be reached by the two States. I feel that if full and complete hearings of both sides of this question could be had by the committee, legislation could supplement existing law, and no court action would be necessary.

A Novel Journalistic Undertaking

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. LUDLOW. Mr. Speaker, Eugene C. Pulliam, owner and publisher of the Indianapolis Star and one of the foremost of the progressive editors of the country, and Mrs. Pulliam, left New York last Tuesday on the first leg of an airplane trip around the world that will be unique in journalistic annals. Their trip will embrace every continent and will include 28 countries.

Their first stop was in England, where they were guests in a brief visit with our former colleague, Lewis W. Douglas, of Arizona, and his family. Their itinerary includes other European countries, the Near East, Africa, and South America and they will return via Miami, reaching Indianapolis on October 5. On November 17 they will start on the second leg of the trip, which will include China, Japan, and the Philippines.

What makes the reportorial mission of Mr. and Mrs. Pulliam especially novel is that they are going as private citizens, wholly detached from any official connection, and they will get most of their information entirely outside of official channels. Consequently, it may be expected that the series of articles which they plan to write on their return will present a true picture of the thinking of the masses of the people of the countries which they visit. They will make their own independent investigations, unhampered by official barriers. Mr. Pulliam will get the views of people on the streets, in the factories, and on the farms. Mrs. Pulliam will concentrate on interviews with women.

They want to know what the people themselves think of America. Are the people of the totalitarian countries totalitarians by choice or do they have a concept of freedom, however feeble it may be? Do they regard Uncle Sam merely as a generous Santa Claus, whose leg is to be pulled at every convenient opportunity, and what becomes of the money we are spending for rehabilitation? They will try to find out what the people of the world think of America's new foreign policy, as outlined in Secretary Marshall's program. Are Americans as unpopular as they are represented, or is there in the hearts of the people of foreign lands the basis of world accord?

Arrangements for the tour were made with meticulous care, if I may quote from a letter I received from a good friend of the editor a few days ago. It is recalled that Tom Marshall once complimented President Wilson by telling him that he—Marshall—was the President's only vice. Mr. Pulliam's only vice is smoking and this friend says that he saw to it that supplies of smokes are sent to him in advance at various stopping places so that he will never be out of his favorite brand of cigars.

It is conceivable that the articles which will be written by these two excellent reporters, Mr. and Mrs. Pulliam, will be of more aid to Congress and the State Department than a dozen high-powered governmental missions, by giving a truer view of world opinion than would be possible under official auspices. If those who have the capacity and the facilities to do likewise will follow the example of Mr. and Mrs. Pulliam the problems of the Congress and the diplomats will be simplified and differences which menace the peace of the world will begin to fade away in an atmosphere of mutual understanding.

The Little Foxes

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph and Stewart Alsop appearing in the Washington Post of July 25, 1947:

THE LITTLE FOXES

(By Joseph and Stewart Alsop)

The country is due for a barrage of pious platitudes about the accomplishments of the departing Congress, from partisans who wish to paint a charming picture. There will be a holy silence, however, about one feature which has been as conspicuous as it is uncharming. In the presence of lobbyists, the Eightieth Congress of the United States has behaved like a blowzy chorus girl just starting on her second pint of rye.

The fact is vitally important, and not merely to the American progressives who can hope that the triumphs of the lobbyists today will prepare for the triumphs of progressivism tomorrow. Sensible American conservatives must realize that holding a lobbyists' carnival at the Capitol is not a wise way to serve long-range conservative interests. Yet at this session, something very like the beginning of a lobbyists' carnival has been plainly discernible.

"You can't take a deep breath around here," remarked one disgusted Republican Senator, "without getting a lung full of utilities lobbyists."

Although the large ranchers, real estate, wool, and one or two other lobbies have been rather more conspicuously successful, the best introduction to what has been going on is the story of the blatant power lobby.

The power lobby is the most active, and most conspicuously well-heeled in Washington. Its grand panjandrum, the high-powered P. L. Smith, representative of the National Association of Electrical Companies, gets a salary in the Hollywood class—

$65,000 annually, with an ample expense account. But even the prosperous Smith is less important than the numerous officials of the large utilities companies. These converge on the Capitol at frequent intervals to make the boys on the Hill see the power question in "the old, free-enterprise way." And behind these larger operators there is a whole network of lawyers with retainers from the utilities, bankers with deposits from them, and other influential figures. These speak from the voting districts to Washington with voices of authority.

Besides stirring up the sordid attack on David E. Lilienthal, the power people have scored major successes at this session with the Appropriations Committees. These committees are a natural field of operations, because of their views on public power held by the two chairmen, roaring old JOHN TABER, of New York, and his more slick opposite number in the Senate, STYLES BRIDGES, of New Hampshire.

Through the Appropriations Committees, in fact, the Federal power program has been put into a slow stall, by snipping here and chopping there at vital projects. The great Bonneville project, for example, is so undermaintained and overloaded that the transformers are literally being cooled by having hoses played on them. Yet the Bonneville construction funds were cut almost in half, and the funds for operation and maintenance reduced from $4,700,000 to $2,500,000. Thus the present thoroughly dangerous condition will continue.

Again, extension of power supply from the Shasta Dam to several important California municipalities was neatly prevented by the simple deletion of funds for a transmission line. And the Southwest Power Administration, which has to contend with especially strong political counterinfluences in its Texas-Oklahoma-Arkansas area, also had its funds for transmission lines drastically cut. Thus the benefits of the national investment in the Denison and Norfork Dams, on the Red and White Rivers, will be denied to many potential power users.

These achievements at the present session are obviously intended, however, to be only the hors d'oeuvres—the little snacks at the beginning of a much larger meal. For the first time in a good number of years, the more unenlightened utilities leaders have been openly trying to put the clock back with legislation. The result has been a crop of strikingly significant bills—the Rizley bill, to free natural gas from regulation; the Dondero bill, to limit sales of public power and to deprive the public power-minded Interior Department of its jurisdiction; the Thomas bill, which would have the effect of forbidding Government construction of any further transmission lines; and the bills of Representative MILLER, of Connecticut, which would liberate from regulation large numbers of utilities companies now regulated.

None of these bills has yet passed. But this does not trouble the power people. Their strategy obviously is to put on their real pressure drive later on, when the election is over and, as they hope, an intensively conservative Congress will listen to them even more complacently. In that happy period, the body of Federal power legislation is to be revised.

The public power advocates among Federal officials are to be quietly dropped down the political oubliette. And everything is to be as it was before the hated name of Roosevelt was heard in the land.

Fortunately, such Republican leaders as Senators VANDENBERG and TAFT show none of the responsiveness of the congressional rank and file to these "little foxes that spoil the vines." But as the party of business, the Republicans have got a very big, very difficult decision to make because of this onslaught of the little foxes upon Washington.

Clare Hoffman, Patriot

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. KNUTSON. Mr. Speaker, a Michigan friend has sent me an editorial from the News-Palladium, a most excellent daily paper with a wide circulation, published at Benton Harbor, Mich., by Stanley Banyon and a corps of top-notch newspapermen.

The editorial is entitled, "Hoffman in Washington." It reads:

HOFFMAN IN WASHINGTON

The Washington columnists seem to be finding out new things about our one and only Congressman—CLARE E. HOFFMAN—almost daily.

The other day we were reading the trivia of one of these space fillers and he made quite a piece out of the fact Mr. HOFFMAN doesn't have any pockets in his coat.

The reason, according to this writer, is that when the Fourth District Congressman makes a speech he has a habit of flailing his arms and hand through the air and if there were pockets in his coat he might encase his hands in these receptacles, to the great detriment of the effectiveness of his speech.

Well, maybe this is just as good an explanation for the absent pockets as any that we've heard, including the one that none of the HOFFMAN garments possess a pocket and therefore the Congressman can't carry any "jack" around and therefore isn't tempted to spend any.

(As a downright fact all HOFFMAN pants—at least those we've seen—do contain pockets and when it comes to campaigning, he does spend his own money.)

Another bit of Washington chit-chat we picked up was that our CLARE was seen in downtown Washington asking a stranger the location of one of the best known hotels. The inference of this, apparently, that despite the 12 years he had been in Washington this Michigan solon still doesn't know his way around.

We don't know how well the Congressman knows downtown Washington, but he sure knows his way around the Capitol. And he isn't lost in the House—or in rough and tumble debate. For better than a decade he ceaselessly needled the Roosevelt regime until the New Dealers prayed nightly some misadventure would take him home to his ancestors. Strangely enough—or was it, in view of what Jim Farley has been writing—HOFFMAN was on very friendly terms with the orthodox Democrats of the House.

Outside of Senator VANDENBERG, HOFFMAN is probably better known at large than any other member of the Michigan congressional delegation. He's been dubbed a labor baiter, an insolationist, and generally "an aginner." But we never heard even his angriest enemy charge that he talked one way and voted another. In every campaign he tells the voters if they don't like him they should fire him and get a "new hired man." His best friends defend him, but they can't explain him.

He's a showman with a bunch of firecrackers thrown in, just to add a dash of pepper to the ensemble.

Certainly, Mr. HOFFMAN is probably as well known over the country as any Member of the House, and his renown is due to his many sterling and outstanding attributes.

This is my thirty-first year in Congress and those who have been here since our popular colleague joined us in 1935 know of his courageous fight against the New Deal; his persistent insistence at all times—sometimes when some grew tired of it—that we should adhere to constitutional government and avoid foreign entanglements which many Members predicted would get us into difficulties which might imperil our future welfare, even our security.

We, in Congress, have no difficulty in explaining HOFFMAN, even though, as the editorial states, "His best friends can't explain him."

We know him to be a sincere, hard-hitting, indefatigible working servant of the people, whose almost sole interest is in preventing the dissipation of our national resources and the undermining of those principles of government which have made our Nation supreme.

His colleagues need no explanation of CLARE E. HOFFMAN. They take him as he is—an honest, hard working, intelligent, patriotic American trying to do his job well; and he has succeeded to a marked degree.

The Eighth Person

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Harding College Monthly Letter of July 25, 1947:

THE EIGHTH PERSON

Did you know that you're working 10 days out of every month for the Government? Well, you are. That is the extent to which we have allowed activities of the Government to grow. Perhaps, as a nation, we can see that the business of government has expanded. But when we get to looking at the books, the chances are we find a good deal more mushrooming than we imagined.

Look at this another way. If you may be considered an average person, you pay taxes at the same rate as if your employer paid you no wages 10 days out of each month, but instead paid the check over to the Government. This comes from the fact that right now Federal, State, and local taxes consume about one-third of all the dollars earned in the United States. That's a burden on our necks that merits attention.

Now, don't think you can get out of this by pleading innocent. You're just a wage earner, you say? Not a high-bracket man who turns over three-fourths of his net income to the Government? Sure, you know the take is high, but you say he's the man who does the squawking? Listen. While you may not be paying directly your 10 days of wages to the Government, you're paying just the same. The bill is made out every fiscal year, and you are helping pay it.

Whether you pay that much directly or not, you are sharing the burden of the costs of Government. This bill is made out to the Nation, and you're part of America; aren't you? If perchance somebody pays more of

this bill than you do, just remember that your share comes back to you.

Where does all this money go, you ask? Of course, we have a lot of expenditures in Government, besides paying salaries and other kinds of allowances to individuals. Yet one out of every eight workers in America in 1939 drew his salary from the Government. Leaving the city and the State governments out of the picture, it is estimated that one out of every eight persons in the country is on the Federal pay roll right now in one form or another.

Stand eight average people together—one of them gets a check regularly from Uncle Sam. Amazing, isn't it? And remember, you are footing the bill. This includes civilian employees, those receiving old-age assistance, veterans, dependents of veterans, those in the Army, Navy, and Coast Guard. This is a total of more than 16,000,000 people receiving monthly checks from the United States Government.

This means that every seven persons must supply a check for the eighth each month. It is indeed a difficult task to decide where we'd like to start cutting. But we must, or our Nation is in definite danger. If we do not, we shall be in the position of the Roman Empire, which lasted only little more than 400 years. Rome had too many folks on her pay roll. She soon was dust. Historians are saying America has already begun to decline. I will not agree with this viewpoint, provided we come to our senses.

It is not easy to say, Whoa! It is difficult to get out from under tax burdens once they're yoked upon us. But we must adopt a definite policy of reducing Government expenditures. We must set free our industry, and investment capital as well, from the overburden of taxes. We must have genuine prosperity. And when we keep asking the Government to spend, let us remember that power-out-of-purse is soon power-out-of-hand. It's an easy but sure way to national ruin.

Report to the People of the State of Arizona on the First Session of the Eightieth Congress

EXTENSION OF REMARKS

OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. HARLESS of Arizona. Mr. Speaker, it was quite evident when the Eightieth Congress convened that there were wide and divergent views and opinions prevailing as to the fundamental issues affecting the domestic and foreign affairs of our Nation. As this session has progressed, these various attitudes and concepts have crystallized into legislative form. We have had some far-reaching laws adopted since January 3, 1947, and there are other matters pending which are of equal magnitude and must be resolved in the second session of this Congress.

In this brief summary of the accomplishments of the Eightieth Congress, I shall, as near as possible, confine my remarks to those matters which more or less affect the people of Arizona and their relationship to the Nation and the world.

WATER LEGISLATION

Of prime importance to the people of Arizona is the legislation now pending with respect to the waters of the Colorado River. One major accomplishment for Arizona was the passage of the Gila-Wellton-Mohawk irrigation project. This has been the first major irrigation project adopted by Congress, which establishes a project irrigated by the waters of the Colorado River, since 1937. This tract of land comprises some 75,000 acres located near Wellton and Mohawk in Yuma County.

Still pending in Congress is the bill filed by each member of the Arizona delegation which would bring water into central Arizona from the Colorado River. Many routes have been proposed for the diversion of this water. However, after a survey by the Bureau of Irrigation and Reclamation it has been determined by Arizona authorities, indicated in this bill, to construct a dam at Bridge Canyon in order to provide electricity. Due to the excessive costs of construction at this time, it has been proposed that the tunnel which would divert the water from the proposed Bridge Canyon Dam to a canal some 70 miles south of Bridge Canyon be temporarily substituted by a pump lift to be installed at Parker Dam. This pump lift will bring the water to the canal at a point which would intersect with the proposed tunnel, thus carrying the water in the planned canal to a point north of Phoenix at Granite Reef Dam. This project has been approved by the engineers of the Bureau, and pertinent evidence has been taken before the subcommittee of the Senate Committee on Public Lands. It is the next major project to bring Colorado River water onto Arizona soil. Arizona can expect active opposition to this project because of the interest of other States.

Legislation has been proposed to litigate the rights of various States to the Colorado River. Bills are pending in both the House and Senate which would require the Attorney General of the United States to interplead all of the States of the Colorado River Basin into a lawsuit in order to determine the water rights of each respective State of the basin.

Efforts will be made by various interests to force the issue on this proposed litigation, before the further consideration of Arizona's rights and claims to Colorado River water.

The rights of Arizona to Colorado River water will be further pressed in the second session of the Eightieth Congress.

It is not only essential to acquire Arizona's share of the Colorado River water as soon as possible but it is likewise extremely important to secure Arizona's share of the electricity produced at the dams on the Colorado River as early as possible. Electricity as well as water means additional wealth for our State.

AGRICULTURE

Hardly had the Eightieth Congress convened when the Nation was shocked with the discovery that an epidemic of hoof-and-mouth disease had broken out in our neighbor nation of Mexico. There were indications that traces of the disease had been found in the United States. It was quite evident that it was necessary for the United States to cooperate with Mexico in the eradication of this disease, otherwise every herd of cattle and other known cloven-hoofed animals in our country would be threatened with this disease. Emergency legislation was passed, and appropriations were made for this purpose, and the work is now under way. In order to protect our land from an invasion of the disease and to guard against unlawful activities on the border, I introduced a bill (H. R. 1460) which would require the State Department to complete a fence along the United States-Mexican boundary.

It is my considered opinion that the Eightieth Congress has been penny-wise and pound-foolish in agricultural matters. It is evident in this Nation that our natural resources are dwindling. Conservation of such is one of our chief problems. Unfortunately the majority group in Congress has seen fit to cut drastically the appropriations for soil conservation. This same majority group has also materially reduced appropriations for the support-price program for agricultural products.

Also of prime importance to the people of Arizona was the passage of the Wool Bill. It was unfortunate that the bill which originally passed Congress contained certain tariff features which made it necessary for the President to veto it. However, the subsequent bill which was enacted into law will protect the wool growers of America by means of the support-price program. It is of vital interest to the State of Arizona.

MINING

Along with agriculture, one of the main sources of income in Arizona is mining. During the war, unfortunately, the price of copper was stabilized too low at the fixed price of 15 cents per pound. Mines were permitted to apply for premiums, if it could be shown that the cost of production was greater than the fixed price of 15 cents per pound. There is an extreme shortage of copper in the country. In order to assure a sufficient supply, the Congressmen of the western mining States compromised with the Congressmen of the eastern manufacturing States and removed the copper tariff for 2 years. However, there was a concerted effort on the part of certain interests to abolish permanently premium-price payments to copper, lead, and zinc producers. I am pleased to report that the premium-price legislation has passed Congress, and this program will be continued for a period of at least 2 years. It guarantees the miners of copper, lead, and zinc a profit. It means salvation for small mine owners and continued employment for many thousands of workers; it means increased prosperity for Arizona.

During the war many small mine owners in the United States were encouraged to make investments in order to increase production. Express and implied contracts were made by Government agencies with many of the mine owners in

order to encourage them to do exploratory work and increase their production. Some of these mine owners stood a chance to lose heavily unless they were reimbursed for these investments which were carried out at the insistence and request of the War Production Board or other Government agencies. In order to protect these small mine owners adequately and justly I introduced H. R. 1285, which authorizes prompt settlement of these claims by the Government.

At the beginning of World War II it was quite evident that our Nation was short of strategic metals and minerals. We had no stock pile of such materials as copper, lead, and zinc. In order to insure our country against a recurrence of this unfortunate condition I introduced H. R. 1284, which establishes a Mineral Resources Division within the Department of the Interior. This Division is empowered to carry on experimentation, investigation, and other research in order to encourage the production of strategic metals and minerals in this country. It authorizes this Division to create stock piles of metals and minerals which are in short supply.

I also introduced H. R. 1246, authorizing the Reconstruction Finance Corporation to make mining, milling, or smelting loans. It is my sincere hope that these last three measures will be adopted by Congress at the earliest possible time in order to insure the healthiest possible conditions in our mining industry, and the adequate national defense of our country.

INDIAN AFFAIRS

Although I am not a member of the committee handling Indian affairs, I have been concerned with their welfare for many years and have recently made an extensive study of Indian matters, particularly those relating to the Navajos. I have found some conditions which I sincerely hope will be corrected in the near future. Out of more than 60,000 Navajos, less than 20,000 of them can speak the English language. They are living in a condition of destitution and possible starvation, because of the improper treatment they have received in the past. With the cooperation of the newspapers it has been possible to arouse the interest of the people of Arizona and the Nation in the plight of the Indians; we have already made considerable headway.

I have conferred with the Commissioner of Indian Affairs and have presented various aspects of the Indian problems on the floor of the House of Representatives. Through my efforts, a bill has been modified to give citizenship to all Indians who are born in the United States in the future. I firmly believe that the Indians of our Nation have been woefully neglected, and it is now time to adopt a policy to make these native Americans full-fledged citizens capable of living a happy and constructive life in America. My efforts toward this end will be relentlessly pushed.

Through my efforts, the Department of Agriculture has approved the furnishing of surplus commodities, particularly potatoes and other vegetabes, to the Indians in order to supplement their meager diet.

EDUCATION

At the beginning of 1947, one of the great disasters of our Nation was the deplorable scale of wages paid to the teachers in our schools. I have been vitally interested in the enactment of legislation granting Federal aid to education. I sincerely believe that in the near future Congress will see fit to adopt this measure. I have been helpful, through my committee, the House Committee on Interstate and Foreign Commerce, in enacting the bill for creating a National Science Foundation. Due to the ravages of the war on the youth of our country, we are faced with a woeful shortage of trained scientific and technical personnel. The National Science Foundation will do much to overcome this handicap.

I have been deeply interested in the School Lunch program, and I am pleased to report that it has been continued for another year.

This Congress has enacted into law the continuation of supplementing educational funds for war-swollen communities which have not yet adjusted to overgrown conditions brought about by the shifting nature of postwar activities. Due to the great increase in the population of Arizona communities, it has been necessary to aid our communities in the construction of school buildings and educational facilities. I have worked diligently with the Federal Works Agency and War Assets Administration in getting funds, equipment, and buildings to supplement existing facilities. This has all been done in wholehearted cooperation with the educators of Arizona with the view of supplementing their splendid efforts.

NATIONAL DEFENSE AND FOREIGN POLICY

During these critical times, when the world is still explosive and in a state of readjustment from war to peace, it is important to keep the people of our country informed on the progress of matters affecting their security and national defense.

Our President is to be complimented on the appointment of such capable and respected men as Marshall, Eisenhower, Lewis Douglas, and others to key positions to guide our international affairs.

The world picture has changed so rapidly, and it has been necessary to keep our foreign policy up to the minute. We have been dealing with elements in the world which are unpredictable. We must be prepared to meet any eventuality, and this preparation must of necessity affect our Armed Forces. I am pleased to report that the Eightieth Congress has passed a bill merging our armed forces and setting up all the Department of Defense under one Secretary. We now have a Department of War, Navy, and Air Forces, all operating under a single Secretary of National Defense. This has been brought about by the relentless and consistent efforts of President Truman. In order to keep abreast of the times and prepare our country properly for the dangers that ars lurking in the world today, the President has urged Congress to enact legislation which will train every young man to defend our country.

There are various views on how this program should operate. Whatever program is adopted, I sincerely hope that it will not interfere with the schooling and home life of the American youth. This legislation has not yet been enacted. Our study will continue. It will probably be considered in the second session of the Eightieth Congress.

LABOR AND TAXES

Two of the major conflicting issues in the first session of the Eightieth Congress were Labor and Taxes.

The matters affecting labor-management relationships were temporarily disposed of in the Taft-Hartley labor bill. It has been my contention that, although this bill contains several desirable features, it has some provisions which will soon aggravate friction between labor and management. However this is now the law of our land and we must adhere to it until the representatives of the people find it necessary to alter it. Although the adoption of a Constitutional Amendment outlawing the closed shop by the voters of Arizona may be considered a mandate of the people on this subject, I sincerely believe that the majority of the people of Arizona would not have wanted many of the punitive and restrictive features of the Taft-Hartley Bill. There are already indications that this bill cannot bring about industrial peace. Since this bill was adopted, Arizona has experienced one of the greatest strikes in its history in the construction trades.

The second controversial issue of prime importance to the people of our State and Nation was the reduction of taxes. I voted to sustain the President on his veto of the bill which would reduce taxes in 1947, because I sincerely believed the people were willing to pay taxes which the country still needed during this year. Although I do not like some of the features of the second bill, to reduce taxes in 1948, as passed by the House and the Senate and vetoed by the President, it was my firm belief that it was the best tax bill that this Congress would pass. Under existing conditions, I believe the people of this Nation are entitled to have relief from the wartime taxes which were imposed upon them. Therefore, I voted for the reduction of taxes in 1948.

I realize that many other issues have been acted upon and by necessity will receive further action in the second session of the Eightieth Congress. Space limitations preclude a discussion of these matters at this time.

DEPARTMENTAL WORK

Along with the legislative duties, a Congressman is engaged in other duties which are of prime importance. In order to obtain justice and rights for the people of Arizona, it is frequently necessary to contact the various Departments of the Government in order to adjust matters affecting individuals, groups, municipalities, counties, and the State.

It has been my duty to be in frequent contact with the White House and the many other departments of Government which have a bearing on the interest of our people.

I have frequently contacted the Civil Aeronautics Administration and Civil Aeronautics Board with reference to

various matters affecting Arizona people. Of particular importance has been the establishment of feeder air-line service in Arizona and the Southwest. It is hoped that this problem will be satisfactorily resolved in the near future. These activities were a natural supplement to my work as a member of the Civil Aviation Subcommittee of the House Committee on Interstate and Foreign Commerce. I also introduced H. R. 1245 which provides for a national system of air markings for the facilitation, encouragement, and safety of aviation.

In the matter of disposition of surplus properties located in Arizona, I have had frequent contact with the War Assets Administration. It has been my aim to preserve as near as possible for useful purposes such properties as Luke Field, Fort Huachuca, and other surplus installations.

I realize that there are many subjects and matters which are of interest to the people of Arizona that cannot be treated here. I always welcome comments and observations of the people from back home which will enable me to represent Arizona in accordance with the wishes of its people.

The Tragedy of Poland

EXTENSION OF REMARKS

OF

HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the National Broadcasting company's publication, Talk, on the Tragedy of Poland. It is a vivid and unbiased portrayal by the former American Ambassador to Poland, the Honorable Arthur Bliss Lane:

THE TRAGEDY OF POLAND—OUR SO-CALLED LIBERALS ARE LIBERAL IN CONDONING, UNDER SOVIET DOMINATION, WHAT THEY FORMERLY CASTIGATED UNDER NAZI DOMINATION

(By Arthur Bliss Lane in his first broadcast after resigning as Ambassador to Poland)

Recently, I submitted to President Truman my resignation as Ambassador to Poland. As ambassador I could not properly discuss publicly the Polish situation. Feeling it my duty to give the facts to the American people, I asked the President to relieve me of my post so that I could write and talk freely regarding the tragedy of Poland.

The tragedy of Poland is in reality a series of tragedies. The first tragedy was the signature of the nonaggression pact between Nazi Germany and the Soviet Union in August 1939. World War II was the result. The tragedy of the weeks following the conclusion of this pact resulted in the complete military defeat of the heroic Polish Army against a far greater foe.

The next tragedy was the conclusion of the treaty of September 1939 between Nazi Germany and the Soviet Union, partitioning Poland. This destroyed all semblance of Polish independence. Concentration camps at Majdeneck, Oswiecim and Buchenwald, soon became notorious for their infamies, their refined and unrefined tortures, their asphyxiations and cremations. Over 3,500,000 Jews perished in those camps.

The next tragedy was started by the insurrection of the people of Warsaw against the Nazi invader on August 1, 1944. This insurrection was encouraged by exhortations from the Soviet radio. It was waged under the most difficult conditions and was a glorious page in Polish history. All of that part of Warsaw occupied by the insurrectionists was subjected to terrific bombardment from the air and by artillery. Thousands of Poles were killed, maimed, and rendered homeless. But to the Pole, physical suffering is not a major factor in life. To him, freedom and liberty mean far more than absence of physical hardship.

But the greatest tragedy which the Poles suffered during this insurrection was that no help came from the Soviet forces. At that time, they were only a few miles away, on the east of the Vistula River, which runs through Warsaw. The Poles could not believe that their ally, on whom they had counted, failed them. Finally, after 63 days, they were forced to surrender. Food, arms, and ammunition had given out and the moral tragedy of surrender was followed by a terrible physical tragedy. The Nazis forced all inhabitants of Warsaw to leave the city. The city was then destroyed from the ground by incendiary bombs—house by house, block by block. Only buildings used by the Nazi officials were spared. Warsaw was left the worst ruined city of Europe. The destruction was due not to military necessity, but to diabolical vengeance. This did not kill the spirit of the Poles. They still looked to the Red armies for the liberation of Poland. They expected they would have a government of their own choosing. Instead, a committee, hand-picked by the Soviet Government, was set up in Lublin as the governing body. This committee was recognized by the Soviet Union as provisional government of Poland, in January 1945.

The United States Government had asked that recognition should be delayed until the Yalta Conference should meet. Our request was refused. Then came the Yalta Conference in February 1945. It, too, was a tragedy for Poland. It did not definitely provide that a democratic form of government should be established. It gave merely the assurance that free and unfettered elections would be held. That promise has not been kept. According to the Yalta decision, conversations were to be held at Moscow between the three powers to reach an agreement on the setting up of a Government. No agreement was reached. Why? Because Soviet Russia wished no agreement except on its own terms.

As soon as the newly-formed National Provisional Government of Poland arrived in July 1945 there was immediate talk of elections. In August 1945 President Bierut assured members of a congressional committee of the United States that it would not be possible to hold elections during the winter because of difficulties of transportation. The President indicated that the elections would be held in the spring or early summer. Although a referendum was held on June 30, 1946, it had no relation to the elections. The falsification of the counting of votes in the referendum and acts of intimidation indicated that the same practice would be used in the elections. The Communist-controlled government was playing for time. The elections were not held until January 19, 1947, in the midst of the most severe winter which Poland had experienced in 15 years.

Many peasants were unable to vote because of transportation difficulties. It is significant to bear in mind this situation in view of President Bierut's statement to our congressional committee, almost 1½ years previously, that elections could not be held fairly during winter conditions.

There is no use in my repeating what the United States Government has already stated in its notes to the Soviet and Polish Governments regarding the intimidation, coercion, and violence which characterized the preelection period. It is significant, however, that the notes protesting the preelection activities were delivered prior to, and not subsequent to, the elections. This shows that, even if the voting and counting of votes had been fair and correct, the elections would not have represented the free will of the Polish people. How can one blame the father of a family for voting the Government list if he was threatened with the loss of his job and of his living quarters? In many cases he was so threatened unless he agreed to sign manifestos which were circulated, expressing approval of the regime in power.

Far more cruel methods of intimidation were also employed. Many persons were brutally beaten by the police to persuade them to change their political allegiance. Many were arrested. Others were forced to remain in ice-cold water up to their hips until they agreed to vote the government ticket or until they collapsed. The Polish people has been suffering treatment of this sort since the inception of the provisional government.

The conditions of which I speak were not confined merely to the preelection period. The same terror of a knock on the door in the dead of night, exists today as it did during the Nazi occupation. But today when a person is removed to secret police headquarters there is often no certainty in the minds of his family where he is detained or whether he is dead or alive.

An additional tragedy is the passage on February 20, of what is known as the "Little Constitution." This concentrates the control of Poland in a series of state councils presided over by a national council in Warsaw with supreme control over the lesser councils. It is a virtual establishment of Soviet rule without mentioning the word "Soviet." This constitution legalizes the ruling of the country by decree. It virtually destroys the power of Parliament. Even though the Parliament was illegally elected, it had been hoped that it would be a check against despotic measures such as censorship and political arrests. This is clear indication that the so-called democracy and freedom which our Government promised the Polish people, has been rendered void. Through the decision of the Communist-controlled puppet government, with the backing of its masters in Moscow, we now know that free speech and free elections have been made impossible.

What shocks me is that persons in the United States, who hide under the cloak of liberalism, should give the impression that the people in Rumania, Bulgaria, Yugoslavia, and Poland are enjoying a democratic way of life under Soviet domination. These so-called Liberals are indeed liberal in one sense—liberal in condoning, under Soviet domination, what they formerly castigated under Nazi domination.

To us freedom-loving Americans, intimidation, physical torturing, arrests, and murders for political purposes are abhorrent. Let us have no hesitation in condemning such crimes against humanity, whether they be committed under the emblem of the swastika, the hammer and sickle, or under the emblem of the crownless Polish eagle, which is today the symbol of the tragedy of Poland, and which can well be the tragedy of us all if it is to be permitted to proceed unchecked.

Work, Remedy for a Sick Nation

EXTENSION OF REMARKS
OF

HON. DONALD L. O'TOOLE
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. O'TOOLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of His Eminence Francis Cardinal Spellman, at the luncheon of the New York Building Congress, held at the Hotel Astor, New York City, on Tuesday, May 27, 1947:

Belief in my fellow Americans, belief in their common sense to do a common job for their own common interests, which are synonymous with the common good of America, and faith in their determination to go forward together, to live and to work together, impel me to appear before you today and speak to you as I do. Solicitude for my country, for the welfare and peace of my fellow countrymen as well as the fear of a common danger, urge we to present for your heedful consideration some observations which I believe to be all important to the survival of each and every American and to the unity of America itself.

I come before you, a son of the soil of America, begot from the loins of sons of toil that have helped make our country great. Fortified by the feeling that you believe in my love of this America, I am assured that you will consider my reflections with friendly ears and open minds.

It is a great and grave mistake to assume that any one class of Americans is naturally and inevitably hostile to any other class, that the wealthy and the workingman, employers and employees, are destined to live in mutual conflict. Citizens by birth or choice of a common country, we have in war and in peace fought together in common causes against common dangers, shared common sorrows and sufferings, triumphed in common successes. The independence and liberty which we now possess are the works of combined councils and united efforts, resulting in mutual benefits. This unity is the source of our strength, the core of our liberty, the foundation of peaceful living—and these we must guard with zealous, jealous anxiety and affection, for our own survival, for our children's protection, and in memory of those who worked, fought, and died to purchase for us this peace and freedom.

On many occasions, through the years, and throughout the world, I personally have known, seen, and heard well-meaning people do honor to men who faced and solved the great problems of the past, while, paradoxically, they decried and denounced those who were trying to meet the problems of the present in the same spirit which inspired the successful solution of similar crises of other times. What use for us to pay lip-loyalty to the mighty men of the past unless we sincerely endeavor to apply to the situations of the present the qualities which enabled them to meet those crises?

Forecasting America's struggles and difficulties even unto our own day, it was Abraham Lincoln who foresaw their solution. "I hold that while man exists it is his duty to improve not only his own condition, but to assist in ameliorating mankind," he said. "Labor is prior to, and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital and deserves much the higher consideration."

That was Lincoln's caution to the capitalist. But, in his wisdom, charity, and justice, never did he see or argue one side unmindful of the other, an invaluable example for us to follow in the evaluation and recognition of human rights—the very issue which confronts us today.

Now, then, let us give equal heed to his warning to the workingman. "Capital," Lincoln said, "has its rights, which are as worthy of protection as any other rights. * * * Nor should this lead to war upon the owners of property. Property is the fruit of labor * * * property is desirable; it is a positive good in the world. * * * Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

With Theodore Roosevelt, I believe that:

"Property shall be the servant and not the master of the commonwealth and the citizens of the United States must effectively control the mighty commercial forces which they have themselves called into being. I recognize the right and duty of our generation to develop and use the natural resources of our land; but I do not recognize the right to waste them, or to rob, by wasteful use, the generations that come after us. I ask of the Nation that it behave as a good farmer behaves with reference to his own children. That farmer is a poor creature who skins the land and leaves it worthless to his children. The farmer is a good farmer who, having enabled the land to support himself and to provide for his children, leaves it to them a little better than he found it himself."

And I believe that this same principle applies to every man within a nation.

Every man should have a fair chance to make of himself all that in him lies; to reach the highest point to which his capacities can carry him and to get for himself and his family substantially what he has earned. This equality of opportunity means that the Nation will get from every citizen the highest service of which he is capable. The right to regulate the use of wealth in the public interest is universally admitted. But let us admit also the right to regulate the terms and conditions of labor, which is the chief element of wealth, in the essential interest of the common good for the common man.

In the interests of the workingman himself we need to set our faces like flint against mob violence just as against corporate greed; against violence and injustice and lawlessness by wage earners just as much as against lawless greed and selfish arrogance of employers. If I could ask but one thing of my fellow countrymen, my request would be that whenever they go in for reform, they remember the two sides, and that they always exact justice from one side as much as from the other."

Not new words these, but words that down through the years have lived to give the lie to all who would deny that in unity reside the strength, wealth and peace of our United States and all its varied people, who, living and working as one, have made and kept our country one. Yes, the words belong to others, but in full accord with the ideas and ideals set forth and all they mean, I make them mine. And I hope and I believe they are the ideals of every American living within the grand and glorious framework of our Constitution and its Bill of Rights.

Especially should these principles be practiced today when we are in a period where not only employer and employee alike, but our very country itself and every man within it, suffer from shortages and stoppages which threaten our economic strength and stability. Many people feel it imprudent to make commitments for capital expenditures because of rising costs of both labor and materials, and, as a result, a great number of projects, involving hundreds of millions of dollars, have been abandoned or postponed. I believe if this policy is continued and extended it can lead only to the stalling of the wheels of our domestic economy, resulting in stagnation and depression. It is based on a premise, not necessarily true in fact, that prices are bound to come down and that the withholding of enterprise will aid beneficially in the process. Whether or not this is true no one can say with any degree of assurance. It seems to me, however, that the thinking that leads to such a conclusion necessarily precludes the most fundamental principle in American life—the will to go forward to happiness, prosperity, and victory, united by confidence in America's destiny. To delay longer or retrench will not alone impede prosperity but invite inflation, deflation, stagnation, and defeat.

For myself, I am determined to go forward, though I have made it a rule—and steadfastly observed it throughout my life—personally never to spend $100 unless I had $100, and officially, as Archbishop of New York, never to undertake the construction of a building unless I had on hand half the amount of money necessary for its completion. It is unprecedented for me to break this rule established by myself for myself, and go counter to the advice of those who counsel me to wait until the cost of construction drops. I have decided to break my own rule, determined to act contrary to those who have bid me wait, because I believe that this crisis in the life of our Nation is a challenge to all men who love America to come forth and help her. Yes, America has need of us and I want to be among the first to give further proof of my abiding trust in the high worth of our people, their industry, thrift, courage, and determination to continue in the American way of life. This faith, with my faith in God, I yield to no man. If this country's economy is to be weakened or destroyed by catastrophic influences I do not want to stand supinely by and watch its downfall. I do not endorse any such philosophy of fear. If such there is, and if justified even in the slightest degree, I do not want to retire to an ivory tower and there in anguish bemoan the coming of an evil day. Rather, I want to take my place in the front ranks and fight to counteract defeatism as well as the false economic theories that challenge our true destiny. I abhor defeatism. Mine is the philosophy of action. I would emulate the intrepid Foch: "My center gives way, my right recedes. The situation is excellent. I shall attack."

And today I call not upon a few, but upon all, not alone upon the citizens of New York City but of every city and every State; I call upon all to unite in attack on this most vital problem which affects us all alike, for we are all Americans, and our common concerns are as broad as our beloved continent. Let us rouse ourselves and help, lay our shoulders to the wheel, for the prosperity of our people and the welfare of our Nation are at stake. Let it be told to future generations that in mutual hope and trust, every true and loyal American, alarmed at one common danger, came forth to meet and to resolve it. The burden and solution of the problem belongs jointly to all. It matters not where you live, or what rank of life you hold, be you rich or poor, Negro or white, Protestant, Jew, or Catholic, employer or employee, by your works you must prove your faith in your country and your fellow humans. He who lags at this time, when cooperative action can save a whole people, is but a coward courting ultimate disaster. He whose heart is firm, and whose conscience approves his conduct, will go forward and pursue his principles even unto death.

My own line of reasoning is to myself as straight and clear as a ray of light. I put my trust in God and in man. I appraise this critical situation and see the remedy: Work based upon confidence, the one antidote to fear and panic—confidence in ourselves, our economy, and our country; work rendered to one another in mutual obligations, good will, good faith, and justice; work inspired by friendship and fellowship, dedicated, in the common concern of all Americans, to cultivate peace, not war, as the framework of society; work pledged, in a steadfast concerted effort to render a dollar's worth of service for a dollar fairly paid.

Through work, founded upon confidence in our country's destiny, America has recovered from every crisis that has threatened her. Therefore, with confidence I shall go forward and hope and pray that others, in equal confidence, will follow. Believing in me as a priest, thousand of Americans have entrusted to me in contributions and pledges, millions of dollars, with which to build churches, schools, hospitals, and other institutions. These funds I hold in sacred trust, and, as a proof of my own conviction in the rightfulness of what I have today presented and proposed to you, my fellow Americans, I do now give you my promise to expend $25,000,000 for buildings to be constructed within the archdiocese of New York. Next week ground will be broken for the Archbishop Stepinac High School which will cost $4,000,000 and for which we have on hand one million. I promise also to go forward immediately with the building of the Alfred E. Smith Memorial Hospital, which will cost $7,000,000 instead of the estimated three which have already been subscribed. I promise to begin construction on the New York Foundling Hospital, which will cost $3,000,000, for which, after the sale of the old institution, the payment of debts and the acquisition of a new site we shall have available $600,000.

All this do I promise because I have faith that the good will and good works of capital and labor, of employer and employee, of all Americans of every station in life, will be commensurate with my own, herein pledged and proven.

Danger of Proposed American Authors' Authority

EXTENSION OF REMARKS

OF

HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. DOMENGEAUX. Mr. Speaker, under unanimous consent to extend my remarks, I include an analysis of the proposed American Authors' Authority by the board of directors of the American Writers' Association, which is composed of outstanding authors of this country who are interested in maintaining their literary and individual freedom and are justly opposed to the communistically proposed American Authors' Authority. I think it would be well that Congress acquaint itself with this nefarious program.

The analysis follows:

The plan to set up an Authors' Authority similar to Petrillo's authority over musicians, which was temporarily defeated last fall, has been brought forward again by the Screen Writers Guild of Hollywood.

This new plan is couched in cool legal language, but it gives the proposed Authority the same absolute power over the work of writers that was so dangerous in the first plan.

BACKGROUND

In the dog days of July 1946, James M. Cain sprang on an unsuspecting writing world the proposal for a so-called American Authors' Authority. The plan had been worked out by a committee of the Screen Writers Guild of Hollywood. The SWG passed a resolution in its favor and began a terrific pressure campaign to have it passed by the three other guilds constituting the Authors League: The Authors Guild, the Radio Writers Guild, and the Dramatists Guild.

The Cain plan proposed a centralized authority to represent all American writers (except those in daily journalism) in their business dealings with publishers, editors, and the radio and motion pictures industries. No distinction was made between the specialized problems of the screen writer, who is usually the salaried employee of a corporation, and the problems of free-lance writers, poets, novelists, or the author of a textbook. The whole scheme reflected a determination to put control of writers of all types, and the solution of the most diverse problems, into the hands of a single authoritarian body.

Almost overnight several hundred writers all over the country organized the American Writers Association to fight this dangerous proposal. An aroused public opinion recognized the danger to the free word and to creative independence. The threat of quick acceptance by the other guilds, under minority pressures, was for the time being averted.

There were some optimists, indeed, who thought that the plan was defeated—an illusion in which they were encouraged by widespread reports that it was being "revised" to meet the Nation-wide objections.

THE "REVISED" VERSION

Now the illusion is ended. An AAA committee of SWG has issued a special supplement to the April Screen Writer. This gives the proposed articles of incorporation and bylaws for the AAA, which turn out to be entirely in conformity with the original Cain document. More than that, when the plan is reduced to formal articles of incorporation and bylaws, the dangers of the scheme are even more starkly revealed. The Cain plan has not been revised, but simply translated into a legal document. Every one of the fears aroused by the original proposal is justified and, in some cases, deepened by the more detailed document.

Ten thousand copies of the supplement have been sent out by the SWG where they might do most harm. With a great show of Socratic objectivity, the controversial issues are taken up in question-and-answer form. Again the document appeals adroitly to grievances of the American writer, again without special reference to his particular field. The risks involved in monopoly control of all literary products are again dismissed casually.

The AAA plan does not give the American writer a vote in the authority. Nor does it give him any other direct means of influencing its actions. He would not be a member of the authority. He would not, in the accepted sense of the word, "join" it—he would merely submit to its ministrations. The Authority would protect him by becoming the legal trustee of his creative property, that is of his life and livelihood as a writer.

To be sure, the bylaws say any writer may withdraw his work from the Authority—but where will he peddle it? Once the author has assigned his legal rights to the Authority he has made his works unsalable elsewhere. Let there be no double talk on this score. The instigators of the plan make it very clear that they mean to control the market and to dictate to everyone concerned. "We think if we put our literary properties into a cage," says the supplement, "and make it difficult for them to get literary properties anywhere else, that eventually they (the publishers and producers) will get hungry enough to go in there where anybody could tie a bell on them." It does not add that, in a market thus centrally dominated, the meekest and most helpless of all would be the individual writer.

LEGAL POWERS

Let's break down the plan and look at some of the most important provisions. The heart of the proposed articles of incorporation is in the following paragraphs describing the purposes of the AAA:

"3. To hold in trust for the creators, the copyright, title and all forms of interest and ownership in, literary properties of all kinds, and to assign, deal in, transfer, dispose of, license, lease and grant interests and rights of all kinds in such properties.

"4. To act as trustee, representative, or in any other capacity on behalf of creators of literary properties and owners of interests therein, including, without limiting the generality of the foregoing, to take all lawful steps to preserve, enforce, and protect rights arising out of, or under, copyright, title, or other interests in literary properties, to sue, defend, arbitrate, enter into contracts, give quittances and releases."

In other words, the AAA, whose oligarchic form of organization we shall discuss later, is both a holding company and a closed shop. Whatever the arguments for the closed shop, there can be none in the field of creative effort.

The new plan, like the old, rests on a total surrender by the writer of his properties in his works. The authority, as the Screen Writer Supplement makes quite clear, would take legal ownership of both copyrighted and uncopyrighted works. It alone would close all financial deals, collect all funds, cut a slice from earnings and payments for its own uncontrolled use.

The author could not sign any contracts of his own choosing, and neither could his agent. He could not compel the authority to sign a contract; thus his works might lie unused and he could do nothing about it. He could not appeal to the courts because the authority—not he—would have legal title to his works.

CONTROL OF WRITERS' PROPERTY

The impudent totalitarian presumption of this scheme is incredible. No one in American labor has ever suggested that the AFL or the railroad brotherhoods should acquire legal title to the labor power of their members. No one has ever suggested that the United States Chamber of Commerce should demand legal title to the business firms of its members.

But the AAA demands just that. It demands legal title to the creative property of the writer. This then would enable the authority to control a substantial portion of the output of the country's writers. The centralization of so much power in one set of hands would be truly horrifying in the domain of creative thought and clashing ideas, where maximum independence for the individual thinker and creator, especially for the unpopular and nonconformist writer, is the essence of freedom. The danger of the misuse of such power to corrupt the writing craft and especially to intimidate the individual writer is obvious. Its leverage could be exerted for political and personal pressure to set the direction of writing on all issues, from atheism to Zionism.

It will be said "But the writer can stay out if he wishes." True, just as a musician can stay out of the Petrillo organization or a small business can stay out of a cartel which dominates its particular field. Once the authority is set up, even in part of the

writing field, the independent writer will be helpless against the slightest whim of the authority. With legal title to writers' works, the authority will attain controls which will enable it to dictate terms to leading publishers and producers, as well as the individual literary craftsman. Then the writer can stay out by starving or finding some other trade.

RELATION TO OTHER WRITERS' ORGANIZATIONS

Throughout their statement the planners assume that the present professional organizations of American writers—the four guilds, the Authors League, the American Pen Women, the American Writers Association—are unable or unfit to fight for the rights of writers and to protect their interests. Those are voluntary organizations, whose officers are elected by the direct vote of their members. Their members have a direct say in their management. It is this which the AAA would cure.

We of the American Writers Association believe that there is nothing the AAA can do for the American writer which his professional, voluntary, democratic organization cannot do better. We believe that the demand for the surrender of all writers' rights to an oligarchic machine is intolerable; we believe this authorization demand means intellectual suicide for creative writers.

The authority, according to its published plan, could conduct "battles" for "improvements in the copyright laws, separation of rights, revision of tax laws, protection of civil rights all on a scale that neither the individual guilds nor the Authors League itself is currently prepared to handle."

Some of these suggested improvements may be highly desirable. But, the Authority, being a monopolistic cartel, would have far less effect on Congress and on public opinion than the various professional organizations of writers, or individual writers. There is justified mistrust of great power aggregates. Monopolies engaged in lobbying hide behind as many voluntary organizations and individuals as they can corral. Pressure on Congress and other official bodies is obviously most effective when it comes from a multitude of organizations, interests and people, rather than from a single power center.

This also goes for contractual relations between writers and publishers, producers, radio stations and networks. The screen writers, let us say, may prefer to lease their creative properties instead of selling them outright. They can achieve this through their existing guilds, along democratic lines of collective bargaining.

An authority representing writers in all fields, concerned with purposes far removed from the specific conditions affecting the screen writer, and subject to the distrust that attaches to any cartel, cannot win for them advances so effectively as an organization of the screen writers themselves.

The dramatists guild has a program for protecting the rights of their members and improving their business relations. But playwrights are members of their guilds and have a vote and a say if they wish to exercise it. How could their position be improved when their guild is superseded by an overall authority not subject to control by its depositors?

Some of the professional organizations of authors and writers have neglected the economic interests of their members. Others have not been sufficiently active or firm. But that is not because their constitutions do not give the officials enough power; it's simply because they are badly run. One might as well propose that labor authority be set up to supersede all trade unions, or an industry authority to supersede all business organizations, because some unions and businesses do not measure up to their responsibilities.

ORGANIZATION

Now let's look at the actual organization, the electoral and administrative apparatus of the proposed AAA.

Who will actually run the AAA? The answer is a board of 17 governors, 4 elected by each of the 4 guilds with the president of the Authors League as ex officio chairman of the board. The actual administrator, Mr. Cain's tough mug, will be a national director, aided by an executive signatory who holds all the contracts. The director chooses his whole slate and the governors are free, Russian fashion, to vote for it, or not vote.

No writer can join or be a member of the AAA, as he can of a voluntary professional organization. He has no vote in the AAA, no voice in its administration, no legal, or for that matter, moral control of any kind. All he can do is to assign his property rights as a writer to the authority to handle as it pleases. Should the authority attain the monopoly over the written word which it seeks, all the writer can do if he does not like the way his interests are handled is to withdraw his property from the "trusteeship"—and sell it precisely where the dissenting writer used to sell it in Nazi Germany, which is nowhere.

In theory the members of a guild would have a shadowy influence twice removed through the four board members of their particular guild. In practice we know too well that such indirect control is worthless and therefore a species of make-believe and deception. But writers not in the guilds, or in other authors' organizations now existing or arising later, would not have even that theoretical shadow of influence. Many writers have refrained from joining the guilds or have resigned for reasons that they consider adequate; why should they be subjected to a monopoly dictation set up by others?

The proponents of the AAA assert that those writers who are not in any of the guilds (and they are the great majority) would be "like depositors who are not stockholders in the bank." The analogy shows their contempt for the intelligence of the American writer. Even the members of the various guilds would not be "stockholders" in the AAA, either in fact or analogy, because they are not members, and have no say in its operations. A depositor, when he withdraws his money from one bank, can put it in another. Where will the writer "deposit" his product when he withdraws it from the AAA in a market dominated by the AAA? The whole point is that the authority is organized as a monopoly and aims to become one in economic fact.

THOUGHT CONTROL

No matter how the scheme is disguised or what alibis for its excessive power and ambitions are advanced, the authority would be an oligarchy over the American writer. It would be in a position to exercise political as well as economic dictatorship. If, in two guilds, militant minorities elected the Governors they could take and hold control of the authority even though their total membership was a lot smaller than that of the other two guilds. Thus a small minority could have a strange hold on all literacy output. The very concentration of power would make possible, nay, inevitable, the use of this enticing leverage to favor ideological friends and silence undesirable and unmanageable writers.

The American Writers Association would be recreant in its duty to its members and to public opinion if it did not frankly point out that the AAA is the brainchild of communists and their fellow travelers in the Screen Writers Guild. The scheme is evil in itself and dangerous in the hands of any political group, right or left. Indeed, 17 angels led by a seraphic tough mug would be corrupted by the possession of so much authority in the realm of ideas. But it happens to be a notorious fact that those who hatched the plan and those most energetic in pushing it are of the pro-Communist persuasion.

This does not mean that anti-Communists and innocents have not been enlisted in the proposal. (It is only fair to say that Mr. Cain himself does not seem fully aware of the implications of the plan but to have been the carrier of other men's ideas.) Some writers are politically naive; the economic promises of the AAA to redress real grievances sound good to them. Anyone even slightly familiar with Communist and fellow-traveler techniques of domination knows how cleverly they exploit real problems and the good will of honest men.

The fact remains that the very AAA Committee of the SWG includes several open Communist Party members, a number of fellow travelers and a number of notorious "innocents." Let us repeat the warning of John Dos Passos, one of the great libertarian voices in American letters today, to his fellow writers:

"It is very much too bad (that) many American writers remain ignorant of and indifferent to the political movements that are shaping the world we live in. This ignorance is the main stock in trade of the fanatical Communists who do the work behind the Screen Writers Guild and the Hollywood center of pro-Soviet propaganda. They launched the AAA as part of a carefully worked out campaign, which has been partly successful, to take over the direction of American thought. The motivation of the non-Communist Hollywood writer involved was a little different, more that of the fox in the fable who had lost his brush and tried to induce all the other foxes to cut theirs off, too. Their ignorance of and indifference to politics have made them the willing dupes of the Communists in what is basically a campaign to destroy the American form of government and with it all free institutions."

We writers should be forewarned by the experience of the CIO, a typical example of political innocence. We see today the heroic struggle of its rank and file members to free themselves from control by a Communist minority through its transmission belts. It is a struggle which could have been avoided if the totalitarian minority had been headed off at the outset. Other organizations which have been similarly infected have faced the same heartbreaking struggle for liberation. It is easier to surrender democratic rights than to retrieve them.

Is it not absurd that American writers at this late date should fall victim to the same disease? The AAA plan, as now revealed in detail by its proponents, is ideally suited for capture and control by a tiny clique of self-perpetuating insiders. This is not an accident. We believe it was planned that way by people whose imaginations are fired by the vision of minority control of intellectual and creative life in this country.

The American Writers Association supports every measure that will help improve the position of the writer. For this very reason it is unalterably opposed to a devious effort to fasten on American writers a dictatorship over their property as writers and their functions as creative workers.

SUMMARY

Let us sum up:

1. The Authors Authority, as set up in the supplement to the March 1947 Screen Writer is not new or even revised. It is the original Cain plan in detailed organizational form. It meets none of the objections raised by writers throughout the country, obviates none of the dangers which alarmed American public opinion.

2. The proposed AAA aims to set up monopoly domination of the whole field of

writing, by making it impossible for publishers or producers to get material from writers except through their authority. This closed shop is an obvious threat, not only to the livelihood but to the creative and ideational independence of the individual writer.

3. A body exercising such immense power in the domain of ideas would possess a propaganda machine ready to put over on the American people any social philosophy or political program which it happened to favor; it would constitute a direct threat to the freedom of the whole Nation.

4. The AAA is so organized that it makes an ideal object for each capture and permanent control by a militant and highly disciplined minority among the great body of American writers.

5. Like all totalitarian undertakings, the AAA makes wide and handsome promises which it will be unable to fulfil and for which it exacts the price of virtual surrender of the free word. The existing writers' guilds and other writers' organizations can and should deal with the legitimate grievances being exploited by the proponents of the AAA. There is nothing such an authority could do for writers which writers cannot do better, and less dangerously, for themselves.

San Diego River and Mission Bay Project

EXTENSION OF REMARKS

OF

HON. CHARLES K. FLETCHER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. FLETCHER. Mr. Speaker, the San Diego River and Mission Bay project is both a flood-control and rivers and harbors problem. It is a project that is doubly justified because the Federal Government, having diverted the San Diego River to Mission Bay, should be responsible to some extent for the construction and maintenance of a satisfactory channel to the ocean. I should like to point out that under present conditions devastating periodic floods endanger highly developed areas, some of which are Navy and marine property. It would be possible to dredge Mission Bay to make it temporarily usable, but unless San Diego River is diverted to a separate outlet, the Mission Bay would continue to shoal by the deposit of silt. The project is very much needed to protect private property and life as well as being essential to the improvement of Mission Bay for navigation of small boats.

Under Public Law 525, Seventy-ninth Congress, second session, the Federal Government authorized the construction of a channel 3.3 miles in length, 800 feet wide, with capacity of 87,500 cubic feet per second; construction or reconstruction of three highway bridges, one railroad bridge, and two stone jetties into the ocean. The State of California has also authorized this project in chapter 1514, statutes of 1945. California has voted to cooperate with financial assistance totaling $1,826,000. It is estimated that the Federal Government will give total financial aid for flood control of $2,778,000, and additional aid for navigational features amounting to $3,080,000. With this State and Federal aid, the city of San Diego plans to complete the San Diego River Mission Bay project at a total estimated cost of $16,759,000.

I sincerely trust that the sum of $1,000,000, as requested will be appropriated in this bill by Congress for the preparation of plans and for the construction of this project.

Speaker Martin Accepts Honorary Life Membership in AMVETS

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. ANDREWS. Mr. Speaker, last evening in a beautiful Capitol Hill ceremony Speaker JOSEPH W. MARTIN, JR., took the oath of office as an honorary life member in the AMVETS—the veterans' organization which was recently chartered by the Congress.

The House Ways and Means Committee room was bedecked with flowers and ferns for the occasion. A brilliant 35-piece Army Air Forces Band was one of the highlights of the evening, under the direction of Major Howard.

AMVETS is the only veterans' organization of the recent war to be honored by the Congress of the United States in granting it a charter. It is a great organization and it is growing immensely in power and prestige. Those who witnessed the AMVETS ceremony honoring Speaker MARTIN will long remember it among their fondest memories. It was superb and wonderfully arranged.

I present herewith a printed form of the program and a few remarks that were made at the ceremony, as follows:

PROGRAM AT PRESENTATION OF HONORARY LIFE MEMBERSHIP TO HON. JOSEPH W. MARTIN, JR., SPEAKER OF HOUSE OF REPRESENTATIVES, BY AMVETS POST NO 19, HOUSE OF REPRESENTATIVES, WASHINGTON, D. C., FRIDAY, JULY 25, 1947, 8 P. M., WAYS AND MEANS COMMITTEE ROOM, NEW HOUSE OFFICE BUILDING

7:30 p. m., music by AAF Band.

8 p. m., America, by AAF Band, Major Howard, conducting.

Invocation by Rev. Dr. Bernard Brascamp, D. D., acting chaplain.

Investiture of post commander and vice commander by department AMVETS commander.

Band selection by AAF Band.

Master Sgt. Abrashal Robofsy, soloist.

Presentation of honorary life membership in AMVETS to Hon. JOSEPH W. MARTIN, JR., Speaker of House of Representatives, by Lucian Hunter, Jr., commander, and Allan M. Ames, first vice commander.

On presenting life membership scroll to Speaker MARTIN, Commander Hunter said:

"Speaker MARTIN, it is indeed a privilege and high honor for me on behalf of the Members of the House of Representatives AMVETS Post, No. 19, to present to you this scroll welcoming you into our organization.

"We know that your membership will be a great influence in aiding AMVETS to become the leading organization for the veterans of World War II."

First Vice Commander Allen M. Ames said:

"Mr. Speaker, it is a real pleasure and privilege for me on behalf of the members of this post to present you with this life membership card and to welcome you as a member of our organization."

Speaker MARTIN made a splendid speech expressing his gratitude for the honorary membership and wished AMVETS success and the best of luck.

Commander Hunter then introduced Hon. EDITH NOURSE ROGERS, chairman of the House Veterans' Affairs Committee, who substituted as guest speaker for Hon. SAM RAYBURN, minority leader of the House, who at the last minute was unable to attend the ceremony.

"We AMVETS like to think of Mrs. ROGERS as the adopted mother of the veterans. Because of her gallant crusade for those who served their country we feel that she has justly earned this recognition.

"It is indeed a pleasure to present the Honorable EDITH NOURSE ROGERS, chairman of the House Veterans' Affairs Committee, who will be our guest speaker of the evening."

Commander Hunter had this to say:

"It is indeed unfortunate, ladies and gentlemen, that the House of Representatives Post of AMVETS is not permitted to give but one honorary life membership per year.

"Former Speaker SAM RAYBURN has been a great friend of the veterans and we are deeply grateful to him for his efforts in our behalf."

The meeting came to a close with taps by Major Howard of AAF Band in honor of those who died in World War II.

Benediction by Rev. Dr. Bernard Braskamp, D. C., acting chaplain.

CHARTER MEMBERS, AMVETS POST, NO. 19, HOUSE OF REPRESENTATIVES, WASHINGTON, D. C.

Officers: Post commander, Lucien O. Hunter, Jr.; first vice commander, Allan M. Ames; second vice commander, William E. Brady; third vice commander, Karl Standish; adjutant, Richard G. Jefford; finance officer, Jack W. Watson; sergeant at arms, S. A. Morichetti; legislative counsel, J. H. Leib; chaplain, W. Howes Meade, master of ceremonies.

Charter members: Joseph L. Bowles, James C. Hunter, Richard A. Micheel, Millard B. Rice, Wesley H. Wilson.

HONORED GUESTS

Members of Congress: Hon. CHARLES A. HALLECK, House majority leader; Hon. LESLIE C. ARENDS, House majority whip; Hon. EDITH NOURSE ROGERS, chairman, House Veterans' Affairs Committee; Hon. WALTER G. ANDREWS, chairman, House Armed Services Committee; Hon. SAM RAYBURN, House minority leader; Hon. JOHN W. MCCORMACK, House minority whip.

Officers, House of Representatives: John Andrews, Clerk, House of Representatives; William F. Russell, Sergeant at Arms; M. L. Melettio, Doorkeeper; Frank P. Collier, Postmaster; The Rev. Dr. Bernard Brascamp, D. D., Acting Chaplain; James P. Griffin, Deputy Sergeant at Arms.

National Commander Raymond Sawyer: former National Commander and founder of AMVETS Elmo W. Keel; Andrew Kenny, one of the original founders of AMVETS; Commander of the District of Columbia Department, AMVETS, Robert Leahy; Regis Cole, executive secretary.

Ways and Means Committee room, through courtesy of Hon. HAROLD KNUTSON, Member of Congress, chairman, Ways and Means Committee.

Ushers: Head usher, Patrick Russo; Robert Olsen; William Bassett; Robert Dunn; James Suma; John Lippeatt; Edward Funston.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. EDWARD O. McCOWEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. McCOWEN. Mr. Speaker, under leave to extend my remarks and to include therein my report as chairman of Subcommittee No. 1, measures relating to education generally, on H. R. 2953, I may say that H. R. 2953 was reported from the Subcommittee No. 1 to the full committee by a vote of 6 to 2, and the report was filed with the full Committee on Education and Labor and is now on the calendar of that committee.

The following is the report:

FEDERAL ASSISTANCE TO THE STATES FOR THE PURPOSE OF FINANCING A MINIMUM FOUNDATION EDUCATION PROGRAM AND OF MORE NEARLY EQUALIZING EDUCATIONAL OPPORTUNITIES

Mr. McCOWEN, chairman, Subcommittee No. 1—Measures Relating to Education Generally, submitted the following interim report to accompany H. R. 2953:

The subcommittee of the Committee on Education and Labor, to whom was referred the bill (H. R. 2953) to authorize the appropriation of funds to assist the States and Territories in financing a minimum foundation education program of public elementary and secondary schools, and in reducing the inequalities of educational opportunities through public elementary and secondary schools, for the general welfare, and for other purposes, having considered the same, report favorably thereon and recommend that the bill be adopted.

INTRODUCTION

For a number of years committees of the House of Representatives have held hearings on proposals designed to extend and to make permanent Federal financial assistance to the States for the purpose of improving and equalizing public educational opportunities. The basic idea of Federal aid for public education is not new. From the early days of the Republic, Congress has provided such aid through allotments of public lands and grants of money for special types of education, vocational training, and to meet emergencies arising from economic depressions and wartime conditions. The primary questions, therefore, before the subcommittee have been to ascertain the extent of the need for Federal assistance and to determine how present needs could best be met.

Subcommittee No. 1 of the Committee on Education and Labor of the Eightieth Congress has held hearings extending over 16 days and received testimony from approximately 75 individuals and organizations. The subcommittee has had opportunity to consider all sides of the problem. Much of the testimony, in a convincing manner, underscored the evidence presented at previous hearings. No doubts remain that the Nation continues to have educational slums which the States, regardless of their efforts, have not and apparently will not eradicate without Federal assistance. These conditions were accentuated during the recent war period and during the recent years of economic adjustment.

Never before have the people of the Nation been as acutely aware of the need for extending educational opportunities. Through local and State action the people have assumed willingly many additional financial obligations in an effort to overcome the critical inadequacy of the financial support of schools. These efforts have not kept pace even with the rising costs, the increased birth rate, and the deterioration of school plants. The fundamental educational inequalities remain. It is in the interest of the people as a whole, and upon their insistence, that the Federal Government must assume responsibility for guaranteeing to all American children and youth a defensible minimum level of educational opportunity. These statements are based on evidence produced at the hearings.

I. REASONS FOR THE APPROVAL OF THE BILL H. R. 2953

That Federal aid for education is necessary has already been established by the types and amounts approved by Congress since the early days of the Republic. That the extension of Federal assistance at this time is necessary has been demonstrated by the evidence appearing in many printed reports of the House of Representatives. It is not necessary to repeat this evidence in detail in the present report. In general, the arguments fall into two categories: (*a*) Safeguarding the national interest through the promotion of education; and (*b*) meeting the needs arising from the inadequacies of the financial support of schools.

Safeguarding the national interest through the promotion of education

In the Declaration of Independence, the Constitution, and numerous other documents have been set the basic principles of American Government. That these principles are closely related to the education of the people has been clearly recognized by statesmen since the founding fathers up to the present day.

The Importance of Good Citizenship

Our representative form of government is based upon the literacy and civic competence of its citizens. They are called upon to vote upon public questions, to choose public officials, and to join with their fellow citizens in common enterprises. Today our children are living in a complex American society. Each year millions leave the schools to join with their elders as voting citizens. Through our form of government the popular voice is collected and uttered, and that utterance must represent intelligence and understanding.

Citizens of the States are also citizens of the Nation. There is free movement of people, commerce, and ideas among the States. This exchange has been one of our great strengths, but it has its hazards. The 1940 Federal census showed that 10,000,000 adults had less than a fifth-grade education. Hundreds of thousands of young men were rejected in recent years by the selective service because of educational deficiencies. Many of the future citizens of the States of greatest wealth are being educated or neglected in the less-privileged States. No State can be isolated from the baneful effects of ignorance in a Nation which has extensive mobility of population.

The Preservation of Democracy

Each generation has its duties to perform. It is ours to perfect and to perpetuate the democracy of everyday living and the representativeness of our governmental institutions. These are the matters requiring more than literacy. Our people must understand the principles of American society and be able to apply those principles to current problems. They must love their country and work for its betterment. They must appreciate their opportunities and be willing to share with others. These qualities of the individual citizen, making for the effectiveness and perpetuation of American society, are acquired through education.

But these precious assets of America are not matters solely of domestic concern. We live in a world weighed with perplexity and unrest. Our people must understand the heavy international obligations of the Nation. They must be equipped, physically and educationally, to meet any dangerous challenge to our security. When properly conceived and adequately financed, education is an effective bulwark against totalitarianism and a safeguard to democracy.

The National Welfare

The greatest resource of any nation is its people. Each day finds them in homes, factories, hospitals, churches, business, mines, schools, and on the farms, carrying forward the social and economic processes of life. These human resources will continue to make America great.

For our Nation to increase its economic and cultural strength it must maintain a high level of educational opportunity. Education steps up the living standards of nations. Comparisons made of other countries show that the nations with high income also have high levels of education and great amounts of technical skill. Underlying and making effective such factors as natural resources, adequate labor supply, technical research, and good labor-management relations are the understanding and technical skill of the people as a whole. Productive capacity is increased though training and education.

A nation also must have intelligent consumers. Business and agriculture prosper in a society where the standards of living are high. Uneducated people have few wants. They are satisfied to do without adequate food, proper clothing, good books, sufficient medical care, and other artistic, cultural, and spiritual advantages of modern life. The basic nourishment of the economic processes is to be found in intelligent and educated consumers. It is, therefore, essential that there be an adequate educational opportunity available to every child in every State. The conservation and development of our human resources is a positive contribution to the general welfare of the Nation.

Meeting the needs arising from the inadequacies of the financial support of schools

The primary responsibility of organizing and administering public education in the United States rests upon the States. The States in most instances have delegated large educational responsibilities to their subdivisions (municipalities, counties, and school districts) which operate within the framework of State law. A major part of the financial support for public schools is obtained from local and State taxation. Although the general scope and purposes of public education have shown marked uniformity throughout the Nation, the programs and facilities have been developed or impeded according to the economic resources of the individual States. These differences among the States are still further accentuated during periods of economic depression and of economic readjustment. Some idea of the present financial difficulties was revealed by the testimony of witnesses at the subcommittees hearings.

Deprivation of Educational Opportunity

For many years the Nation has been acquiring an educational deficit. It was dramatized during World War I by the number of young men who were rejected for military service because of their inability to read, write, or understand military commands. It was supported by the Federal census of 1940, which revealed that millions of adult citizens had little or no schooling and that 5,000,000 children and youth did not attend any school. It was further revealed by the number of selectees rejected for service in

World War II. The majority of these deficiencies were found in the States where there are not sufficient economic resources to provide good schools.

Today, primarily because of a shortage in funds for educational purposes, at least 2,000,000 children are suffering a major impairment of their schooling through the professional ineptitude of teachers who possess only substandard qualifications; hundreds of thousands are attending for only part of the school day or for only a few months of the year; additional thousands have had no school to attend or have been offered programs curtailed by the shortage of qualified teachers. Many of these shortcomings in educational opportunity are in addition to the conditions producing educational deficits two or three decades ago.

Critical Financial Problems in Local Districts

In final analysis, education is as good as the individual teacher. Because of low salaries more than 350,000 qualified teachers left the profession between 1940 and 1945. Their places were taken by inexperienced and substandard teachers, or the positions were closed. Studies have revealed that inadequate local salary schedules were the primary cause of the turn-over and the subsequent shortage of a supply of qualified teachers.

Despite local and State efforts to improve salaries in the present school year 1946–47, half of the teachers in public elementary and secondary schools have been paid less than $2,000 for the year's work; 16 percent received less than $1,200. Today, in the wealthier States, the status of salaries and the remote possibility of improvement have discouraged many more young men and women from choosing teaching as a life work than the even lower salaries did in 1940.

In an effort to improve salaries, so as to retain the experienced teachers and to attract competent young people, local school districts have curtailed budget allotments for instructional supplies and the maintenance of physical plants. The result has been a further lowering of the quality of instruction and the postponement of financial obligations which ultimately must be met.

More than 1,000,000 children are attending schools in local districts where annual current expenditures are less than $500 per classroom. A survey in 1939–40 revealed that there were systems so poorly financed that they spent less than $100 per classroom, while the best-financed systems spent $6,000 or more per classroom. This wide variation of 60 to 1 continues even today, according to recent contracts with State departments of education.

Inequalities in the Abilities of the States

The States vary widely in their ability to support education. In 1945 the income per capita ranged from $556 in Mississippi to $1,595 in New York. For that same year the amount of income behind each child of school age ranged from $1,974 in Mississippi to $9,005 in California. Thus the 3-to-1 ratio in the average wealth of the people becomes nearly a 5-to-1 ratio when the number of children to be educated is taken into consideration.

The contrasts in financial ability within States is even greater than the differences among the States. Most of the States have school districts that are financed at a relatively high level; and, at the same time, other districts are operating at poverty levels. To eliminate such differences many States have provided equalization aid and have adopted minimum foundation programs. Many of these minimums are lower than they should be. One of the major purposes of the proposed bill is to help establish a minimum program in every State and, in some States, to stimulate the adoption of minimum levels even more acceptable educationally.

The Fiscal Responsibility of the Federal Government

It is an accepted principle of American Government that wealth, income and privileges should be taxed wherever they are found and the revenues obtained should be expended for public services wherever they are needed. Federal assistance to the States is a logical application of this principle at the national level.

Our Nation is an economic unit. We draw upon physical and human resources with little regard for State lines. Economic progress and prosperity tend to be regional or national in extent and are not confined by State boundaries. The Federal Government should draw upon the economic resources of the Nation in providing for any phase of the general welfare.

The interstate character of business and the various forms of corporation organization are such as to impair, if not to block, the taxing ability of the States. In such instances the Federal Government is the only taxing power commensurate with the economic organization to be taxed. The revenue resources of some States have increased at a much more rapid rate than they have in other States, and only through the Federal taxing power can the benefits of these new resources be made available to all of the people.

The American system is based upon a dual structure of a union of States and a nation of people. Both the States in their respective sovereignties and the people as a whole have a joint responsibility for educating the children who are citizens of the States and citizens of the Nation. The time has come for the Federal Government to assume its full fiscal responsibilites in the field of public education.

II. ANALYSIS OF H. R. 2953

The purpose of the act is to assist the States in equalizing educational opportunities by the allotment of Federal revenues of not less than $3 per child of school age to any State making reasonable effort to provide for the support of its public elementary and secondary schools. In those States where an expenditure of 1.1 percent of the average income payments, for a period of 5 years, will not provide $40 per child of school age, the bill provides for amounts of Federal assistance beyond the minimum $3 allotments.

Limitations on Federal Control

Section 2 specifically prohibits any department, agency, officer, or employee of the United States from exercising any direction, supervision, or control over, or prescribing any requirements with respect to, any school, educational agency, or institution in any State receiving funds under the act. It is further provided that no Federal agency or officer shall attach any term or condition of any agreement or other action taken under the act or attach any limitation or provision in any appropriation made pursuant to this act. These are positive safeguards against the impairment of local and State control over the funds allotted.

Appropriations Authorized

Section 3 authorizes for the purpose of the act the sum of $200,000,000 for the fiscal year ending June 30, 1948; the sum of $250,000,000 for the fiscal year ending June 30, 1949; and for the fiscal year ending June 30, 1950, and for each fiscal year thereafter, the sum of $300,000,000.

Apportionment

Section 4 provides an objective formula for the apportionment of the funds under the act. No discretion is given to any Federal agency or official. The steps prescribed in the formula are as follows:

1. The cost of a minimum school foundation program is computed by multiplying by $40 the number of children in each State, ages 5 to 17, as determined by the Department of Commerce.

2. The average income of the people of each State for a 5-year period is then multiplied by 1.1 percent to determine a reasonable standard educational expenditure for each State.

3. If the cost of the $40 foundation program for any State (1) is larger than the amount of revenue produced by 1.1 percent effort, (2) the State is eligible to receive the difference in Federal aid.

4. If the cost of the $40 foundation program for any State (1) is less than the amount of revenue produced by 1.1 percent effort, (2) the State receives an amount equal to $3 multiplied by the number of children ages 5 to 17.

Subsection (d) of the bill provides that any State to receive the full equalization allotments (see (3) immediately above) must spend annually for public schools at least 2.5 of the average of its income payments for a specified 5-year period. Where a State spends less than 2.5 percent, as specified, its allotment is proportionately reduced. The rate of 2.5 percent was the average proportion of income allotted by all of the States for public schools in the decade immediately preceding World War II. This provision is to discourage any tendency of Federal funds to replace State effort, yet it leaves to each eligible State the decision of whether or not it wishes to meet the requirements for full Federal allotments. It is further provided, however, that no State's allotment shall be reduced below an amount equal to $3 multiplied by the number of children, ages 5 to 17, in each such State.

Subsection (f) provides for a pro rata distribution of funds to the States in case the amount appropriated is less than the total amount of the allotments to all States.

Subsection (g) reserves 2 percent of the funds appropriated for apportionment to Alaska, Hawaii, the Canal Zone, Puerto Rico, the Virgin Islands, and Guam. The United States Commissioner of Education is authorized to make these apportionments on the basis of the need of these areas for additional funds for public elementary and secondary schools. The amounts of the allotments will be determined by joint agreements made with their respective educational authorities. These outlying areas were not included in the formula applying to the States because they have unique educational problems and because comparable statistics on income payments and educational status are not available.

Certification and Payment

Section 5 provides that the United States Commissioner of Education shall certify, to the Secretary of the Treasury, the amounts allotted to each State under the act. Payments are to be made to the treasurer or corresponding official of the State, who must account for the moneys received and pay out such funds only on the requisition of the State educational authority.

Availability of Appropriation

Section 6 provides that the funds appropriated under the act shall be disbursed by each State to local public-school jurisdictions, or other State public-education agencies, for all types of current expenditures (excluding interest, debt service, and capital outlay). The funds must be used for public elementary and secondary schools.

The act does not delimit a State in its definition of public education. In States where public revenues are disbursed to nonpublic education, for any of the purposes for which funds are paid under this act, the Federal allotments may be similarly disbursed. However, in any year, no State may allot to nonpublic education a larger proportion of the Federal funds received than it provides from its own State and local revenues.

The purposes of this section are twofold: (1) To avoid Federal control of public education in the States; and (2) to permit the States to disburse the Federal allotments as

State and local revenues are now disbursed under the laws in each State.

State Acceptance Provisions

Section 7 provides that a State, if it wishes to qualify for the funds appropriated under this act, shall through its legislature provide for the administration of the funds received. In the event the legislature is not in session when the act becomes operative, the governor may act in lieu of the legislature until the legislature next convenes.

The legislature is to provide that the State treasurer or other corresponding State official shall serve as trustee of the funds received under the act and report to Congress, through the United States Commissioner of Education, a detailed statement of the amount so received and of its disbursement; provide that its State educational authority shall represent the State in the administration of these funds; provide for an audit by the State educational authority of the funds received and apportioned to local school jurisdictions to such State authority; provide that the State educational authority shall make reports to the Commissioner with respect to the progress of education within the State, which reports said Commissioner shall convey to the Congress.

Section 7 further requires that in States where separate schools are maintained for separate races, the State through its legislature shall provide a just and equitable apportionment of the Federal funds allotted under the act. This apportionment is to be made without any reduction of the proportion of State and local moneys expended for educational purposes during the fiscal year ended in 1947 for public schools for minority races. In section 9 (d) "a just and equitable apportionment, allottment, or distribution of funds" is defined as one which results in an expenditure for the minority group of a proportion of such funds that is not less than the proportion that the minority racial group bears to the total population of the State.

The same section provides that funds appropriated under this act shall be allotted only to those States which provide from State revenues for all public elementary and secondary school purposes not less than the total amount, or the amount per pupil in average daily attendance, actually spent for such purposes in the fiscal year 1947. Furthermore, only those local school jurisdictions shall be entitled to receive funds appropriated under the act that continue to pay, from State and local funds, average monthly salaries to their teachers not less than the average monthly salaries paid as of February 1, 1947, or the nearest date prior when school was in session. This provision applies not to individual salaries but to the average salary paid in the local school jurisdiction. Clearly the intent of these provisions is to prevent the substitution of Federal funds for costs previously paid from State and local revenues.

The State, either through its legislature or through its State educational authority, if the legislature so directs, shall provide for the apportioning of funds under the act in such manner that, not later than the fourth year of operation of the act and each year thereafter, there will be available from all sources to all local school jurisdictions not less than $40 per pupil in average daily attendance for current expenditures (excluding interest, debt service, and capital outlay) for the maintenance of a program of public elementary and secondary education. The bill thereby sets up a minimum foundation program of education providing equal basic educational opportunity for the children and youth of the Nation.

Right of Appeal

Section 8 gives the State educational agency in any State the right to appeal questions of administration to the United States Commissioner of Education and, after 90 days, if not satisfactorily terminated, the right to appeal to a United States district court. Such court shall have jurisdiction as to both fact and law.

Definitions

Section 9 contains certain essential definitions of terms used in the act.

Separability

Section 10 provides that provisions of the act held invalid in their application to any State, person, or circumstance does not affect the application of such provisions to other States, persons, or circumstances.

III. ESTIMATES OF APPORTIONMENT OF FUNDS AUTHORIZED

The accompanying table shows the approximate distributions of the funds authorized by the act. These are estimates based upon the latest available statistics on expenditures, income payments, and the number of school children in each State. No attempt has been made to estimate the payments that would be made to the Territories and other outlying areas.

(First estimate)

National Education Association of the United States, Washington, D. C.—Estimates of Federal aid under McCowen bill (H. R. 2953)

States	Estimated payments to States under McCowen bill after applications of 2.5 percent effort to the equalization funds (calculations based on 1944 data)		
	Equalization ($40 and 1:1 percent)	Non-equalization $3 payments	Total
1	2	3	4
Continental United States	[1] $141,646,000	$55,446,000	$197,092,000
Alabama	13,330,000		13,330,000
Arizona	1,232,000		1,232,000
Arkansas	8,215,000		8,215,000
California		4,356,000	4,356,000
Colorado		735,000	735,000
Connecticut		1,023,000	1,023,000
Delaware		171,000	171,000
District of Columbia		432,000	432,000
Florida	(614,000)	1,356,000	1,356,000
Georgia	10,664,000		10,664,000
Idaho	564,000		564,000
Illinois		4,512,000	4,512,000
Indiana		2,187,000	2,187,000
Iowa		1,503,000	1,503,000
Kansas		1,116,000	1,116,000
Kentucky	12,095,000		12,095,000
Louisiana	7,959,000		7,959,000
Maine	(174,000)	564,000	564,000
Maryland		1,281,000	1,281,000
Massachusetts		2,496,000	2,496,000
Michigan		3,588,000	3,588,000
Minnesota	(548,000)	1,668,000	1,668,000
Mississippi	12,735,000		12,735,000
Missouri		2,253,000	2,253,000
Montana		327,000	327,000
Nebraska	(467,000)	810,000	810,000
Nevada		81,000	81,000
New Hampshire	(125,000)	294,000	294,000
New Jersey		2,415,000	2,415,000
New Mexico	2,824,000		2,824,000
New York		7,206,000	7,206,000
North Carolina	18,766,000		18,766,000
North Dakota	1,213,000		1,213,000
Ohio		4,254,000	4,254,000
Oklahoma	7,210,000		7,210,000
Oregon		675,000	675,000
Pennsylvania		6,246,000	6,246,000
Rhode Island		432,000	432,000
South Carolina	10,686,000		10,686,000
South Dakota	1,080,000		1,080,000
Tennessee	9,556,000		9,556,000
Texas	10,547,000		10,547,000
Utah	1,022,000		1,022,000
Vermont	(211,000)	225,000	225,000
Virginia	3,714,000		3,714,000
Washington		1,092,000	1,092,000
West Virginia	8,234,000		8,234,000
Wisconsin		1,980,000	1,980,000
Wyoming		168,000	168,000

[1] The total of column 2 does not include the amounts in parentheses. These parenthetical amounts are equalization sums which are less than $3 per child guaranteed payments shown in column 3.

Personal Appraisal of Potential Republican Presidential Candidates in 1948

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. JOHNSON of California. Mr. Speaker, a year from now the two great political parties of our country will have nominated their candidates for the office of President. The American electorate will be busily engaged in trying to appraise the relative claims of the candidates to the support of the voters of the Nation.

It seems obvious to me that the candidate of the Democrat Party will be President Truman. To refuse to nominate him would be a repudiation of his administration, and, consequently, a confession that the Democratic Party, which controlled the executive branch of our national Government, had failed in its trusteeship. To repudiate the Vice Presidential nominee who had been selected in 1944 as the heir apparent to the Presidency and who later became President, would be tantamount to saying "We now realize that we picked the wrong leader in 1944, but give us another chance and we will give you another one whom we believe will be a successful President."

Far be it from me to offer or suggest any petty or partisan criticisms, such as have been voiced by prominent Democrats in my State and in other places. The problems with which the President must deal almost every week are so stupendous and so fraught with danger or benefit to our people and to mankind everywhere that we can only hope that he may have the wisdom and the courage to handle them in a manner that will benefit us and posterity. The way he handles these complicated questions, whether it be merely for the duration of his present term or for a longer time, may affect the course of history and the happiness of men everywhere for generations. But irrespective of how we may feel, he is handling and attempting to solve the questions now before the country, and it must be obvious that his party must renominate him as its standard bearer or practically forfeit its chances in the 1948 campaign.

Consequently, it is interesting to survey the field of personalities from whom, it now seems obvious, the Republicans will select their standard bearer. To help me personally get a correct appraisal of these men, I shall venture to discuss briefly the group of persons from which the Republicans will obtain their candidate for President in 1948. In this group I think also will be found the Republican candidate for Vice President.

This is the group that I think contains these candidates: Dewey, of New York; Taft, of Ohio; Warren, of California; Bricker, of Ohio; Stassen, of Minnesota; Vandenberg, of Michigan; Joseph Martin, of Massachusetts; Edward Martin,

of Pennsylvania; Saltonstall, of Massachusetts; Lodge, of Massachusetts.

The order in which I arranged this group has no significance whatever. Dewey was mentioned first because he was the Republican standard bearer in 1944 and is most mentioned as the probable candidate of the party in 1948.

My appraisal and comments on these men are not based upon any special research concerning any of them or their records. It is based upon general reading, discussions, speeches I have heard, and run-of-the-mill comments and discussions I have heard in Washington and other parts of the country. Nor have I talked to any of these men personally about this statement, nor have I asked their permission to say or not to say anything about them.

Let me then give you my brief comments about these individuals.

GOV. THOMAS E. DEWEY, OF NEW YORK

Dewey became a prominent national personage very early. Whether by design or by circumstance, he became a potential Presidential candidate at a very young age. In 1940, when only 38, his name was presented to the Republican Convention. As a prosecutor he made a great record. What I admire about this record is that he did not make a pretense at law enforcement by arresting the prostitute, the small gambler, and so forth. He drew the curtain aside and went after the "big fish" of the underworld and convicted them. Having had a little experience in the enforcement of the law, I know what a tough job that is and what great ability and courage a prosecutor in a great city like New York must have.

From all I can learn, Dewey is a fine administrator. At any rate, the people of New York endorsed his first 4 years by reelecting him by a tremendous majority in 1946. He appoints good men and insists that first consideration in asking for a public appointive job is that the applicant must have the ability to handle the job well and must have integrity. There are so many diverse opinions as to Dewey's personality that I have not been able to determine whether he gets along with people, is tolerant, and approaches his job with true humility. Most of the various criticisms that I have heard made by Republicans are items that I learned, over 6 months before the convention, would be used by the Democrats if Dewey was the Republican candidate. They were, for instance, that "he is a prosecutor"; he is a "dandy"; "he speaks so perfectly that he is not human"; he is a "small man," referring both to his size and character (he is the size of the average American in stature, and taller than Chiang Kai-shek and Stalin); he would be "autocratic and in constant collision with Congress and his subordinates." It was really amusing to hear Republicans whose favorite was not nominated, parrot this Democratic propaganda. Tolerance, vision, courage, and a basic understanding of the problems and dangers facing us and mankind are necessary, especially during the next few years. The degree to which Dewey measures up to these are manifested by his record as a public official, which is good. As to the personal equation, I am not sure nor am I convinced that the critical observations I have heard from people in whom I have confidence are well founded.

Mr. Dewey is a man to be reckoned with. His attainments cannot be written off by any petty criticisms.

SENATOR TAFT, OF OHIO

One thing that has impressed me about Senator TAFT is that every man whom I have met who knows him intimately is a great admirer of his. This applies to men who are violently opposed to some of his ideas. They all seem to grant that he is intellectually honest and frank. It is a long time since we have had a man who is a potent candidate for the nomination for President who speaks out so frankly and definitely on controversial issues of the hour. On practically every issue in national politics Senator TAFT has clearly and publicly expressed his thinking. On universal-military training and on the matter of the war-crimes trials he has not been afraid to state his views, although it was unnecessary to do so until these issues were before him as a Senator.

As far as I can determine, he takes his position on controversial issues without rancor or prejudice. His method seems to be to learn the essential and basic facts about a problem, the setting of the particular problem in the over-all group of problems confronting the country, and after study and reflection to determine what is the correct course to pursue, in the particular issue under consideration, to best serve the public welfare.

In many ways, Senator TAFT is like his distinguished father. He is more of a judge than he is a politician. He approaches the solution of a public problem like a judge approaches a decision he must make in a legal dispute. Instead of applying the law to the facts, as a judge does, Senator TAFT applies his conception of what plan, when applied to the problem to be solved, will best serve the public interest and correct the abuse that the hearings or facts disclose. Men may differ with his conclusion but I have found no one who disputes that the Senator approaches public questions with an open mind and fearlessly makes his decision.

It has been stated that Senator TAFT, who now espouses Federal aid to education, was once violently opposed to such a plan. But his studies of the problem convinced him of the soundness of the position he now maintains on that issue. Also the Wagner-Ellender-Taft bill represents an evolution in the Senator's thinking on the housing problem. The present bill is one designed to give public aid to housing, especially to the low-income groups. I have heard important persons express surprise, and in some cases disappointment, that Senator TAFT should be the coauthor of such a bill. He seemed to suffer no qualms in changing his thought and publicly admitting it when he once was convinced that his present position was right.

GOV. EARL WARREN, OF CALIFORNIA

In 1946 when Earl Warren was reelected Governor of California, he was the second Governor to be reelected in 60 years. The other was Hiram W. Johnson. More than that, in the election of 1946, Warren received the nomination of both parties, the first Governor to receive this honor. Warren has captivated the California electorate as no other man ever has. I predict that if he should be the nominee of the Republicans, he would captivate the American electorate and the election would be a landslide for the GOP. Why is this? He does a good job; he is thoroughly honest; he is a good administrator; he knows how to get along with people. These are reasons why he is a successful Governor and has been a successful public official. But they are not the main reason for his vote-getting ability. He has political "it"; that undefinable type of character and personality that captivates the interest of the electorate and holds their loyalty. He is a big man; he is handsome; he is friendly; he enjoys people and gets along with them; he understands and personifies the common man who has no spokesman at the capital.

Mr. Warren has courage. During his first term he recommended a law providing a system of health insurance. The doctors and other groups resisted the recommendation. Many of the local politicians criticized the Governor, and the Governor finally lost the battle. The Governor successfully sponsored a change in the unemployment-insurance law providing for the payment of benefits due to sickness. It was curious to hear some people in California and in the National Republican Party organization, in 1945 and 1946, suggest that perhaps Earl Warren would have difficulty in getting the Republican nomination for Governor. He not only got it, but the Democrats also selected him as their candidate. In California, the primary is really a group of elections, one for the members of each separate party, who are registered 40 days before the election, so the real Democrats picked him and they gave him more votes than his Democratic opponent got in both the primaries.

Warren is progressive. He lives on the "shores of the Pacific," and, consequently, fully realizes that we are part of the "family of nations." Every day planes leave California for Pacific points, reaching them in hours, where formerly it took days and weeks. He knows the world is small and still shrinking. Alaska and California are closely bound together by trade. Warren knows that the world is round and that trouble can come from over the top of the world or around the side of it. California got a "close call" in 1941, when Pearl Harbor was attacked. It might have been attacked and an invasion might have followed. Warren, a doughboy in the First World War, is keenly alive to the security problems of today.

During the war California was a regular arsenal of war activity. Army, air and naval installations covered the State. Troops of all kinds trained there. Millions went through the State "on the way over." Following the war, hundreds of thousands of former servicemen have returned and will make their home in California. In all, over 2,500,000 new people have settled in California since

the 1940 census was taken. Every problem that has faced the Nation has been presented to California. Housing, readjustment, labor problems, shipping, mining, reclamation, including irrigation, hydroelectric development; agricultural problems, presented by the dozens of special crops, and so forth. To be governor of such a State presents almost every problem that a President must meet, except that of foreign relations. Sometimes Members of Congress suggest that California must be a foreign State because in practically every problem that is considered by Congress California has some kind of a stake or interest.

Warren is not a candidate, or at least he has no organization. He was not active as a candidate for governor before his nomination. His friends were anxious for him to run. When he did enter the race the war was on and he stated frankly at the start that in view of that fact he would run and if elected would have a nonpartisan administration. He carried this policy out, appointing members of both parties to various offices, much to the discomfiture of many politicians but to the satisfaction of the people.

His friends now wish to help make him a Presidential candidate and may do so. They feel this coming election is too serious a matter to have any candidate take the nomination by default. They want the people to have a chance at the best man. Also, some feel that the election is not a cinch, but one way to make it a certainty for the Republican Party is to have Warren.

Warren's family life is reminiscent of Theodore Roosevelt. The Warrens have six children. Instead of this being a burden to the Governor and his wife, it is merely one round of pleasure, with every member of the family taking part.

HAROLD STASSEN, OF MINNESOTA

Harold Stassen, more than any other candidate, typifies the younger element of the American electorate. He is only 40 years of age, yet he has had a hand in some of the greatest events of this changing and transitory age.

When only 31, he was elected Governor of Minnesota. The labor organizations fought him, because they considered him antilabor by virtue of the fact that he stated that if elected he would pass a law providing a plan for the mediation and settlement of labor disputes. He was elected. He kept his word and had the law passed. The law proved so successful that in the next election, the labor leaders, who had formerly denounced him, supported him.

While still Governor, the war broke out. Shortly thereafter, he resigned the Governorship and entered the United States Navy. He rose to the rank of captain and participated in some very important engagements. He was a staff officer on Admiral Halsey's staff and he has had experience which makes him know what modern warfare is like.

He was selected by President Roosevelt as one of our delegates to the United Nations Conference. It was generally conceded that he made more of a hit with the news correspondents than any other member of our delegation. He has a frank, disarming way in meeting people and meeting groups. You go away from a discussion with him feeling that he has disclosed his thinking, rather than trying to hide his thinking, by what he says.

He is thoroughly imbued with the idea that we are in a so-called international age. We are in a position of leadership whether we wish to be or not and we must find some way to bind the nations together to make peace secure. Stassen, perhaps, more than any other candidate, realizes the implications and the awful consequences of modern warfare.

He is not only outspoken for international collaboration, but he has gone one step further than any other candidate in either party. He thinks to bring about true international relations there must be an understanding, not only between the governments, but also between the peoples of the various nations. He is not advocating world government, but he does believe that if the people of the various nations can have their way, they will understand each other. What he hopes will result is that governments may become more representative of the people who must pay the taxes and fight the wars. If that is true, it is his conviction, that there will be no more war, because the average man gets nothing from it but tragedy and sacrifice.

In 1940, Harold Stassen was the floor leader of the Willkie forces at the convention which placed Mr. Willkie at the head of the Republican ticket. He is a shrewd, poised, and experienced party leader and worker. He has probably done more to awaken interest in the young voters in the Republican Party than any candidate now being considered. Through the Republican forums, which he organized, he has tried to get our young voters to understand what the important problems of today are. He also suggests, on the public platform and otherwise, what he considers the correct solution of the major problems facing the Nation, and he hopes that the party, of which he is a member, will offer solutions that will appeal to the minds and the hearts of the young voters. He is a strong peace proponent, and has had enough practical experience in politics and public affairs to understand the long and tedious road that we must travel in order to bring about a stable world.

Mr. Stassen is thoroughly frank. He admits that he is a candidate, but he states that he is merely a candidate in the sense that if the people believe in his ideas, he would like to be their representative to carry these ideas out. No matter what may happen to him with reference to the nomination for President or Vice President, he has made a tremendous contribution to the Republican Party and to American thinking, in the direction of world peace. The important part of his life is still before him, and he will undoubtedly be heard of in the future, even though he may not be on the ticket in 1948. In the 1944 convention one delegate stated to me that, "The Stassen people are the only group that I have met who know what they are here for and know exactly what their candidate stands for." This was a great tribute to a young man who has made a tremendous mark on the American political scene. He is more a man of the people than he is a polished professional party leader.

SENATOR BRICKER, OF OHIO

For 3 terms JOHN BRICKER served as Governor of Ohio. Prior to that time he had held State elective offices. Certainly the people of that great State approved of what he did and had plenty of time to become familiar with his record before giving their endorsement of it.

Whether the problems which confronted Governor BRICKER were problems that would help him understand the national problems of this day is doubtful. Undoubtedly fiscal problems, involving balancing the budget and taxation, developing a State highway system, the regulation of utilities and other matters in which BRICKER was active as Governor would be excellent experience in handling our national domestic problems. But the broader problems of our national and international security, our relations with foreign countries, our policies looking toward world unity to bring peace are problems with which State executives do not need to cope, except incidentally. The experiences of Senator BRICKER, since 1946, will help him grasp these special problems.

As a Vice Presidential candidate BRICKER made a great impression on many people. He discussed largely the domestic problems of the country, such as reducing our bureaucracy, lowering taxes, eliminating waste, balancing our budget, stopping excessive use of Federal power, and so forth.

He must have charm and magnetism as the press reports of his speeches indicated that he captivated great crowds. Coming from a pivotal State such as Ohio and having been repeatedly reelected to high State office it is obvious that he has made a deep and perhaps lasting favorable impression on the voters of his State. In the event that Senator TAFT should not be Ohio's candidate it seems quite certain that Bricker will be Ohio's favorite son in 1948.

SENATOR VANDENBERG, OF MICHIGAN

Senator VANDENBERG is perhaps the most conspicuous example of a well-known public character who has almost completely reversed his viewpoint within a few years. Before the war he was classed as an "isolationist." Starting before the war's end the Senator made it plain that he believed that the only course open to us, if we wished peace in the world, was via international collaboration. Furthermore, he led the movement to make our foreign-relations program a nonpartisan and bipartisan program. As he said with reference to our foreign policy "partisanship stops at the water's edge." He held the key position as the ranking Member of the Senate Foreign Relations Committee, and later as its chairman. Without his help the administration would have been hopelessly bogged down in their efforts at building a world organization.

As one of our delegates at the United Nations Organization meeting in San Francisco he had a tremendous hand in writing the Charter. In many other ways he worked hand in glove with the administration in trying to weave a foreign policy that would stabilize the world and bring peace. Probably no man in our country has a better grasp of the problems facing this country in the field of foreign relations. He has learned the problem from our own representatives at the conference table and, more important, in the numerous conferences in which he has been a key figure, he has learned the viewpoint of the leading nations with whom we must deal to bring accord and perhaps peace. Interwoven with the effort to bring about agreements and mechanisms that will bring peace is the problem of security, economic, military, and political. No man in our country has a deeper grasp of these problems because his information and knowledge has been forged in the crucible of discussions and arguments of rulers, foreign ministers, and representatives of the countries involved.

I have never heard anyone doubt the ability of Senator VANDENBERG to successfully handle the office of President. The only doubt which I have heard is that his age might make it inadvisable to thrust upon him the terrible responsibilities which our next President must bear. Were he elected in 1948 he would at the time he took office be almost 65 and at the end of his term would be within 3 months of 69. Very few, if any, of our Presidents have been that old during their incumbency. Whether Senator VANDENBERG has the requisite health and vigor to handle the job would be for the electorate to consider from the evidence at their command. Judged by his apparent health and vigor as of today he will be a virile character for a long time to come.

SPEAKER MARTIN, OF MASSACHUSETTS

JOSEPH W. MARTIN, Jr., is one of the most tolerant men I have met. Many of the men that I have met in the House, when they first meet Mr. MARTIN, wonder how he ever became the Republican leader and finally Speaker. Time always gives the answer, because the longer they know him, the more they realize his capacity for getting along with men, of harmonizing their differences and of respecting their viewpoints. JOE MARTIN is a man that wears well. He has that fundamental sense of fairness and fair play that characterizes the real leader. Furthermore, he is not the type that takes himself too seriously and has no delusions of grandeur. He has that sound common sense and good judgment that is essention in a political leader.

He has had contact with national politics in many different ways and for a long time. I can now understand why Mr. Willkie selected him as the man to manage his campaign. He possesses political intuition to an extraordinary degree. Mr. MARTIN has a broad grasp of national public problems. He has heard them discussed for over two decades, almost daily. JOE MARTIN is known at every Republican political headquarters in the United States because of his contact with national campaigns and through his chairmanship of the national committee.

He states that he is not a candidate and undoubtedly he is not a candidate in the sense that he is drumming up an organization to drum up delegates for MARTIN. However, it is very likely that the convention may have difficulty in agreeing on one of the candidates, especially the ones that are now in the lead. In that event, a compromise candidate will be brought forward. In such a situation, JOE MARTIN or Earl Warren, of California, could easily emerge as the one selected and as agreeable to the contending factions who may have tied the convention up. A man like JOE MARTIN would have a tremendous lot of personal friends. There is not a member of the Republican group in the House that would not be delighted to do something for him in the event he were on the ticket. They would do this more as a personal tribute, perhaps, than as a party responsibility. Every Member of the House has been accorded fair treatment and as far as humanly possible, Mr. MARTIN has tried to meet their personal wishes. I have yet to find a Member who has ever made a serious complaint about any treatment accorded him by Mr. MARTIN as the Republican leader or as Speaker.

Mr. MARTIN has a broad conception of the important problems facing our country. For years, he was on the Foreign Affairs Committee of the House. He knows the legislative road that leads to laws, as he was on the Rules Committee for a long time.

SENATOR SALTONSTALL, OF MASSACHUSETTS

Senator SALTONSTALL is one of the group of Members in the Senate who has served as governor. As the Governor of Massachusetts he was a distinct success. He had wide experience in governmental affairs in Massachusetts and culminated his service to the State with three terms as Governor of Massachusetts.

Since coming to the Senate in 1944, the Senator has been exposed to and gotten a good insight into the national problems facing us at this time. He is listed as a forward-looking, progressive type of individual. He has a broad grasp of our international problems and the incidental problems of security which are tied to our foreign policy. The Senator is a very personable individual and one can readily understand how he remained in public office for so many years.

Senator SALTONSTALL's family is, like the family of Governor Warren, of California, a large, happy family. It is very possible that the Senator, in the event of a deadlock, might be considered seriously for the top spot and probably even more likely that he might be considered as a running mate of the one who would be selected for the nomination for President.

SENATOR EDWARD MARTIN, OF PENNSYLVANIA

Senator MARTIN is the oldest man in this list of names. He has had an interesting and colorful career as a soldier and as a public official.

Undoubtedly, Senator MARTIN will be the favorite son of the Pennsylvania delegation at the national convention. This delegation has 70 votes and constitutes a very strong group in the event that trading between the various candidates should occur.

EDWARD MARTIN rose from the rank of private to become a major general in the United States Army. He served with distinction in World War I and with distinction in World War II. He has been awarded the Distinguished Service Cross several times and he also wears the Purple Heart, symbolic of the fact that he was wounded in action.

As a public official of the State of Pennsylvania, Senator MARTIN has made an excellent record. In the numerous State offices in which he has served, he has performed well. He was the Governor of Pennsylvania for 6 years and proved to be an excellent administrator as well as an excellent chief executive of that great State. Undoubtedly, that training would be a splendid background for the administrative duties of the President of the United States. The Senator has been Adjutant General of the State of Pennsylvania which, in addition to his active participation in the last two wars, qualifies him as an authority on the matter of national security. He is thoroughly aware of the problems facing the country in a military sense. Since our foreign policy and national security are so interwoven in this age, all this experience is valuable to him in trying to help shape a course that will lead us to peace. He knows the explosive and interdependent world in which we are living today and is anxious, like every other public official, to try to lay down a pattern of relationship between ourselves and the remainder of the world which will lead to a peaceful horizon. No man who has not had the combat experience of Senator MARTIN can realize how a combat soldier hopes and prays and is willing to sacrifice for peace.

It may be that in the event a comparatively young man is nominated for President, the Republican Party would look to an older man to balance the ticket, such as was the case in 1944. Senator MARTIN, from the large State of Pennsylvania, would be an ideal candidate for Vice President in that contingency.

It is unlikely that the convention would nominate a man of his age for President. Should he be nominated for President and elected, he would be 69 years of age at the time he took office, which is generally considered to be too advanced an age for the strenuous job which the Presidency entails. At any rate, he would prove to be a tremendous drawing power in his own State and the populous East, where he is a member of the ticket, and it would not surprise anyone who has thought about the matter, to find him on the ticket as a candidate for Vice President.

SENATOR LODGE, OF MASSACHUSETTS

I also include the name of Senator HENRY CABOT LODGE, JR., as a possible candidate. As a very young man he showed tremendous vote-getting capacity by being elected to the United States Senate. While a Member of the Senate, and a very intelligent one, the war came on. Without any fuss or feathers, or without seeking to gain pub-

licity for his decision, he resigned from the Senate and entered the armed services. He had a magnificent war record in combat. He returned when his military service was over and again ran for the Senate in 1946 and was elected over the veteran campaigner Senator Walsh. It is perfectly obvious that a man of his age, with these attainments, and with his vote-getting capacity, must be reckoned with. He would add to any ticket, and it might very well be that in trying to select a young man with strong public appeal and a most excellent record, the convention might select Senator LODGE. He is young enough so he can be a prominent leader on the national scene for many years to come. We have often heard it said that coming events cast their shadows forward. The shadow of Senator LODGE on the national political scene is already clearly discernible and it may very well grow larger and more intense as the history of the next 15 years unfolds. On the pressing problems of the day, such as international questions, matters of security, and the building of an organization that will bring world peace, his record is excellent. This man is well trained, widely traveled, and equipped in every way to handle almost any job in the gift of our Nation. He is marked for a high place in the leadership of his party, as well as in the leadership of our Government.

There are other men who may develop into candidates. One is General Eisenhower. Another might be General MacArthur, although his age is against him. General Eisenhower is leaving the Army, entering the field of education in the city of New York, and it could very well be that there might be a strong enough movement to draft him so that the Republican Party, assuming that he is a Republican, might select him. However, it is unlikely that a military man will be selected. With all the military problems that have confronted the Nation in the last few years, I believe that the electorate still is a little uncertain as to the wisdom of selecting as a candidate a man whose entire career has been devoted to military problems. But times have and are changing and it might be that the people who have 15,000,000 veterans in their midst might lay aside their general feeling against military men in public office and decide to take such a leader.

Progress Versus Criticism

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. CANNON. Mr. Speaker, under leave granted to extend my remarks I include an editorial from the pen of Mr. Robert M. White II, editor of the Mexico Ledger, of Mexico, Mo.

It is a pertinent and piquant comment on congressional policy and statesmanship and is particularly timely and accurate in its summary of the attitude of public sentiment on the session just closing.

The editorial appears in the July 23, 1947, edition of the Evening Ledger as follows:

INVESTIGATIONS

The coming political year—the homestretch run for "48"—promises to be a year of congressional investigations.

Rubbing their hands with glee, the Republican Congress is planning to investigate such agencies, issues, and actions as the Reconstruction Finance Corporation, the immigration system, organization of the executive branch, wartime profiteering, economic condition of the country, high prices, housing shortage, foreign needs and domestic resources, lobbying activity by Federal employees, propaganda and publicity activity by executive agencies, Voice of America, policies of all lending and spending agencies, enforcement of the new labor law, taxes and tax policy, social security, un-American activities, flood control, etc.

Even investigations will be investigated.

Some of this probing is desirable.

The fact that it can happen is a needed restraint on some not-too-responsible bureaucrats. However, investigations are a negative way of getting things done. They are time-and-energy-consuming and while they correct some policies they mainly disclose the true character of past performance.

Naturally, the main reason the GOP Congress has held back its major investigations until the coming year, is political. Any and all disclosures of inefficiency in Government will be used as political ammunition in '48. This, of course, is all a part of the game. However, the country will not be fooled. The past Democratic administration were eras of progress. And eras of progress get more votes in the long run than eras of investigations. While investigations make history more accurate, they don't make history.

The Record of Congress on Housing

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement I have prepared on the record of the present session of Congress in connection with providing adequate housing facilities.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HOUSING AND THE EIGHTIETH CONGRESS

When this session of Congress began in January we all knew that this Nation faced as one of its major problems a housing crisis. It was a problem which affected every element of our society but the group which it undoubtedly hit hardest was the veteran. Veterans wanted and needed housing desperately. They needed housing to fit their limited incomes. There were several concrete proposals put forward which would have gone a long way to meet the problem. But these proposals were not accepted by this Congress and today we find that the fate of the homeless veteran as well as other citizens who need a place to live is not only no better but in many respects considerably worse than it was when this Congress began its deliberations.

The action of this Congress on housing has been negative. Franklin D. Roosevelt, Jr., national housing chairman of the American Veterans Committee (AVC), an organization of World War II veterans which has shown creative leadership in the housing field, said in January that the veteran asked three things from this Congress in regard to housing: (1) Passage of the Taft-Ellender-Wagner long range housing bill; (2) continuation of rent controls without increases; and (3) the continuation of the limitation on commercial building and the channelling of critically short materials into veterans' housing.

Let us take a look at the record of Congress on these three minimum proposals.

The Taft-Ellender-Wagner bill has been endorsed by an impressive group of civic and church organizations in addition to the CIO, AFL, AVC, and VFW. The need for it has been demonstrated in the cold figures of statistics as well as the heart-rending stories of broken families with which we are all familiar. The Bureau of the Census has reported that from 30 to 40 percent of married veterans are living in rented rooms or doubled up with in-laws. The survey also demonstrated that most veterans could not afford the housing which was being erected. The median weekly income of veterans was shown to be between $40 and $50. In the majority of cases they cannot afford to pay more than $40 a month rent, and they cannot afford housing costing much over $6,000.

The Taft-Ellender-Wagner bill provided financial aids and guarantees which would expand rental and sale housing construction. It would have brought the cost of housing down. I do not intend to go into the details of the bill. Actually, in the eyes of the AVC and VFW it was a conservative proposal considering the proportions of the housing crisis. The AVC urged, for example, that the period of amortization loans for housing be extended to 50 years and the interest rate reduced to 3 percent. The effect of these provision would be to reduce a $60 monthly rental to around $48. The AVC proposed numerous other concrete amendments which would have broadened and improved the bill. I point this out to make it clear that it was not for a lack of a well-thought-out housing program that this Congress failed to act. The program which would have provided a large part of the solution was there—but it was rejected.

Instead of adopting a positive program Congress chose to listen to the siren call of the powerful real estate lobby. While the Wall Street Journal was reporting that over-all building costs were up 86 percent over 1939 and at an all-time peak, Congress was busy removing the last of the essential controls which were protecting a veterans' housing program. The American Veterans Committee protested during the last session of Congress concerning the results of the removal of price controls prematurely. Today we find that it has become general economic opinion that many controls were removed too soon. But in the face of a housing crisis and of skyrocketing housing prices Congress gave the green light to commercial builders in removing the last of the needed controls in the so-called extension of rent-control bill.

It already appears that we can kiss goodby to any hope of housing in the next year that veterans can afford. Housing builders are reported to be curtailing their programs up to 90 and 95 percent because of the increasing cost caused by the competition of commercial building.

At the same time that veterans groups were urging steps to reduce the cost of housing, the Congress chose to extend rent controls with phony provisions leaving the door open for increased rents. Actually landlords were making more money than ever before. Net operating income of landlords increased 30 to 40 percent since 1939 because

of the almost complete absence of vacancies and the savings landlords have made in maintenance costs. But Congress chose to accept the proposal of the National Association of Real Estate Boards calling for a 15-percent increase in rents for landlords who give their tenants a year's lease. Again, the consideration was not for the millions of veterans and other citizens looking for a place to live at rents they could afford but for the profiteering group represented by the National Association of Real Estate Boards.

Today it does not require extended investigation but merely a few conversations with veterans to discover they are not happy about the current housing picture. Veterans have been reasonable and patient in their housing demands. They have endured a multitude of extreme hardships in living in substandard housing makeshifts which have threatened their health and that of their families. They have doubled up with in-laws under circumstances which have caused general unhappiness and in many cases broken homes. But despite the patience and fortitude of our veteran population no American can escape the conclusion that it is the Nation's duty to make a sincere and hard-hitting effort to face and solve the housing problem.

This Congress has not faced the housing problem. I have tried to show that in the proposals of AVC and other groups we have had concrete suggestions. The program was there. We rejected it. As we return to our home States this summer I wonder how we are to reply to the question of the veterans who come to us and ask: "Why can't I get a place to live?" Can we with any sincerity say that the program of the National Association of Real Estate Boards which we have adopted will provide the housing that veterans need? If we do succeed in locating a house for sale can we point it out triumphantly to the veteran and say "Look what we have done for you?" I fear not, because the only houses on sale now range from $10,000 to $20,000 in cost and the veteran is apt to laugh a bit bitterly when we point out that kind of proposition to him.

I am confident that the Members of this body are going to do a lot of thinking about housing in the next few months since they are going to get some very pointed questions. I hope the thought is productive of a courageous attempt next January to get housing and not simply to assure the profits of a small and selfish group.

Regulation of Gas Transmission Companies

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Gas Bill's Cost Estimated at Fifty-two and a Half Million," written by Ruth Finney and published in the Scripps-Howard newspapers of July 25, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GAS BILL'S COST ESTIMATED AT FIFTY-TWO AND ONE-HALF MILLION—PUBLIC WOULD PAY, COMPANIES COLLECT

(By Ruth Finney)

WASHINGTON, July 25.—Natural gas transmission companies have a big dollars-and-cents stake in the Rizley Bill which would hamstring the Federal Power Commission's regulation of their rates.

The bill passed the House recently and will lay over in the Senate until next winter.

The Federal Power Commission released estimates today showing increased charges that 10 companies would be able to make if the bill becomes law.

Consumers in Pittsburgh, Ohio, Chicago, Detroit, Missouri, Kansas, Nebraska, Iowa, Minnesota, South Dakota, Oklahoma, Colorado, Wyoming, Indiana, Tennessee, Arkansas and Mississippi would pay $52,500,000 extra.

HIGHER PROFITS

The Commission said the added revenues would mean substantial increases in the earnings of transmission companies. The estimates were:

Cities Service, 14 to 24.3 percent.

Colorado Interstate Gas Co., 26.4 to 79.4 percent.

Natural Gas Pipeline Co., 11 to 33 percent.

Panhandle Eastern Pipeline Co., 18.7 to 33 percent.

Southern Natural Gas Co., 11.3 to 22.3 percent.

Mississippi River Fuel Corp., 17.4 to 25.4 percent.

When the Senate Interstate and Foreign Commerce Committee voted last week on the Rizley bill, it had not yet received the Federal Power Commission's report on the effect of the bill. The measure failed to receive approval by only one vote.

COMMISSION'S CONCLUSIONS

This is what the report said:

1. The bill would seriously hamper effective regulation of rates and service, to the detriment of consumers.

2. The Commission's report on its inquiry into all phases of the natural gas industry will soon be submitted to Congress. Therefore, it would be unwise to enact legislation now.

3. Many administrative difficulties would be inevitable because of contradictions and ambiguities in the bill.

4. The bill gives no assurance that the various States would have any authority to regulate.

Housing

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. HILL. Mr. President, this evening at 7:45, our distinguished colleague, the junior Senator from Louisiana [Mr. ELLENDER], delivered an important speech on housing, over the Mutual Broadcasting System national hook-up, speaking here in Washington. I ask unanimous consent to have his speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I am grateful for the opportunity of talking to you about housing. It is of deep regret to me, however, that the occasion for this opportunity is the illness of Mr. LaGuardia. I know all of you join me in hoping for his speedy and complete recovery.

I regret Mr. LaGuardia's absence tonight for still another reason. I agree with his view, often expressed, that the failure of Congress to enact comprehensive housing legislation is a calamity. I consider—as he does—the reasons for this failure intolerable and shocking. It is the very sort of situation, in short, which calls for the full play of Mr. LaGuardia's unparalleled abilities for vivid analysis.

One of the main reasons why we do not now have comprehensive housing legislation has perhaps been best summed up by the President in a message to the Congress last month. In this message he said:

"One of the most stubborn obstacles in the way of any constructive housing program has been the opposition of the real-estate lobby. Its members have exerted pressure at every point against every proposal for making the housing program more effective. They have constantly sought to weaken rent control and do away with necessary aids to housing. They are openly proud of their success in blocking a comprehensive housing program.

"This group has sought to achieve financial gains without regard to the damage done to others. It has displayed a ruthless disregard of the public welfare."

As many of you know, I have been closely identified in the Congress with housing legislation for at least a decade. For many years, I served on the Senate committee which dealt with legislation relating to housing for low-income families. In 1944 and 1945, I was a member of the Special Senate Committee on Housing and Urban Redevelopment, of which Senator TAFT was chairman. Over a 2-year period, we carried out the most exhaustive and painstaking investigation on housing ever made in this country.

This investigation showed that our present housing conditions are not due to the war but have roots which go far back into the prewar period. We found that, long before the war, private enterprise—and I say this not in criticism but as a matter of simple fact—had been unable under existing aids to provide decent housing not simply for the lowest income third, but even for a substantial portion of our middle-income families. We found that most of the housing that was being built—before the war as well as after—was priced for sale or rent beyond the financial means of the great mass of our moderate and low-income families. We found that slum conditions had spread to such a large extent in most of our communities, large and small alike, as to gnaw at the very vitals of their well-being.

It was on the basis of the unanimous conclusions of that committee that Senator TAFT, Senator WAGNER, and I introduced S. 1592 in the last Congress, and its successor bill, S. 866, in this Congress.

Now, the basic point I want to make is that the efforts of those of us who served on the Senate committee, and of the Senators who participated in the drafting or consideration of these bills, were governed by a single fundamental objective. Simply stated it was that private enterprise must be given every opportunity and every encouragement to do as much of the total housing job as it possibly could, and that all governmental aid and activity in the housing field had to be predicated on this approach. Toward this end every private trade and related group interested in housing was canvassed

at least three times for their suggestions as to how private enterprise could best be enabled to do as much of the job as possible. We then incorporated in the bills the various suggestions made by these groups. In fact, our bill went immeasurably beyond the proposals advanced by these groups in assuring that private industry should have every opportunity and every encouragement to do as much of the total postwar housing job as possible.

The result was that 90 percent of the programs in S. 1592 last year, and S. 866 this year, were devoted to encouraging private construction of homes, whether for sale or rental. Public housing endeavor under these bills was clearly and explicity restricted to an area where there could not possibly be any competition with private enterprise, and only after being favorably acted upon by the elected officials of the governing body of the community applying for Federal assistance. Also, it was severely limited insofar as the total number of housing units that could be provided.

It is, of course, with a deep sense of irony that I tell you all this. For our expectation was that, since the bill gave every possible incentive and aid to private enterprise, and included the very programs suggested by the real estate and allied groups, we would naturally have their wholehearted support in securing the enactment of our bill. Under the circumstances, I think you will agree that would be the normal expectation of any group of fair-minded men.

You all know how mistaken that expectation proved to be. Primarily because of the fact that the bill provided some aid for our poorest families, the representatives of real estate and allied groups—who have, without any right or authority, sought to arrogate to themselves the role as the sole spokesmen for private enterprise—have bitterly and viciously fought the enactment of the bill.

But the views expressed by the representatives of the real estate and allied groups are not representative of the views of private enterprise. Let me make that clear by just one example. In testifying before the Joint Committee on the Economic Report this month, Mr. Jerome Ney, the chairman of the board of the American Retail Association, said:

"Now a final word on the controversial issue of public housing and the Taft-Ellender-Wagner bill. Again let's put good sense ahead of emotion. A substantial portion of the Nation's families at the bottom of the income pyramid simply cannot afford adequate housing. We agree with Senator TAFT that subsidized public housing, at least for a time, is the only sensible answer to this problem. We cannot agree that this type of public housing contains the threat of socialism in the housing industry. On the contrary, we believe that the greatest threat to private enterprise in housing is the failure to meet the housing problem head-on."

There has never been any doubt in my mind that had we left out of the bill the provisions for a limited program of aid for our poorest families, it would have been passed long ago. But neither Senator TAFT, nor Senator WAGNER, nor I, would agree to sponsor a program which extends aid to all groups of our citizens except those who need aid, the most. This has never been the American way, and I hope it never will be.

Last year, as you know, these real-estate groups were able to prevent a vote on the comprehensive housing bill in the House. This year, they have directed their high-pressure tactics, misleading propaganda, and complete distortion of the facts toward preventing any action by the Congress on the bill.

Let me give you a few typical examples of the way in which these groups operate. This year representatives of the real-estate groups came before the Senate Banking and Currency Committee and testified that there really is no housing shortage. They said a fictitious picture of housing shortage has been created by Government propaganda. (Senate hearings on Reorganization Plan No. 3, p. 30.) We have been faced with the sorry spectacle of the representative of one of these groups stooping to make the categorical charge that the program of Government market guaranties for prefabricated housing undertaken as part of the veterans' housing program was, in fact, a calculated scheme to create a public-housing program. In proof of this, the group unequivocally stated that, as part of this calculated scheme, the Government has been purchasing these prefabricated units and storing them in warehouses until they got enough of them to go ahead with a gigantic public-housing program. As it happened, the committee requested facts. And what do you suppose this witness said when the facts were so requested? He said, and I quote, "I was mistaken about that." (Senate hearings on Reorganization Plan No. 3, pp. 26, 27, and 63.) But the important fact is that this incident is typical of the tactics employed by the representatives of these trade groups in spreading propaganda which they know is without any basis in fact, with the hope that it would mislead the Members of the Congress and the public generally.

An equally shocking spectacle was when representatives of these groups came before the Banking and Currency Committee and opposed the plan to organize the housing functions of the Government on a sound, permanent basis, on the ground that it was a mere subterfuge to promote public housing. In proof of this, figures were cited to the effect that this year's budget for the National Housing Agency was greater than its budget for last year. (Senate hearings on Reorganization Plan No. 3, p. 37.) On actual checking, we found that the increase cited was due to a very substantial increase for private housing aids, while, at the same time, there was a substantial decrease in the funds for public housing. In addition—and this caps the climax—when the House of Representatives cut out this increase for private housing, these same spokesmen then took their hats and brief cases and went down the hall to the Senate Appropriations Committee and asked that the reductions be restored on the ground that these services were essential to private enterprise. (Senate hearings on H. R. 3756, pp. 219-221.)

These groups have not only sought to sabotage all proposals for an adequate housing program; they have striven for legislation, and have engaged in litigation against the Government, designed to remove existing safeguards that the Congress has imposed in the public interest, in connection with the various aids it has made available to private housing enterprise.

This has been particularly true in connection with the Home Loan Bank System.

The result was that just last month, on June 23, the Supreme Court decided a case where the Federal Home Loan Bank Commissioner's action to conserve the assets of a Federally chartered savings and loan association was attacked as arbitrary and unconstitutional. By unanimous opinion, the Supreme Court found it necessary to state, and I quote: "It would be intolerable that the Congress should endow an association with the right to conduct a public banking business on certain limitations and that the Court at the behest of those who took advantage of the privilege should remove the limitations intended for public protection."

It is evident what these short-sighted groups are aiming for. They want all the rights, all the privileges, all the benefits, and all the aids, that they can get from the Federal Government. But, they want absolutely none of the limitations or obligations that go with these benefits and aids and that Congress has found necessary to protect the public. Moreover, they not only want all they can get, but they want to be the only ones to get it.

On the basis of the record, the present picture is discouraging and disheartening. But I can tell you, on the basis of my many years of experience as a legislator, that no short-sighted and ill-advised groups, or any combination of them, can continue to thwart the public interest if the public refuses to let them. The Congress in the long run is always responsive to the public interest, and the more active and determined the fight put up by the public, the quicker the response will be. With the closing of the present session, and the return of Congressmen to their constituencies, there is an admirable opportunity for you to make clear to your Congressmen what your desires and demands on housing are. I hope that the people will take full advantage of that opportunity.

Good night.

The Third Party

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two outstanding editorials written by Hon. Josephus Daniels, editor of the Raleigh (N. C.) Observer, and published in that paper. The editorials deal with the subject of a third party.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

WHY NO THIRD PARTY

Some people, who wish to see a third party, think they see the breaking up of old party ties and the emergence of a party that, no matter its name, will follow the course of the Labor Party in Britain. They argue that when Lloyd George organized a government, with conservatives in control of the military and fiscal branches, he lost the support of labor and the more militant liberals. The result was that the Liberal Party became a poor third. Its more conservative members voted with the Churchill imperialist party and the others either joined the Labor Party or gave it the votes necessary to enable the Labor Party to overwhelmingly defeat Churchill and the conservatives.

In view of the fact that some Democratic Senators and even more of the Democratic Representatives voted for the tax bill desired by the big boys, and the labor bill, and many from the South voted to override Truman's vetoes, it is said that they are opening the way for the swallowing up of the Democratic Party by an American Labor Party. There might be something in that if conditions in America were similar to those in Britain. The southern Democrats who refused to follow the Democratic President in his vetoes have no thought of leaving the Democratic Party. They know such a course would drive them out of office. In an off year they may vote for conservative or even reactionary measures in Congress, but in a Presidential year they will support the nominee because party fealty is strong and because they know

that the liberal sentiment in the South is much stronger than appears in the recent votes of legislators.

History will repeat itself. Most of the politicians in North Carolina were opposed to the nomination of Cleveland in 1884 and in 1892, and the delegates to the national convention both times cast the vote of the State for another. But every time North Carolina gave the electoral vote to the nominee, there always being a strong element for Cleveland and reform.

In 1896 the solid North Carolina vote was cast for Bryan, and also in 1900 and 1908—every time he ran. The "embattled farmers" were then liberal and militant and demanded liberal candidates and policies.

In 1904 the conservative wing controlled and advocated the nomination of Parker. They later favored candidates who did not appeal to the rank and file of the party. Every time the Democrats have nominated a conservative it has invited the defeat that followed.

In 1912 most politicians in North Carolina and in all other Southern States except South Carolina and Texas opposed the nomination of Woodrow Wilson. But this State, under liberal leadership, led in the nomination of Wilson in 1912 and 1916. He defeated the conservative Democrats in the convention and at the polls. If Wilson had not rung true for militant liberalism he could not have been nominated in 1912 or elected.

There were not wanting Democrats in North Carolina who were lukewarm supporters of Roosevelt each of the four times he was nominated and elected. Some came out for conservatives as the nominee and some joined the Liberty League to defeat him. But in all that period the militant liberals were so powerful that Roosevelt received the largest majorities ever cast for a candidate in North Carolina.

What does all this prove? That North Carolina Democrats—and most other southern Democrats—cannot be seduced into a third party or to favor the nomination of any candidate whose record is not progressively militant and liberal. Truman's vetoes of Republican legislation has strengthened him. No Democrat can be elected who does not get the militant liberal vote.

If, however, the Democratic Party should reject its Jeffersonian, Jacksonian, Wilsonian, and Rooseveltian sound liberalism and uphold the reactionary measures passed by this Congress, it would merit and invite the utter defeat that followed the nomination of Parker and Davis, who had the misfortune to get the kiss of death from big business, which on election day voted Republican.

The conservative and reactionary vote in the country at large is tied hand and foot to the Republican Party which does its bidding. When Democrats, failing to stand true for the old Democratic doctrine of "equal rights to all and special privileges to none" nominate a so-called middle-of-the-road candidate they march down the road to certain defeat.

No. There will be no incentive to let a Labor or other third party follow what occurred in Europe. The Democrat Party in 1948 will ring true for dynamic progressive and liberal policies and will attract the vote of all who repudiate the reactionary policies of this Republican Congress, and will hold the support of all the regular Democratic States.

THIRD PARTY IN 1948?

About this time of an off year when big issues divide men, in one of the parties much talk is heard of the probable organization of a new party in the Presidential election. The present predictions of division are not new. When a party has been in power for a long time there is certain to develop differences on policies. These became so acute in the last term of Cleveland that when Bryan was nominated in 1896 the Cleveland element nominated Palmer and Buckner on a gold-standard ticket. The Third Party ticket made a poor showing, for its members were so hostile to Bryan and so strong for the gold standard that in order to make Bryan's defeat doubly sure most of the Palmer and Buckner supporters voted for McKinley on election day.

After a tenure from 1897 to 1912 there arose serious divisions in the Republican Party. Under Taft the party enacted the worst tariff measure in history and became so reactionary that in 1912 Theodore Roosevelt and other Republicans refused to support the regular nominees. They organized a new party with militant leaders—Theodore Roosevelt and Hiram Johnson as candidates—and in that year this new party—called Progressive—carried six States. Roosevelt would have been elected if the Democrats had not nominated a fighting liberal. The division in the Republican Party assured Wilson's big majority, but in that year he would have won if there had been no Republican split. In that election Roosevelt received 88 electoral votes to Taft's 8, Wilson getting all the others.

There has been no serious attempt to form a third party since 1924 when the La Follette-Wheeler ticket of the Progressive Party failed to carry any State except Wisconsin.

Will there be a serious movement to form a new party in 1948? Harold L. Ickes left the Republican Party in 1912 to support Theodore Roosevelt, returned to it later, but refused to remain in the party when it returned to old-time reaction and supported Franklin Roosevelt in 1932, 1936, 1940, and 1944. He says: "I am very much in favor of two strong major parties. I do not want to see the Democrats scared to death. So I assure them that there will be no third party in 1948."

Mr. Ickes, having affiliated with three parties, ought to be as good an authority as lives on the question of a third party. He thinks the real threat to Democrats comes from the Democratic administration itself and not from an imagined third party that lacks organization, money, or leadership.

It is true today, as Wilson said in his day, that 75 percent of the Democrats were liberal and 25 percent conservative, whereas the proportion of Republicans was 75 percent conservative or reactionary, while 25 percent of the Republicans were liberals. Judging by the votes in Congress at this session the proportion of Republicans who are liberal has decreased, and in the Senate there are less than half a dozen and probably not more than that proportion in the House. In 1948 the Republicans will be dominated by the element that has shaped reactionary legislation and will nominate candidates who are in the bag for the big boys, but who will talk progressive as Dewey did after reaching the Pacific coast in 1944. Nobody believed his belated liberal talk was sincere.

The Democratic Party must and will be militantly liberal and make the issue as clear-cut as Wilson and Roosevelt did. If it caters to the so-called conservative vote it will invite the same fate that defeated it when it nominated Parker, Davis, and other candidates who received the kiss of death from some of the big boys.

Rent-Control Legislation

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Letting the Cat Out?" published in the Pittsburgh Press of July 24, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LETTING THE CAT OUT?

Congressman JESSE WOLCOTT recently made some interesting comments on the new rent law which he engineered through the legislative mill.

The Michigan Republican advised tenants who feel their landlords aren't entitled to a 15-percent rent increase to sit tight.

But under the law which Mr. WOLCOTT sponsored, such a tenant will face the possibility of an unlimited rent increase or eviction, come next March, unless he agrees to the rent boost now so he can get a longer lease.

To brush off this threat, Mr. WOLCOTT told reporters that Congress has no intention of forcing tenants into the streets next spring. If the housing shortage is still bad, he said, rent controls won't be permitted to expire February 29, as scheduled.

Well, could it be Mr. WOLCOTT is letting the cat out of the bag?

The one-sided rent law, which brandishes the threat of eviction next spring over the tenant who refuses to give his landlord an immediate rent increase, was passed under pressure of the real-estate lobby.

But Mr. WOLCOTT's statements are significant.

It leads one to wonder whether this rent law wasn't just a gesture of appeasement to satisfy the landlord lobby and win the votes of the real-estate men in the 1948 election.

Having sewed them up, the Republicans then could very well say to the real-estate interests—just before rent controls expire next February:

"We gave you the chance to get a 15-percent rent increase. Now we're going to extend the rent controls another year."

And hope that that will give them the votes of the tenants too.

Or maybe Congressman WOLCOTT already has seen the handwriting on the wall if rent ceilings are lifted. For the housing shortage certainly isn't going to be licked by next spring. And if rent controls are permitted to expire, thousands of tenants will face eviction with no place to go.

Should this come to pass, the Republicans might very well find themselves with a housing problem of their own. They might have to move out of Washington.

Resource Development and Valley Authorities

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have inserted in the RECORD an able address on the subject, Resource Development and Valley Authorities, by Hon. C. Girard Davidson, Assistant Secretary of the Interior, before the Valley Authority Conference in Washington, D. C., July 18, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today as never before this country must concern itself with the vital problem of con-

serving and developing its basic resources. The full utilization of our resources is necessary for the progressive development of our economy and the achievement of higher standards of living for our people.

Many countries of the world are also depending upon the basic resources of the United States to assist them in bridging the gap until they can support themselves through the development of their own resources. At the direction of the President, two committees of Government economists and experts and a committee of private citizens are studying this problem. They are trying to appraise the effects of a comprehensive program of foreign aid and reconstruction on our own resources and the impact of such aid on our economy.

Despite the prodigal fashion with which we have exploited our resources in the past, this country is still basically very wealthy. There are vast areas in the country, particularly in the West, where we have barely scratched the surface in the development of our resources. In addition to providing this country and the world with the materials and supplies they require, the full development of these underdeveloped areas will provide millions of additional jobs, business and farm opportunities for our citizens.

As the President said in his State of the Union message to Congress, "The major opportunity of our generation to increase the wealth of the Nation lies in the development of our great river systems." Of course he meant the construction of multiple-purpose dams that will harness the waters of our rivers for flood control, irrigation, navigation, fish and wildlife propagation, and recreation. But he also meant when he spoke of increasing our wealth that these river systems should produce cheap and abundant supplies of hydroelectric power. As he said at Kansas City last month, "We have a long-standing policy that public power resources should be developed for the benefit of the people."

I do not want to minimize the need for flood control and other benefits of water development in the Missouri Basin and on other river systems in the West, but I want to emphasize that such flood control and other benefits must be achieved without sacrificing the productive benefit, the creative benefit of hydroelectric power.

Just as a century ago the railroads opened up the West, so cheap power will develop its resources. But the difference will be that instead of making the West a colonial empire of the East by carrying away its movable assets, cheap power, if we maintain our present public power policies, will bring a balanced development and a prosperity based upon a diversified economy.

Advancing technology places increasing reliance upon power for the production of the things we use and for processing the raw materials of our mines, our fields, and our forests. The electric furnace and the electrolytic cell are our means of overcoming the depletion of our high-grade mineral reserves because through them a large variety of our low-grade mineral ores can be made to yield their metals and chemicals, if cheap power is available. Electricity today is an indispensable raw material of production.

Even though these last hundred years have seen us skim the cream of our western minerals and forests and land resources, we have the tools whereby those resources that remain can be made to continue the enrichment of the American economy. For instance, the application of cheap power to our forest resources opens up vast potentialities for economic activity in plastics, alcohol, and other chemicals. We can make the full tree become a producer of wealth, instead of one-third lumber and two-thirds waste. This development is already well under way in the Pacific Northwest where a variety of products are now being processed from what was once wood waste.

The same principle applies to our fishing industry. At the present time we discard at our fish canneries almost as much value in vitamins and proteins as we process. Given adequate research and the application of cheap power, we will some day be producing synthetic fibers, artificial leather, and a variety of pharmaceutical substances from the scrap of the fishing industry.

The availability of abundant cheap power means not only the conversion of resources now wasted or untapped into useful products but the diversification of the raw-material economies of our underdeveloped areas. As an area begins to process some of its own raw materials, its prosperity increases and it becomes a better market for the goods manufactured in the other regions of our country. The diversification of industry reduces the reliance of a region upon the exploitation of its basic raw materials. Consequently, there is more opportunity for the conservation of the region's basic resources without impairing its prosperity.

The same dams which produce the power so important to the economic progress of our underdeveloped areas store the water and make it available for irrigating arid lands. Through land reclamation we can provide additional acreage to grow the food needed, in ever greater quantities, at home and abroad.

In addition to increasing our supply of arable land by irrigation and reclamation projects, we must conserve our soil resources and restore the fertility of land already under cultivation. For this purpose, farmers are demanding ever greater quantities of phosphate fertilizer.

In the Northwest there is almost an infinite supply of phosphate awaiting development by the fertilizer industry. Through the electric-furnace process developed by the TVA, we believe that low-grade phosphate shale may be used as effectively in the production of plant food as is the high-grade rock under the other methods. Here again the availability of the abundant supplies of cheap hydroelectric power can assist in the development of a mineral vitally needed for conserving one of the Nation's most valued resources.

In recognition of the importance of the development of our western phosphate reserves, the Department of Interior undertook to develop a coordinated program involving most of its 12 bureaus and divisions. Our phosphate program involves the surveying and testing of western phosphate deposits, the study of commercial feasibility, the transmission of power to the areas slated for development, adjustments in our mineral leasing policy to facilitate development, the study of transportation, market, and other factors influencing the production of phosphate and the coordination of the agencies responsible for those various functions. We are also working cooperatively with the Department of Agriculture and the TVA on this project.

The coordination of Interior agencies involved in the program was facilitated by the Pacific Northwest Coordination Committee which had been established by the Department to pull together and correlate the programs of the several bureaus in that region. The execution of the phosphate program in proximity to the people of the region affected has given added impetus to the development.

This kind of approach to the problem of resource development has demonstrated the value of intensified efforts to coordinate existing agencies of Government in the area within which the work is to be done, both within and between the several departments.

I am not citing this example of an effective attack upon a resource problem in order to lead this conference away from its subject. Nor is this an attempt to prove what you already know—that competent, earnest people working on the solution of a problem for the public benefit will do a good job irrespective of organizational difficulties and administrative hurdles. I am aware that the problem to which this conference addresses itself is not whether we should have coordination in the development of our resources or why we should have coordination, but how this can best be done.

We are seeking the most effective, efficient, and economical method of doing our resource conservation and development jobs. We are seeking the most competent vehicle for the planning and administration of these programs. We are seeking a method that will not depend merely upon the good will of a few good people. We want machinery that will facilitate—not frustrate—the good work of good people.

I have been fortunate in having had a rare opportunity to observe the various approaches we have used in developing our resources. I was employed by TVA for several years, during which much of the initial planning and construction were under way. After a period in private law practice I then went to work for the Bonneville Power Administration in Portland, Oreg., and had an opportunity to observe the problems of resource development in the Columbia River Basin. The Bonneville Power Administration of the Department of the Interior, as you undoubtedly know, is the power marketing agency for dams built and operated by the Corps of Engineers and the Bureau of Reclamation on the Columbia River. Currently, here in the Department of Interior, as I have indicated, we have attempted to coordinate the bureaus and divisions of the Department to achieve our conservation and resource development objectives.

Out of this experience has come a conviction that the planning of resource development should be on a river-basin basis; and that the most speedy, efficient, and economical method for carrying out both the planning and execution of the program is by a regional development agency which has ultimate authority and responsibility for the total job to be done. The budget process through which our national resource agencies must operate is such that it is well nigh impossible to achieve the dovetailing of plans and programs of work in a given river basin. Even if the agencies should submit budgets which are properly related to common objectives in river basins, there is no guaranty that the various congressional committees which will consider the programs and requests for funds of the several agencies will coordinate their actions. Moreover, national agencies have broad interests in relation to which the problems of any one river basin are relatively less important. Consequently, responsibility should be concentrated in a regional agency which is solely concerned with the development of the resources of that basin.

The establishment of a valley authority does not require the replacement of the Federal agencies with special competence, which perform those functions in the area which are clearly a part of a general national program. But under the unified planning of a valley authority which is responsible for the results achieved and is vested with the ultimate authority to get the job done, the timing and scope of these agencies' respective programs would conform to the requirements of the valley's development.

A good example of the lack of such unified attack on a river basin is represented by the Rio Grande Valley, which constitutes one of the most acute problems in the country. In this valley, the water supply is inadequate and irregular. From time to time, spring or summer floods cause extremely heavy damage to rural and urban properties and transportation facilities. The flood danger is

steadily becoming worse, due to the rising level of the river bed caused by the ever-increasing deposits of sediment. The river bed is already several feet higher than the adjacent valley land over long stretches of the river. It is at least several feet higher than the main business and industrial section of the city of Albuquerque. The present levee system becomes less and less effective as the bed of the river rises.

The aggrading river bed is causing the water table underlying the adjacent valley land to rise, and is rending the present drainage system more and more ineffective. Irrigated farmlands are being abandoned as they become waterlogged or are covered by sediment brought down by the floods.

To put an end to the devastation and property damage caused by soil erosion, floods, and deposits of sediment requires a completely integrated valley program. The developments on the main river for downstream flood and sediment control, irrigation, and power must be related to the developments for upstream erosion control and the rehabilitation of the resources on the watershed. Plans for the downstream program are the primary responsibility of the Bureau of Reclamation, the Corps of Engineers, and of several other cooperating agencies. Plans for the upstream and watershed development are the primary responsibility of the Department of Agriculture. Funds were approved by Congress for carrying forward the reclamation and downstream flood-control investigations and plans during the war. Appropriations and work on the upstream flood control or watershed investigations by the Department of Agriculture were suspended during the war.

The reports and plans of the Bureau of Reclamation and the Corps of Engineers were scheduled for completion July 1 of this year. Investigations of the upstream phases of the problem by the Department of Agriculture have not been resumed as of this date, and reports and plans will not be completed short of 2 years or even longer if funds for this purpose are not made available for the fiscal year 1948. All three reports should have been prepared, been fully coordinated and presented at the same time so that there may have been laid before Congress a complete over-all plan for the middle Rio Grande Valley.

Similarly, other rivers are broken up into special problems and attacked upon a piecemeal basis.

Only the development of the Tennessee Valley stands out in sharp contrast to the development of our other great river basins. While the Rio Grande Valley problem still awaits a solution, the Tennessee Valley has achieved watershed control in step with dam construction so that the river now runs clear and the soil in that valley stays on the land.

If we have learned the lesson of the intimate relationship between natural resources that permits their unified development, it is largely because of the example of the Tennessee Valley and the TVA. It would be extremely dogmatic to assert that a river could not be developed except by a valley authority modeled after TVA. But it is irrefutable that despite the long years of effort by our other resource development and construction agencies, and the millions of dollars of expenditures, the Tennessee is the only river that has been completely harnessed and controlled in the interests of the people.

Compare the Tennessee Valley with its neighbor, the Missouri. In the past few weeks we have witnessed some dramatic contrasts between the two regions—the one devastated by floods; the other secure from such depredation and ready to benefit from the storage of the waters derived from heavy rains by releasing them through turbines to generate electric power.

There are other significant, if less dramatic, bases for comparing the Tennessee and Missouri Valleys. During the 10-year period 1930 to 1940, the Tennessee Valley gained 12 percent in population; the Missouri Valley lost one-half of 1 percent of its population. The value of manufactured goods produced in the seven Tennessee Valley States increased 27.7 percent, and industry expanded; in the Missouri Valley during the same period the number of manufacturing plants decreased from 20,000 to 17,000, representing a loss of employment for 110,000 wage earners. Land values which had been on a parity in the two valleys in 1930 increased from about $39 per acre to an average of $46.30 per acre in the Tennessee Valley and decreased to $25.28 in the Missouri Valley. In other respects, the economic well-being of the people of the Tennessee Valley improved during the 10-year period with resulting benefits to the entire Nation. The Missouri Valley, which comprises one-sixth of the land area of the United States and is vastly richer in other natural resources, does not carry its proportionate weight in the national economy.

These comparisons demonstrate that it is important not only that we make the necessary investments in the development of our basic resources but that we do it in such a way as to achieve a balance of interests. The active participation of the people of the region in the planning for the development of the resources, on which their future well-being depends, helps materially in formulating and crystallizing the common purpose in relation to which conflicts can be resolved in the public interest.

Most of us have agreed upon the desirability and even the necessity of developing our river basins through valley authorities. But just because this is the most sensible plan doesn't mean that it will be easy to achieve. All of us remember the years it took the late Senator Norris to secure the passage of the "lame duck" amendment which made good sense and hurt no one. In addition to being right, he had to work at it. We can do no better than to follow his example. We should do no less.

The Crisis Facing Agricultural Commodities

EXTENSION OF REMARKS
OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. PEPPER. Mr. President, in spite of the unprecedented prosperity which we have today, a real crisis faces many of the prominent agricultural commodities of this country unless we can expand our foreign markets so that they may be absorbed. I recently delivered a radio address on the subject. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are now at a point of farm and industrial production and prosperity unprecedented in American history. Corporation profits and farm income today are generally higher than ever in the past. Yet, at this very time, a number of important agricultural products face a truly grave market emergency and threaten bankruptcy or serious losses to thousands of efficient farm producers.

This market crisis faces a substantial number of farm products produced in a great number of our States—citrus fruits, dried fruits, potatoes, including sweetpotatoes, certain of the canned vegetables, dried milk, dried eggs, and others.

These products, until this year, were partially sustained by large Government purchases and by foreign exports. Today Government purchases and the foreign market have greatly dwindled. This situation has been permitted to develop despite the fact that the Government has been spending many hundreds of millions of dollars to feed the hungry people of the world and particularly those in our zones of Army occupation. In the spell of a false economy, we have been buying for that purpose such foodstuffs as grains which provide the greatest calorie content for the smallest expenditure of dollars. But in this process, we have been promoting the upward spiral of prices in the relatively tight supply products, while we have permitted other products in heavy supply to go to waste and rot and to fall to dangerously low price levels. And the very products now being ignored in our Government purchasing programs are the ones which are of vital importance in providing a balanced diet. I believe, if we are to help feed starving foreign peoples, as, indeed, we must and should, that we should do it as efficiently and providently as we can. But our purchasing program should give thought to the need for a balanced diet. I contend the purchasing program should avoid aggravating the unbalanced condition of our agriculture; that it should not inflate prices of certain commodities to unprecedented highs; that it should not permit other commodities like citrus fruits, potatoes, dried milk, et cetera, to fall to dangerous lows.

Let me illustrate this problem by a more particular reference to the citrus-fruit situation.

In four of the great States of our Union, California, Texas, Arizona, and my own State of Florida, the citrus-fruit industry is of basic importance. That industry now faces the most serious market situation in years.

During the war years, in response to the Government's need for greater production of food, citrus crops were increased very substantially in our four citrus States. The Government bought as much as 48 percent of the total processed citrus juices during the war, for our Army and Navy, but in the last 2 years, Government purchases have been drastically reduced to less than 2 percent, and the citrus industry has been unable to sell all the fruit it has produced. Prices have dropped sharply and some producers are receiving less for a box of fruit than it cost them to produce it. Other producers, fearful of a further decline in prices, have abandoned their crops, which will remain unpicked this year. The Department of Agriculture estimates that in Florida alone, 3,800,000 boxes of citrus have been left to rot on the trees because the growers could see no profit in hiring labor to pick them.

America and the world unfortunately are not without experience in the matter of letting fruit rot on the trees and grain wither on the stalks. But, generally, that happens only in times of acute economic crisis when the people are without funds and the Government without the will or the resources to bridge the gap between the oversupply and the unsatisfied needs of the hungry. But now, we are at a point of prosperity unprecedented in American history. Now, corporation profits and farm income generally are higher than ever in the past. Yet it is now that the citrus industry, as well as a number of other agricultural products, faces a truly grave market emergency.

On the other side of the water, millions of people are going hungry. Millions of children are going undernourished and are being doomed to disease-ridden foreshortened lives for lack of necessary vitamins and minerals in their diet. Citrus fruits would be an ideal

food to insure a healthful balanced diet. Great Britain, for example, is so concerned about the lack of balance in the national diet, that she dips regularly into her meager stock of dollars to buy from the United States citrus juices for use in feeding children and expectant mothers.

Here, then, is a great need for our products on the other side of the water and a surplus supply on our side of the water.

We must find a bridge between their needs and our supplies. Every consideration of political and economic advantage dictates that we do this. Well, what can we do about it?

Last week a number of Senators from the citrus-growing States—Florida, California, Texas, and Arizona—had a conference in the Capitol with the then Assistant Secretary of War Petersen. Mr. Petersen was in charge of the Army's food purchases for the feeding of the foreign populations in our zones of occupation in Germany and Austria. We urged upon him a policy of buying those farm crops that were in heavy supply and for which there was an insufficient home market, including citrus fruits, dried fruits, potatoes, certain of canned vegetables, dried eggs, and dried milk. We pointed out that Army purchases at present were being concentrated on certain grain products, such as wheat, which are especially high in calorie content. This results, of course, in sending up the prices of those foods to record high levels, while the prices of other foods are permitted to fall below the cost of production. Secretary Petersen was quite familiar with the problem. He was mindful that Army purchases of certain products in comparatively short supply were helping spiral prices of those products. He indicated that he would prefer, other things being equal, to buy commodities in heavy supply, like citrus fruits and dried fruits, eggs and milk, since this would give assistance to American producers who need it most and would help to maintain a balanced farm economy. But he pointed out that he was limited by a small appropriation which required him, in the interest of obtaining the maximum calorie and protein content for his money, to concentrate on grain foodstuffs in comparatively tight supply.

The Senators who made up the group which had the conference with Secretary Petersen have done me the honor of naming me to head up the work of further negotiating with our Government departments with a view to obtaining the necessary relief for the American citrus industry. With their aid and support, for which I am deeply grateful, I shall continue to press for the inclusion of a fair proportion of citrus products in the goods we ship abroad on loan and credit. I shall fight for an adequate school-lunch program.

But in the economic interests of the people of my State, I shall fight generally against the danger of drying up the foreign market for all American goods.

The business papers are full of warnings by economic experts that our current prosperity is being precariously maintained and will be short-lived. They argue that the recessions that have followed every previous war in our history constitute an inevitable pattern, which the present postwar period cannot escape. I am not one who will accept supinely the inevitability of economic depression.

I understand that we have not yet discovered the exact formula guaranteeing economic stability, but I do assert that we have learned a lot since 1929. We have discovered much about what makes the wheels go around in our economy. We have identified some of the weak spots which are the first to give way when prosperity turns the corner down the accelerating road to depression. We also know where some of the strategic spots are, the spots where Government measures, applied in time, can head off a depression or cushion it if it comes and speed recovery.

Now, I say that the problem faced by the citrus industry and by other major farm crops in heavy supply—dried fruits and certain of the canned vegetables, potatoes, dried eggs and dried milk—is a stop, look, and listen signal. It warns us of the danger involved in the delicate balance of our current prosperity. But, if we heed that warning, we will find that the danger is also an opportunity for our agricultural producers. One of the principal reasons for the plight of the citrus industry and the other farm products in heavy supply is the loss of the foreign market. That market has not been lost to competitor nations, who are out-producing or out-selling us. The grim fact is that in most of Europe, farm production is far less than it was before the war. In addition to reduced harvests, transportation difficulties have cut deeply into supplies. No, we have lost those markets because they do not have the dollars to pay for our food stuffs.

Now, not only the American farmer and citrus grower have relied heavily on the export market. It is the considered judgment of all our economists that the recent high level of exports has been one of the most powerful contributors sustaining our current prosperity. Export markets have absorbed all the goods which American business and American consumers were unwilling or unable to purchase. Wheat is doing remarkably well today, but it must be noted that the heavy American exports of wheat are just equal to the surplus in the American wheat crop over normal home requirements. In other words, if we did not have foreign markets for the unusually heavy wheat exports we are now shipping abroad, our surplus would be so great that the price would drop to a dangerous low, which would bankrupt many of the wheat-growing farmers of America and, in the process, drag down many of the businesses which depend on a continued prosperity of the wheat farmer. Now, the foreign consumers of our surplus wheat do not have the dollars to pay for it. They are getting that wheat through our Army purchases to feed foreign peoples in the occupation zones; they are getting it through American loans, grants, and credits.

But there are clear indications that the foreign markets, which have contributed so much to stabilizing our own economy and to preserving the prosperity of the bulk of our farm population must be expected to shrink in the very near future. Foreign countries have, for some time now, been scraping the bottom of the barrel of dollars, and rising prices have bitten deeply into their meager dollar supplies. The English loan, for example, will be exhausted a year earlier than was anticipated. We are exporting to foreign countries about $16,000,000,000 of goods this year, but those foreign countries will earn no more than $8,000,000,000 through the sale of goods and services to us. A deficit of about $8,000,000,000 in the balance of trade faces them. To meet it, they will have to draw upon their dwindling gold and dollar assets and new American credits. Unless means are found to replenish the supply of dollars, a sharp drop in the level of exports would appear unavoidable. If that drop occurs, we may expect, because of the special and profound effects of exports on business activity, that a general economic depression will be touched off.

The current rate of American exports means about 7,000,000 jobs for American workers—jobs in the better paying industries, because they are the ones that generally produce for the export trade. For thousands of American businessmen and farmers, that export trade means the difference between staying in business and failure. For thousands of others, the margin of exports is the difference between red ink and black ink for certain of their lines of business. But these direct benefits of exports do not begin to measure their beneficial effect upon our whole economic structure. Ours is a dynamic economy and exports are one of the important catalysts in the business process. The development of recession in the export sector of our present business would precipitate a downhill snowballing reaction in the other sectors. For example, if our exports of machine tools should drop sharply, thousands of machine-tool workers would be laid off. But that is not the whole story, because, when the income of these workers is cut off, they would be unable to buy the products of farmers and factories and the home market, and thus the chronic vicious cycle of our economy is set up again.

There are those who say that we cannot afford to make the loans and advance the credits required to maintain the export level required for our prosperity. There are those who think the Marshall plan will waste our precious American substance abroad. This, I suggest, is the false economy of the pound-foolish policy. For many reasons, America cannot afford to let Europe go down.

Six years of bloody war and then 2 more years of continued hunger, cold, and privation have left Europe on the verge of a fatal collapse. If that collapse is permitted to occur, if chaos and desperation dethrone stability and hope, who can say what new tyranny and dictatorships would spring up? We must be concerned with economic freedom and justice quite as much as with political freedom and justice. We know that the freedom and the liberties of the people must have a sound material basis if they are to survive and expand. In the past 20 years, we have seen too many examples of hungry and insecure men pawn their freedom for bread and shelter. We have seen how little free speech means to a mouth that is crying for bread. We know that, in the whirlpool of depression and mass unemployment, it is not only economic opportunity that gets sucked under, it is liberty and democracy itself. We are truly devoted to the democratic faith. Then, we must prevent the kind of depression that swept the world in the thirties and left tyrannous demagogs, like Hitler, in its wake. We must not play politics with hunger and starvation, with peace and war. We must not risk our birthright for what is merely a mess of pottage, the proposed untimely and unjust tax cuts. We must not, for lack of courage and vision, lose the world we fought so hard to save.

To many of us, the preservation of a peaceful democratic world is justification enough for a bold program of American lending and investment abroad. But such a course is dictated also by every consideration of self-interest. America cannot afford, cannot afford in dollars and cents terms, in bread and butter terms, to let Europe go under. Europe has never been self-contained or self-sufficient, so far as its needs of foodstuffs and industrial goods is concerned. Europe has always turned to American farmers and businessmen for food and raw materials and industrial machinery. European purchases have been one of the major factors making for American prosperity and industrial supremacy. If we let Europe go under, therefore, we undermine directly one of the foundations of American prosperity and industrial might, as well as the peace and security of the world.

What I am calling for is a return to the enterprise, vision, and courage, which made American business the envy and despair of all competitors. All I am asking is a return to that great American heritage—a tradition that goes back to the earliest days of the American Republic, to the days when it was still weak and untried, the American tradition of holding out a helping hand to the struggling peoples anywhere in the world, who ask our aid in their fight for a new and better life.

United Nations' Useful Open Forum

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "UN's Useful Open Forum," published in the Pittsburgh Press of July 24, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNITED NATIONS' USEFUL OPEN FORUM

Stressing the need for amendments to the United Nation's Charter to curtail the veto power, the American Legion calls the UN's Security Council "a perpetually hung jury."

The Legion admits this may not be the time to make fundamental changes in the Charter. But it indicates a goal which it feels must be attained before the UN can be "fully effective."

This, we think, is a proper approach to the problem. The UN cannot be fully effective so long as there are major conflicts between the two blocs which now divide the world. It is essential to recognize that fact, but just as essential not to dismiss the organization as an institution of no great value.

Something like a "hung jury" results from every clash between the Soviet and the western viewpoints. But discussions before the Security Council put the spotlight on troubled areas and so contribute to public understanding of international controversies and to creation of a world opinion that can become a mighty force for peace.

A charter amendment to eliminate the Soviet veto would not itself bring a change in Russian foreign policy. However, continuing abuse of the veto will tend to reveal the real Soviet objectives. If these are not in harmony with Soviet propaganda, misuse of the veto will defeat its own purposes.

Kicking Russia out of the UN would settle nothing, tempting as that thought might be. We've got to live with the Soviets, like them or not, in or out of the UN; so long as they stay in, they can be called on to explain their conduct before the world. The UN's open forum can be useful if we make the most of it.

A Tax Cut Proposal

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks I include a bill which I have just introduced suggesting a fair distribution of tax relief when and if we are to have tax reduction. This bill was prepared in collaboration with my colleagues, the gentleman from Michigan [Mr. DINGELL] and the gentleman from Pennsylvania [Mr. EBERHARTER], whose names would appear on the bill as coauthors if the rules of the House permitted it.

The Forand bill would: First, eliminate wartime excise-tax rates on a large number of items; second, repeal the tax on transportation of property; third, raise individual income-tax exemptions by $100 per capita; fourth, reduce individual income surtax rates by 1 percentage point in each bracket; and fifth, allow married persons in non-community-property States the same tax treatment as husbands and wives in the 12 community-property States.

The income-tax provisions of the bill carry an effective date of January 1, 1948. When Congress convenes next January we can determine whether the time for tax reduction has arrived. The Secretary of the Treasury has advised the Committee on Ways and Means that a period of tax reduction is approaching. This bill provides for tax reduction in accord with the principle of ability to pay—which is the only fair and equitable theory of Federal taxation. If fiscal requirements and inflationary threats make tax reduction inadvisable on January 1, 1948, then my bill can be held until that happy day arrives.

The estimated annual loss of revenue would be somewhat over $4,000,000,000—or approximately the same over-all tax cut provided by the Republican tax-reduction bill. The bill, however, would provide greater benefits for persons in the lowest income groups.

The text of the bill follows:

A bill to reduce Federal income and excise tax rates, to equalize Federal income taxes upon married persons, and for other purposes

Be it enacted, etc., That this act may be cited as the "Tax Reduction Act of 1948."

REPEAL OF WARTIME EXCISE TAXES AND WARTIME EXCISE TAX RATES

SEC. 2. (a) Sections 1650, 1651, 1652, and 1653 of the Internal Revenue Code (relating to war taxes and war tax rates) are hereby repealed.

(b) Section 302 (b) (2) of the Revenue Act of 1943 (period applicable to increase of tax with respect to billiard and pool tables and bowling alleys) is hereby amended by striking out the period at the end thereof, and by inserting in lieu thereof the following: ", and continuing through June 30, 1948."

(c) Section 309 (b) of the Revenue Act of 1943 (relating to draw-back on distilled spirits) is hereby amended by striking out the period at the end thereof, and by inserting in lieu thereof the following:

", and ending on the first day of the first month which begins more than 20 days after the date of enactment of the Tax Reduction Act of 1948."

(d) The term "rate reduction date" as used in chapter 9A of the Internal Revenue Code (relating to war taxes and war tax rates) means the first day of the first month which begins more than 20 days after the date of enactment of this act.

(e) The amendments made by subsection (a) shall be effective on or after the first day of the first month which begins more than 20 days after the date of the enactment of this act.

REPEAL OF TAX ON TRANSPORTATION OF PROPERTY

SEC. 3. (a) Subchapter E of chapter 30 of the Internal Revenue Code (relating to the tax on transportation of property) is hereby repealed.

(b) The amendment made by subsection (a) shall apply to amounts paid on or after the first day of the first month which begins more than 20 days after the date of the enactment of this act for transportation on or after such first day.

INCREASE IN PERSONAL EXEMPTIONS

SEC. 4. Section 25 (b) (1) of the Internal Revenue Code (relating to credits of individual against net income) is hereby amended by striking out "$500," wherever appearing therein, and by inserting in lieu thereof "$600," and by striking out "$1,000," and by inserting in lieu thereof "$1,200."

REDUCTION IN SURTAX ON INDIVIDUALS

SEC. 5. (a) Section 12 (b) of the Internal Revenue Code (relating to the rates of surtax) is amended by striking out the tax table contained therein and by inserting in lieu thereof the following:

"If the surtax net income is:	The tentative surtax shall be:
Not over $2,000	16 percent of the surtax net income.
Over $2,000 but not over $4,000.	$320, plus 18 percent of excess over $2,000.
Over $4,000 but not over $6,000.	$680, plus 22 percent of excess over $4,000.
Over $6,000 but not over $8,000.	$1,120, plus 26 percent of excess over $6,000.
Over $8,000 but not over $10,000.	$1,640, plus 30 percent of excess over $8,000.
Over $10,000 but not over $12,000.	$2,240, plus 34 percent of excess over $10,000.
Over $12,000 but not over $14,000.	$2,920, plus 39 percent of excess over $12,000.
Over $14,000 but not over $16,000.	$3,700, plus 43 percent of excess over $14,000.
Over $16,000 but not over $18,000.	$4,560, plus 46 percent of excess over $16,000.
Over $18,000 but not over $20,000.	$5,480, plus 49 percent of excess over $18,000.
Over $20,000 but not over $22,000.	$6,460, plus 52 percent of excess over $20,000.
Over $22,000 but not over $26,000.	$7,500, plus 55 percent of excess over $22,000.
Over $26,000 but not over $32,000.	$9,700, plus 58 percent of excess over $26,000.
Over $32,000 but not over $38,000.	$13,180, plus 61 percent of excess over $32,000.
Over $38,000 but not over $44,000.	$16,840, plus 65 percent of excess over $38,000.
Over $44,000 but not over $50,000.	$20,740, plus 68 percent of excess over $44,000.
Over $50,000 but not over $60,000.	$24,820, plus 71 percent of excess over $50,000.
Over $60,000 but not over $70,000.	$31,920, plus 74 percent of excess over $60,000.
Over $70,000 but not over $80,000.	$39,320, plus 77 percent of excess over $70,000.
Over $80,000 but not over $90,000.	$47,020, plus 80 percent of excess over $80,000.
Over $90,000 but not over $100,000.	$55,020, plus 83 percent of excess over $90,000.
Over $100,000 but not over $150,000.	$63,320, plus 85 percent of excess over $100,000.
Over $150,000 but not over $200,000.	$105,820, plus 86 percent of excess over $150,000.
Over $200,000	$148,820, plus 87 percent of excess over $200,000."

(b) Section 12 (g) of the Internal Revenue Code (relating to limitation on tax) is amended by striking out "85½ percent" and by inserting in lieu thereof "84.55 percent."

EQUALIZATION OF FEDERAL INCOME TAXES UPON MARRIED PERSONS

SEC. 6. (a) Section 51 (b) of the Internal Revenue Code is hereby amended by striking

out the third sentence in said section and substituting in lieu thereof the words: "If a joint return is made, the tax shall be twice the tax computed on one-half of the aggregate net income shown on the joint return, and the liability with respect to the tax shall be joint and several."

(b) Section 23 (aa) (1) of the Internal Revenue Code (relating to the optional standard deduction for individuals) is amended to read as follows:

"(1) Allowance: In the case of an individual, at his election a standard deduction as follows:

"(A) Separate return with adjusted gross income $5,000 or more: Except in the case of a joint return by husband and wife, if the adjusted gross income is $5,000 or more, the standard deduction shall be $500.

"(B) Joint return with adjusted gross income $5,000 or more: In the case of a joint return by husband and wife under section 51, if the aggregate adjusted gross income of husband and wife is $5,000 or more, the standard deduction shall be $1,000 or an amount equal to 10 percent of such aggregate adjusted gross income, whichever is the lesser.

"(C) Adjusted gross income less than $5,000: If the adjusted gross income is less than $5,000, the standard deduction shall be an amount equal to 10 percent of the adjusted gross income upon the basis of which the tax applicable to the adjusted gross income of the taxpayer is determined under the tax table provided in section 400."

CHANGES IN TAX AND WITHHOLDING TABLES

SEC. 7. The Secretary of the Treasury is authorized and directed to make such changes in the tables in section 400 (optional tax tables) and section 1622 (withholding tables) as may be necessary to reflect the reduction in taxes provided for in sections 4 and 5 of this act.

EFFECTIVE DATE OF INCOME-TAX AMENDMENTS

SEC. 8. The amendments to the Internal Revenue Code made by sections 4, 5, and 6 of this act shall become effective with respect to taxable years begininng after December 31, 1947

The Valley's Need

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Valley's Need," published in the Friday, July 18, 1947, issue of the Idaho Sun.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE VALLEY'S NEED

The logic for the establishment of a Columbia Valley Authority is pure and simple. As ex-Senator Hugh Mitchell, president of the CVA League has stated, it is no more complicated than that which inspired the Tennesse Valley Authority, an authority of proven worth. However, with Senator GLEN H. TAYLOR of Idaho about to introduce a bill for a CVA into the Senate with sponsorship of four other solons, both the simplicity and purity of the logic will be apt to disappear in a furious flurry of opposition.

So while we still have the simplicity let us point out the simplest fact of all, that with an authority for the Columbia River Valley the advancement of the entire area will receive far more interested attention followed by cohesive action than can ever be found under the present set-up.

Let us refer again to the words of Mitchell as regards CVA:

"We who work for a Columbia Valley Authority say that the valley authority is the appropriate instrument for this task. We have before us the Tennessee Valley Authority as the greatest demonstration project in the world for conserving and developing natural resources. Flood control is only a small part of the work to be done in building up the soil and generating power for industry. But the TVA does its work well because it has a multi-purpose unified program for the region and the mechanism for intelligent administration. The Tennessee, under TVA management, is the best-controlled river system in the world * * *

"And because all or some of the multitude of Federal Bureaus operating in the Pacific Northwest had failed in their jobs, we had a spectacle at Walla Walla which could well make one wonder at the efficiency of our democracy. * * *

"The question at issue should have been simply one of determining why fisheries planning had not kept up with irrigation, power, navigation, and flood-control planning. If the so-called inter-agency committee could assign blame for this failure and correct the difficulty it might service some useful purpose.

"Despite congressional action over the years the salmon propagation program has been regretfully slow. The problem was known even before the first great step toward the building of Grand Coulee and Bonneville. Congress has repeatedly asked the agencies in charge what they needed. But in the face of a favorable congressional attitude the fisheries agencies still ask for 10 or 15 more years.

"Why wasn't the job done in the last 15 years? I say it was because there was no agency urging speed upon the fisheries experts. They were more interested in problems of Alaska, or of New England, or of the Gulf of Mexico.

"The agency which should have been working and fighting for orderly development in the interest of the Pacific Northwest is the Columbia Valley Authority. Any CVA board sitting down to review our problems would have known immediately that a settlement of the salmon problem was one of first priority.

"But there was no CVA. There was no other agency doing a Pacific Northwest program checking job. Therefore, there was no one to say that the salmon propagation problem had to be settled and settled quickly. * * *

"The economic development of a great region is at stake. It is a program for jobs and farms. It is a program for a better Nation by building a better Pacific Northwest. * * *

"According to the Bureau of Reclamation 238 projects are involved, 238 projects which will bring water to 5,500,000 acres of land to provide some 70,000 new farming opportunities. These in turn would provide new employment opportunities for 1,000,000 people.

"It's a program too of producing 55,600,000,000 kilowatt-hours of firm energy with its great job potential.

"The annual cost to the Nation would be less than $300,000,000 during the 50-year amortization period but the projects would bring an estimated monetary return of more than $385,000,000 each year, even during those 50 years. Once construction costs have been paid the annual profit to the Nation would approximate an estimated $300,000,000 each year.

"The feasibility of the program is based on the relationship of power development to industralization. Once again we have demonstrated the tie-up between farm and industry. The industrial use of power at reasonable rates promises a sufficient return to help along the weaker irrigation projects. Industry helps to build agriculture. When both are healthy and strong, jobs are many and markets are good.

"Such an important program cannot proceed in an orderly and efficient manner by the pulling and hauling of special interests and of overlapping agencies. We need an organization that can analyze all the problems and mesh the parts into a balanced whole. We need continuity of policy and program by an organization working for the people. In short, we need a Columbia Valley Authority.

"We work for a CVA because we desire that nature be mastered for the benefit of people. Our human resources will derive vigor and strength from intelligent organization of our natural resources. For all people we seek the creative opportunities that lead to good living and lend dignity to the human spirit."

We of Vancouver and Clark County, who have by the grace of God been established on the banks of the mighty Columbia and its enfolding fertile lands have a binding interest in a CVA. We are coming more and more into the habit of looking futureward, of realizing our potentialities. A firm and intelligent control of the valley will do much to further the development of our entire area so let us work for it diligently.—V. M. S., 2d.

Correspondence Between Hon. Scott W. Lucas, of Illinois, and Emerson P. Schmidt

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. LUCAS. Mr. President, sometime ago, in a colloquy with the Senator from Alabama, I quoted from a statement that was made by Mr. Emerson P. Schmidt, director of the Economic Research Department of the Chamber of Commerce of the United States of America. I unfortunately misquoted Dr. Schmidt, and he has addressed a letter to me calling my attention to that fact. By a rather strange coincidence, Dr. Schmidt was testifying before a committee in the House of Representatives, and he also misquoted something that I said on the floor of the Senate about a year ago. I addressed a letter to Dr. Schmidt, replying to his letter addressed to me as of July 14. I ask unanimous consent that both letters be incorporated in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CHAMBER OF COMMERCE OF THE
UNITED STATES OF AMERICA,
Washington, July 14, 1947.

The Honorable SCOTT W. LUCAS,
Senate Office Building,
Washington, D. C.

DEAR SIR: We were somewhat disturbed at what you said on the floor of the Senate on

Friday, July 11, about the Chamber of Commerce and particularly myself. Frankly, I do not see how you Senators get as much work done as you do and remember facts and figures as well as you do.

In this case, unfortunately, what you said (CONGRESSIONAL RECORD, July 11, 1947, p. 8662, third column, middle paragraph) about my testimony of September 4, 1945, appears to be the exact opposite of what I said. You say:

"I distinctly recall that in 1945 * * * we heard Mr. Schmidt testify that in his opinion by the following spring of 1946 we would have 15,000,000 to 20,000,000 persons out of employment. Mr. Schmidt placed the unemployment figures higher than did any other expert who appeared before our committee * * *. I must confess that I have little confidence in Mr. Schmidt's estimate since that time."

If you have the time, I wonder if you would turn to the testimony of 1945, (hearing before the Committee on Finance, United States Senate on S. 1274) page 520, third full paragraph, where you will find these words:

"The factors mentioned in 8 above, plus the widiely publicized deferred demand and the existence of billions of liquid 'savings' are more likely to lead to excessive purchasing, rather than to the reverse."

Then on page 521, third full paragraph, you will find these words in my testimony:

"Thus, whether we look at the side of deferred consumers' demand or for producers' goods and equipment, or at the picture portrayed by the money liquidity positions of American business and individuals, we cannot help but conclude that a great boom is pending. I am not predicting its indefinite continuation, although I think it may continue for several years."

If you will examine the rest of the testimony, you will find that it runs in a similar vein. In fact I have never in my life made any predictions on the size of unemployment. That is too hazardous.

For this reason I wonder if you have any suggestion as to how best to clarify to your colleagues the unfortunate impression that may have been left in the minds of some people by your statement on Friday.

Incidentally, the quotation from my testimony of July 9, 1947, on page 8662 of Friday's CONGRESSIONAL RECORD, introduced into the RECORD by Senator SPARKMAN contains an error in the second sentence, although the error was in the transcript which Senator SPARKMAN had in his possession. The sentence should read:

"If a recession does take place, which I doubt, I think the tax reduction would be well-advised."

The transcript of my testimony used the phase "ill-advised," but I can understand how the stenographer could confuse "well-advised" and "ill-advised." At a later point in my testimony this same issue came up and I made the same argument that the tax reduction might help to obviate depression.

Very sincerely yours,

EMERSON P. SCHMIDT.

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C., July 26, 1947.

Dr. EMERSON P. SCHMIDT,
Director, Economic Research Department, Chamber of Commerce of the United States of America, Washington, D. C.

DEAR DR. SCHMIDT: This will acknowledge your letter of July 14.

Upon examining the hearings to which you refer, I find that I was misled by the beginning of the statement you inserted at page 514 of the hearings on the emergency unemployment compensation legislation, and upon more careful reading I agree you are correct. I shall try to correct this in the RECORD before the session ends.

We all make mistakes, and I wish to call to your attention an incorrect interpretation by yourself of my position on the minimum-wage legislation in the last Congress. Recently, in your report of the Committee on Economic Policy, page 16, and also in your statement before a subcommittee of the House Labor and Education Committee on July 8, 1947, you quoted me as saying: "* * * if this bill should become the law of the land, it would constitute, in my humble opinion * * * inflation. * * * I am compelled to vote against it * * * for what I conceive to be the best interests of the people of America."

I made that statement, but it was not based on the theory on which you were presenting your argument.

You will recall that the cost-of-production amendment for farm products was offered in connection with this bill, and a thorough examination of my remarks on the bill will disclose that I debated this amendment at quite some length on March 28, 1946, and on other occasions prior to the vote on the amendment on March 29, 1946.

Although I had argued that the amendment was inflationary and completely at odds with the agricultural parity program, we had so carefully worked out, and which had been so successful, the cost-of-production amendment was agreed to. Consequently, when we arrived at a vote on the bill it would have been necessary to approve this objectionable amendment in order to vote for the bill, and that is the reason I made the statement to which you refer.

Later, on May 13, 1946, you will find that I had the following colloquy with Senator PEPPER, of Florida:

"Mr. LUCAS. Mr. President, will the Senator from Florida yield?

"Mr. PEPPER. I yield.

"Mr. LUCAS. I should like to have the RECORD show, and to have the Senator corroborate, that I favored the minimum-wage bill.

"Mr. PEPPER. I am sure of that.

"Mr. LUCAS. I supported it to the utmost, even as against my agricultural interests, in attempting to defeat adding the cost of labor to the parity formula, because I knew that if that went in, the minimum-wage bill would not become law in this country.

"Mr. PEPPER. The Senator is quite correct. His record has been excellent in both respects I have mentioned."

A careful reading of all my remarks on the bill and the amendment will leave no doubt as to my reason for making the statement which you quoted. It was made solely because of the cost-of-production feature of the bill about to be voted on.

Will you please advise me that you are making proper corrections in the report in which you quoted me?

Yours very truly,

SCOTT W. LUCAS.

The Immigration Problem

EXTENSION OF REMARKS
OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made on June 20, 1947, by Ugo Carusi, Commissioner of Immigration and Naturalization, before the Subcommittee on Immigration of the House Committee on the Judiciary.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Much has been said and written of late on the subject of immigration. Unfortunately some of the writings and utterances are false and misleading. A recent example is the address delivered by Paul H. Griffith, national commander of the American Legion to the Daughters of the American Revolution in Washington, D. C., on May 22, last. Because of the prominence of Commander Griffith's position, these assertions of misinformation and gross exaggeration were given wide circulation in the press. Failure to challenge the commander's statements and to meet them with facts, may give them undeserved weight in the public appraisal of the immigration picture.

Attorney General Clark properly insists that the people of this country should know exactly what is going on in the field of immigration, and I am happy, at his direction, and through your courtesy for this opportunity, to set forth in this memorandum a statement of official fact which he and I are confident will lead to a better understanding and appreciation of our immigration problem, and what the Department of Justice and its Immigration and Naturalization Service are doing in the administration and enforcement of our immigration laws.

Inasmuch as Mr. Griffith in his recent address had something to say on each of the important aspects of immigration, I have chosen in this memorandum to take up each point as he has raised it.

LEGAL IMMIGRANTS

Mr. Griffith says: "Legal immigrants are entering this country at a rate of 154,000 a year."

The largest number of immigrants to come to this country in any one of the last 10 years was 108,721, in 1946. The annual average in the last decade is 55,157, of whom the quota immigrants comprise 29,463, and the nonquota immigrants (mainly immigrants from Western Hemisphere countries and spouses and minor children of American citizens) number 25,694. The actual number of quota immigrants in the fiscal year 1946 is extremely close to the annual average for the past decade, it being 29,095. The nonquota immigrants in 1946 showed a decided increase over prior years, due primarily to the 45,496 war brides and their alien children who entered during that year and boosted the nonquota figure to 79,626. So far the figures for the present fiscal year indicate that the number will be slightly higher.

Mr. Griffith's assertion that 154,000 immigrants are entering legally each year may be explained by the fact that the immigration quotas fixed under law total 153,929 each year. He may have assumed without verification, that every one of those quota numbers connotes an actual immigrant when, in fact, in the last 10 years 80 percent of the quota has not been used.

ILLEGAL IMMIGRANTS

Mr. Griffith says: "But for every legal immigrant for whom Richard opens the door to America, there are at least 10 illegal immigrants—black market immigrants, if you please. They belong to the 'Sneak-into-America' 1947 World Club."

Based on his statement that 154,000 are entering legally each year, his figure for illegal immigrants must be 1,540,000 per annum. Continuing on that basis he adds, "Every day thousands of foreigners run our borders or skip our laws in illegal entries into the United States."

The largest number of illegal entries is over the Mexican border. Almost to a single man or woman or child, those illegal entrants are Mexican laborers or members of their families. No evidence has come to the Immigration and Naturalization Service that

that border or the Canadian border is being used by persons from other countries seeking to enter the United States surreptitiously, in other than rare, isolated instances. The vigilance and cooperation of the Mexican and Canadian Governments have had much to do with this result. On the Canadian border most of the illegal entrants are Canadians coming into the country to work, shop, or visit without strictly following the legal requirements. The experience of the Immigration and Naturalization Service has shown that persons who seek to "slip by" the immigration bars at our seaports are limited to less than 2,000 a year. In the past year about 1,400 of them were stowaways. All but a handful had been apprehended by the master of the vessel and turned over to the immigration officers at the pier. A few who succeeded in getting ashore have been apprehended and subjected to deportation proceedings.

In his reference to illegal border crossers, Mr. Griffith says "Outlanders from the four corners of the earth run our borders daily along the Canadian and Mexican boundaries and over the Caribbean waters, making a mockery of our meager patrols."

It has already been pointed out that the illegal crossers are almost exclusively Mexicans and Canadians. As for the mockery which they are making of our meager patrols, it is sufficient to say that in the first 10 months of the fiscal year 1947, the border patrol and other officers of the Immigration and Naturalization Service have brought about the apprehension and expulsion of 171,703 deportable aliens, of whom 15,313 were deported and 156,390 were made to depart at their own expense in lieu of deportation. Of this number more than 90 percent were Mexicans; the next largest number were Canadians. In 1946 the number was 116,320. It may be of interest to know that this large number of expulsions has brought about a labor shortage in the States bordering Mexico; this is convincing proof that the expulsions are now exceeding the entries. Indeed, in order to meet the labor shortage, agreements have been reached between the United States and Mexico by which Mexican agricultural labor is now being recruited and imported in compliance with our immigration laws. The largest estimate of illegal entries which can be made from the number of apprehensions (including the large number of Mexicans) clearly shows that Mr. Griffiith's figure of 1,540,000 is about 800 percent too high.

SEAMEN

Mr. Griffith says: "Seamen, many of them that only in name, are jumping ships in American ports."

In the past 10 years there have been 7,665,342 arrivals of alien seamen at United States seaports. Of this number 45,100, about two-thirds of 1 percent deserted. The records of the Immigration and Naturalization Service show that most of them have either been apprehended, deported, or reshipped foreign. Desertions in the fiscal year 1944 were 5,811; in 1945, they totaled 5,577; in 1946 they totaled 4,365. In the first 6 months of the fiscal year 1947, the number is 1,860. This shows a definite downward trend of desertions; our most recent figures tally closely with those of the prewar years. In speaking of desertions by seamen, we must not overlook the fact that this is a technical term and does not, in many instances, indicate that the seaman has left the vessel with the intention of abandoning his calling or remaining in the United States. If a seaman arrives at the pier just too late to sail with his vessel he is counted as a deserter although he departs on her next sailing or, indeed, on a sooner sailing of another of his employer's vessels.

VISITORS AND TRANSITS

Mr. Griffith says: "Foreigners arriving in transit on the way to other lands make it a permanent sit in the good old United States of America" and "aliens dropping in on visitors visas manage to get lost in our wide-open spaces."

The three largest groups of legal nonimmigrants are the visitors for pleasure, who have averaged 40,642 for each of the past 10 years; visitors for business, 29,525; and aliens in transit through the United States to other countries, 33,060. Other nonimmigrants are: Resident aliens who are returning from trips abroad; foreign government officials, their families and servants; students; and treaty traders. The complete nonimmigrant figures for the fiscal year 1946 are:

Government officials, etc	17,031
Temporary visitors for business	74,913
Temporary visitors for pleasure	59,913
In transit	31,124
Treaty traders	378
Returning residents	13,306
Students	5,855
Members of international organizations (United Nations delegates and families)	658
Other classes	291
Total	203,469

As of April 30, 1947, there were in the United States in legal status 78,543 visitors and 11,391 transits. During that month more visitors and transits departed than entered; 53,090 visitors had entered and 55,357 had departed; 14,348 transits had entered and 13,336 had departed. These figures are cited in connection with the assertion that visitors lose themselves here and transits just sit. Of course, many visitors and transits do seek to extend their stays here and some attempt to remain permanenly. The experience of the Service has been, however, that most of them seek to accomplish it by legal means; that is, by asking for extensions or change of status. Inasmuch as such applications are granted only in cases of real merit and where the application is obviously made in good faith, the number of denials of applications runs between 80 and 90 percent.

A check-in and check-out system is maintained by the service in order that illegal overstays may be detected and appropriate action taken. Our field officers are alerted to act promptly to bring about the departure of those who seek improperly to extend their stays. The law does not require nor does limited personnel permit the checking of every person who leaves this country, particularly persons who leave by train or automobile. Consequently, while we have accurate statistics on the number who enter the country legally, the recorded number of departures is always less than the actual departures. However, in order to be safe, we proceed upon the assumption that a person whose departure is not of record is still in the United States. On that basis, our records as of April 30, 1947, showed that 85,471 visitors and transits were possibly in the country in illegal status. In the past 2 months we have assigned additional personnel to the task of checking these records. As a result, the number is dwindling fast. Already a large number have been found to have departed, confirming our judgment that the majority of them had departed at the expiration of the time for which admitted. We hope to complete this survey in the next few months.

STUDENTS

Mr. Griffith says: "Overseas students come here to study and make it life jobs."

In the past 10 years the yearly average of student visitors has been 2,302. The number to come in the fiscal year 1946 was 5,855. Periodic checks are being made by the Immigration Service to determine whether the student is continuing his studies at the university in which he was enrolled. Some instances have been found where students have left the school to go to work or have taken up unauthorized employment while going to school. In those instances the status of student is declared breached and appropriate action taken.

We are watching the student cases very closely, and requiring reports from the school officials as the activities of each alien admitted as such.

GENERAL COMMENT

I have tried in the foregoing to give specific information as honestly as I can on those observations of Mr. Griffith which he would term "factual." It has not been my purpose—nor do I feel it appropriate—to comment upon his general views or characterizations. I do add this thought, however: To the extent that he infers that the officers and employees of the Immigration and Naturalization Service are acting dishonestly, carelessly, and without regard to the public good and their oaths of office, with the result that there is—in his words—"skulduggery * * * under our existing laws," and that "immigration in 1947 has run amok," Mr. Griffith unfairly condemns a large group of loyal and efficient public servants, a very large number of whom are members of the great organization which he presently heads.

What About Eisenhower?

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What About Eisenhower?" published in the July 1947 issue of the Churchman.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT ABOUT EISENHOWER?

As we go to press it is announced that Gen. Dwight D. Eisenhower will step out as Chief of Staff of the Army on January 1, 1948, to become president of Columbia University. An announcement by the War Department admitted that such an offer was made, but declared that General Eisenhower had no intention of leaving his post "during the current year."

The fact that the famous war leader will quit his military career for a civilian position at a time of international tension caused immediate speculation in regard to the implications concerning our national defense policy, as well as to possibilities in the election year of 1948.

Eisenhower's intention to quit his job as Chief of Staff is a disturbing fact to many of us who are deeply concerned over the way in which our policy makers in Washington are handling world affairs. From the day of his homecoming, in June 1945, General Eisenhower has consistently raised his voice to strengthen the effort for peace and international understanding. He stressed this point of view when he received the Churchman award last December, and in recent months he has stated that those who are plotting war will make themselves guilty of the greatest crime to mankind. It is possible that Eisenhower stood in the way of certain plans which are reported as being hatched by influential groups in the State and War Departments?

Brig. Gen. H. C. Holdridge, in his sensational article "American Militarism," in

the Christian Century of March 19, 1947, accused certain military cliques of preparations to solve our domestic problems "with bayonets." The courageous general wrote:

"We are being sold a bill of goods on 'national security' by our armed forces. When delivery is made and we open the package we shall not find security but militarism. We shall find that we have traded our birthright of freedom and democracy and morality for a mess of militaristic pottage."

Did General Eisenhower oppose such a policy, and is this the reason why he intends to step down from his influential post? There are two possibilities. Either General Eisenhower intends to quit on his own initiative, or he has to give up his job due to certain conflicting views on our present foreign policy. Whatever the reason might be, to the average American this resignation will appear as another signal that we are going a step nearer World War III.

Eisenhower is the last one in a top position who was closely acquainted with the postwar ideas of the late President. When the general steps down, it will be another blow to the cause of peace. A peace-minded general as Chief of Staff is a greater asset for the American people than a peace-minded head of an American university.

Record of Hon. James J. Davis as Secretary of Labor

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of the record of Hon. James J. Davis when he was Secretary of Labor.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF LABOR, HON. JAMES J. DAVIS, SECRETARY, MARCH 1921–DECEMBER 1930

During the 10-year administration of the Department of Labor by Secretary James J. Davis, the Department was divided into administrative units as follows:

1. Office of the Secretary.
2. Bureau of Labor Statistics.
3. Bureau of Immigration.
4. Bureau of Naturalization.
5. Children's Bureau.
6. Women's Bureau.

Office of the Secretary also included:

7. Conciliation Service.
8. United States Employment Service.
9. Bureau of Industrial Housing and Transportation.

The act of Congress creating the Department of Labor effective March 4, 1913, provided that its purpose should be "to foster, promote, and develop the welfare of the wage earners of the United States, to improve their working conditions, and to advance their opportunities for profitable employment."

Outstanding achievements of the Department of Labor during the decade in question are three, namely: the activities of the Conciliation Service in promoting and preserving peace in industry; the restrictive immigration act whch stemmed the flood of European mmigration which threatened to swamp us, thereby preserving the available jobs for American workmen; and third, the introduction of the 8-hour day by abolishing the 12-hour day and the 7-day week in our basic industry, the far-flung iron and steel industry. This latter achievement was the greatest advancement for labor in many a year. It marked an epoch in the life and labor of the American workman.

During the decade in question, the Department was diligent in the discharge of its responsibilities under the provisions of the act of Congress setting up the Department. Practically all its activities were concerned with promoting the welfare of wage earners. The Bureau of Labor Statistics was the central source of statistical and other information concerning labor. The Bureau of Immigration enforced the laws enacted in large part for the protection of American wage earners. The Bureau of Naturalization dealt with immigrants who were seeking United States citizenship. The work of the Children's Bureau was devoted in part to the problems of young wage earners, and the work of the Women's Bureau was devoted entirely to the welfare of women in industry. The Conciliation Service was devoted to promoting and preserving peace in industry. The United States Employment Service aided the unemployed to find employment

The United States Housing Corporation was engaged largely in disposing of homes built for workers during the period of World War I, and the Department library was built up to one of the finest collections of material relating to labor.

The Secretary of Labor also served as chairman of the Federal Board for Vocational Education which cooperated with the States in promoting vocational education and the rehabilitation of disabled men in industry. During his incumbency in office, appropriations for the Department of Labor increased year by year.

During this 10-year interval, the Conciliation Service exercised its good offices in a total of 5,117 trade and industrial disputes, strikes, threatened strikes, and lockouts, securing an amicable adjustment in a total of 3,620 cases for an over-all average of approximately 78 percent. The United States Employment Service placed in employment an average of 1,500,000 men and women annually during this same period.

Because of the tremendous number of immigrants involved, the Bureau of Immigration was the major administrative responsibility of the Department. The Bureau of Naturalization also reached into the lives of hundreds of thousands of alien immigrants who came to this country to make it their permanent home. Since the overwhelming majority of these newcomers to our shores were prospective workmen, and future citizens, it seemed logical that the first two departments of government to come into contact with them as they began the journey which would place them in a job and eventually make them citizens of the United States, should be part of the Department of Labor. These two very important Bureaus, however, were transferred from the Labor Department to the Department of Justice under the President's Reorganization Plan No. 5, effective June 14, 1940.

Upon assuming office in March 1921, Secretary of Labor Davis found more than 5,735,000 workers temporarily unemployed. Vessels engaged in bringing in aliens had a carrying capacity in excess of 1,250,000 annually. The number of immigrants admitted to the United States mounted from 141,000 in the fiscal year 1919 to 430,000 in 1920, and to 805,000 in 1921. Immediate action to restrict the number of entrants from foreign lands, no matter how worthy they might be, was vital to supply work for those of our own workers unemployed and to prevent the importation of hundreds of thousands of immigrants who would otherwise surely come seeking jobs that were not then available.

For this reason, the Department recommended and laws were enacted to restrict European immigration, which effectively stemmed the onrushing tide of immigration and contributed largely to the early solution of our unemployment problem. By this action immigration from Europe was reduced to an average of 156,000 in 1930.

The 10-year period in question marked a decrease in working hours, a betterment of working conditions, and increases in wages in nearly all sections of the country, with the consequent benefits of better homes and improved standards of living for our people. At the beginning of this period the United States Employment Service was functioning in a limited manner.

The Secretary carried on a continuous activity in industry for a saving wage for workers because he believed the traditionally accepted living wage was not sufficient to make the worker's house a home. He also waged a continuous campaign urging every major industry in America to liberalize and humanize its labor-relations policies. The iron and steel industry was the first major enterprise to be approached by the Government with respect to this program. A conference was called by the President of the United States and attended by leaders in this giant industry. They were advised that the 12-hour day must go. Industrialists maintained that the industry would go broke if the 12-hour day was abolished. The Secretary of Labor maintained that it should go broke if management could not operate on an 8-hour day. The conference ended with favorable response on the part of the industrialists. This was the beginning of the 8-hour day in the iron and steel industry, and eventually throughout the Nation.

During this period the Secretary prepared the first wage-and-hour bill. The railroad labor bill was passed during this period with the support of the Secretary of Labor and the approval of the railroad brotherhoods.

The Secretary constantly urged the introduction and expansion of collective bargaining in those industries where collective bargaining was not accepted, especially in the steel industry. He urged putting teeth into the railroad labor bill since he felt the old law was more or less voluntary. Secretary Davis himself was always a stanch advocate of collective bargaining and organized labor. He received the full support of the American Federation of Labor in his campaign for the United States Senate in 1930 and in subsequent campaigns. The first piece of legislation he introduced upon assuming his seat in this legislative body was for the benefit of the workingman and was known as the Davis-Bacon bill, March 3, 1931.

Department activities during the administration of Secretary Davis as recorded in his annual reports for the years in question were:

FISCAL YEAR ENDING JUNE 30, 1921

Conciliation Service handled 457 trade and industrial disputes; 338 were settled amicably, with 593,006 workers directly or indirectly involved.

Settled vast packinghouse workers' strike March 1921 and the marine strike June 1921.

Recommended that the appropriation for Conciliation Service be approximately doubled.

Percentage Act restricting immigration enacted and placed in effect June 3, 1921.

Immigration into the United States the first year of operation of this act was reduced by more than a half million immigrants.

Bureau of Immigration inspected 2,117,502 immigrants, nonimmigrants, and seamen.

Naturalization citizenship training extended to 3,526 communities, a greater number than in any preceding year.

Research work in the Bureau of Labor Statistics becoming increasingly important in the dissemination of labor news.

Sheppard-Towner Maternity and Infancy Act adopted November 23, to be administered by the Children's Bureau.

Reorganized the United States Employment Service. Recommended that the appropriation for this service be increased to four times that of previous year. First Federal survey of the unemployed.

FISCAL YEAR ENDING JUNE 30, 1922

Conciliation Service handled 360 cases of trade and industrial disputes, 266 adjusted amicably.

Nation-wide coal strike which began in April involving 450,000 bituminous and 150,000 anthracite miners settled in August in the bituminous fields and September in anthracite fields.

Bureau of Immigration examined a grand total of 1,532,565 immigrants, nonimmigrants, and seamen.

Eight hundred five thousand, two hundred and twenty-eight immigrant aliens were admitted during fiscal year 1921. Without percentage immigration laws, conservative estimate for fiscal year 1922 would have been more than 1,000,000. Actual total number alien immigrants admitted fiscal year 1922 was 309,566.

Secretary's Board of Review to hear immigration appeals created in January.

Bureau of Naturalization handled a total of 436,149 initial and final petitions for naturalization. Conducted citizenship training activities in 3,625 communities throughout the Nation.

Enactment of act September 22 providing independent naturalization status for married women.

United States Employment Service in cooperation with the several states placed in employment a total of 1,458,746 men and women.

Development of the USES industrial employment survey. Monthly reports on employment by industrial groups and geographical divisions. President's conference on unemployment.

Development of program of Federal aid to the States for the welfare and hygiene in maternity and infancy under Sheppard-Towner Act of 1921, administered by the Children's Bureau.

Secretary recommended to Congress erection of a permanent building to be occupied exclusively by the Department of Labor.

Secretary recommended to Congress an amendment to the Federal Constitution to permit the establishment of minimum standards of child labor.

FISCAL YEAR ENDING JUNE 30, 1923

Department was instrumental in abolishing the 12-hour day and 7-day week in the iron and steel industry and the substitution therefor of the 8-hour day and 6-day week.

Out of 534 trade and industrial disputes, Conciliation Service secured 428 amicable settlements. Three hundred ninety-five thousand six hundred and seventy-eight workers were involved directly or indirectly. Aided in settlement of railroad strike. Also major conciliation activities in the pottery and garment trades.

Bureau of Immigration examined 522,919 immigrants. Recommended the enactment of an "Alien Code" to include annual enrollment of all aliens so long as they remain alien.

Bureau of Naturalization handled 296,636 declarations of intention to become citizens, 158,056 petitions for naturalization, and conducted citizenship training activities in 2,461 communities through the United States.

United States Employment Service, in cooperation with the several States, placed 2,156,466 men and women in jobs.

Forty States now cooperating with the Children's Bureau under the Maternity and Infancy Act of 1921.

Nurses institutes on maternal and infant care conducted in 17 States by Children's Bureau.

Women's Industrial Conference held in Washington in January, attended by representatives from 40 different States.

Various special studies on women in industry conducted by the Women's Bureau.

Secretary Davis in his annual report to Congress stated:

"During the last year we took one great step forward through the elimination of the 12-hour day and the 7-day week in our great basic industry, the steel industry."

FISCAL YEAR ENDING JUNE 30, 1924

Conciliation Service handled 544 trade and industrial disputes, 415 of which were adjusted amicably. Four hundred and ninety-seven thousand four hundred and sixty-nine workers involved directly or indirectly.

Secretary appointed an all-colored commission of five to make a study of industrial and economic conditions in the Virgin Islands.

Continued progress toward establishment of 8-hour day and 6-day week in certain industries operating on a 12-hour day 7-day week basis.

Called conference in Washington of manufacturers of paper boxes to reduce working hours per day and days per week in this industry.

Special commission appointed and headed by the Secretary of Labor made an extended on-the-spot survey of emigration conditions in European countries.

Proposed to House and Senate, bill known as Immigration Act of 1924, a bill to limit immigration of aliens into the United States, and provide a system of selection in connection therewith. Better known as the "Selective Immigration Act."

Participated in International Conference on emigration and immigration in Rome, Italy, May 15–31.

Selective Immigration Act of 1924 approved by Congress May 26. Provided permanent quota system.

Bureau of Naturalization handled 424,540 declarations of intention to become citizens, and 177,117 petitions, a total of 601,657, highest peak since act of 1906 became operative. Conducted citizenship training courses in 3,023 communities in the United States. Two thousand five hundred industrial firms were assisted in various ways in furthering training for citizenship of their foreign-born employees.

United States Employment Service, in cooperation with the several States placed in employment a total of 1,806,990 men and women.

Constitutional amendment submitted by Congress to the States in June "to limit, regulate, and prohibit the labor of persons under 18 years of age."

Arkansas first State to ratify constitutional amendment on child labor.

Secretary of labor recommended to the Congress:

The necessity of giving the Department of Labor authority and the means to enable it to undertake industrial safety research work.

Increases in pensions and annuities paid to retired employees.

Permanent legislation to provide for general supervision by the Federal Government of an adequate system for the clearance of labor between the States, and financial aid on a fixed percentage of the appropriation made by each State for employment activities.

Reorganization of and expansion of its general wage work studies in the Bureau of Labor Statistics, and that funds be provided to maintain a division of labor safety in the Bureau.

Increased appropriations for the expansion of the Conciliation Service.

Expansion of the Children's Bureau so that the public would have more benefit of the reports and findings of that Bureau.

That the United States Employment Service be made a statutory bureau of the Department of Labor.

FISCAL YEAR ENDING JUNE 30, 1925

Conciliation Service handled 559 trade and industrial disputes, affecting 334,009 workers directly or indirectly. Three hundred and ninety-two of these disputes were settled amicably.

Two Negro commissioners of conciliation were added to the staff of mediators in the division of conciliation.

Immigration Bureau examined a total of 458,435 aliens, 274,314 of whom were immigrants.

Restrictive immigration law went into effect July 1, 1924, limiting European immigration to an annual total of 153,714.

Adopted system of examining immigrants abroad before embarking for United States instead of upon arrival in United States.

Immigration Border Patrol organized July 1924.

Secretary again recommended to Congress the enrollment of registration of the alien following his arrival in the United States, with provisions for an annual census of the unnaturalized and a system of education in Americanism which would give every alien an opportunity to learn the English language and something of American history, traditions, ideals, and institutions.

Bureau of Naturalization handled a total of 277,218 declarations of intention to become citizens and 162,258 petitions for naturalization.

United States Employment Service in cooperation with the States placed in employment 1,609,977 men and women. Farm Labor Service placed 400,000 seasonal workers compared with 70,000 in 1921.

Forty-three States and Hawaii now cooperating with Children's Bureau under Maternity and Infancy Act.

Conference of State directors of maternity and infant hygiene held at Children's Bureau in October 1924. Thirty-six States represented.

Secretary recommended and urged ratification of the child labor amendment by the various States.

Secretary again called attention of Congress to necessity for the passage of a more liberal retirement law for retired employees of the Federal Government.

FISCAL YEAR ENDING JUNE 30, 1926

Conciliation Service handled 551 industrial and trade disputes, strikes, threatened strikes, and lock-outs. Three hundred and thirty-seven of these, including the anthracite coal strike in February, were amicably settled. Four hundred eighty-five thousand six hundred and ninety-eight workers were directly or indirectly involved.

Immigration Bureau examined a total of 496,106 aliens admitted to the United States, of which 304,448 were immigrants, and 191,618 were nonimmigrants.

Bureau of Naturalization handled 277,539 declarations of intention and 172,232 petitions for naturalization.

One million seven hundred ninety-one thousand three hundred and eighty-one men and women were directed to employment by the United States Employment Service.

Bureau of Labor Statistics issued 23 bulletins and 12 issues of the regular monthly Labor Review, a total of 7,846 pages.

Organized the Industrial Accident Prevention Conference to meet in Washington in July 1926.

During the year 43 cooperating States and Hawaii held 1,945 prenatal and child-health conferences, 15,524 child-health conferences and 2,686 prenatal conferences. One hundred

and thirty-five combined prenatal and child-health centers were established, 140 child-health centers, and 8 prenatal centers.

Women's Industrial Conference, January 18–21: Delegates represented 107 national organizations, 41 States, District of Columbia, and Philippine Islands.

FISCAL YEAR ENDING JUNE 30, 1927

Conciliation Service handled 545 trade disputes. Three hundred and ninety-five cases were adjusted amicably; 575,723 workers affected directly or indirectly.

Forty-eight-hour week now obtains for practically all branches of labor, with a very considerable number on a 44-hour and a 40-hour week.

Bureau of Immigration examined and admitted a total of 538,001 aliens, of whom 335,175 were immigrants, and 202,826 were nonimmigrants.

Bureau of Naturalization handled 258,295 declarations of intention to become citizens and 240,339 petitions for naturalization.

United States Employment Service through its cooperative service placed in employment a total of 1,688,476 workers.

Bureau of Labor Statistics as in previous years continues to be the clearing house for information concerning the activities of the various State boards and commissions administering the workmen's compensation laws of the various States.

Agreement worked out by the Bureau and all manufacturers of dangerous small articles of fireworks containing white or yellow phosphorus to cease manufacture of such articles not later than August 15, 1926.

Industrial Accident Prevention Conference held by Secretary of Labor in Washington July 14. Representatives attended from 33 States.

Fourth Annual Conference of State directors of maternity and hygiene held at Children's Bureau January 11. Attended by representatives from 37 cooperating States, 3 noncooperating States, and Hawaii.

Forty-five States and Hawaii now cooperating with the Children's Bureau under the Federal maternity and infancy act.

Women's Bureau completed several extensive studies in the interest of wage-earning women.

President Coolidge in his message to the Congress stated:

"In the industries the condition of the wage earner has steadily improved. The 12-hour day is almost unknown."

Secretary of Labor in reporting to Congress stated:

"There is no such thing as separating the economics of the Negro from those of any other group in America. At this time I am firmly convinced that the industrial and economic interests of the Negro are indissolubly a part of those of all the American people."

Also taken from the Secretary's Annual Report to Congress:

"During the past generation marvelous changes have occurred in the living and working conditions of the American laborer. Twenty-five years ago the 60-hour week was general for all classes of labor, with many workers on a 72- and 84-hour week. Now, the 48-hour week obtains for practically all classes of labor, with a very considerable number on a 44- and even a 40-hour week. The 60-hour week is gone. The 72-hour week is confined to a very small percentage of workers, and the 84-hour week, which meant 12-hour days 7 days a week, is virtually abolished."

FISCAL YEAR ENDING JUNE 30, 1928

Conciliation Service handled 478 industrial disputes; 307 were settled amicably by the Commissioners; 352,028 workers affected directly or indirectly.

Adoption of 8-hour day now nearly Nation-wide.

Bureau of Immigration examined 307,225 alien immigrants and 193,376 nonimmigrants, a total of 500,631.

Recommended changes to the Congress in the immigration laws to meet the industrial and economic needs of the country.

Enactment in May of an Immigration Act to enable foreign resident members of families of United States citizens to be reunited.

Secretary's board of review passed upon 71,698 cases, approximately 250 for each working day.

Bureau of Naturalization handled 254,588 declarations of intention and 240,321 petitions for naturalization.

United States Employment Service through its cooperative service placed in employment a total of 1,412,645 men and women.

Adoption March 6 Senate resolution authorizing annual unemployment survey by the Bureau of Labor Statistics, annual appropriation to be $100,000.

Program developed by Children's Bureau cooperating with the States has resulted in the establishment of permanent educational centers and a great saving in life and improvement in the general health of mothers and babies.

Fiftieth annual conference of State directors of maternity and infancy work held at Children's Bureau in April. Forty-six States responded by sending representatives including three States not yet accepting Federal aid.

FISCAL YEAR ENDING JUNE 30, 1929

Conciliation Service handled 522 cases. Three hundred and eighty-five were adjusted amicably.

Five-day week becoming prevalent in American industry. Adopted by the building trades in New York City early in 1929.

Bureau of Immigration examined 279,678 immigrants and 199,649 nonimmigrants, a total of 479,327.

Immigration from Europe down to 158,598 as a result of quota immigration laws enacted in 1924.

Secretary recommended consolidation of the various laws relating to immigration into a comprehensive statute.

Two hundred and twenty-four thousand seven hundred and twenty-eight aliens became citizens through naturalization. Bureau handled 280,645 declarations of intention and 255,519 petitions for naturalization.

Naturalization laws amended by Congress in March upon recommendation of the Secretary of Labor.

Enactment by Congress of act affording relief for those aliens who entered the United States prior to June 3, 1921, who could find no record of their legal admission under the immigration laws.

Farm Labor Service in United States Employment Service placed 559,571 seasonal workers.

Negotiations initiated by United States Employment Service with the Veterans' Administration for establishing an employment service specifically to aid ex-service men and employment.

During past 9 years Federal Board for Vocational Education rehabilitated 40,000 disabled persons so as to restore them to earning power. Work of this Board steadily expanded.

Conference at Children's Bureau, February, of State departments of public welfare. Thirty-two States represented.

Several extensive studies of women wage earners completed by the Women's Bureau, including a study of working conditions of Negro women in 15 States.

FISCAL YEAR ENDING JUNE 30, 1930

Conciliation Service handled 557 cases, adjusting 386 amicably.

Immigration Bureau examined a total of 446,214 aliens.

Naturalization Bureau handled 62,138 declarations of intention and 131,151 petitions for citizenship.

United States Employment Service directed a total of 1,345,936 men and women to employment. Farm Labor Service directed 611,598 workers to employment in the harvest fields. This Service has increased from only one permanent office in 1921 to 19 permanent offices in 1930.

Specialized employment service for veterans now functioning. Secretary recommended setting up veterans employment service in all principal industrial centers.

In the field of employment statistics, Bureau of Labor Statistics succeeded in having included for the first time a questionnaire on unemployment in the decennial Federal census which was started in April 1930.

Secretary of Labor was vice chairman of the White House Conference on Child Health and Protection.

End of the first decade of the Women's Bureau as a permanent agency.

November 1930, Secretary Davis elected to the United States Senate.

December 1930, Secretary Davis assumed his seat in the United States Senate.

Call to Action by Hon. William Langer, of North Dakota

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a call to action issued by the Senator from North Dakota [Mr. LANGER].

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON CIVIL SERVICE,
July 26, 1947.

To All the Relatives of Civil-Service Employees:

As chairman of the Senate Committee on Civil Service, I introduced S. 637; and, in order to keep it on a bipartisan basis, I had Senator CHAVEZ, former Democratic chairman of the Senate Committee on Civil Service, join me in the sponsorship of the bill. The committee reported the bill out by a vote of 12 to 1.

In spite of my best efforts, we were unable to get the bill passed. There was money for foreign countries. There was an attempt to reduce the taxes of men receiving incomes of $100,000 or more a year by tremendous amounts. There was money for nearly everything except for the civil-service employees. All we heard was that there were too many civil-service employees—that it would cost the Government too much money to provide for the widows and orphans or for annuities for civil-service employees.

Now, the Hatch Act applies to the employees who are actually working for the Government, but it does not apply to their wives and relatives. Therefore, I am enclosing herewith "A Call to Action", which I, as chairman of the Senate Committee on Civil Service, am asking them to read carefully; and I hope that after they have read it they

will sign the pledge contained therein and send it to me. I tell you frankly that it is my experience that the only way your folks are going to get justice which has been long delayed is by organizing and fighting for it politically.

Hoping to hear from you soon, I am

Your friend,

WILLIAM LANGER,
Chairman of the Civil Service Committee.

The People and Roosevelt

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The People and Roosevelt," written by Ralph McGill and published in a recent issue of the Atlanta Constitution.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PEOPLE AND ROOSEVELT

(By Ralph McGill)

People go into the little chapel near the Warm Springs Foundation and kneel down to pray.

You may see them almost any time you go there.

They come from everywhere. They say nothing. They drive up, park the car, go in, and kneel and pray.

Some seem to go about it so directly you know that for them it is something they have planned for a long time. They have rehearsed it in their minds so much that when they reach the chapel they know just what they must do.

Not far away, down the winding road, is the small clapboard cottage which was called the Little White House. There is a fence before it.

It is interesting to watch there, too. There is hardly a day that at least two or three persons do not come there and stand for awhile looking at the house. Some are merely curious. Others stand there looking with eyes full of tears. Now and then one will kneel and pray. Still others will bow their heads over the fence, close their eyes and remain there in meditation and prayer.

For all of them Franklin D. Roosevelt meant something very personal. It may be that it was a home or a farm saved. Or, it may be just a memory of those terrible, dark days which now seem like a dream and which many conveniently forget, when despair sat like a great black raven above the door of every heart, and the only voice with courage and faith in it was his. Whatever it was, it brings them to Hyde Park in greater numbers than go to any other national monument or memorial.

CRITICS

And so it is at the Little White House in Georgia. A writer named Van Loon once wrote a book called Geography. In a frontispiece, in an effort to create a picture of the immensity of time and of eternity, he wrote something like this:

"In a far-off place stands a great mountain of granite. Once a year a small bird comes and sharpens his beak on the stone. When that bird shall have worn away that great mountain of stone, one day shall have passed in eternity."

The critics come every day to the granite of Roosevelt's memory, calling him charlatan, Communist, and worse. They sharpen their beaks on the mountain of his deeds and his name, but, somehow, they leave no impression.

From the dusty eons of bygone years there comes the sound of loud and mocking laughter from those who record the passing years. All that was said of him was said of all others who have answered something in the hearts of men, and the granite of their names and deeds remains. You cannot see where the many shrilly carping critics have come to sharpen their beaks. Their droppings wash away in the great warm rains of gratitude to the man; or dry into dust in the suns of affectionate memory, and are blown into fields to enrich weeds that grow in wheat or corn to plague the man who values honest grain.

FAULTS

His faults were many. Great men have great faults. And the critics who saw away on their fiddles of wrath make a great and squawling noise about these faults.

But, somehow, the people come to pray.

Never think you can do much to damage the name or memory of any man or any woman who has answered, even in part, some great yearning and some great hunger in the human heart.

He was all they say.

He was ambitious. He pussyfooted at times. He was impatient. He played politics, and he was skilled at it. He used corrupt machines if they were going his way. His code of political morality did not include party loyalty if it meant abandoning what he believed to be a great issue. He would fret about small, personal things, and be casual about great things. He had his share of vanity. He liked to lead and be followed. He was not good at taking advice. He was all this, and more. (And so are much lesser men. One wonders if the critics ever examine their own?)

Yet, if you take pencil and paper and add it up and put down the result, you will see that the same total will be found beneath the names of all those who have been projected by destiny and the fell clutch of circumstance to a place in the blazing sun of history. And none in all our history was ever so sharply projected as he.

GREATNESS

And, so, having added all the petty faults and the great faults, you are confronted with the immensity and the soundness of his accomplishments.

A world, quite literally, was going to pieces about us. Revolution, and worse, swept the world. Kingdoms and governments fell or were scattered like tenpins in the bowling alleys of history.

And, when the messenger came to take him to Charon's boat he left a country which had intact every single one of its institutions, unimpaired, strong and free. And he left a people bereft of not a single guaranty under a constitution written generations before in hope and confidence.

Nowhere else in the whole wide world could that be said.

And so, they come to pray, and in Georgia the place where he came to rest, and to die, becomes a memorial park and, for millions, a shrine.

The people know what the critics know, but will not admit.

But time and history will. And the people always have.

Memorial Address by Hon. Oscar Zapf Before Nevada Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. GEORGE W. MALONE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the RECORD a memorial address delivered by Hon. Oscar Zapf, judge advocate of the Nevada Department of the Veterans of Foreign Wars, before the Nevada Veterans of Foreign Wars at Elko, Nev., at their thirteenth annual convention, on June 12, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Comrade Commander, sisters of the Women's Auxiliary of the Veterans of Foreign Wars of the United States, comrades, distinguished guests and friends, three times in the half century last past, our bravest and best were sent to foreign lands to stem and turn back the tides of tyranny that threatened to engulf the world. Three times our comrades returned bearing their shields or borne upon them.

We are met here today to honor our comrades who returned borne upon their shields. Each year by these memorial services the Veterans of Foreign Wars of the United States keep forever green the memory of our absent comrades. It is fitting and proper that we should do this.

What we say here in honor of their memory is of little moment, but ten thousand times ten thousand free men enjoy that freedom because of what they did on land and sea and in the air—at Santiago and El Caney; at San Juan Hill and at Manila Bay; along the banks of the Meuse and the Marne and in the forests of the Argonne. The saga of their heroic defense of human liberty is written in blood in the fox holes on Bataan and the isles and atolls in the Pacific. The crimson-stained sands of Anzio, Salerno, and Normandy record their valor.

Our absent comrades are not dead. Indeed, they cannot die so long as one single human heart throbs responsively to a longing for freedom, and so long as their work remains unfinished.

Words alone are not enough with which to pay homage to our absent comrades. It is by our acts and by our deeds that we honor them.

It is for us, the living, to reaffirm our undivided allegiance to the Government of the United States, and to our American institutions and ideals.

It is for us to keep America united and strong in order that America can remain free. Lacking unity and strength, freedom cannot long endure.

It is for us to hand down to our posterity, unimpaired and undiminished, the rights, the privileges and the blessings of liberty which are our heritage. It is for us to emphasize and to reemphasize this truth: That these rights, these privileges, and these blessings of liberty were born in agony and paid for in blood. That they exist and will continue to exist only so long as freemen voluntarily assume and fulfill all the duties and all the obligations which are the foundation upon which rest these rights, these privileges, and these blessings of liberty.

Because personal freedom and dictatorship cannot both exist at the same time and in the same place, it is for us to say in plain, blunt language that we will not tolerate any attempt to establish a dictatorship in this country, whether that dictatorship be called nazism, fascism, bureaucracy, big business, or a dictatorship of the proletariat. A dictatorship is a dictatorship regardless of its name.

We advance this proposition: That any problem that confronts this people can be solved with equal justice to all, if we first diligently seek guidance from Almighty God, and then apply common sense, coupled with a four-letter word that means to labor, to the solution of that problem.

At a cost in treasure that staggers the imagination and at a cost in more precious lives, we have learned that the threatened destruction of liberty anywhere is the concern of freemen everywhere.

And, finally, it is for us to keep faith with our absent comrades. As their devotion to the cause of liberty and freedom was measured only by the span of life itself, it is for us with equal devotion and like fidelity to that cause to dedicate ourselves to complete the work in the furtherance of which they gave up their lives.

And then, at some golden daybreak, when the war drums are forever silent and the battle flags are unfurled no more, we will read more clearly the meaning of these sacrifices and our absent comrades will know that their sacrifices were not in vain.

Strengthening the United Nations

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from an address by Dr. Frank P. Graham, president of the University of North Carolina, dealing with the needs for strengthening the United Nations.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Human society with an atomic bomb in its bosom cannot lag in adjustment to its explosive power. Mankind, with his swift scientific inventions and his slow social adjustments, has, with much economic progress and much human misery, muddled through to this fateful hour. Confronted with the atomic bomb, men and the nations through cooperation now are to master this modern mechanical civilization or be destroyed in its unregulated self-destruction.

The one world needs an international authority in line with the Baruch-Acheson-Lilienthal report for inspection and control of the sources and manufacture of atomic power; a world court with jurisdiction over the crimes of individuals against the United Nations subject to the guarantees of an international bill of rights; an international police force responsible not to separate nations but to the United Nations; and the shifting of legislative power from the Security Council to the Assembly of all the United Nations, weighted for representation of the peoples of the world.

The atomic bomb in the hands of the absolute state is the greatest threat which has come to man. With regard to the other dangerous lags, we have the freedom to struggle for freedom and hope for a better day. With the lag of the idea of the absolute national state in an atomic age we may have no world in which to struggle or hope or even to live. The one world truly begins at home, but without the one world we may have no home in which to begin.

Blunder Out of China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. JUDD. Mr. Speaker, some months ago, the Book of the Month Club chose as its selection Thunder Out of China, which purported to be the work of experts on China, and to be solely a factual unbiased report and analysis of events and people in China, debunking all the alleged myths about Chiang Kai-shek, the Communists, and so forth.

Quite understandably many Americans accepted the book as straight reporting of facts, instead of clever selection and manipulation creating an impression quite unwarranted if the total picture in its historical setting is viewed with balance and perspective. That is, even if all the particular incidents the authors chose to report were true, the total impression given is grossly false.

Some "debunking" of the supposed debunkers has been done by Mrs. George Fitch, who saw China long before the war years and knows that the basic difficulties in China were not produced by the present Chinese Government; they have been there for thousands of years and are what that government has been struggling with—and on the whole making incredible progress until Japan struck. How many governments in Europe have come through the war and postwar reconstruction without assistance from abroad? Why should anyone be so unrealistic as to imagine the young Chinese Government could suffer more and longer, standing steadfast through 8 long years of cruel warfare and destruction, invasion, occupation, blockade, floods of Japanese paper currency, and an armed rebellion within (of the sort we are at last learning that Communists organize everywhere if possible)—and then carry out postwar reconstruction without sustained assistance from abroad in more substantial forms than advice?

It is as short-sighted and dangerous for the United States to have China come now under Communist—which means Moscow's—domination as it would have been to have China come under Japanese militarism's control.

Mrs. Fitch has made China her home since 1919. She has traveled over much of rural China by sedan chair, junk, Peking cart and train. She has made a special study of the Communist problem in recent years. In 1939 she testified before both the Senate Foreign Relations and House Foreign Affairs Committees, with prophetic statements on the folly of our policy of shipping materials of war to Japan, under the guise of neutrality.

Under leave to extend my remarks I include the following article by Mrs. Fitch, which merits reading in full:

BLUNDER OUT OF CHINA

(By Geraldine Fitch)

To sift the grains from the chaff of hearsay, to note all the exaggerations, inaccuracies, contradictions, and false statements in Thunder Out of China would require another book of equal length. The roar of thunder from Theodore White and Annalee Jacoby might be ignored had not the Book of the Month Club made it echo and reecho across this country, and if its naive and reactionary solution for China's problems were not being advocated by some in high places as a new United States policy toward China.

The authors of Thunder sometimes rise to heights which—could they maintain the eminence—would give them real claim to literary distinction. Two cases in point are the initial description of Chungking, and the later portrayal of the heroism of both Americans and Chinese who flew the hazardous Hump when it was the only crevice in a tight blockade of China.

But through nearly 300 of the 325 pages of their thundering runs a red streak of bias. Most of the time an easy fluency hides an appalling ignorance of China, nowhere more apparent to those who know and love the Chinese people than in the descriptions of these very people. They play on every string of the reader's sympathy in an utterly unrealistic and discordant boogie-woogie about the "beating, whipping, torture, and humiliation" of the peasants of China. Evidently they know nothing of the dignity and self-respect of the country people. They imagine the most peace-loving people in the world to be "seething with revolution"; ready to "set the countryside to flame." That their paeans of praise are reserved for the admittedly ruthless, tyrannical Chinese Communists shows a bias, conscious or unconscious.

I do not assume that the authors are Communists. I think more probably they are not. Such political naiveté could hardly be a pose. But they have imbibed an amazing quantity of the Communist brew, and from here on will be hailed as the best of good fellows in that camp.

No true friend of China denies the need for administrative reform there today, but the real friend sees causes as well as crisis. No country could have suffered 15 years of invasion without grave resultant disorders. What China needs today is aid, not condemnation.

Seemingly impartial in leveling criticisms at both sides (as did General Marshall in his report on China), the authors (unlike Marshall) proceed to interpretations which are both communistic and contradictory. Chinese communism, like Russian communism, advances, not by the support of the people and popularity with them, but by the use of terrorism and intimidation, ofttimes by ruthless purging of opposition. White has made a one-sided selection of evidence, even of his own dispatches, contradicting his appraisals in Life magazine of Chiang Kai-shek and of the military situation in China. He lacks political background and historical and geographical perspective, using the same arguments against Chiang which were used against De Gaulle, making the same excuses for Mao Tze-tung which were made for Tito. He ignores the opinions of those who have had more intimate contact with Chiang, such as the late W. H. Donald and Wendell Willkie, of Henry Luce, Howard Coonley, Ambassador Hurley, General Wedemeyer, and scores of others. White's own appraisal in Life (May 1, 1944) was more consonant with that of Bishop James E. Walsh, long in China, who has said:

"When the history of our age is assessed, the present leader of China will stand revealed as one of its greatest men. * * * A man of the people, he knows their needs and has nothing so much at heart as the promotion of their true welfare. He is neither a dictator nor a figurehead; he is simply a determined man with a conscience, a sense of responsibility, and a deep love of country."

That the book is hurtful to China, all organizations like United Service to China, the Institution for the Chinese Blind, and the churches are discovering as they try to raise relief and reconstruction funds for China.

For the sake of brevity, reference to the authors will be confined to Theodore White, * * *. In order to make the charges against this book specific, this analysis is divided under the following headings: "Half-truths and exaggerations"; "Inaccuracies"; "Contradictions, false statements"; "the Communist slant."

PART I. FROM HALF-TRUTH TO EXAGGERATION

White presents his readers with a great flow of words uninhibited by facts. * * * Readers without Chinese background are hoodwinked by the ease with which half-truths are embellished. Quite rightly White states that Dr. Sun Yat-sen's San Min Chu I (Three People's Principles) is "by all odds the major political theory in the land" and that China's task is like "attempting to devise one solution for the problems of feudalism, the Renaissance and Reformation, the industrial revolution, and the social unrest of today." Not original, but so far so good.

But what White will not disclose is that China's staggering enterprise of going modern has been vastly complicated, not only by 15 years of Japanese invasion, but also by 20 years of subversive activities on the part of the Chinese Communists, directed by Moscow. With every autonomous and semi-independent "armed state within the state" now incorporated into the body politic except the Communist one, White comes forward advocating a return to regional feudalism.

White also refers to the Sun Yat-sen revolution and calls the Whampoa Academy "a school for a host of flaming advocates of revolution," but when he wants to smear the military men who have remained loyal to Chiang Kai-shek through the years he says (p. 42) "the young students of the military academy were decimated in the early revolutionary battle; those who remained were loyal to the Kuomintang before all else, and faithful to Chiang." By innuendo White gives the impression that those killed in the early years of revolution would not have remained equally loyal. A study of White's use of the word "loyalty" would be revealing. Seemingly he cannot comprehend constancy over a period of years. Consistency is an enigma to him, perhaps because he has turned quite a somersault himself.

"Within the areas that Chiang controlled," the author says, "his police butchered Communist leaders; families of known Communist leaders were wiped out." This is oft-repeated, never documented. But if there were such reprisals, what caused them? White should read—as I have done—some of the diaries of central China missionaries describing the massacres by the Communists in those years. In 1927 the young Red leader at Pheng Phi near Swatow had a large sign written in blood over his cave headquarters, announcing that the Russian advisers had instructed the Chinese Reds to kill eight groups of villagers, including religious people of any sect and those who favored a capitalist America. And kill them they did, by the score.

White admits that "by agreement with Chiang Kai-shek they (the Reds, during the united front) were to leave positional warfare to him and wage guerrilla warfare behind the enemy lines," but he does not tell the reader that this was in agreed areas. And, of course, it was to reconquer the country for the Government not for themselves. White becomes lyrical about the Communist record through the war: "One of the most amazing adventures in arms of all times." This is a half-truth with a vengeance, but not in White's meaning. While deployed to free their country from the Japanese, the Chinese Communists increased their army from an agreed 85,000 to 1,500,000. While supposed to be helping their Government, they conquered for themselves territories with a population of 90,000,000. In this opportunism their attacks were often upon Government troops rather than Japanese. In his Vigil of a Nation Lin Yu-tang gives dates, places, and names of generals where this occurred in scores of cases.

As the war progressed, White says a stalemate caused renewed tension between the Government and the Communists. This is merely a fraction of the truth. What caused the break-down of the united front in China? Does White not know of the Hitler-Stalin pact of 1939, which caused a volte face on the part of the Reds in China? He must know that the Chinese Communists, who for 2 years had been calling the generalissimo the George Washington of China, began then to call him dictator, Fascist, gangster, and many similar epithets. And if he knows, it is dishonest to withhold this information from the reader.

Sometimes the flow of words runs to gross exaggeration, rather than to building on half-truth, as when White blandly states that "with the exception of Douglas MacArthur the commanders of the war against Japan in December 1941 were men blinded by an enormous and overweening arrogance" (p. 83). Of course, those who talk in such extravagant terms, given time, will be smearing MacArthur as well. But Nimitz, Halsey, Stratemeyer, Chennault evidently made MacArthur look like a modest violet. The Book of the Month Club chooses this sort of thing for a million Americans to read as choice literature.

"China claimed that she had a government (p. 97)—no election had ever voted it into power * * * they bridged the discrepancy between fact and statement with the Kuomintang's theory of state, a theory that did not work, but was none the less interesting. China was assumed to have not a government of the people but one held in trusteeship for them by the Kuomintang. Sun Yat-sen outlined the party's responsibility in three stages. * * *"

Russia also claims to have a government. Will Mr. White tell us when it was voted in by free election? Later he excuses the totalitarian Chinese Reds by saying: "Mao does not talk of voting." But is White sideswiping the Kuomintang for its peculiar theory of state, or Sun Yat-sen for so outlining the party's trusteeship? Unlike the one-party Government of Russia and Yenan (intended as permanent), the one-party rule of China was temporary. And even as White thunders, China moves on into Dr. Sun's third stage of constitutional democracy.

* * * * *

So with his niggardly tribute to Chinese officers who hungered with their men, marched with them on foot: "they were a handful." His minimizing of China's resistance: "That this army held the line against the Japanese for 6 years is the most remarkable thing of all strange things about it." Strange? Stupendous—glorious. But it was not Communist, so White cannot explain it, and will not praise it.

In Kweichow in 1944: "The troops received 2 days' rations when they dug in, and their mortars had 20 shells to a gun. For 9 days without further food or ammunition, they fought in the cold and freezing weather. The hills were barren of food." But give this Nationalist army at their "Valley Forge" unqualified praise? Never. It is only the Communists who are exalted; the Reds who, instead of fighting for their country, are out expanding their "agreed areas," making hay while their brothers freeze, using the war for a putsch to power. Says White: "The Kuomintang could explain its defects in convincing terms of poverty and weakness." Was the explanation not valid? It could also have charged America with neglecting China on the lend-lease front. But White saves his praise for the Communists trying to usurp the government. He has forgotten his dispatches to Life (May 1, 1944), showing the impossibility of supplying the armies, lacking both food and transportation.

The Communist troops, White admits, could not stop a Japanese spearhead, "did not know how to handle artillery * * * or air corps; knew little of modern signal corps work, mechanization or medical practice, could not maneuver a division in battle." But "the Red army had one quality that made it great—its fighting spirit." The government armies, bombarded from land, sea, and air for three months at Shanghai, must have had some of that spirit, too. That National army which fought 9 days on 2 days' rations in freezing weather must have had some of this fighting spirit. But White's sympathies are not on their side.

He admits the Communists "fought Government troops * * * sounding like the man who claimed he had been hit in the fist with the other fellow's eye," admits that the National Government could not possibly recognize all their opportunistic expansion at the end of the war. Nevertheless, it is the Communists' war record which "is one of the most amazing of all times."

"Stilwell's handling of lend-lease had annoyed him (Chiang)." The grain of truth here is that Stilwell handled it. Suppose we had sent an American to handle lend-lease for Churchill or Stalin. Chiang "privately indulged in one of his famous rages," but White's imagination can describe what is private. "Chiang Kai-shek informed them that he had agreed to have an American commander in chief in China, because China could trust America, but under no circumstances would he permit that commander in chief to be General Stilwell; if America insisted, he would go it alone, retreating farther into the mountains with his loyal divisions before the Japanese advance." Hurrah for the generalissimo. But to White this is just "incandescent fury."

So Wedemeyer came into China to serve under this man of "uncontrollable fury" in the last of eight discouraging years of war, and "Wedemeyer got cooperation where Stilwell met stony refusal." It is true that Chiang refused Stilwell's request to arm the Chinese Communists. (Perhaps Americans would have been wiser to follow Chiang's example instead of our arming Communists, for example, Tito.)

But Stilwell got the only well-trained, well-equipped Chinese troops [1] for the Burma campaign, against the better judgment of the generalissimo who knew he needed them to protect the advance air bases in China. Wedemeyer has said publicly:

"The actual contribution that our Chinese allies made in the recent war has not, in my opinion, been properly evaluated or appreciated. * * * The steadfast determination of the generalissimo as well as the Chinese people to fight on against overwhelming odds saved countless American lives and accelerated final victory."

Is it strange that General Wedemeyer with his appreciation of China's resistance got cooperation?

T. V. Soong, White reports, had to assent to the Sino-Russian treaty of August 1945, "an agreement already roughed out for him by two other powers." No wonder the China Critic of Shanghai said editorially last year: "If Roosevelt and Churchill were so anxious

[1] Trained at Ramgarrh, India.

to please the Russians, why didn't they give them concessions in Alaska or India, instead of giving away what didn't belong to them?" White's admission is a half-truth, however, because White must know that though the Yalta price was high, it bought Russia's promise of "moral support and military aid to the National Government of China" (Sino-Russian Treaty, August 14, 1945), and yet he says: "If we (United States of America) sought security in China by espousing the Kuomintang, the Soviet Union means to counter by espousing the Chinese Communists." He knows Russia promised to espouse the national government. He knows Russia promised to make Dairen an open port. Yet at an IPR luncheon honoring White for villifying China, I heard White say: "Russia has never broken a promise to China."

"China must change or die. * * * China must build the same railroads, open the same mines, clear the same rivers, erect the same steel mills, whether the Kuomintang or the Communists or both control her destiny."

The Communist record is one of cutting railroads, destroying machinery, murdering six Government engineers sent to reopen the Kailan mines, clearing no rivers, erecting no steel mills. China has changed. China will change. China, with the oldest civilization on the face of the earth, will live on when White and his thunder have reased to rumble.

PART II. IGNORANCE AND INACCURACIES

Since the authors did not go to China until after the war had started, they lack the perspective to compare new China (then less than 30 years old) with old China.

Though advertised as a Chinese scholar, White's knowledge of the language, judged by many mistakes in rendering of Chinese names, is extremely limited. With only a smattering of Chinese, he would be unable to converse intelligently with the farmers in their colloquial dialects. Ignorance of the rural Chinese for whom he professes such profound sympathy is apparent in every description of them. "They live in such terrible poverty that they have nothing to lose but their chains. * * * The beating, whipping, torture, and humiliation of the villagers of Asia by officials and gendarmes is part of the substance of Government authority."

The farmer of China is an independent, industrious, cheerful individual. He is not beaten, swindled, and kicked about all his waking days. Reliable statistics, such as Dr. J. Lossing Buck's Land Utilization in China, volume 3, show that a higher percentage of the farmers of China own their own land than of American farmers. Eighty percent of the people live on the land—far too many for the amount of arable land—but heretofore they have been free souls, respected as the second most important group in the nation, never before, to my knowledge, labeled "brood mares" and "beasts of burden." The "land redistribution" slogan of the Chinese Communists is not the solution of the agrarian problem. The land reclamation and better land utilization record of the National Government can be obtained from our own Department of Agriculture, which has aided both surveys and completed projects.

White saw China only during the war. Undoubtedly he saw sad sights and many of them, as in any invaded country. But his descriptions are those of an imaginary proletarian revolution—of the serfs of czarist Russia or the peons of Mexico—they do not fit the farmers of China.

Statistics on land in the book, for which no authority is quoted, are incorrect. Indeed (p. 27), he says, "It is characteristic that this (the peasant's relation to the land) the most overwhelming of all her problems should completely lack adequate statistics." White must mean that he is completely uninformed on the three volumes of Land Utilization, by Dr. J. Lossing Buck, or Free China's New Deal, by Hubert Freyn, or similar authoritative texts by Chinese economists.

White leaves off where the government of Chiang Kai-shek begins: With constructive achievements to improve the lot of the farmer. The people's livelihood is one of Dr. Sun's three principles, and the national government before the war, during the war, and since the war has made marked progress in river conservancy, irrigation projects, reforestation, land reclamation, credit cooperatives, and so forth. It could have accomplished much more but for the obstruction of the Communists.

* * * * *

Moreover, while White thunders, the national government goes right on in peaceful change, convening the national assembly, presenting the wise laws of a constitution drafted and revised, revised and re-drafted many times—a constitution prepared in the Legislative Yuan under the aegis of Dr. Sun Fo, whom White would concede to be a liberal, and approved last year by the Chinese Communists themselves. By abstention from the national assembly which adopted the constitution, the Communists are the ones who refuse to ease the tension by wise laws. They also are the ones who take the law into their own hands and set the countryside to flames. Not the farmers.

Of the Japanese in surrender, White says: "If anyone had asked why they lost, why they were being forced to sign an end to all their world, they would have advanced a dozen cogent reasons wrapped up in figures on tonnages * * * never entertained a thought that they might have lost because what they had conceived was so hideously wicked that it generated its own defeat."

But, by White's description, what America had conceived was so wicked it should also have generated its own defeat. For "America's war had cut blindly across the course of the greatest revolution in the history of mankind, the revolution of Asia." Wicked America, interfering with world revolution.

China, too, according to White, should have generated its own defeat. He says:

"The story of the China war is the story of the tragedy of Chiang Kai-shek, a man who misunderstood the war as badly as the Japanese or the Allied technicians of victory. Chiang could not understand the revolution whose creature he was."

So Japan, America, and China were all deserving of defeat. They opposed the great world revolution.

When, in contrast, White sings that "the Chinese Communists had the people with them, and with the people they made their own new justice," the reader should note that justice, like democracy, is something the Communists manufacture to suit their ends. To all who understand Communist tactics this will be apparent. But the majority of Americans do not know China, do not know that the new justice includes intimidation, coercion, and purging of opposition. Any government which does not want to go Communist is "reactionary," "Fascist," "inefficient," and "corrupt."

In 1927 the first coalition of Chinese Communists and the Kuomintang came to an end. White says: "What happened in those 3 weeks is a mystery." He is either ignorant of what happened, or glosses over what he does not want to admit—i. e., that the Chinese Communists, with the connivance of the Russian advisers to Chiang's government, tried to usurp the government at Hankow. Chiang broke with them and established the National Government at Nanking. * * *

The Communists had entered the Kuomintang on orders from Moscow to bore from within, just as they do in America, Greece, France, and everywhere else. They had tried to obstruct the northern expedition by seizure of the Whampoa Academy and then the Canton Arsenal. Failing in both, they tried to discredit Chiang by the Nanking incident, when Communist troops attacked foreigners. They fomented strikes and labor troubles in Shanghai and unsuccessful revolts among peasants and farmers.

Chiang was kidnaped in Sian in 1936. White says: "No one has ever recorded in full what actually happened during Chiang's kidnaping." Madame Chiang wrote the inside story; so did W. H. Donald and the generalissimo himself. Does White mean he never read their accounts or that it serves his purpose to ignore them?

He is inaccurate on most statistics. He says the population of 200,000 in Chungking "more than doubled." It was 500,000 before the war. His 7,000,000 recruits who never reached the front is criminally wide of the mark. His figures on delegates to the National Assembly are wrong. He is inaccurate in claiming that Communist terrorism is "in the past." The Reds murdered all the young medics trained by Father Lebbe during this war. This Belgian was another Father Damien, a great humanitarian, himself imprisoned by the Communists, dying soon after his release. The Reds drove 130 missionaries out of Shantung in 1946, destroyed the 80-year-old agricultural project of the Belgian Mission at Shiwantze in the same year, and continue to liquidate property holders to this day * * *.

Sometimes White is more naive than inaccurate, as when he says: "Part of the tradition of the State Department, and an honored one, is for members (like Hurley's staff in China) to report the truth to the American Government." He should have added "as they see it," because Hurley saw it differently from his young, pro-Communist staff. Wedemeyer, too, did not view the Chinese Communists as did the young career men Hurley sent home.

* * * * *

PART III. CONTRADICTIONS

The number of conflicting statements within the covers of this book is legion, with space here for only a few.

The references to war lords are so contradictory with so many nuances of meaning that one wonders if White knows what a war lord is. China's war lords were military governors of provinces, when the provinces also had civil governors. As they built up independent armies, some of them gained control of several provinces. On page 34 they "were purely destructive"; on page 39 some of them are "repentant war lords * * * who have seen the light"; and on page 49 they are patriotic war lords, choosing to fight with the National Government rather than yield to the Japanese; on page 53 "war lord armies from the south and southwest were marching to join the battle"—brave war lords; on page 58 they are "corrupt war lords" again. Then "commanders of the secondary areas were usually provincial war lords who stood outside the pale of Chiang Kai-shek's confidence," (p. 71), and again, "At one time half of the eight or nine war areas were commanded by men who within the previous 15 years had fought or offered to fight open civil war against Chiang." In other words, four (or four and a half) war lords who had previously been disloyal were now serving the generalissimo.

Most of the former war lords had incorporated their independent armies into the National forces—all but the Communists, who maintain an independent army to this day. Why doesn't White, as reporter, say so if impartial? Why stop short of the Communist war lords? And why, in final solution for China's ills, recommend returning to this feudal system of autonomous regions, where war lords—nothing less—would be independent or semi-independent regional heads?

The Chinese Communists are excused for everything they do against their Government: "They are forced to agitate or die," "keep public support at fever pitch or see it perish," their activity brought them "into

incessant friction with Government units." But when the Government finally had to discipline the Fourth Route Army (Communist) for expanding beyond its agreed area time and again,[2] White calls that a massacre. Of Communist attacks on Government troops, White says: "It was total war; and there were no neutrals." Not even their own countrymen. Anything the Reds do can be rationalized. Nothing the Government does can be right.

One amusing contradiction is that this terrible Kuomintang, this undemocratic party, was riddled with cliques, was "as heterogeneous a political catch-all as the Democratic Party in America." That lets the cat out of the bag. Everyone can see now how ominous, how Fascist, how undemocratic it is.

The CC clique seems to be confined to a membership of the two Chen brothers—all who are ever named. It was "reactionary, it was anti-foreign, it stood closest to the generalissimo, but it was also the only group within the Kuomintang organized from the grass roots up." These are strangely contradictory terms.

"All other groups derive their strength either from their armed forces, or from the personal patronage trough at the capital." No other group besides the Communists has armed forces, and the "patronage trough" sounds like political machines in America. By the time White adds that "in some provinces the tangpu (local Kuomintang) were dominated by the local war lord (sic.) and in other areas the party had definite particularistic provincial tendencies," it would seem that China is pretty individualistic, with no Politburo to tell each Chinese what he must do, how he must vote, or else. The military clique is not powerful enough or else not Fascist enough to "have much power." Maybe China is democratic.

* * * * *

On one page "Tremendous popular support rolled up behind" Sun Fo; on another, "A few malcontents rallied around Sun Fo." "Less than 10 percent of the party membership was independent of Chiang's will," which might mean 90 percent were loyal—something White would not understand. He acknowledges that Chiang's picture is in every distant hamlet, but will not concede to him popular support. Government administration is under three heads: "All three gave fealty to the g'issimo" and "the g'issimo liked them all." Quite wonderful in a country White thinks barely hangs together. Moreover, Chiang, this man of "uncontrollable fury," "placated and soothed one after the other." But the mutual loyalty implied in their fealty, White cannot understand.

The pen really dipped in venom is reserved for China's great leader, never once called by White the President of China. To Chiang Kai-shek, on the day victory over Japan was being broadcast from Chungking, White pays no tribute. The generalissimo, longer at war than any other leader of Allies or Axis, victorious now, but in plain uniform without military decoration, made the announcement to his people, without recrimination against the enemy, without bitterness or gloating. White was in the studio that day. A friend of mine was there too, and says White was down on one knee hastily scribbling the g'issimo's message as it was read in translation by Hollington Tong. As the broadcast ended and the group went out, most of the people of Chungking seemed to be pressing about the radio station, tumultuously cheering. No police were holding back the people, no bodyguard was there for the g'issimo as he walked down the steps and some little distance through the throng to his car. White, behind the g'issimo, was greatly impressed, and kept saying to my friend: "Isn't this wonderful? Did you ever see anything like it?"

But to picture Chiang Kai-shek as a man of "uncontrollable fury" for a best seller, White curbs his enthusiasm, forgets the thrill of that hour, and brands one of the great men of history with this canard:

"No one could tell that here was a man who had just seen the defeat of his national enemy and who, only that night, was about to set in motion the wheels of machinery that was to engulf the country afresh in civil war."

The Book of the Month Club makes such its considered choice!

White's greatest contradiction is evident if one contrasts his description of General Chiang Kai-shek in his book as a man with a "lust for power, calculating ruthlessness, monumental stubbornness" with his own pen picture in Life magazine of May 1, 1944 (NOTE.—Not in the first year of the war, but after 7 of the 8 years!):

"China has been kept in this war by the leadership of Chiang Kai-shek. * * * This leadership has been unswervingly, unflinchingly and heroically anti-Japanese. It is Chiang who, at the darkest moments of China's loneliness, has held his government and his people to their destined task. He is a man of great intelligence. In his understanding of China he is unsurpassed."

White paid this high tribute to Chiang Kai-shek in Life after 7 years of war. General Wedemeyer gives even higher praise for Chiang during the eighth and most difficult year of the war:

"There are few people who could speak more authoritatively than I do concerning the sincerity, high moral purpose and Christian humility of China's present leader, Generalissimo Chiang Kai-shek. I had frequent, practically daily, contacts with him under the most trying conditions. I can attest to his unselfish devotion to the Chinese people and his earnest desire to provide a democratic way of life within China."

Those who know the President of China know whether the tributes or the canard are the truth. But White cannot have been truthful both times. The Generalissimo did not completely change in the last year of the war. * * *

Many people, knowing little of China, have thought this book impartial because White says something good before he says something bad. But he manages to completely poison the good. Chiang had the "sanctity of a deacon, was a devout and practicing Methodist, reads the Bible every day," but he is made out a hypocrite, still "harsh and ruthless," a man who "sent into battle soldiers doomed before they heard gunfire," a leader who on the night of victory was planning to plunge the nation into civil war.

White concedes that General Stilwell clashed not only with Chiang Kai-shek, but with the British Mountbatten and with the American Chennault. He says he was ill-served by his entire public relations staff, that "he disliked paper work, and the men who did his staff work served him atrociously." There were many frictions, but he was a great guy! Chiang, whose picture admittedly "hung in every village, his name still a magic symbol" in 1944, who got on admirably with the late Wendell Willkie, with Donald Nelson, with Patrick Hurley, with General Wedemeyer, and General Marshall, must have been the difficult one.

Stilwell took a "hell of a beating" in Burma; naturally wanted to train, equip, and clothe a Chinese army to return and retake Burma. The training program at Ramgarrh, India, was not just of the rag-tag remnant which Stilwell led out of Burma on foot. More than 50,000 Chinese were crowded into planes and flown over the Hump to this secret training point. White says: "Chinese opposition to Stilwell's program (of a Burma campaign) is hard to analyze." Things seem hard for White to analyze if he doesn't like the deductions.

When trained and equipped, Chiang wanted those Chinese troops back in China. He felt he needed them there. When, as a result of not having them, the American airfields were lost to the Japs, he probably still felt the same. But Stilwell got those best-trained, best-equipped troops for Burma. Chennault felt "the fighting in Burma was a waste of time." Chennault believed with sufficient air power he could keep the Japanese in eastern China from attacking the air bases; he said: "All supplies should be concentrated on the Fourteenth Air Force and what supplies were left over should be turned over to the Chinese to do with as they saw fit." But Stilwell, who handled lend-lease for China, had his way.

It resolves into a question of which was more important in defeating the Japanese; reopening a difficult and narrow road soon to revert to jungle, or protecting the big airfields so important if the Americans had to invade the coast. White's own description of the demolition of the airfields when the Japs came, fields built at such coast in blood and sweat, gives weight to the theory that Chiang was right. "Stilwell felt he was fighting the Burma campaign alone," says White. At least he had the only well-fed, well-equipped, well-trained Chinese troops. Chiang felt he needed them in China. Chennault thought so, too.

* * * * *

The Communists, White tells us, had no national congress since 1928, which (White does not reveal) was held in Moscow. Their central executive council met rarely, and the direction of the party lay in the hands of the political bureau dominated by Mao Tze-tung and Chou En-lai. The party and the army unquestioningly executed their decisions. As in Russia, no democratic procedures, no general elections—but criticized for this? Not by White. And yet how he scores the Kuomintang for not being more democratic.

"The political bureau handed down high policy after the leaders had argued it out, and Yenan made no criticism. * * * Unanimity on policy was total * * * a stark contrast to Chungking." White likes this unanimity better: "None of the critical atmosphere of Chungking, where the cynical, civilized bureaucrats of the Kuomintang gossiped and picked each other to pieces constantly." As in America? Well, which is the more democratic, which the more totalitarian?

Of many canards against Ambassador Hurley, White says of his attempt to make peace between the Government and the Chinese Communists: 'This would have required infinite patience, an almost saintly tolerance, vigorous administrative skill, and a deep understanding of China." So Hurley failed. But, between them, General Marshall and Ambassador Stuart possessed all these attributes, and they, too, failed. Could it be that the Communists are at fault, Mr. White?

But the great Americans in China to White are those who would arm the Communists, or force Chiang to grant all they asked. First White admits that "actually no minor number of seats would satisfy the Chinese Communists" and then in direct contradiction, "A government that tried to solve these problems might have granted the Communists only token representation and still won their support." (In the interim government Chiang offered them 13 seats out of 40, when, according to White's own figures, they represented only one-fifth of the population.) Then too "Kuomintang liberals" made a proposal "which might have been accepted a year earlier but the Communists had already launched a campaign for dominance of east China. They were unwilling to settle for anything that would leave them—and

[2] At the time Chiang said he had forgiven the Fourth Route Army "until 70 times 7."

China—subject to the generalissimo's veto power." So they must dominate? They are not content with coalition, or one-fifth representation.

* * * * *

White's contradictions of his own statements become wearisome. The least a coauthor might have done would be to note these conflicting assertions and suggest revision.

PART IV. TRUE OR FALSE?

Some of the most thunderous statements can scarcely be classified as inaccurate. When they bear no resemblance to the truth, they must be labeled false.

* * * * *

A wholly false statement is this: "In Shanghai collecting the lifeless bodies of child laborers at factory gates in the morning is a routine affair." I have lived in Shanghai through the early years of China's developing industry when children worked long hours for a pittance, and through the years when the municipal council in the International Settlement and the Chinese Chamber of Commerce in the Chinese areas achieved labor laws and established excellent factory inspection. I submit that White's vilifying statement was never true. Children who died during the war starved because of the Japanese invasion, not as child laborers at factory gates.

When White talks about a fixed station in life "from which there is no escape," he is giving a false picture, for China is remarkably free from distinctions of class or caste. He may not know that the merchant eats in a room back of the shop with his clerks, that the master carpenter dips into the same dishes with his apprentices, that the landowner often works in the fields with his tenants and eats with them around a common table. Many a Chinese Abraham Lincoln has passed the Confucian examinations making him eligible for high official position. Complete ignorance of China's social democracy is inexcusable in one who presumes to write books about the country and the people.

"Officials thundered against the hoarding—but no action was ever taken." Representing Life magazine, White might be expected to read Time reporting the execution of certain unrepentant hoarders.

The white man has "thrust his faith down the gullet of the heathen at bayonet's point." What utter nonsense. Unless White is an anti-Christian Communist, he must be either untruthful or woefully ignorant of the centuries of educational, medical, and evangelistic work of Christian missions, establishing some of the finest universities, many of the best hospitals, helping the Chinese establish schools for the blind, missions to lepers, orphanages, technical institutes, agricultural missions, etc.

Presumably to explain why the Chinese Communists were fighting government troops more than Japanese after the United front broke down, White says: "The campaigns the Japanese fought between 1938 and 1944 were foraging expeditions rather than battles." These years cover battles for Changsha where the foreign correspondents went over the battlefield and acknowledged the heavy loss of life (on both sides); the battle of Ichang (won by the Japanese with poison gas); many Japanese attempts to cross the Yellow River into Shensi; Chinese victories in Burma and at the Salween. * * *

It is untrue to say "all other parties (except the Kuomintang) were outlawed." White knows the parties comprising the Democratic League—including the Young China Party and the Social Democrats—are not outlawed. He knows there was a Communist (Tung Pi-wu) on the Chinese delegation to the San Francisco Conference; that there were Communist delegates in the People's Political Council of January 1946. He knows that only their own refusal to participate kept the Communists from being in the recent National Assembly which adopted the Constitution. They make themselves "outlaws" by having an independent army, like the former war lords, but it is completely false to say that other political parties (unless armed) would be outlawed.

* * * * *

White, who lauded Chiang Kai-shek in 1944, now charges that during the 20 years since he broke with the Communists, both Chiang and China have changed. "His one passion now became and remained an overriding lust for power. All his politics revolved about the concept of force." It's a false picture. If it were true, it would show somewhere in the two volumes of his wartime utterances, so remarkably free from bitterness, hatred or vituperation against either the Japanese or the Communists. There one finds a Christian leader, exhorting his people to pray for the enemy, to keep hatred out of their hearts.

Veracity is not with White when he passes off slander against the Generalissimo's personal character by saying he was "infuriated by gossip he would have shrugged off 20 years earlier." Chiang has always resented gossip affecting his wife, such as the idle slander of Lady Chesterton of England in a book about her travels in China. On protest through the British ambassador the book was banned in England until the false assertions had been deleted. Chiang had even greater reason for refuting the slander, referred to by White, spread by irresponsible columnists and radio commentators all over the United States.

* * * * *

Other vilifying statements, unfair and untrue, are that "7,000,000 men had died of sickness and hunger or because they had deserted to their homes or en masse to the enemy," that "going into the army was usually a death sentence" and that General Ho Yin-ching was responsible "more than any other man except Chiang Kai-shek for the rotting away of the Chinese armies in the field, the starving of Chinese soldiers." It is a long-suffering Chiang Kai-shek that does not sue Theodore White for libel like that. White himself gave a very different picture in Life in May 1944:

"The soldiers of China are hungry. The transportation (lack of it) is such that even if the government could organize an efficient quartermaster corps in the rear there would be no way of getting meats, fresh food, and beans to the front in quantity to feed the soldiers. * * * The great burden of the war has been borne by the armies of the Central Government itself. These armies were responsible for the great victories about Taichehwang and Changsha, for the heroic defenses of Shanghai and Hankow and in recent years the Gorges and Rice Bowl area."

After 6, 7 years of war and blockade there was lack of supplies of all kinds, dreadful lack of communications, calamitous lack of trucks, locomotives, and rolling stock of all kinds. Let Theodore White sit down some time and try to imagine how different the picture might have been if China, like Russia, had had $11,000,000 worth of lend-lease supplies, both war and medical.

White says: "Expropriation had been a cardinal tenet of Communist doctrine in the 1930's, now it was outlawed except in cases of landlords who aided or collaborated with the invader." But missionary John Abernathy, of Shantung Province, says: "The Chinese Communists have terrorized more people and destroyed more property in 1 year than the Japanese did in 8. * * * If a farmer has more than 2 acres of land they call him a capitalist, arrest him, publicly humiliate him, take from him all that he has and turn him out to beg." My conversations with Chinese men from the same province last winter confirm Abernathy's statement. * * *

"China had become a secondary concern of American strategy by the spring of 1945." When I repeated this to General Wedemeyer, he did not hesitate to label it absolutely incorrect. White says Wedemeyer was to train a first-class Chinese fighting machine, but "what the machine was to be used for, who was to drive it, where it was to go, was not Wedemeyer's business." The general put the same label on that one.

White goes on: "Hurley was the No. 1 American in China. Wedemeyer, as No. 2, was harassed and angered by Hurley's petulance and nagging." General Wedemeyer calls Hurley a great American, with whom he did not always agree. But Wedemeyer's directives were from the President and the Joint Chiefs of Staff. Hurley did not give him orders, nor did the Ambassador interfere in any way with the accomplishment of his objectives.

"The Generalissimo gave the kiss of death to all reform hopes." Step by step, if not quite as fast as White's book was selling, China under the Generalissimo's lead was moving forward toward full constitutional democracy. "Of 1,440 delegates (to the National Assembly) 950 were selected before the Japanese war." One should not write in such ignorance as to be open to the charge of falsifying. Originally there were 1,200 delegates. As a concession for unity's sake, 850 new ones, including far more Communists than their numbers warranted, were provided for. Still the Communists refused to participate, but the Young China Party and the Social Democrats sent delegates. It makes White's statement that "the government would not promise to widen the membership of the Constitutional Assembly" one more untruth.

It is wholly misleading to say that the choice in China, either for the Chinese or for America, became "Chiang Kai-shek or communism * * * no one ever mentioned a middle way." All negotiations, whether under Hurley or Marshall, have been predicated on the middle way of a coalition government with Communists, Democratic League members and nonpartisans. But what White advocates, as far as I can make it out, is equivalent to war-lord feudalism, semi-independent provinces again; a weakened national army "that cannot dominate the entire map of China at one time;" "each province responsible for its own internal security," which was the war-lord system. He says the centralization sought in the past is impossible. The great middle group in China "wants peace and will labor for it. * * * If they were well organized they could guarantee peace. * * * But they lack an army * * *." More feudal, party armies advocated for China? Heaven forbid. China is farther along the road to democracy than that.

* * * * *

So with White's false picture of "revolution stirring and shaking every province, every county, every village in the land—working in the columns of hungering refugees, in the bivouac of every soldier." Like many other Americans, the writer's husband has done relief work or worked with Chinese soldiers all through the war. Not only his experience with soldiers wounded once, twice, three times and still eager to get back to the front lines, but his movies taken in many parts of China during the war give the lie to the distorted picture of White's seething proletariat, soldier, and browbeaten peasant. If White wanted to write a book about the peasants of China, he should have become personally acquainted with them first.

PART V. THE COMMUNIST BIAS

As soon as the author charges that "America's war had cut blindly across the course of the greatest revolution in the history of Asia," the bias—conscious or unconscious—is apparent. When White sees his own country as the one that blindly keeps the people

of half the world from freedom, he is wearing Communist spectacles, whatever his religion. Only so could he write of the war in the Pacific: "Japan's plunge into the South Seas was a turning point in the history of subject Asia, so portentous a phase in a revolution of hundreds of millions of men, that the war itself was reduced almost to a detail." World revolution is the thing.

Throughout the book, White approves any expansion of the Communists while the Chinese Government is fighting the Japanese:

"In 1943 they were in full tide of expansion again. They had nearly eliminated government influence in the province of Shantung by the end of that year, and the Eighth Route Army in Kiangsu was stronger than ever. The new Fourth Army which the Central Government had tried to wipe out (sic!) in 1941 was also flourishing. It occupied all the central part of Kiangsu and most of the south of that province. Its units stretched inland * * * most of Hupeh and parts of Honan."

Approving the race of the Communists against their government after Japanese capitulation, White says: "Manchuria alone remained in dispute. * * * They did not yield the Yangtze Valley and Shanghai to Chiang out of fear alone; they yielded because they had decided to trade Shanghai for the much richer prize of Manchuria." Who wanted to trade? What right had they to either? "Speeding north in one of the most dramatic marches in all history"—brave, opportunistic Reds!

"A radio and courier network linked all Communist centers * * *." The whole description is like that of Tito making hay while the war raged. All sorts of excuses for the Communists. White admits that they were "not for national war against the Japanese but for power for themselves," that they were "complete masters of brutality when brutality becomes necessary." When is it necessary? He condemns Chiang Kai-shek for ruthlessness or brutality, even though not substantiated.

His excuse for the Communist army not concentrating large numbers of troops "across the Yellow River or along the coast" is that "any such concentration would have been an open invitation to the Japanese to attack frontally in a battle they could surely win." Quite an admission; but the government troops had to attack frontally whether they could win or not.

Another strange admission is that after Stilwell's recall, "for the rest of the war, America's concern in China was politics, not warfare. And politics meant simply an effort to understand and cooperate with the leaders of Yenan." That must have made things difficult for both General Wedemeyer and Chiang Kai-shek.

Admitting that the Chinese Communist Party in the twenties (it was not organized until 1921) had been controlled body and soul by Moscow, its 1927 troubles were partly due to its own immaturity, partly the ignorant advice of Russia (hard on Russia's best advisers, Borodin and Bleucher); from Pearl Harbor on, the United States became more and more important to the Chinese Communists, the Soviet Union ever more remote. The explanation given is: "America had been in Communist mythology a land of predatory capitalism; now by contact with Stilwell they had a new picture of American policy." (The attitude would soon change if they didn't get the lend-lease they were angling for.) "By 1944 the Chinese Communist Party was rooted in its own soil. Sinified, nationalistic. * * *" (Just like Tito's Communists in Yugoslavia.) The Communists loved the American observer group, Col. David Barrett, John Davies, Jack Service, etc. They had great hopes of direct American aid. But we threw the opportunity away. We proved to them that no matter how friendly they might be to us, we would support the government of Chiang Kai-shek against them under any circumstances. Why against them? Weren't both fighting the Japanese? Or could it possibly be that the Communists were fighting Chiang?

"Chiang stood for a moment within reach of statesmanship." If he had assented to Communist terms, the authors think it would have meant peace. Not for a moment. As with Hurley, they would have doubled their demands. "Dissent meant bloodshed, and Chiang dissented." Chiang should have thrown over the unified China planned by Dr. Sun Yat-sen, built up by overthrow of the warlords, and returned to the feudal system of "recognizing regional control."

"Control of individual provinces by different parties could not lessen the unity of China any more than control of individual States by Democrats or Republicans." Do Republicans or Democrats maintain armies? Do we have no centralized control? This business of control of individual provinces is the old feudal warlord system, eliminated by the Chiang government, all over again.

And the presence of the American marines, it is said, helped to prevent the Communist plan. The railroads were protected by United States marines. "Until the government forces moved beyond the protection of that American flag, the Chinese Communists could not attack them." Otherwise they would have, and finally they even ambushed the American marines.

So the authors are quite clearly for the Communists. Up to now the Communist Party has shone by comparison with the Kuomintang. Only if, as a new government, they "move energetically forward to reform, can the Communist protestation of loyalty be tested." Loyalty to what? Their lack of loyalty to their government can be proved by their entire past history. When the Kuomintang was admittedly revolutionary and "moving energetically forward to reform," the Chinese Communists under instructions from Moscow joined it to bore from within. Today similar instructions direct them to break up the good feeling between Chiang Kai-shek and the United States, to do everything possible by civil war to overthrow the government while continuing to negotiate with Gen. George C. Marshall.

White says the Communist leaders "would hesitate as little to demand the ultimate sacrifice of thousands or even millions of peasants as they would to offer their own lives as sacrifice." * * * "They have cheated and broken promises; they are bitterly intolerant of criticism," but nonetheless White is for them, because he is for revolution—world revolution—which makes a Pacific war for our freedom "a mere detail."

He admits that "If we withdrew unilaterally, then in 10 years all China may be under Communist control—and in measurable years—all Asia." But this is not a terrifying prospect to White. "We must come to an agreement with Russia by direct negotiation or by a conference that includes the two great parties of China." By now he has forgotten "the great middle group wherein lies the hope of China." "We must make clear to the Russians * * *" and "Suppose Russia will not cooperate?" Then "We must do what Russia does—offer bread and equality in their daily life, adopt a policy of change. We will not clash with Russia, nor can she menace us." It is nice to have White's assurance. What makes him think that Russia, having broken the August 1945 treaty with China from the moment the ink was dry, will keep a treaty with us about China? Having said that "the open-door policy meant simply that China was 'open' to everyone but the Chinese," I wonder if White would now advocate an iron-curtain policy, which would mean that China is closed to everyone but the Russians?

WORDS WITHOUT MEANING

There is so much about China that White doesn't know, so much he knows which isn't true, that one might be amused by his roaring and rumbling except for one tragic fact. His thunder beclouds the real issue. China is inching toward democracy, but at every inch an armed minority obstructs reconstruction, creates chaos, and prevents unity and political-economic democracy. Failing to sense this, White does not see China's struggle as part of the world's ideological warfare. As China was first in the battle against the aggression of fascism, so China is today in the vanguard against the aggression of communism. And China knows, as White does not, that both are totalitarian, both the enemy of freedom.

Treatment of Displaced Persons

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement made by Secretary of State Marshall before the House Subcommittee on Immigration and Naturalization, on July 16, 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE HONORABLE GEORGE C. MARSHALL, SECRETARY OF STATE, BEFORE THE HOUSE SUBCOMMITTEE ON IMMIGRATION AND NATURALIZATION, JULY 16, 1947

I appreciate the courtesy of this committee in convening especially to hear statements by some of the Cabinet officials in support of H. R. 2910. I speak with a good deal of personal feeling on the subject of displaced persons. As Chief of Staff during the war years I naturally followed the subject very closely. I saw the first authentic and detailed reports on conditions in the concentration camps overrun by our armies. Some of you may recall that, at the request of General Eisenhower, I invited a group of representative congressional leaders to visit the concentration camps at that time. I commend their report to you as an historic document. In the realm of foreign affairs, I have also had a direct association with the problem, as I shall later describe. I believe that the outcome of the discussion on this bill will have an important bearing on our foreign policy. That is why I am here today.

There are about a million displaced persons in and around the displaced-persons camps. Most of them are people who were uprooted primarily from the Baltic States, from the part of Poland east of the Curzon line, now within the Russian borders, and from Yugoslavia. They were forcibly transferred into Germany by the Nazi armies before the end of hostilities. A much smaller group includes the remnants of the Jewish population of Germany and Austria, and also Jewish people, primarily from Poland, who fled into Germany and Austria after the close of hostilities. All of these million individuals are now under the control of the Western Allied Armies in the occupied areas of Germany and Austria and in Italy. It is they who present the problem we are discussing.

From 80 to 90 percent of these people now in Germany were there before the close of hostilities. The remainder were Jewish refugees who entered since that time.

I desire to emphasize at the outset that by supporting this bill, we are not asking

Congress to take on a new problem. The problem of the disposition of these displaced persons is one that Congress already has on its hands. It is a problem that is ours as a result of our armies fighting their way into Germany and Austria and taking governmental control of our zones and with it the fate of these captives of the Nazis. Congress is at present the ultimate governmental authority for the 600,000 of these victims of the war now located in the American zones.

Assistant Secretary Hilldring and other witnesses have already described the character of these displaced persons, their present situation and the four alternatives that appear to confront the Congress in determining their disposition. These alternatives are:

First, forcible repatriation;

Second, closing the camps and turning those victims of the Germans back to the Germans and the German economy;

Third, indefinite separate maintenance in Germany of these displaced persons in assembly centers; or

Fourth, their resettlement in other countries, including the United States.

I wish to make certain observations on each of these alternatives.

As to repatriation: Very speedily after the end of hostilities the western Allied armies repatriated to their countries of origin 7,000,000 persons who had been brought into Germany by the Germans. For the most part, they were western Europeans—French, Belgian, Dutch—and citizens of prewar Russia. We have aided and will continue to aid all others willing to return. A substantial but diminishing number of Poles and a small number of others have gone back to eastern Europe during the past year. But it has now become clear that practically all of the displaced persons now remaining in our hands are definitely and finally unwilling to return. We are therefore confronted with the question as to whether we should return them forcibly against their will. They are, as I have said, primarily people from the Baltic States, from that part of Poland east of the Curzon Line which is now under Russian authority, and from Yugoslavia. In these areas there has been a change in the political and economic system which these displaced persons are unwilling to accept.

There is a sharp divergence of viewpoint between the Soviet Government and our own as to what course should be pursued. The Soviet viewpoint has been vigorously presented in every possible forum—the Control Councils of Germany and Austria, the General Assembly of the UN, and the Council of Foreign Ministers, to mention a few. The Soviet viewpoint is that those persons born in areas now subject to the Soviet governmental authority are Russian subjects and under obligation to return to such territory. They demand that we forcibly repatriate the DP's. Our view is that it is against American tradition for us to compel these persons, who are now under our authority, to return against their will to those or other areas under governments whose political and economic systems they are unwilling to accept.

I have felt that the position which we have taken is in accord with the views of Congress. I earnestly hope that the Congress will reject the alternative of forcible repatriation as a solution of this problem. But this very difference of opinion has been a constant source of international friction. It will remain such a source of conflict and friction so long as these displaced persons remain in Germany and until they can strike new roots elsewhere in friendly soil.

We could eliminate this friction by abandoning our principles. But the principles which we have been upholding are not only our own. They have been adopted by the General Assembly of the United Nations. To adopt the alternative of forcible repatriation would therefore be violating not only our American traditions but also standards of international conduct.

As to the second alternative—abandoning the DP's to the Germany economy: There is quite naturally a fierce resentment between the displaced persons and Germans. The displaced persons know that the Germans are responsible for their present plight. The Germans regard the displaced persons as an uncomfortable burden and a constant source of annoyance. To turn them back to the Germans would be to perpetuate grave tensions and an ever-present threat of internal conflict. It would increase the present difficulty of our occupation and prolong the necessity for it. It would not lessen the international tension over the DP's. Further, from an economic standpoint this alternative is impracticable. The western zones of Germany are already overcrowded with the millions of Germans and people of German stock who have fled or been transferred into Germany since the end of the war. If we should in addition throw these displaced persons onto the German economy, we would have to continue our contributions to their support, though indirectly as an alternative to their starvation.

The third alternative is to continue indefinitely the segregation and maintenance of these displaced persons in Germany with a prolonged contribution from the American taxpayer for their support directly or indirectly through the International Refugee Organization. Quite apart from the dollar and cents burden that this country would thus saddle itself with, I feel profoundly that it is an alternative we should not adopt. So far these people have done well in making the best of their situation. They have been active in such work as it is possible for us to find for them and, indeed, for them to find for themselves. They have created much which is excellent in the life of their small communities. But men and women cannot be cut off indefinitely from any opportunity to help themselves or to plan for their own lives and the lives of their children without an inevitable deterioration. That deterioration would have disastrous effects on these people. That demoralization also would have disastrous effects on the larger problem of the reconstruction of the Europe that will alone make possible a peaceful world. The fundamental American tradition as to all people under our governmental authority is the opportunity to help oneself. To continue to hold these people where there is no opportunity to help themselves and without hope of such opportunity is contrary to that American tradition.

The fourth alternative is the resettlement of these people in the various countries of the world who will be willing to receive them. Determined efforts have been made in that direction. Helpful results have already been accomplished. Belgium is taking substantial numbers. So is France. England has assumed responsibility for the care of the several hundred thousands of the Anders Polish Army and is receiving currently substantial numbers of displaced persons. Norway has admitted some.

The question is naturally asked: Why is it not better for these displaced persons to participate in and contribute to the reconstruction of Europe?

The answer must be: So far as this is practicable, it is desirable. However, for the reasons already outlined, the return of these people from the eastern European areas to those eastern areas for this purpose is not one we can urge. It would take force to do it and a surrender of our principles. On the other hand the western areas of Europe, which are already making arrangements for taking several hundred thousand of these displaced persons, are now densely populated. Their needs, economists tell me, are not primarily for additional manpower. Certain of these areas are on or across the border line of overpopulation. Their need is primarily to replace and bring up to date capital equipment, with the necessary working capital of raw material and subsistence and a restored fabric of trade and commerce, so that available manpower can again effectively produce and the product be effectively distributed. Some expert and experienced top-level technical assistance from the outside might be helpful to them but so far as it might be drawn from displaced persons it would not be numerically important.

I have received from a member of your committee a suggestion that in the plans now being formulated by these countries for their economic reconstruction provision be made for increasing the number of displaced persons they have agreed to admit. As you know, we have suggested to the European countries that they initiate their own survey of their own needs and of steps which might be taken in reconstruction. These countries may well find it possible as part of these new reconstruction plans to convert a larger part of this burden into an asset by the more extensive use of this manpower than they have so far found it practicable to plan. Such efforts will certainly have our support. But the problem is of such magnitude that both we and the South American countries must also take steps to aid in its solution.

We had hoped a year ago that admission of displaced persons into Latin America and other countries outside of Europe would solve the whole problem but we now know that it will not. Shiploads have moved to Paraguay and Brazil and some are now on their way to Venezuela. Other plans are in the making. But we cannot, I feel, sit back ourselves and expect other countries to make all the positive efforts to solve this problem in which we are so directly concerned.

In our discussions with other countries we are constantly met with the question, "What is the United States, which is urging others to accept these people as useful and desirable immigrants, doing about accepting a part of them itself?" If we practice what we preach; if we admit a substantial number of these people as immigrants, then with what others are already doing and will do we can actually bring an end to this tragic situation. In so doing, we will also confirm our moral leadership and demonstrate that we are not retreating behind the Atlantic Ocean.

Although we have left it to other countries to take the lead in active measures to alleviate this tragic situation, yet we are actually in a better position to receive a substantial number of these people than any other nation. We have numbers of their stock already in this country who know their language and who have the resources and interest to assume the task of fitting a relatively small number of their kinsmen into our vast economy, without expense to this Nation in their resettlement, and with a reasonable assurance that they will not become public charges.

I am, it goes without saying, deeply concerned with the readjustment of our veterans into the tasks of peace. Already it has proceeded at a pace far more rapid than anyone believed possible. I do not believe that the great rank and file of our veterans, aware of the facts, would want this relative handful of our allies and victims of the Nazi armies to be forcibly returned to areas where economic and political system alien to our own prevail and which they are unwilling to accept. Nor do I believe that they would desire them to be turned over again to the people who uprooted them and enslaved them or kept them hopeless in these camps.

I urge prompt decision and action by Congress on this question. We must not continue these allies of ours, these captives of the Germans, indefinitely in the camps pro-

longing their abnormal existence and killing their hope.

The tasks that are imposed by a declaration of war are not completed when the guns cease fire. This is one of the tasks which we have not completed. It is for you to determine how it is to be completed.

H. R. 221

EXTENSION OF REMARKS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. BULWINKLE. Mr. Speaker, in the early days of the present session of this Congress I introduced a bill now known as H. R. 221. In the Seventy-ninth Congress, some 2 years ago, I introduced a bill H. R. 2536. These are practically similar and both are unique in two important respects.

The first is in regard to the support of the bills from every State and section of the country. I say to you frankly that in the years that I have been in the Congress, since the Sixty-seventh Congress, there has never been a bill pertaining to transportation which has had such unanimity of support from those who rely upon transportation, those who engage in transportation and those who regulate transportation in the public interest. In short, public utilities commissions of the various States, with one exception in the entire United States, those engaged in transportation such as the truckers, railroads, inland waterways, coastwise shippers and bus lines actively supported the bill in the last Congress and in this Congress.

In the second place there is a small minority opposition. This group is composed of some well meaning individuals, some columnists, some in the Government service who do not know what they are talking about and some fellow travelers on the road to Moscow. This opposition is rather peculiar. H. R. 221 has been grossly misunderstood and misrepresented. It is amusing to read what two or three columnists who are allegedly in opposition to the bill have to say about it. One can see by reading their articles that they know nothing about transportation and are very careless about the facts, largely on account of their complete ignorance of the subject.

In mentioning those who favor the bill it is well to remember that in the Seventy-ninth Congress the Committee on Interstate and Foreign Commerce reported the bill favorably. There were 26 members of the committee and only 3 voted against it. In June of this year a bill similar in concept, S. 110, was passed by the Senate after lengthy debate by a vote of 60 to 27. The original House bill, H. R. 221, was reported in July of this year from the House Committee on Interstate and Foreign Commerce by an overwhelming vote. Owing to the shortness of the time before adjournment, it is not possible to consider the bill on the floor of the House at this session. It remains on the calendar and will be considered at the next session in January, or in event the Congress convenes before January the bill will be considered at that time.

I cannot understand the attitude of some in the Antitrust Division of the Justice Department. By their attitude do they mean to assert that the Department of Justice, not the Interstate Commerce Commission, should decide whether or not practices in the field of transportation are reasonable or unreasonable? Do they mean to assert that which is necessary to accomplish the purpose of the Interstate Commerce Commission has all of a sudden become unlawful? Do they mean to assert that even though transportation has been subject to regulation by the Interstate Commerce Commission for more than 50 years it is unlawful? Do they want additional power lodged in the Department of Justice which would give to that Department the veto over the decisions of the Interstate Commerce Commission? Have they forgotten that the Congress has delegated to an agency of its own creation, the Interstate Commerce Commission, the power to regulate transportation? Would they have this power abolished and taken away from the Congress and established in the executive branch of the Government? I wish to remind them, these men in the Department of Justice, that the Congress makes the policy, not the agency to which they belong.

I challenge these men or any other opponents of the bill, to point to one word, one sentence, one paragraph of the bill which aids or abets the evils of monopoly. I challenge them to point out one phrase which permits or encourages discrimination or restraint of competition and trade. Nothing in it has to do with the level of rates or their relationship to each other. The bill only deals with the method by which carriers may discuss their rates before rate proposals are filed with the Interstate Commerce Commission. One will see by reading the bill that the Commission retains its full and complete powers as to the rate which it may approve. The bill makes it clear that no action is authorized in any conference unless it first has the approval of the Interstate Commerce Commission. One will find further that the Commission is denied the power to approve unless it expressly finds, after full public hearings, that the proposal is in the furtherance of the national transportation policy.

I read the other day the astonishing statement that "the bill permitted carriers to get together in secret some dark night." Needless to say this is absolutely incorrect. The bill provides for complete publicity at every conference to protect the rights of the public.

The purpose of H. R. 221 is to make certain that action which is found to be in furtherance of the national transportation policy shall not be deemed a crime under the terms of the antitrust laws. It sets up administrative machinery by which the Commission may determine in each particular case whether or not a given practice or proposal is or is not in furtherance of the national transportation policy. It provides for the continuing supervision of the conduct of carriers and shippers to see to it that whatever is done must be done in the public interest.

This is not a railroad bill only as some of the opponents would have you believe. They forget that there are 22,000 truck lines and a number of bus lines that are vitally concerned in the passage of this bill. These motor carriers touch every city, town, and hamlet in the Nation.

I am deeply concerned in the welfare of transportation whether it be by land, sea, or by air. This Nation must have for its preservation and prosperity efficient transportation systems. Remember it cannot survive without it.

The People's Platform

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast:

ANNOUNCER. The People's Platform. "Should there be a United States of Europe?" This question has assumed new importance in the light of recent European meetings to plan together for American aid. So Columbia's weekly discussion program considers today the problem of European unity and cooperation. Chairman of the People's Platform is Dwight Cooke. His guests are Senator CLAUDE PEPPER, Democrat, of Florida, Representative HALE BOGGS, Democrat, of Louisiana, and Isidore Lubin, United States representative on the Economic and Employment Commission of the United Nations and former United States Representative on the UN's Devastated Area Commission. For the People's Platform discussion of "Should there be a United States of Europe?" we hear first from Chairman Dwight Cooke.

Mr. COOKE. The Prime Ministers of England and France have answered that question for us in almost identical words. They both said very recently: "Europe must unite or perish." Certainly never has war-drenched Europe been more disunited and wrecked than it is today. All around them Europeans see chaos and starvation and wrecked factories and bridges and railroads and trade. And on top of this they have the dark fear of the two rising suns of the twentieth century, the United States and Russia, that they will be burned to atomic ashes in that kind of a rivalry. If Europe could unite, they'd no longer be any kind of a pawn in such a rivalry. So Europe dreams of unity. And if Europe could unify, it would be an immensely happier, better world for us Americans, too. We'd have order and prosperity and trade; we'd have a climate in Europe in which democracy could grow and an end to the American nightmare of a Russian-controlled Europe from Cherbourg to Dakar. So we, too, dream of European unity. But can it be more than a beautiful dream? That, gentlemen, seems to me the question which we've got to discuss today; find out what kind of a unity we can aim for and get and where Germany fits in that kind of a unity, and, finally, what we do about it, what the Marshall plan has to do with it, what our responsibilities are, and why it pays us to spend

LAW LIBRARY
FEDERAL WORKS AGENCY

the money in such a project. Now, Mr. Boggs, you introduced a resolution in the House along these lines; did you not?

Representative Boggs. Yes, Mr. Cooke. Senator Fulbright, Senator Thomas, and I introduced concurrent resolutions in the House and in the Senate on the same day, which stated in effect that the Congress favored the creation of a United States of Europe within the framework of the United Nations. We had several reasons for introducing that resolution. I would say the principal one was that we were certain that while the Truman doctrine was an essential doctrine, we felt that it was a negative approach to the problems of Europe, rather than a positive approach, and we felt that only by the unification of Europe can Europe's problems be solved and can we preserve our own economic stability.

Mr. Cooke. Well, there again, you share in this dream of unity. How about the practicality of unity now, Mr. Boggs?

Representative Boggs. Well, of course, Mr. Cooke, it is a very difficult problem. The unification of Europe is an old ideal; it's been, as you say, a dream of statesmen, scholars, and students of the problems of Europe since civilization made its debut on that continent. However, maybe today because of the peculiar problems of Europe the ideal may be closer to accomplishment than at any time in the past.

Mr. Cooke. Senator Pepper, how about this question of the peculiar problems of Europe and European and world unity?

Senator Pepper. Mr. Cooke, we all agree that it's been an aspiration of the people of Europe to get together for centuries. It occurred in the days of the Grecian city-states and the Italian city-states, and since that time that dream has gone on. But it is my opinion that rather than today to try to create a United States of Europe, I believe it's best to use the organization we now have set up, the United Nations Organization, as the best way of promoting the well-being and keeping the peace of the people of the world. I believe that today an effort to set up a United States of Europe would simply make permanent the tragic division which divides eastern and western Europe. It would promote lack of harmony and lack of cooperation, rather than an affirmative harmony and affirmative cooperation. I do not attribute that spirit to Senator Fulbright and to Mr. Boggs, but I do attribute it to men like Mr. Winston Churchill and Mr. John Foster Dulles. Many people who today are talking about a United States of Europe really want only a federation of the western part of Europe, the anti-Russian part of Europe, and they want to make the keystone of that western Europe that they wish to organize a rebuilt Germany. I think that's in the direction of war, rather than toward peace for Europe and the world.

Mr. Cooke. Well, Mr. Lubin, Senator Pepper has brought up quite a number of questions to discuss there, but take the largest question he's brought up. Do you think there's a choice today of European harmony in a United Nations versus European unity and some kind of United States of Europe?

Mr. Lubin. Well, Mr. Cooke, as I see the picture of Europe at the present time, you've got a devastated continent. The first job that must be done is to make it possible for these countries to rebuild their economy so their people can be put on their own feet and be permitted to make their own living.

Mr. Cooke. Why don't we take your point there, Mr. Lubin, and see if the other two gentlemen around the table agree with you. Do you think that's the first that should be done, Mr. Boggs?

Representative Boggs. I thoroughly agree that Europe must be put on its feet. As a matter of fact, there's more than Europe involved in the problem. If Europe isn't put on its feet, I'm afraid that we may be knocked off our own.

Senator Pepper. I believe in economic unity as the basis of world peace, and I want to see that unity achieved through the Social and Economic Council and the other organs of the United Nations.

Mr. Lubin. But the question as I see it is this: You've got specific regional problems. You've got an interrelationship between the economy, Senator, of the different countries of Europe. Now, the Social and Economic Council was cognizant of that fact when they created last spring the European Economic Commission. And the theory there was that these countries could sit down together, work out their own economic problems together, unify their railroad system, so you'd have a central European railroad system.

Mr. Cooke. All this under the United Nations?

Mr. Lubin. All of it under the European Economic Commission. Once, Mr. Cooke, these organizations could get going, you integrate your power, your electric power; some countries have too little, some have surpluses even now; there is no way of bringing these shortages and surpluses together. If you could develop the economic machinery so that you would have a coordinated pattern, such as we have in the United States, each part of the country being interdependent upon the other, it would have gone a tremendous distance.

Mr. Cooke. I think, over and over again today, evidently I'm going to have to emphasize this difference between the "if" and the dream and the practicality. That sounds very nice as you outline it, Mr. Lubin. What happened?

Mr. Lubin. What happened was this—that the Council was just about getting started when the situation in Europe became so acute, because of the fact that Europe did not have the purchasing power, or the foreign exchange to buy the fundamental machines which were necessary to get her agriculture and her industry going; crisis came along * * * let me put it this way: the United Nations created the Europen Economic Commission a little bit too late, and some other instrument had to be brought in, and that instrument right now is the Marshall Plan.

Representative Boggs. Mr. Cooke, I was very much interested in what Senator Pepper said about harmony. All of us want harmony. Talking about ideals, there's no finer ideal in the words of man. Nevertheless, we're up against very practical situations, and it seems to me that our country has certainly demonstrated its good faith.

Senator Pepper. Today the world is like a patient that's very, very sick. There isn't anything known to medical science which will get such a patient suddenly well. The world today has got to be nourished and carefully nurtured back to better understanding and to better cooperation and toward peace and away from war. The only way that can be done is the way you nurse a patient back to health, by constant care and constant sympathetic, understanding effort. But the first step toward doing that is to begin to look at the problem objectively, to get away from this blind prejudice which grips probably them toward us and us toward them today, so that we can't think clearly. We're not thinking with our heads today about world peace and world cooperation; we're thinking with our prejudices; we're thinking about these ideological differences, instead of thinking about people who have to live together, because we're all in the same world.

Representative Boggs. Senator, by the nature of our discussion, as we're talking about a unification of Europe, the Russian question must inevitably be brought up, as all of us have done. It occurs to me, however, that it's awfully difficult to distinguish between totalitarian systems. Now, I recall in '37, '38, '39, and thereabouts, I was one of your consistent admirers when you so eloquently pleaded the cause of democracies as opposed to Fascism as represented in Tokyo and Berlin. And I can remember the day that you were burned in effigy in front of the Capitol. Now, after all, you say you favor liberal approach. From the standpoint of liberalism, how do we distinguish between these totalitarianisms, whether they come from the right or from the left?

Senator Pepper. Well, that's an analogy very commonly made, Mr. Boggs, and I appreciate what you said a moment ago about my efforts. So if the position that I take now is sometimes and in some places unpopular, I hope that I may be vindicated in the future, as you and I were in the position we took in the late thirties. The question is too long to answer in a sentence or two, but I say that my answer is substantially this: you've got a different objective; you've got a different attitude; you've got different ideologies in the present Russian policy from what you had in the Hitler policy. You don't have the race-ism that Hitler had; you don't have the persecution of the Jews; you have respect for the minorities in the Soviet Union; you have a government devoted not to exploitation, but to the building up of the masses of the people. And, although it is, as you say, a totalitarian state, in that it is not like our democracies that it gives full expression to all the people, but instead of trying to exploit the masses, either for conquest or for the riches of the few at the top, as Fascism tried to do, this is a totalitarian state, the aim of which is to provide security for the whole people against such dangers and devastation as they had in the past and to lift up the masses of the whole people. Now, it's an immature democracy, it seems to me, a long way back down the line of history from where we are, but it's moving in the direction of a greater democracy.

Mr. Cooke. Well now, gentlemen, let's get a little closer to the center of our question today, and that becomes, I suppose, because we've been talking about Russia, the question of Russia and this western European unity. As I understand your position, Mr. Lubin, and yours, Mr. Boggs, it isn't that you would not prefer to work with Russia on a great world scale of harmony, but that you both feel that at this point it's impossible.

Mr. Lubin. Well, not only do I, Mr. Cooke, prefer that Russia be part of this unifying Europe, but I feel that eventually she may be part of it. Now, it's because I honestly feel that if she realizes that she has more to gain than to lose by being part of an economic union of Europe, wherein every country still retains its so-called political and cultural integrity—but a system, a union, whereby goods flow freely from country to country, where you eliminate all these trade barriers that stand in the way of economic and agricultural development and that fundamentally means a standard of living of peoples—that she will realize that she has a lot to gain by entering into such a union. Now, I think Russia made the greatest mistake of her life when she refused to become part of the Marshall plan. Everything she did, I honestly believe, will ultimately lend to her own economic hurt, rather than good. She had everything to gain from being part of it.

Representative Boggs. I think, Mr. Cooke and Mr. Lubin, that the best answer to what Senator Pepper has been saying lies in the fact that Russia has been invited to participate and has pointedly refused. Certainly, there's no anti-Russian bias in that situation.

Senator Pepper. I'll say just a word more about that subject, and then I'd like to discuss another aspect of this matter. I think

if we had proceeded through the United Nations Organization, through the European Economic Commission, which functions under the United Nations, where all the nations of Europe are represented, that we never would have had the refusal that later came about from the Soviet Union and some of her associated states. I think they got the feeling that they had never been consulted even informally, as I think they felt—whether that's true or not—we had consulted England and France in that informal way. And then the next thing that was unfortunate about the beginning of the Marshall plan—and I want to say that I'm for it—I agree with Mr. Lubin it was unfortunate that the Soviet Union did not come in. But the invitation was not issued by the United States; it was issued by Mr. Bevin, of Britain, and Mr. Bidault, of France, after they had formally had a private meeting. Now, I think that was a great psychological mistake. The first meeting should have been at least a meeting of the Soviet Union, Great Britain, and France. Not only that, then they proposed—Britain and France—that there be a committee that would tell the nations of Europe how they should participate in the plan. The Russians, I think, took the position that it should be as the Economic Commission of Europe is today, with every nation having a representative upon that commission. That's just a part of that psychological misunderstanding which exists today and which we've got to clear up.

Mr. COOKE. Well now, turning from that psychological misunderstanding to the practicalities of today and tomorrow, as the thing shapes up right now, the proposition seems to be that an effort be made by the 16 nations of some 219,000,000 people gathered in Paris, that they try to get together as far as they can in summing up their needs quite exclusive of eastern Europe or Russia, which seems to be going along a different line now; that, then, we see in the United States what we can do to help that development and hope, in turn and in time, that more nations will come into it. But the question comes right up, Mr. Lubin, is that a practical scheme? Will it work?

Mr. LUBIN. Well, I feel that it'll work only temporarily. I honestly feel that these various nations who are getting together today to determine what their needs are have got to do more than a bookkeeping job. They've got to do more than just figure out what they need, what they've got and subtract one from the other and say "this is what we need from the United States."

Mr. COOKE. Specifically, what——

Mr. LUBIN. They've got to get together and work up some plan whereby they can coordinate their economy. Every country in Europe has its own plan—a 2-year plan, or a 3-year plan, or a 4-year plan, or a 5-year plan. Every one of these plans is being worked up independent of the plans of their neighbors or the welfare of Europe as a whole. In many instances it isn't purposeful; in many instances they just don't know what their neighbors are doing. There's no machinery whereby they can get together and sit down and work out something that will fit into a pattern where one part will help the other.

Mr. COOKE. Well, do you still, then, have a western Europe highly industrialized, without the complement of an eastern Europe and its farm and agricultural products?

Mr. LUBIN. Not necessarily. You have a western Europe which is partly agricultural—a good part of western Europe is still agricultural—and a part of western Europe which is industrialized. On the other hand, if these countries got together and worked out some pattern, the mere increase in their productivity would give them surpluses to sell abroad. These surpluses, in turn, could be sold to eastern Europe and through such trade they could balance each other.

Representative BOGGS. Mr. Cooke, it seems to me that what Mr. Lubin is saying is that economic collaboration is not enough, or he may be saying that there's no machinery for establishing the proper type of economic collaboration. It seems to me that the more you study this problem that more is required than economic collaboration. Sooner or later, if the problems of Europe are to be solved, there must be political unification.

Mr. COOKE. You mean common citizenships, Mr. Boggs; you mean common parliaments in Europe? That kind of an——

Representative BOGGS. Substantially, yes. Just that. And we've talked a little bit about the problems of Germany. Let's look at that for a moment. If we reconstitute Germany, Germany immediately becomes a new menace to world peace.

Mr. COOKE. And by "reconstitute" you mean, Mr. Boggs, that if we build up the power, the industrial power and factories of Germany?

Representative BOGGS. Exactly. If we build up Germany to a condition substantially similar to that existing prior to the last war. On the other hand, to think about economic reconstruction of Europe without the industries of Germany is an impossibility.

Mr. COOKE. Mr. PEPPER, what do you do with that kind of a conundrum?

Senator PEPPER. I thoroughly agree with Mr. Boggs that we need to unify Europe, but we don't need to unify Europe any more than we need to unify the world. I'm in favor of a world government. I believe that we should move in that general direction. But I'm afraid that if, instead of using the organization we now have as a sort of a way station on the way to a world government——

Representative BOGGS. Senator, I don't want to interrupt you, but actually I'm sure that neither Mr. Lubin nor I—certainly Senator FULBRIGHT, Senator THOMAS, and I—don't contemplate anything except the use of the United Nations. As a matter of fact, our resolution specifically calls for this program to be worked out within the framework of the United Nations, and while I'm not familiar with the specific provision in the Charter—I think it's section 53—it is so provided in the Charter of the United Nations.

Mr. COOKE. Yes; but Mr. BOGGS, neither the Paris conference nor the Marshall plan at the present time is in operation in the United Nations.

Senator PEPPER. What I was about to say was that if we don't use the United Nations as a way station on the way to a world federation, if we stop now and try to build up a United States of Europe, that's going to emphasize regionalism rather than worldism. What we're going to do if we don't watch out, if we do that, is to substitute a belligerent regionalism, a war-making sectionalism on the part of the nations of the world for this competing belligerent nationalism which has produced the wars of the past.

Mr. LUBIN. Senator PEPPER, I don't feel that we can solve any problems by putting the blame at any particular point. But the opportunity did exist—and we've got to be realistic about this—to use a United Nations agency in Europe last week when these various governments got together. Russia, on the other hand, refused to play ball. She didn't come in and say, "Yes; we think this is all right; we need it, and everybody will agree that it's an essential thing, but we would like to use an instrument that was created by the United Nations, namely, the European Economic Commission, as a way of getting this thing started." Had she done that, I'm sure that the United Nations would have been a party to this.

Senator PEPPER. But, Mr. Lubin, I'm afraid you are overlooking the fact that the very fact that the Prime Minister of Great Britain and the Foreign Minister of France called this other conference meant that they were ignoring and condemning the futility and failure this United Nations Organization which was already functioning. They were the ones that bypassed it and they were the ones that set the pattern.

Mr. LUBIN. But, Senator, I don't believe that even after they had bypassed it, it necessarily had to be a closed deal. I feel that Russia could have come in and insisted: Yes, we are a part of this and we want to use this instrument.

Representative BOGGS. The evidence points in that direction. Russia was invited, Russia participated, Russia refused to go along and, as a matter of fact, denied participation by her satellite nations.

Senator PEPPER. You know, there's one thing, I think, that is going to be difficult for these western powers to understand. They think they are still running Europe. And the only way they can do that is to have us help them run it, as a combination against Russia. Today the strongest power in Europe in this new world after this old war is not Britain and France, as it was in the past; it's the Soviet Union. Yet they are still assuming the right to lay down the pattern for Europe.

Representative BOGGS. Senator, who's doing the combining now? You talk about the West combining against the East. Look at the map of Europe. Where are the satellite nations? Can you say that Great Britian has the control over France and the Low Countries and the Scandinavian countries that Russia has over her eastern satellites?

Senator PEPPER. I was saying that today there is a new balance of power in Europe, that after this war, with Japan destroyed and Germany impotent, the strongest nation in Europe is not Britain, which was formerly the strongest, and France, which was formerly the strongest; it's the Soviet Union that occupies a sixth of the earth's surface and has a tenth of the earth's people; yet Mr. Bidault, of France, and Mr. Bevin, of Britain, had a private meeting in Paris and then sent for the Soviet Union, like the tail that was going to be wagged by the French-British——

Mr. LUBIN. Senator, nobody can deny the fact that everything you say is right. Nobody can deny that it was bad strategy, bad international politics. I still insist, however, that Europe has got to be revived. She's got to be put in the position where every citizen there can be self-respecting and have some hope in the future.

Representative BOGGS. I agree.

Mr. COOKE. Now, Mr. Lubin, you said a few moments ago it wasn't a question of blame here, and we aren't trying to reduce this blame. Therefore, let's take a step further. The position that you and Mr. BOGGS have seems to be fairly evident, that you would like to build up this Paris economic union development as far as you can, aided with American resources and dollars, and hope, in time, that this western European economic unity would spread out and become a totally European unity and then a world unity. Now, that you're envisaging doing at this time without Russia. Now let's turn to Mr. PEPPER and let him say——

Senator PEPPER. My position is that we already have a United Nations Organization. It has as its most important function a Social and Economic Council. I believe in world economic unity. I believe that is the basis for world political unity and world peace. I want us, when we build these regional organizations, to build them for the purpose of harmony and unity and peace and not as a division which will divide the world into further disunity. The last thing is I don't want the rebuilding of Germany to be the basis of any such proposal.

Mr. COOKE. Let's ask Mr. Lubin and Mr. BOGGS, Senator, why this whole development

that they see cannot be done through the United Nations Economic and Social Commission, because isn't that the center of the problem here and the disagreement among you?

Mr. LUBIN. Well, Mr. Cooke, I think the answer is simple. The United States Government asked Europe to get together and tell us what it was that they needed. Now, we didn't tell them how to do it. It was up to them to decide. These European countries had an instrument in the United Nations. Apparently Russia took offense because of the fact that two foreign ministers got together without consulting her. I still insist that that machinery could be used even now; in other words, there are certain facilities that could be made available to all these European countries.

Representative BOGGS. I think the answer is pretty obvious. We're just ignoring developments. Six months ago, the President of the United States came before the Congress and asked for $400,000,000 for Greece and Turkey. It's been said that in doing that, the Congress bypassed the United Nations. Maybe it did. But it's perfectly obvious that the other countries of western Europe are going to be asking for money, too, and this thing is a double-edged sword. The economic stability of the United States is just as much involved as the economic stability of Europe. And while I agree with the fundamental principles that Senator PEPPER is talking about, I don't see any alternative that he offers.

Senator PEPPER. I believe that the United Nations can be made stronger by using it and not by by-passing it. I believe that to try to set up a United States of Europe today will not bring more harmony and be conducive to peace; it'll simply make permanent the division that already exists and I believe it's erroneous for many of the proponents of a United States of Europe to want to make a rebuilt Germany the fulcrum of its power.

Mr. COOKE. Well now, what about our own responsibilities? We've talked a lot about how the world should be done. How about our responsibilities under any kind of a unity and harmony? Are we going to have to spend these billions upon billions, fifteen or twenty billions, and why should we, Mr. BOGGS?

Representative BOGGS. Well, I've been talking about that off and on here. I think most certainly we have a responsibility. We fought this war, we spent 350 billion American dollars, we have lost countless thousands of American lives.

Mr. COOKE. And we can't afford not to go on spending the money * * *.

Representative BOGGS. Of course, we can't. We are in the world, and we must stay in the world.

Mr. LUBIN. Let me put it this way: You can't have peace or any desire for peace, as long as people have no hope for the future and they see no future for their kids. There's no chance of having the world go on in a peaceful way if certain parts of the world go hungry while other parts of the world are prosperous and have all of the good things of life. I insist that we, if we want peace, must make it possible for these other parts of the world to reach that stage of economic life where their people will have no advantage from war. As it is, when you're hungry, what have you got to lose when you go to war?

Senator PEPPER. Mr. Cooke, the United States, not only to help the rest of the world but to survive economically itself, to save American agriculture and American industry, must aid the rest of the world to stay on its feet. We must survive through helping others. The best way to do that is to act through the United Nations, is to be based on economic policies, not to wage an ideological war in the economic aid that we give, and not to rebuild Germany to threaten the peace of the world again.

Representative BOGGS. I agree, Mr. Cooke, that this is the ideal. The only point that I have repeatedly made here today is who is making this ideological war?

Mr. COOKE. The central problem here, every time we pick up foreign affairs these days, whether it's a question of European unity, the Marshall plan or what have you, seems to be this matter we all have to decide for ourselves—of who's to blame, if anybody, for what? It keeps swinging back, as it has today, to the question of Russia's good intentions and our good intentions and whether or not we can cooperate with Russia to build a world together, or whether we have to take, however bad it is, the next best alternative, because Russia and the United States simply will not get together and cannot build any kind of a peaceful world.

Thank you for being on the People's Platform today, gentlemen.

ANNOUNCER. You've been listening to the People's Platform, Columbia's weekly discussion program, as it considered the questions: "Should there be a United States of Europe?" Chairman of the People's Platform is Dwight Cooke. His guests today were Senator CLAUDE PEPPER, Democrat, of Florida, Representative HALE BOGGS, Democrat, of Louisiana, and Isadore Lubin, United States representative on the Economic and Employment Commission of the United Nations and former United States representative on the UN's Devastated Area Commission.

Social Benefits of a Mixed Economy

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 25 (legislative day of Wednesday, July 16), 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article prepared by the People's Lobby, of which Benjamin Marsh is the secretary.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From People's Lobby Bulletin of December 1946]

SOCIAL BENEFITS OF A MIXED ECONOMY

A mixed economy is a combination of private enterprise, cooperative associations, and Government-owned industries and other economic activities.

I. PUBLIC OWNERSHIP

Public ownership should be discussed first, as most major nations are increasingly socializing industry.

The Washington Post recently stated editorially:

"No economy in Europe can be expected to copy the free-enterprise pattern of America."

Years ago, a clear-thinking economist wrote that enterprises which, to be efficiently and economically administered must be monopolies—should be publicly owned.

This is a constructive alternative to the proposal to unscramble, or try to, private monopolies which are a threat to American standards of living and to political and economic freedom, by breaking them up into small and unrelated units, on the theory they will compete.

Unregulated competition may be the life of trade, but it is the financial death of most small competitors.

It also does not insure production, fair wages for workers, or lower prices for consumers.

At the end of the war, the United States Government was the largest owner of plants and equipment outside of the Soviet Union.

In America small businesses are often those which have not yet reached the monopoly status to which their owners aspire, and nearly all seek to prevent competition through trade associations.

Among enterprises which must be monopolistic, in order to be efficiently and economically administered, are: Banking; transportation; telegraphs and telephones; extraction, development, and distribution of natural resources—coal, oil, water power, natural gas, and major minerals; the steel industry; the motor industry; the aluminum industry; the chemical industry; life and fire insurance.

Many economists would add the textile industry, the meat-packing industry, the flour-milling and baking industries, the building-materials industry.

The United Press reported this summer that 43 billion-dollar concerns in the United States have aggregate assets of $101,808,600,000.

These include Standard Oil of New Jersey, United States Steel, General Motors Corp., E. I. du Pont de Nemours, and Socony-Vacuum Oil.

The 43 concerns listed include 18 bank and trust companies, 11 life-insurance companies, 6 railroads, the Bell Telephone System, Consolidated Edison, and Commonwealth & Southern Corp.

The 8 largest financial-interest groups control half of the 200 big corporations and have ties with many of the other half.

In 1918 manufacturers with net annual income of less than $250,000 had 24 percent of all manufacturing income, and in 1942, partly due to war conditions, had only 11 percent. In 1918 manufacturers with net annual income of over $4,000,000 had 34 percent of the income of all manufacturers but in 1942 had 51 percent.

The four largest steel corporations control about 63 percent of the steel-ingot capacity in America; United States Steel alone about one-fourth.

Political control avoidable

Public ownership of natural resources, natural monopolies, and basic industries, as part of a mixed economy, does not involve political control or manipulation.

The Tennessee Valley Authority is an outstanding example of nonpolitical management and operation of a vast enterprise under public ownership.

Most of publicly owned enterprises would be administered through public corporations, with charter from the Federal Government but standing on their own feet, and judged by results on three counts:

1. Supply, quality, and price of goods or services.
2. Efficiency.
3. Labor relations.

Labor in such public corporations should be free to organize, elect representatives of its own choosing, and to strike—subject to laws applying to the non-publicly-owned segments of the economy—and the good sense of labor, itself.

Among the benefits of public ownership as outlined are:

1. Since small as well as large plants in any industry will be acquired by the Government, production to meet domestic needs, and supply foreign demands can be better estimated in advance, and therefore met. Boom and bust could be reduced, if not eliminated.

2. Regional planning through regional authorities, or otherwise, will be facilitated, and construction of plant and equipment determined by domestic and foreign requirements, not by the acquisitive urges of custodians of surplus funds for investment.

3. The problem of capital investment for most of industry would be solved, for govern-

ment could utilize its facilities for obtaining capital from the savings of the millions, not rely on millionaires and other wealthy people.

4. Technicians and production engineers who now, as during the war, are highly competent, would be freed from present financial controls and restraints, and enabled to use their ingenuity to increase production and consumption, not to insure profits from finance-made scarcities.

5. Labor would have an added incentive to produce because lower labor costs would mean not pyramiding profits, but higher and better consumption for all.

6. The menace of owners' or managers' lock-outs and refusals to produce would be ended.

7. Present wasteful costs of competitive advertising, amounting to about $2,000,000,000 a year, would be ended, for advertising for products of publicly owned enterprises would be limited to information and would not attempt to change patronage from a good product meeting the public's needs to one with less or even equal merit.

8. Reduction of styles and simplification of products would be facilitated.

9. Participation of workers' and consumers' organizations in management could be arranged more easily than under private ownership.

10. Inventions would be welcomed for use, not suppressed.

11. Employment could be better regularized.

12. Foreign trade with the many nations where it is a government monopoly would be greatly facilitated.

Honest capitalization essential

The present capital structure of many large corporations, and some smaller ones, is highly inflated, since a favorite device of concerns earning a large percent net profit, is to issue stock or split-up stock, to conceal actual percentage profits.

An honest valuation of concerns the Government would acquire in a well-planned mixed economy is essential to prevent a serious handicap to public ownership.

The record of the Federal Power Commission in reducing the capitalization of some privately owned power companies a tenth to over half is highly significant.

Payment should be on the basis of actual prudent investment, justified capitalization, and average earnings over a period of years.

Public ownership would not increase the total debt, for the Government could exchange its bonds, which would not be tax-exempt, for stocks and bonds now outstanding.

As the Government can get money at a lower rate than most private concerns, fixed charges would probably be reduced for many corporations.

Public ownership of natural resources, now extracted, developed, and used very wastefully—partly because small operators, as in coal, have not enough capital—would reduce the costs of raw material, for the cooperative and private enterprise, as well as the publicly owned manufacturing segments of a mixed economy.

II. PRIVATE ENTERPRISE

The Department of Commerce reported in 1939 that there were 3,300,000 operating business firms in all industries in the United States.

Up to the end of 1941, new businesses were constantly being started, but by 1943 there were a sixth fewer than in 1941.

From the last quarter of 1943 till the end of 1945 many new businesses were started, partly because Government was helping many GI's to go into business for themselves, but at that time there were still about 200,000 fewer firms than in 1941.

The War Production Board reports that from June 1940 to September 1944, 18,000 corporations received $175,000,000,000 of contracts from the Government, two-thirds of which went to 100 large corporations while the 10 top corporations, including General Motors, Ford, Curtiss-Wright, and Douglas, got 31 percent of outstanding contracts—with General Motors getting 8 percent of all these contracts—a total of $14,000,000,000.

The Small War Plants Corporation reported that small companies got contracts for only 30 percent of all war production, of which only one-fifth was through prime contracts let by Government agencies. Two-thirds of all Government-owned or financed war plants have gone to less than one-half of 1 percent of manufacturing enterprises.

The concentration of Government orders and Government plants naturally resulted in a similar increase in the number of workers in large establishments.

The efforts of the Senate and House Small Business Committees to get war orders, surplus war plants, equipment and material, and technical advice, and the benefits of research, for small businesses, have not to date, met with much success.

Small businesses, still clinging to the slogan "private enterprise," have received a heavy set-back during the war. Many of them had heavier taxation because small concerns made vastly larger profits than before the war, and so were subject to the excess-profits tax.

They were not as adept, as big corporations, in getting expenditures for postwar good will—such as advertising nonexisting goods—included as costs, and so not subject to taxation.

Inflated prices of land and material, and high wage rates, also militate against small enterprisers as hucksters.

Many GI's who hoped to set up their own businesses have refrained when they realized what they are up against.

What is the field for small business in the world's most entrenched concentration of industry, in a nation soon to enter at least a moderate recession, expected to last 6 to 9 months?

Primarily manufacturing for local or limited area markets, retailing, and services, not requiring large capital.

Small business short-lived

In the past, only about a sixth to a seventh of those starting small businesses have been able to last over 5 years. Political expediency prompts members of Congress to seek Government aid for constituents, regardless of the need for new enterprises, or reasonable prospects for success.

America is well on in the era of big business, big labor unions, and big farming—the war merely accentuated this.

Laws and government subsidies cannot stop an inevitable and world-wide trend—they can fool a few of the people all the time, and all of the people some of the time, but not all the people all the time.

With Government and nongovernment debt considerably more than the fairly appraised national wealth and, in the aggregate, increasing rapidly, failure to recognize the inevitable, will not solve America's problems, it will merely aggravate them.

III. COOPERATIVES

The status of producers' cooperatives in an American mixed economy will probably be, chiefly, similar to that of small private business—manufacturing for localized areas, distributive and service. Excepted are farmers' cooperative marketing associations already established which will probably expand, as less efficient farmers are forced out of commercial production, and concentration of farm ownership and wealth increases.

Consumers' cooperatives will probably increase membership and amount of business, and may go into manufacturing, as has already been done in refining and selling the output of cooperative oil wells.

Both producers' and consumers' cooperatives will doubtless, like labor and farmer organizations, be represented by experienced members on the boards of directors of public corporations operating publicly owned enterprises.

Agriculture

Enormous and far reaching changes have taken place in agriculture during the war.

Highly significant is the reduction of the number of operated farms by about one-tenth, from the 6,100,000 when war started. Mechanization, despite shortages, has increased and displaced millions of workers.

The United States Department of Agriculture reports that at least 1,500,000 too many farm families are trying to produce commercially.

The Department's committees on postwar programs stated in January 1944:

"The agricultural production of the United States should be adjusted to national requirements, with due regard for export demand and desirable imports.

"We believe that private property is a public trust, and that whenever public or private interests in land use conflict, the public interest should prevail."

Half of farms produce about 86 percent of all farm production, while even with prices of farm products at war peaks, and prices farmers must pay for supplies at present levels, 14 or 15 percent of farm production could not provide even a fair living for 2,750,000 farm families.

Poor and small farmers cannot afford machinery; and if they could, would create some years an unmanageable surplus.

In a mixed economy for agriculture, while a majority of farmers will probably operate their farms under ownership or lease, there will be a large increase in cooperative and Government farms.

An over-all plan

A mixed economy cannot adequately raise and maintain living standards of all without an over-all plan for the Nation.

Such a plan must determine the location of industries in relation to sources of raw material, power, labor, transportation, and climate.

America is in too precarious a position, internationally, to have its growth and development determined by property owners and money barons driven by greed, without regard to public welfare.

The Federal Government has assumed the responsibility of seeing that people don't starve—at least too fast—so we have started unemployment compensation, old-age pensions, public works, etc.

Private enterprise has also been provided with many crutches. The corollary of these measures, is the maximum of preventive constructive direction by Government to reduce the drain upon the national income.

The only way to maintain a high standard of living is by increased production of things people need—not gadgets and luxuries—economically planned, with such distribution of income, as will make it possible for consumption to approximate production out of current income.

This can be done only under an over-all plan.

For 16 years we have postponed domestic disaster by living off future generations—through the issue of interest-bearing long term bonds.

The war merely increased our dangerous dependence on the unborn.

A mixed economy must end our policy of passing so much of our bills to posterity.

Taxation

With costs of government, Federal, State, and local, now approaching one-third of the national income, and the national income falling, taxation is of major importance.

A mixed economy does not change the incidence of taxation.

Under such an economy, it will be true as now, that the three taxes which cannot be

shifted to consumers are direct taxes on land values, personal incomes and nonmonopoly business, and estates or inheritances.

It will equally continue to be true that lower interest rates, lower prices for goods, and lower charges for power, increase the selling price of land, and under our present tax system, will increase the tribute landowners, farm as well as city, can extort from consumers in higher rents, and higher prices for all goods.

To make a mixed economy of greatest good to the greatest number, taxes on consumption must be ended and transferred to taxes on land values, incomes, personal and corporate, and estates.

A Voters' Revolution

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Voters' Revolution" by Roscoe Drummond, reprinted from the magazine '47.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VOTERS' REVOLUTION—THE NATIONAL PRESIDENTIAL PRIMARY CAN BE FORCED DOWN THE THROATS OF THE PARTY BOSSES—HERE IS HOW

(By Roscoe Drummond)

In the May issue of '47 I wrote a piece urging direct national Presidential primaries. Quite a few guns, large and small, went off. Here's how the battle looks at the moment.

Briefly the politicos don't want you to choose your own Presidential nominees in 1948. They're going to insist that papa knows best. They're going to complain that it's just too complicated to remove the nominating machinery from the hands of the party managers and place it in the hands of the party voters. They do not appear to be enthusiastic about giving up power.

To my premise that the President is not truly the people's choice unless the nominees are also the people's choice—there was almost total agreement.

To my statement that convention nominations are undemocratic, are sometimes rigged, have been stolen outright—no significant dissent.

To my natural conclusion that the major parties simultaneously conduct binding, national preconvention party primaries so that Vox Pop can really talk up—vigorous support from reader-voters, anemic support from a few politicos.

Evidently we, the voters, won't get our rights by asking. We'll have to do something positive about it. Even more than they fear the opposition party, the politicos fear organized voters within their own party. That's our cue: Hit them where they scare easiest.

Do you feel outraged at being denied the means of choosing your Presidential nominees? Then let your Congressman and Senator know about it. For their names and addresses, consult the Congressional Directory in any library, or ask your local board of elections. Also let the Democratic and Republican National Committees know that the voters want to select as well as elect their candidates for President. The Democratic National Chairman is Robert E. Hannegan, care of Democratic National Committee, Mayflower Hotel, Washington, D. C.; the Republican, Carroll Reece, Republican National Committee, 1337 Connecticut Avenue, Washington 6, D. C.

The party professionals are driven to put their opposition to a direct, binding national primary on technical grounds. They suggest that the voters might not vote. They suggest that State rights might be invaded. They suggest that so many candidates might run that the outcome wouldn't express majority opinion. They suggest that it would be too complicated. They suggest it might be better to forget the whole thing.

Not all of the political professionals are opposed to the idea. Edward J. Flynn, the Bronx boss who managed Franklin Roosevelt's fourth-term campaign, can hardly be accused of ignoring political realities. He is ready to give his backing to a national primary movement.

"In its general purpose," he wrote, "I think the thoughts expressed (in the article, A People's President, '47 for May) are excellent. Something I have always maintained is that the one way of obtaining proper nominees for public office is through the direct primary. Unfortunately, it is always difficult to impress the average voter with the great advantages that are his under this system. To suggest that he or she vote in a primary is usually met either with ridicule or wonder. They will vote in the general election, but that is like closing the barn door after the horse has been stolen."

Werner W. Schroeder, of Illinois, is a political manager of wide experience on the Republican side. He is vice chairman of the Republican National Committee. Mr. Schroeder sees a direct national Presidential primary as a source of strength to the party itself.

"I am in agreement with the principle of the article," he wrote. "The party conventions would be in much better position to conduct a campaign if an accurate and dependable recording of sentiment were made prior to the nominations.

"I agree that the convention situation as now developed is highly unsatisfactory. It stems from the original idea that a political party was a purely voluntary association and could nominate its candidates in any manner it pleased. Through 50 years of legislation we have gotten away from this idea in the States but it still prevails in national affairs."

Nearly 30 years ago Senator George Norris, of Nebraska, introduced a resolution advocating the direct national primary. When political realists like Ed Flynn and Werner Schroeder can join with an idealist like Senator Norris there is sound reason to believe a national primary is more than a pipedream.

There is nascent support in the Senate today for action which would bring the national Presidential primary into being. Senator WILLIAM LANGER, of North Dakota, recently sought to attach an amendment to the Presidential tenure bill which would have made the direct national primary a constitutional requirement.

Republican Senator GEORGE D. AIKEN, of Vermont, is one of the leading advocates of the national Presidential primary.

He understands the behavior of the professionals. The practice is for delegates to national conventions to be nominated at State conventions by local delegates. These are chosen at caucuses attended by only a small percentage of the voters in their respective precincts. These caucuses, any honest politician will admit, are generally controlled by political party bosses.

I know of one State political boss who, as casually as though he were disposing of a couple of sacks of potatoes, told how he had sold half his delegation to one Presidential candidate and the other half to the opposing candidate.

Some of the principal questions raised by the proposal of a direct national Presidential primary, together with what seem to me to be fair answers, are these:

Haven't State primaries proved that they elicit only a light vote, and wouldn't there be a risk of minority nominations because of light voting?

When elections are significant, voters show that they are ready to get out and vote. A national party primary would be a vital, educative process. It would force the party's national figures into the open arena. It would produce a vivid and significant national debate, thereby clarifying issues. Under such circumstances, a small vote is improbable. Give the voters the chance—let them prove or disprove the fear that a small vote would rule.

Might not the direct primary produce a fickle choice of Presidential nominees, the result of passing emotion or the excessive influence of a temporarily popular personality?

The question is based on a premise which experience has disproved. The premise is that the judgment of the American people as a whole cannot be trusted. The opponents of the direct national primary say that the strongest candidates of the convention system—Hoover, Franklin Roosevelt, Willkie, Dewey—corresponded to the public will. Opponents also admit the nominations of Harding in 1920 and William Howard Taft in 1912 flouted public will. It was respectable public judgment, wasn't it, to prefer Teddy Roosevelt over Taft, and anybody over Harding? I believe the American people can be trusted.

Wouldn't an open direct primary put a lot of nondescript candidates in the running and risk a hopelessly divided vote?

No; because there would be required a substantial Nation-wide petition to enable an aspirant for the Presidential or Vice Presidential nomination to get on the primary ticket.

Since the fixing of voting qualifications and the conduct of elections rest within the jurisdiction of the States, would a national Presidential primary require a constitutional amendment?

Not necessarily. A constitutional amendment would be needed to achieve a uniform Federal primary law applicable to all States and to all parties. It is possible that a simple act of Congress requiring the States to hold primaries on a certain date but at the expense and under the management of the respective States would be sufficient. Qualifications for voting would continue to be determined by the States.

In actual political practice it would be no more complicated for all States to hold a meaningful national primary simultaneously than for a few States to hold such meaningless primaries as they now do.

Next year the real nomination contest will be among the Republicans. President Truman will be renominated whether by convention or by primary. Wouldn't it be better for the Republican voters themselves to decide whether they want Dewey, Stassen, Taft, or Vandenberg—or Warren, Saltonstall, Lodge, or Bricker—than to have the party professionals decide for them?

The direct, binding national Presidential primary would have to be tried to prove its full worth and workability.

Is it too dangerous to put a little more rule into the hands of a free people?

If we want to make more democracy work we can do it. If we, the voters, demand our party rights as well as our electoral rights vigorously enough, the party professionals cannot long deny our demand.

It's up to us.

American Family

EXTENSION OF REMARKS
OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the May 23, 1947, issue of American Outlook, a publication which attempts to inform the people of Great Britain about trends and policies in the United States.

The article, entitled "American Family," describes the living conditions of an average American family on the west coast, and its difficulties in meeting the cost of living under present circumstances.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN FAMILY

(EDITOR'S NOTE.—We asked one of America's shrewdest social observers to give us this picture of an average workingman's family problems today in Oregon, which is as far as London from the eastern coasts of America.)

Plenty of chickens fill the refrigerated showcases at the corner grocery shop. Doris McLane never buys them. She considers 55 cents a pound too great a drain on her husband's pay of $44 a week. A 6-pound bird would swallow 7½ percent of the entire weekly income.

Doris, dark and petite, is 27 years old. Her lean and angular husband, Donald, is 31. They have two children—Doreen, aged 4, and Douglas, who is only 19 months old. Donald McLane's forebears crossed the Atlantic from Scotland half a century ago. Doris is of German ancestry. The McLanes live in Portland, Oreg., a city of 405,000 on the Pacific coast. With an annual income of $2,288 they are a typical American family. Seventy-two percent of all families in the United States have an income of less than $3,200. The McLanes belong within the largest subdivision of this group, for 27 percent of America's families earn between $2,000 and $3,000. At prewar purchasing-power parity that would be between £400 and £500 a year.

Donald is a bookkeeper for the National Biscuit Co., which has employed him ever since 1939. Although Donald is a Republican, he believes in trade-unions and is shop steward for the Office Employees Union (American Federation of Labor) in the Portland plant of the National Biscuit Co. In 1945 Donald came home from 2 years and 9 months of service in the Army to find his job open for him. Most of his service was in Texas, and part of the time he was able to have his family with him.

In the stores where Doris McLane shops, practically every possible food item is heaped in abundance—oranges, pineapples, hams, hens, ribs of beef, bunches of bananas and asparagus, crisp stalks of celery, lamb chops, golden bottles of whipping cream, pork roasts, cans of anchovies. Few such delicacies find a way into the McLane refrigerator, however. Doris buys a few fresh oranges, but these are for the children. She and her husband drink canned fruit juice, which is much cheaper. Perhaps "once in a month of Sundays" (as they also phrase it) they treat themselves to a bottle of whipping cream, and then Doris bakes a strawberry shortcake. She says she experiences no sharp pangs of denial as she walks past the goodies she cannot afford to buy. "It is a little hard at times," she admits, "to buy stew meat when a wonderful four-rib roast is only a few inches away, but our meals taste good to us, and we certainly aren't jealous of neighbors who eat better than we do." Neither of the McLanes drinks, and there is no alcohol in the house. Donald smokes Camel cigarettes, which he buys for 14 cents a package at a chain grocery store. One package lasts him 2 days. The family seldom buys sweets. A 10-cent chocolate bar is a treat.

HOUSEHOLD ECONOMICS

Doris must budget carefully when she does the shopping. Although Donald's pay is slightly lower than it was a year ago (because of the elimination of overtime work on Saturdays), the cost of living in the United States has risen sharply since the summer of 1946. The McLanes feel they would be better off had price controls been continued. They are not sure which political party to blame for the increase in food prices. Although he believes President Truman is "weak and colorless compared with President Roosevelt," Donald thinks that Senator TAFT, of Ohio, probably did more than anyone to end the Office of Price Administration's controls. The McLanes say they definitely would not vote for TAFT in 1948, but they doubt if they would vote for Truman either. "Doris and I hope to see in the White House," says Donald, "a progressive Republican like Harold Stassen or our own Senator MORSE, of Oregon."

Every day the McLanes are conscious of the vast rise in the cost of food. Doris allows herself only 50 cents daily for meat to feed four mouths. This means that she rarely buys select cuts. Only at Christmas or Thanksgiving do they eat roast beef, sirloin steak, or turkey. Doris generally buys round steak or hamburger, which she mixes with noodles or vegetables to stretch into extra helpings.

Donald's income amounts to approximately $190 a month. Doris spends approximately $60 of this for food. This includes five dozen quarts of milk at 17 cents a quart. She buys one loaf of bread a day. At the start of the war this cost 10 cents; now it is 17 cents. The McLanes prefer butter but do not use it. Butter is 72 cents a pound, margarine 43 cents. "Yet get accustomed to margarine."

The McLanes overlook no opportunity to economize. They buy fresh eggs from a fellow worker at National Biscuit, who has a chicken coop in his backyard. They pay him 55 cents a dozen instead of the 63 cents charged at the store. A neighbor has a vegetable garden and gives Donald lettuce, potatoes, and peas in return for assistance with the hoeing. In their own postage-stamp sized yard, the McLanes have an apple tree and a walnut tree. Doris preserves applesauce. This is a typical day's meals:

Breakfast: One egg for Donald, canned orange juice, oatmeal, toast, home-made blackberry jam, coffee or milk.

Lunch: Scrambled eggs, peanut butter sandwiches, home-canned cherries, and biscuits which Donald gets at a reduced rate from the National Biscuit Co.

Dinner: Beef stew with carrots and boiled potatoes, shredded raw cabbage, home-canned pears, biscuits, bread and margarine, coffee or milk.

BUYING THE HOME

The McLanes are buying a home. It is a small, 3-room wood-frame structure. They are paying $4,650. Before the war such a home in Portland could be bought for approximately $2,400. The monthly payment is $40. Of this, only $22 is principal; $18 a month goes to the mortgage company for interest and insurance. More than 17 years will elapse before purchase is completed. In that time they will pay one-third as much to the loan company as to the former owner of the dwelling.

The house has an automatic thermostat-controlled fuel-oil furnace. Donald estimates the annual cost of fuel at $90. Portland has a damp, mild climate not unlike that of North Sea countries in Europe. The McLanes own an electric refrigerator, electric washing machine, small radio set and electric iron. Their monthly electricity bill is $3.50. The power comes from Bonneville Dam, a great Government project on the Columbia River, but is sold to them through a private utility corporation.

ECONOMY BEGINS AT HOME

They have to cut many corners on their expenses. Haircuts in Portland are $1 each, but only 40 cents at the Barbers' College where apprentice barbers are trained. Donald gets his hair cut at the Barber's College. Doris has only one permanent wave a year. It costs $6.50. She does her own hair the rest of the time. She makes the children's clothes, and gets reach-me-downs from two grandmothers. Donald wears clothes he had before he went into the Army.

The McLanes like films but the movies are expensive. Donald belongs to the auxiliary police force. This pays no salary, but entitles him to enter cinemas free of charge. If a show is good he tells Doris, and she tries to go to a matinee when prices are cheaper. Neighbors come in as "sitters" with the McLane children when the parents spend an occasional evening at a show or church social. The McLanes are members of the Presbyterian Church and Donald sings in the choir. Church dues are $1 a month.

On their home the McLanes pay an annual property tax of $47.23 to the State of Oregon. The Federal Government's income tax on Donald's salary is $15.60. His three dependents keep this to a minimum. Yet both McLanes think this is the wrong time to reduce any taxes. They believe the Government debt should be paid off first.

Group insurance at the National Biscuit Co. costs Donald 50 cents a month for $1,500 worth of protection. He also spends about $60 annually for another $3,500 in insurance. The McLanes have a garage but no car. They expect to spend their vacation this summer adding the garage to the house, in order to provide an extra room. Now, the two children sleep in double-decker bunks in the parents' small bedroom. Donald built the bunks himself.

Donald goes to work by train. He pays 25 cents for three journeys. The collection of refuse and garbage costs the family $1 a month, and the McLanes have a telephone on a four-party line with three other families. The monthly phone bill is $3.75. Doris cooks on gas and has a gas hot-water heater. The local gas company charges them $4.50 a month. Water is furnished by the city for $6.60 a year.

LIFE AT THE MARGIN

The McLanes have no savings. They put Donald's pay checks in the bank, and by the end of the month they usually have paid out the full amount. It generally all goes. They pay $3 monthly to the Oregon Physicians' Service for prepaid medical care. When Douglas was born the child's doctor bill was $40. Because of his military service Donald is eligible for attention at the local veterans' hospital.

The McLanes do not have much time to read. They subscribe to the Oregonian, a local newspaper, and this costs $1.50 a month. They also read two national magazines, Life and the Saturday Evening Post. Donald takes American Sportsman. He is interested in fishing, hunting, baseball, and other sports. He follows closely the fortunes of the home-town baseball team. Occasionally Donald plays golf on a municipal links, where the fee is $1 for 18 holes. He goes on the bus or tram, taking his clubs with him.

THE POLITICS OF THE PEOPLE

Although they supported Franklin D. Roosevelt when he ran for President, the McLanes have never considered changing their voters' registration from Republican to Democratic. They regarded Mr. Roosevelt as a special case and not symbolic of the average Democratic politician. They think a Republican President would be good for the country because they feel one party should not occupy the Presidency too long. They hope the Republicans will nominate a progressive, but the way they feel now they would vote for any Republican except Senator TAFT.

Neither Donald nor Doris is sure about President Truman's program for financial and military aid to Greece and Turkey. "I guess the Russians have got to be stopped," comments Donald, "and probably the only language they understand is force. Yet we've heard so much about the United Nations, and now right off the bat we refuse to let the United Nations handle a dangerous situation."

Despite their realization that financially they are living on a thin shoe-lace, the McLanes are not dismayed about the future. Donald hopes to take enough training to become a certified public accountant and specialize in tax problems. He is loyal to his company and claims it offers reasonable chances for advancement.

Donald and Doris read in their newspaper many predictions of a depression in the United States. They have few reserves, and are aware that a sustained period of unemployment would leave them without money for food or payments on the little house. But they are certain they will get along.

Treatment of Displaced Persons

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement relative to the possibilities in regard to the future treatment of displaced persons in Europe. The statement was made by Lt. Col. Jerry M. Sage, United States Army, before the House Committee on Immigration and Naturalization.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY LT. COL. JERRY M. SAGE, UNITED STATES ARMY, HEADQUARTERS OF EUROPEAN COMMAND, FRANKFURT, GERMANY, BEFORE THE HOUSE SUBCOMMITTEE ON IMMIGRATION AND NATURALIZATION

I am a lieutenant colonel in the United States Army and have been called here from my station, the Headquarters of European Command, in Frankfurt, Germany, where I work with displaced persons as Chief of the Field Contact Section. In that capacity I have been in most of the 300 DP assembly center groups which contain nearly 500 installations in the United States zone of Germany. During the past 15 months I have worked and talked with every variety of DP there. I was selected for my job on the basis of qualifications obtained through wartime experiences as an operational officer for the OSS, as a prisoner of war, and as a worker with various underground resistance groups, both before and after several escapes from the Nazis and their prisons.

Prior to our entry in this war I had had very little contact with Europeans. I lived in Spokane, Wash., and married a girl from Tacoma, Wash. After graduation from the State College of Washington, in 1938, I worked as a salesman and sales supervisor for Procter & Gamble on the Pacific coast. I held a Reserve commission in the Infantry and was accepted for active duty in the Army at the Presidio of San Francisco a few weeks before Pearl Harbor.

To my surprise, in April 1942, I was called to Washington by telegram to work with General Donovan of the OSS. At that time a handful of officers had been picked on the basis of both scholastic and physical qualifications to aid by sabotage and intelligence in undermining the activities of the Axis Powers, particularly in occupied countries. We were trained to infiltrate by parachute or submarine, to demolish objectives with high explosives, and to bring back needed information. The first eastern Europeans with whom I came in contact were OSS students who were destined to become part of the resistance movements. In 1942 I worked very closely with a group of Yugoslavs who were especially trained in sabotage and in strategic and tactical intelligence. I also met my first Czechs and Poles at this time.

I operated from England in this type of work in the summer of 1942, and later in the year was in command of a unit which went to north Africa. Activities there behind the German lines resulted in my being shot up and captured early in 1943. Then, as a prisoner of the Germans, I had my first actual contacts with what we now call displaced persons. Although the British and American officers were kept carefully segregated from other groups, we often saw labor being driven like cattle outside the barbed wire of our camps. I remember very vividly the feeling of frustration and impotence engendered by standing behind double rows of barbed wire and machine guns and helplessly watching SS guards whipping Polish women who were being forced to work in the fields for the Nazis. In order to get out of German hands on various escape attempts, I tried to learn as much as possible of the eastern languages, including Polish, Russian, Czech, Hungarian, and Yugoslav.

I made my first actual contacts with the forced labor in Germany on escape attempts in 1943. I well recall the assistance that a little Ukrainian laborer gave me when I was trying to walk from near Berlin to the Czech border, 2 days before the Gestapo caught me, on one of three abortive attempts. When my final escape was actually successful, I was greatly assisted by Poles and developed considerable admiration for that country's underground resistance.

In October 1945 I was sent to Columbia University for 3 or 4 months for a refresher course on the over-all European situation. I returned to Germany in March 1946, and was assigned to my present job with displaced persons.

My job in Frankfurt includes not only a certain amount of staff work at the policy level in the headquarters of General McNarney and General Clay, but also a great deal of personal investigations and inspections of displaced persons and displaced persons installations. In the latter capacity, I found it extremely helpful to be able to speak a few words with the people in their own languages or in the rather basic German which nearly all prisoners or forced laborers acquired during the war.

On my return to Europe in 1946, I learned that of the about 8,000,000 displaced persons that the German armies had forced into Germany from other countries of Europe which they had occupied, approximately 7,000,000 had returned, with the aid of the western allied armies, to the areas in which they formerly lived. In the zones of the western allies in Germany, Austria, and Italy, there were at the first of this year slightly over a million displaced persons in the hands of the western allied armies. Between 80 and 90 percent of these had been forced into German territory by the Nazi armies before the end of hostilities. The balance were persecutees, for the most part the Jewish people who fled into our zones in Austria and Germany, almost entirely from Poland, in 1946. This movement was greatly accelerated by the murder of 40 Jews at Kielce on July 4, 1946. At this point I should like to clarify a misapprehension which has arisen in previous discussions of this bill.

It has been erroneously stated that 80 percent of the displaced persons entered the occupied zones after the end of hostilities. As I have indicated above, the true situation is exactly the reverse. I do not know how this misapprehension came about. It may possibly stem from the fact that millions of Germans and persons of German ethnic origin (Volksdeutsch) have fled or been transferred into the western zones of Germany from eastern Germany or from eastern European countries where they formerly resided. It is not with these people that we are concerned as they are Germans and have become a part of the German economy.

Of the million displaced persons remaining, Lithuanians, Latvians, Estonians, Poles, Jews, Yugoslavs, Ukrainians and stateless persons, of whom we are talking here now, the United States has control of about 600,000 in Germany, Austria, and Italy. Of this number, I have been vitally concerned with those residing in the United States zone of Germany, a total of over 500,000. When I left Germany a month ago, there were 354,000 of these displaced persons in assembly centers in our zone and about 150,000 living outside centers, either in labor units working for the United States Army or working in the German economy.

The United States Army has been charged with the responsibility for this group of half a million people. We have endeavored, with the assistance of UNRRA workers, to feed, clothe, and rehabilitate these people to the best of our ability and resources.

But we are continually asked one question and it is one we continually ask ourselves: What is to become of these people—the ones our Army took under its control and still has under its control?

The four alternative solutions presented by General Hilldring are not new. They have been discussed, considered, and elaborated on, around our conference tables in Germany for many months. But the United States Army in Germany, although charged with the responsibility for displaced persons within American zones, cannot make the decision as to what we are to do with these people in the future. That decision, we are fully aware, must be made by the United States Government—by the Congress—the ultimate governmental authority over them.

There are four possible alternatives:

1. Forcible repatriation.

2. Closing the camps and telling the displaced persons to become Germans and fend for themselves as best they can in Germany.

3. Continuing to maintain them separate from the political and economic organization in Europe, indefinitely, in the little communities which they form in the assembly centers.

4. Endeavoring to secure their resettlement in countries where they can rebuild their lives and strike new roots.

All I am here for is to give you briefly such of my observations of these people as you might feel to be useful to you in reaching your decision as to which of these alternative courses is to be pursued.

I shall endeavor to answer any questions which occur to you and to develop more fully any aspect that you may desire.

REPATRIATION

The alternative of repatriation must, at this point, be definitely termed "forcible repatriation." As has just been pointed out, a tremendous job has been done in returning 7,000,000 persons to their homelands. Over the past 2 years every opportunity has been affording to those now remaining in our zones to return. From my observation, those whom we still have on our hands are essentially a hard core of nonrepatriables who will not return to their place of origin because the map of the area where they formerly lived has been redrawn and a government alien to them is in power. They fear a lack of political freedom, and have a real dread of persecution. I can certainly testify as to the presence of those fears. It is not unusual in the United States zone of Germany, when a movement of displaced persons is contemplated from one installation to another for better accommodations or to meet a military exigency, that rumors immediately begin to circulate about the camp and the fear is developed that transportation is coming to repatriate the displaced persons against their will. On several occasions it has been part of my job to visit such installations to quiet the panic among the people by giving them the true facts about the movement and reiterating that it has not been and is not the policy of the United States Government to force displaced persons to return to the area from which they came. There are still a few people who are accepting our continuing offer to aid those who are willing to go. They receive, when they reach their destination, a 2 months' ration to insure their subsistence until they get their feet on the ground and become reestablished. Those who have gone during the last year and those who may still be willing to go are mainly Poles who came from that part of Poland which is still Poland. But the vast majority of displaced persons now in our hands have convinced me that they will not go back. I cannot number the occasions on which I have asked every variety of DP, "Why don't you go home—to the piece of ground you know, the members of your family and old friends, to the place where you can use your native tongue?"

These are the answers I receive, and I receive them every day from people of nearly every walk of life. The Baltic peoples—the Lithuanians, Latvians, and Estonians—have said to me, "I would rather die than return to my home—it is no longer mine. It is in the hands of the same people who took away every right I had in 1940 and 1941, and who took away friends and relatives of mine whom I never saw again."

Many of the Poles and Ukrainians who formerly lived in Poland east of the Curzon Line, now Poland no longer, say, "I will not return to land now held by the U. S. S. R."

The Jews in our camps tell me: "The Nazi teachings were far reaching. I am still attacked in eastern Europe, as well as in Germany. Let me go to Palestine."

I recall a remark by a Yugoslav DP who was in the same prison camp with me in 1943. "Should I go home to a political regime I hate and fear—to be tried by Tito, who accuses me of being a collaborator during the time I was spending 2 years and 50 pounds of flesh in German prison camps? The only one with whom I could have collaborated was God."

Such observations, multiplied hundreds of times, are heard not only by me, but by every person who works with displaced persons in our zone. It does not do any good to say to these people that 7,000,000 displaced persons have gone back to where they came from; why don't you? The answer is too simple and too clear. Naturally, the millions of French and other western Europeans went back home. Naturally the millions of Russians who believed in the Russian economic and governmental system went back. Naturally, also, anyone who believed in, or was indifferent about, the new systems of government in other eastern areas went back. The ones who have gone were the ones who were willing to go. Their experience is no guide for those who are now unwilling to go. Is it reasonable to expect the DP Balts, for example, who are bitterly hostile to the political and economic system which they experienced in 1940 and 1941 and which now rigidly controls their countries, to feel that it is safe for them to go back, carrying their hostility with them, to work against communism? The very fact that they go back unwillingly is enough to endanger them. Or are we to expect and demand of them that because their native countries have changed hands, they must, therefore, change their beliefs and accept communism as their way of life? We believe that these persons unwilling to go back would have to be rounded up by the United States constabulary or German police and forced into repatriation trains with gun and bayonet.

SHALL WE CLOSE THE CAMPS?

The second alternative is to close the camps and tell the displaced persons that they should become Germans and get such work or relief as the Germans might provide. From my contacts with these people I have observed several aspects of this alternative which you gentlemen may wish to consider in determining what course to choose. The first is that the great body of these people would regard it as a return to imprisonment to be turned back to the Germans whose armies brought them into Germany for forced labor or into prisoner-of-war or concentration camps. It has been equally apparent from my contacts that the Germans do not want the displaced persons in their midst. The Germans have not forgotten the Nazi indoctrination which looked on the non-German as an inferior person to be exploited by the "master race." This feeling appears as one of our difficulties in finding often the German administrator of a labor office discriminates against the displaced person applicant, at least by passive, if not active means. These ingrained antagonisms would be a perpetual source of conflict. They would prolong and make more burdensome our task in the occupation of Germany.

In addition to these deep-rooted antagonisms, there are factors in the economy of the western zone of Germany, as we over there observe it, which also have a definite bearing on the practicability of this second alternative. There are slightly over 500,000 displaced persons in the United States zone of Germany alone. Can we expect the economy of the zone to absorb this half million? Before the war, this area contained about 14,000,000 people. In addition to that population we have had to accept 1,500,000 expellees (ethnic Germans) from eastern countries such as Czechoslovakia, Hungary, and Poland. Another million people have been added to the German economy in our zone under the classification of German refugees—Germans displaced from their homes in either the Russian zone or in the area presently under Polish administration. Thus, excluding the displaced persons, the total population of our zone has now been brought to about 16,500,000. When one considers that at least 30 percent of the housing in the United States zone has been destroyed and its industries for the most part destroyed or collapsed; that even before the war, under the extreme food production efforts of the Nazis, this area had to import 20 percent of its food requirements for a normal population of 14,000,000; that 2,500,000 Germans have been added to the area, and that it is also supposed to feed a million persons in the United States sector of Berlin, the reason why American taxpayers have the alternative of contributing heavily to the support of this surplus German population or letting it starve is apparent. Merely to close the camps and add these half million non-Germans to the already surplus Germans in our area would give us only an apparent but no real relief from the situation we created when we conquered Germany and took these victims of Germany into our hands.

INDEFINITE MAINTENANCE

The third alternative is to continue to keep these displaced persons alive by maintaining them indefinitely in assembly centers, in the hostile environment of Germany. This obviously is no solution. It merely perpetuates a heavy charge on the American taxpayer. It keeps these victims of the Germans in a situation where they cannot help themselves, without plan or hope of building new lives for themselves or their children. These people, as I have lived among them, are fundamentally not so different from you or me. You can picture without any aid from me what that situation would mean to us if we were in it and determine whether this is the alternative you propose to adopt.

RESETTLEMENT

To aid in your consideration of the fourth alternative to the solution of the DP problem, I shall endeavor to answer for you, from my personal experiences, the following questions, plus any additional questions that you may wish to ask.

How are we sheltering and feeding the displaced persons under our care in Germany this summer of 1947?

What kind of people are they?

What are their basic political and religious beliefs, their attitudes toward employment, the state of law and order in their communities, their occupational skills, their health, and morals

And in addition, what are other countries doing about these displaced persons?

The shelter is the best we can provide in view of the destruction during the war of 30 percent of the housing in our zone and the great increase over the prewar population. It varies with each locality of the nearly 500 different installations. We try to do the best we can with what we have and perhaps get accustomed to it, but I don't believe that you would like the looks of some of our necessarily overcrowded conditions. Our largest assembly center at Wildflecken, Germany, houses about 15,000 Poles and Polish Ukrainians in a cluster of huge barracks and apartment buildings. Some larger rooms have to accommodate a number of families—from 20 to 30 persons. Other installations are composed of groups of long, low, wooden barracks built for the German armed forces. Still others are former prisoner of war and concentration camps. I have inspected two DP camps which had been POW "homes" of mine in 1943 and 1944. The barbed wire and machine guns have been removed and great improvements have been made, but the environment you would not regard as conducive to a normal family life. At times at one installation it has been necessary to shelter as many as 250 men, women, and children in one very large room. Fortunately we have passed that stage. We try to get down to one family to a room or partitioned part of a large room and sometimes can do better.

A typical DP room has a row of double-decker wooden bunks around the sides of the walls, a makeshift table, a few wooden chairs, a small wood-burning stove, and what other articles of furniture the DP's can make from scraps of material they dig up. Rarely is any quantity of material found available which can be furnished for floor and window coverings or to provide some of the innumerable comforts of home which we take for granted in this country. But the DP's make a little go a long way. It is surprising how with a

few odds and ends of personal belongings the atmosphere of a separate family center can be given to that particular corner of a large room which a father, mother and several children have curtained off as their own.

We are able to furnish to displaced persons sufficient food to maintain health, with a normal consumer ration of 2,000 calories per day. Supplements are granted for various categories; such as growing teen-age children, pregnant and nursing mothers, hospital inmates, and certain workers. These supplements bring the average caloric intake to 2,400 in our zone. I would estimate that the average American adult consumes between 3,000 and 4,000 calories a day. The daily bill of fare is in the main starchy foods—grains and potatoes. It is sustaining and puts on weight. Except for vegetables grown in the small gardens which are tilled in every patch of ground the DP's can find, there is naturally little opportunity for variation in this diet.

The primary fact to be borne in mind is that they are above all else working people. That is because the Nazi Labor Office which accompanied the German armies was interested in bringing into Germany only those people who were capable of working in the factories and on the farms. Therefore, they selected for deportation to Germany primarily persons in the younger age groups and those physically qualified to do manual labor. It is noteworthy that in the average DP camp one will find relatively few old people or physically handicapped people. Further, it was hard for any without great moral and physical stamina to survive the experiences they went through. As working people in their own countries they were accustomed to long hours of toil. In German labor camps they worked long hours on short rations. Today, in the DP camps, as employment can be found for them, they are still working willingly and industriously in the maintenance of the camp, improving the physical appearance, and in outside employment in Army units and in the local economy. In the administration of the employment program in DP camps, the problem has not been so much that of inducing people to work but of finding work for them to do, for reasons which I will presently point out. Secondly, in the general picture, I must say that I have been continually surprised by the resiliency of the vast majority of these displaced persons. I have seen, in my present tour of duty, the same prisoners and forced laborers of the Nazis who had been with me in Germany in '43 and '44, still residing in the depressing atmosphere of the abnormal camp-type life described above, and have been amazed at their ability to make the best of their situations by studying, working, and striving to improve themselves.

In order to further the rehabilitation of the DP's, to respond to their urgent desire for something constructive to do, and to save the expense of our own personnel, we have turned most of the administration of the assembly centers over to the DP's themselves.

In order to give you a clear picture of the DP, I shall describe as accurately as possible a typical assembly center and what goes on there.

This cluster of buildings was probably built for the German Army and has a wall or fence around it. At the main gate you will find a man wearing an arm band or an old GI helmet-liner hat, with the inscription "DP police" on it. These police are trained by military personnel operating directly under my office. Their functions are much the same as those of policemen in a rural town. They preserve internal order in the camps, keep out personnel who try to enter for illegitimate business, and assist our military law-enforcement agencies in apprehending wrongdoers.

And here I'd like to give some observations on the state of law and order among DP's. DP's have always been a good sources of news. An incident involving DP's which is handled by our military agencies attracts much more attention than a similar incident involving Germans which is handled by German police. Consequently I have run into some exaggerated reports of DP misbehavior. My office happens to have a direct responsibility for supervising law and order among DP's, and maintaining records of incidents involving them. Of course, there are law violators among DP's. I have personally assisted in arrests of them and in prosecutions resulting in court sentences from several months to several years. However, the numbers of those jailed or cited for offenses in the United States zone, taken from statistics of the German Bureau of Criminal Identification and Statistics, indicate that non-Germans have not committed more than a proportionate share of the total crimes in the first few months of this year. In fact, the last figures I have available on offenses against German criminal law show that non-Germans have committed proportionately less than the Germans. From the standpoint of immigration into the United States, the records we have, covering a period of 2 years, would give an unusually good opportunity to screen out the lawbreakers.

Continuing with the DP policeman on your way to the administrative office in our sample camp, you will notice that there is considerable evidence of repairs and reconstruction of the buildings. The majority of our assembly centers are in areas in which countless bombs of the Allied Air Forces dropped. After liberation the DP's who were gathered together in a partially demolished installation went to work on it. Some of the buildings in a camp you visit will have been almost entirely rebuilt from salvaged bricks and odd pieces of steel, glass, and lumber. In an effort to brighten the surroundings, the inhabitants usually make a neat and ornamental design of whitewashed stones and a few flowers near the entrance to the camp.

In a nearby building labeled Administration, you get a good general picture of the political and social views of the people. Since soon after liberation, it has been our policy to allow the inhabitants of each Assembly Center to elect their own leaders and camp committees. The precise form of the elections has not been prescribed, but a survey of a few months ago showed that the typical camp election followed a pattern of nomination of candidates by petition and voting by secret ballot. Some camps have direct election of the leader, and others elect the camp council, the members of which choose the camp leader from among their number. These people have in the past served as advisers and executive intermediaries for the official camp administrator, and generally have proved so responsible that they have been constantly given additional authority.

While we are thinking about this community, which elects its leaders in much the same way as a small town in this country, you may be interested in my observations on DP "isms." If I were asked to point out the community which I considered the least susceptible to, and the most thoroughly indoctrinated against nazism, fascism, and communism, I would not take you to the isolated "100 percent American" small town in the Middle West. I would take you to a DP center in our zone of Germany. The vast majority of the people of the United States definitely dislike these "isms" but have not had a great deal of intimate contact with them. The DP who describes his being rounded-up at night, torn from his family and brought to Germany to labor; the DP who shows you the tattooed concentration camp number on his arm, are certainly actively indoctrinated against any form of nazism or fascism.

As for communism, the very fact that they are ready to accept any fate rather than be sent back to Communist-dominated countries shows their attitude toward that "ism." Further, if I may say so, I have had a wide opportunity to be among them and I know their attitude. These DP's do not take democracy for granted. They have seen these "isms," can recognize them, and violently oppose them.

To return to our visit to the administration building, we find that the keeping of records, all stenographic work, maintenance work, in fact all phases of the operations of the camp are actually conducted by the displaced persons themselves.

In some camps one of the DP committeemen is the labor representative for his community. The strides that have been made by the DP's themselves in finding employment have been considerable, although they have been faced with two or three serious handicaps.

We have been forced to place DP's in whatever housing is available. We do not have the material to build special laborers' housing near works projects, and in Germany transportation is almost nonexistent, with the result that many DP's cannot get to the jobs they would otherwise jump at. A prime example is our largest camp in Germany, Wildflecken, which I mentioned previously. Wildflecken is a large unit providing much-needed space for 15,000 people, but it is distant from any projects which could furnish employment. The agricultural fields nearby are already producing full-time for the local economy. Wood cutting is about the one opportunity for out-of-camp work, and many are kept busy at this work.

Representatives of DP's, welfare agencies, and the Army, who have exhaustively studied the possibilities of numerous manufacturing projects that would utilize the vast quantity of skills available in the DP population, have run into the terrific handicap of having no raw material with which to work. There has also been a reluctance on the part of many DP's to work for a German or the German economy, after having been forced to do so under oppressive conditions for several years. They are eager to work for the Allied occupying authorities, however. Despite these handicaps, the majority of employables residing in DP centers from 16 to 65 years of age are at work.

Of those residing outside the camps, the United States Army has 40,000 DP employees organized in labor-service companies. These companies can be broken down into the following categories: Watchmen, engineer construction, engineer maintenance, engineer dump truck, ordnance depot, quartermaster depot, quartermaster truck. Of this group, all of the engineer and quartermaster construction and trucking companies contain 90 percent skilled labor.

Those displaced persons not under direct care in assembly centers or in labor-service companies are working and eking out an existence in the German economy. But it must be pointed out that these people are also displaced persons and should not be lost sight of in the determination of the solution of the problem.

As our armies advanced into Germany, General Eisenhower appealed to the displaced persons to remain where they were, if they had a roof over their heads and a place to work, rather than to further congest the badly overcrowded DP centers. I have handled countless petitions from these displaced persons residing outside of centers who say that they will remain where they are, where they have shelter near a job rather than to come into a center, but who make urgent appeals for documents showing them to be displaced persons and not Germans. With the return of the German prisoners of war and with the influx of the German expellees,

many thousands of these out-of-camp displaced persons lost their outside jobs and shelter to the Germans in 1946 and had to enter our assembly centers. This movement was stopped, however, in the United States zone of Germany by the closing of assembly centers to new entrants on the 1st of June 1947.

In our average camp, you can learn from the displaced persons' representative, the various skills available there. These are listed in a card in a card index so that a prospective employer can readily find a person with the skill he requires. An over-all survey of the occupational skills of 366,553 employable displaced persons in assembly centers in Germany, Austria, and Italy was made in the summer of 1946. Another survey covering 237,727 employable DP's, in the United States zone of Germany only, was completed just prior to my departure from Frankfurt a month ago.

The following figures show the percentage of the employables surveyed last year, 366,553, in each general classification of occupational skill. The more recent survey in just the United States zone of Germany indicates approximately the same percentages.

A list of the approximately 140 specific skills represented under the 17 occupational categories presented below is attached to this statement.

General classification:	*Percent of total surveyed*
Construction and maintenance	6.7
Administrative, clerical, commercial	11.3
Agriculture, forestry, dairy, food processing	24.5
Health and sanitation	3.2
Miscellaneous services	9.1
Tailors and seamstresses	6.2
Domestic and related commercial services	10.0
Communication, transportation, supply	7.6
Artists	1.5
Professionals	6.4
Recreational workers	.2
Metal trades	2.1
Mining, chemical, and processing	.4
Miscellaneous processing	4.5
Laborers	2.4
Inexperienced persons	2.3
Students	2.1

Excellent vocational training courses are continually supplementing these skills available among DP's. In our zone alone, there are over 16,000 displaced persons receiving vocational training. There is at least one training course in each assembly center; however, the majority have a minimum of five different courses. In addition to the assembly-center schools there are seven formal vocational-training installations in the United States zone of Germany, offering a total of 24 different courses, lasting approximately 2 months each, and attended by 1,000 displaced persons.

If you leave the administration building of the typical camp with which we are concerned, you will probably see a long low warehouse building or former shop of some kind which has been refitted as a vocational school. There you will see DP's working at a forge and anvil pounding out the tools, the bolts, the locks, and practically all the metal equipment which is needed in the camp and perhaps for a neighboring camp which does not have a blacksmith shop. Adjacent you can see the carpenter shop where various items of furniture are made and where apprentices learn to aid in the maintenance and reconstruction of parts of the camp.

The supply of fuel presents a terrific problem in Germany today. One of the prime projects in the summer and fall is to see that sufficient trees are cut from the forests and chopped and stored in the camps for the winter. The DP's do this work themselves.

The next building in our DP camp may be a hospital which is operated by displaced persons. The DP head doctor will proudly show you his health charts and the cleanliness of the institution. We have found excellent nurses among the DP women, and others have been trained to hospital service. The majority of the doctors are DP's who make regular checks on the health of each member of the center population. There are 10,500 hospital beds available for long-term illnesses, and four special tuberculosis sanitariums located at strategic points in the United States zone. Both mass radiographic surveys and hospitalization checks agree on the following figures on tuberculosis in the United States zone: active TB 0.4 percent; inactive TB 2.5 percent.

The over-all health conditions of DP's is considerably better than that of the Germans. No serious outbreak of any disease has occurred from the beginning of the DP operations, probably as a result of using the same immunization procedures that are used in the United States Army. Medical supplies for all purposes are drawn from the United States Army medical stocks.

There is a slow increase of weight in DP's from month to month and almost no incidence of edema despite the preponderance of starchy foods in their diet. The weight of displaced persons averages about 2 percent over the normal, based on United States Army standards.

The center doctor may point with pride to the fact that the incidence of venereal disease is negligible among his patients. A contributing factor may be found in the devotion of DP's in general to a family life. The birth and death rates of DP's are comparable to those in the United States. The young children are the healthiest that I have seen anywhere.

Near the hospital you will probably find the building which houses both the grade school and high school. In our zone nearly 70,000 children attend these schools, taught by DP instructors. In addition to the usual basic courses, one or two other languages, nearly always including English, are taught.

Another prominent place in the camp is the church. Each group worships under its indigenous religious leader. It is amazing to walk into that church in a former bombed-out building and see the beauty that has been wrought from bits of cloth woven into tapestries and altar cloths, from scraps of tin for chandeliers or candle holders, and the beautiful carving in wood.

When you visit the rooms of DP's themselves, you will find today in addition to the minimum equipment furnished them, which I described earlier, samples of the work of their hands and imagination. Woven from worn-out stockings and other salvaged articles of clothing are tiny rugs, tapestries, or sweaters for the children.

I recall one small Ukrainian center where 70 women were working in one large room, all knitting gloves and mufflers which were distributed not only to inhabitants of their camp but to others in the vicinity. We have several such self-aid work projects in the zone, again handicapped by the lack of raw material.

In 12 assembly centers DPs have organized factories which are using material from captured enemy stocks or surplus Army stocks, converting them into boy's suits, girl's dresses, children's overcoats, baby dresses, baby blankets, boy's overalls and baby's sleeping bags, which are distributed to other displaced persons. Equipment for these factories consists of many skilled DP hands and sewing machines on loan from the United States Army or procured by voluntary agencies abroad and brought into Germany.

The average DP is physically fit, is a person who longs to have and to participate in political and religious freedom, is a person who abides by the rules of the community, and has skills, ingenuity, and strength which he wants to put to use in a new permanent home. Another point which you gentlemen may feel to be important is that the DPs still residing in the assembly centers of the United States zone are in many respects a picked and carefully seeded group. In the first place, as I have mentioned earlier in discussing law enforcement, we have put criminals in jail. In the second place, a tremendous screening program has been undertaken and accomplished by the United States Army throughout our zone. A total of 375,310 DP's have been screened to remove from the centers those persons who may have been Volksdeutsch, volunteer members of the SS or Gestapo, and collaborators with the enemy. A total of 37,207 persons, about 10 percent, have been found ineligible and removed from our care. I hope I have given you a clear picture of those who remain.

In general, as I have outlined, the DPs are making the best of the situation. But at best that situation is a grim one quite apart from the physical overcrowding and other matters I have described. There is not work enough available to keep them all occupied, for the reasons I have pointed out. There is no opportunity for them to plan for their future, for the future of their children, or to help themselves and their families to rebuild their lives. They have kept going in the hope of getting out of the camps and out of Germany and having a chance to fend for themselves. If the decision is that they are to stay on indefinitely in the camps, hopelessness and deterioration cannot, as I have observed the situation, much longer be averted.

OTHER COUNTRIES' VIEWS

What do the other countries of the world think of DP's?

Officers of our headquarters have done a great deal of work in conjunction with the Intergovernmental Committee on Refugees, with representatives of other nations on the negotiations for the resettlement of dispaced persons.

Most of the western European countries and some South American countries are taking at least a few DP's. I understand that England is taking considerable numbers from the British zone of Germany, in addition to assuming the responsibility for 200,000 Poles of the Anders army.

In our zone 2 or 3 months ago we watched a group leave for Norway, laughing and crying with pure joy to be leaving Germany. A short time later a friend of mine in Norway gave me an informal report that the Norwegians were happy to have them.

The Belgian Government has contracted to take 20,000 workers with their families, a probable total of from sixty to seventy thousand DP's, in the next few months. I worked very closely with the Belgian representative in charge of this operation and visited him in Belgium about a month ago. He reported that the first 3,000 workers were already producing in the economy and that the Belgian employers are completely satisfied with the arrangement. In DP camps I have picked up letters from these DP's to their families in Germany who will soon join them in Belgium. The letters, which I have here with me, indicate the great happiness of the DP immigrants to be at work again, to be producing, to be able to take the money that they had earned from their pockets and put it on a shop counter for food and clothing, rather than have it doled out to them.

Holland is very much interested in taking skilled nurses. Small groups have already entered the Dutch city hospitals as nurses' aides, paid by the city. Holland may also take 8,500 single men and women, artisans and industrial workers.

The French apparently like the caliber of our DP's since members of the French Army

have proselyted 300 woodworkers plus 180 family members from Augsburg in our zone and persuaded them to enter the adjoining French zone of occupation for work under the French Army. This is done on an informal basis but indicates the acceptability of DP's to those who know them.

Sweden and several South American countries are negotiating for DP's to augment their labor pool. Shiploads of DP's have gone to Brazil and Paraguay. One is on the way to Venezuela. But all the efforts and agreements now in sight will not solve the problem. They are hopeful indications of what might be accomplished if we joined in. Representatives of other governments definitely indicate that they are waiting to see if we are going to do so.

In attending international conferences, we are constantly met with this question: "What is the United States going to do about these people?"

The Belgian representative said to me, "My country has a population density 8 or 10 times as great as your country's, yet we can handle some DP's; why don't you?" To this question we had no answer.

It does seem clear, however, that the fourth alternative, to finally liquidate the DP problem by a wide resettlement program, can succeed only in the event that the United States aids in it by admitting a substantial number.

CONCLUSION

I have tried to give you my observations which bear on your choice of the various alternatives as outlined by General Hilldring. I fully appreciate that this is a matter for the Congress and not the soldiers to decide. The American occupation forces have 600,000 DP's under their control. It is for the Congress to determine by its action whether or not the Army is to be directed to turn back these people who were victims of the Germans to the Germans. It is for the Congress to determine whether or not the Army should be directed to round them up and send them back against their will to the areas of eastern Europe. It is for the Congress to determine, by action or inaction, whether or not they shall continue indefinitely to be maintained in the present camps with such support as the United States taxpayers and those of other countries may contribute. It is for the Congress to determine whether or not resettlement in friendly countries, where they can strike new roots, is a desirable solution, and whether or not it will take steps to participate in that resettlement in a way to make this solution possible.

ATTACHMENT

Summary of occupational skills of 366,553 employable displaced persons surveyed in assembly centers in Germany, Austria, and Italy showing the percentage which each skill classification comprises of the total

Total of employable displaced persons surveyed	366,553
	Percent of total
General classification:	
Construction and maintenance (architects, bricklayers, carpenters, construction machine operators, furnacemen, dredgemen, draftsmen, electricians, enginemen, glaziers, masons, blasters, painters, plumbers, riggers, riveters, sawmill operators, steel workers, surveyors)	6.7
Administrative, clerical, commercial (auditors, bookkeepers, business executives, office clerks, sales clerks, office machine operators, office managers, stenographers, interpreters, typists)	11.3
General classification—Con.	*Percent of total*
Agriculture, forestry, dairy, and food processing (farmers—all types, lumbermen, hunters, fishermen, millers. N. B.: This does not include agronomists, who are listed under "Professionals")	24.5
Health and sanitation (dentistry, dietitians, hospital attendants, midwives, nurses—all types, optometrists, ophthalmologists, pediatricians, physical therapists, physicians, surgeons, pharmacists, sanitary engineers, veterinarians, X-ray technicians)	3.2
Miscellaneous services (barbers, blacksmiths, bookbinders, butchers, firefighters, jewelers, laundrymen, linotypists, locksmiths, opticians, photographers, piano tuners, policemen, pressmen, printers, projectionists, shoe and harness makers, undertakers, upholsterers, watch repairers)	9.1
Tailors and seamstresses	6.2
Domestic and related commercial services (workers in this category are domestics, waiters, kitchen help, gardeners, bakers, cooks)	10.0
Communications, transportation, supply (airplane mechanics, airplane pilots, auto mechanics, auto body repairmen, drivers, craters, telephone and telegraph repairmen, linesmen, radio operators, radio repairmen, railway workers, seamen, teamsters, telegraph operators, telephone operators, teletypists, tire rebuilders, warehousemen)	7.6
Artists (writers, artists, sculptors, musicians, professional entertainers)	1.5
Professionals (agronomists, clergymen, chemists, child care workers; engineers, civil, electrical, industrial, mechanical, mining; lawyers, librarians, social workers; teachers, academic, vocational, technical; occupational advisers)	6.4
Recreational workers (athletic instructors, recreation leaders)	0.2
Metal trades (electroplaters, foundrymen, forgemen, heat treateres, machine operators, machinists, metalsmiths, millwrights, welders, toolmakers)	2.1
Mining, chemicals and processing (ceramic workers, glass blowers, miners, petroleum workers, steel mill workers, quarrymen)	0.4
Miscellaneous processing (clothing machine operators, coopers, leather workers, paper workers, rubber workers, power plant installers, textile workers, woodworkers)	4.5
Laborers	2.4
Inexperienced persons	2.3
Students	2.1

A People's President in '48

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "A People's President in Forty-eight," by Roscoe Drummond, reprinted from the magazine '47.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A PEOPLE'S PRESIDENT IN '48

(A direct challenge to the Republican and Democratic National Committees—a demand that they surrender their monopoly and permit the American people to nominate and elect a President and a Vice President of their own choice in 1948.)

(By Roscoe Drummond)

Mr. and Mrs. American voter, you think that at the next Presidential election you are going to elect a President of your own choosing. Well, you're not—unless something unexpected happens between now and spring.

And if you think it's important to elect the best possible President of the United States next year—one you want, not one whom the politicians let you have—it is not too soon to begin doing something about it.

I'm not talking about whom we should vote for, but whom we have the opportunity to vote for.

The fact so easily overlooked—and the politicians' delight in having us overlook it—is that while the American people do elect their President, they do not choose Presidential nominees.

That is the great and grievous catch in American democracy. And how the major political parties, Democratic and Republican alike, resent and resist having this fact brought sharply into focus. They might be called upon to do something about it.

Why not? And now. Who owns these political parties—the professional politicians or voters?

Politicians think they own the parties. But they can be put in their place. And nothing is better calculated to do it than a healthy voter rebellion in both parties.

The problem is this:

The American people have the opportunity to ratify the party choice, but they do not have the opportunity really to choose the man they most desire for President. They can only select a President from two candidates almost invariably imposed upon them by the party managers.

My question is: Why shouldn't the voters choose their President from 140,000,000 Americans instead of from two?

I should like to put that question to the Republican National Committee, 1337 Connecticut Ave. NW., Washington, D. C., and to the Democratic National Committee, Hotel Mayflower, Washington, D. C.

And I suggest that every reader of this magazine, that every citizen who wonders why he can only ratify instead of choose his President, take time to put that same question to one of the two national committees.

Of course, the professional politicians won't, in the main, like it. They don't like voters getting ideas about more democracy; in fact, they don't like voters getting ideas. But it wouldn't hurt if the professional politicians were asked to show why their closed-corporation method of selecting a Presidential nominee should be allowed to impair the full functioning of democracy.

No need to be timid about annoying politicians. One or two stray voters may get rudely pushed in the face. But when a number of real-life voters get to asking the same question, get to demanding a clear answer, the politician will pay attention.

But something more than protest is needed. Voters must do something concrete and decisive to put the nominations of the people's President into the hands of the people.

Unless something concrete and decisive is promptly done, the voters—the real owners—

of the Republican and Democratic Parties will once again be thwarted by old-fashioned, well-oiled, minority-dominated nominating conventions. They will find that the decisions (the nominations) have already been made for them, not by the many, but by the few; not by the rank-and-file voters, but by the organization leaders; not by democracy, but by machines.

When it comes to selecting between the two major Presidential nominees, the American voters have an uninhibited choice.

When it comes to nominating the two major Presidential candidates, the Republican and Democratic party organizations are monopolies in restraint of political freedom. Their monopolistic practices ought to be abandoned or they ought to be broken. They will not be abandoned until the voters vigorously demand it.

There is, I suggest, a practical and workable reform which could be adopted by both parties and could give either a vitalizing advantage over the other.

The proposal is: That both Republican and Democratic Parties conduct national, preconvention party primaries.

In such a primary the rank-and-file voters—instead of the relatively few national, State, and county professionals—of each party would have the dominant and conclusive voice in the choice of the Presidential nominees.

The primary would be Nation-wide and simultaneous for all parties.

The outcome would be binding upon the party conventions, which might still be the instruments for drafting the national platform. The runner-up in each party should be the Vice-Presidential nominee. (The time has passed when the country can afford weak and unwanted Vice-Presidential candidates.)

It is useful to ask ourselves these questions, and then add them up and ask them of the Republican and Democratic National Committees:

Do you recall ever having an opportunity to register a firm, clear-cut, individual vote for the candidate you would like to have your party nominate for the Presidency of the United States?

When did you last have an occasion to exercise visible influence on your party's choice of its Presidential nominee?

Can't you cite at least twice as many occasions when your party has been manipulated into selecting the nominee least desired by its rank-and-file membership, instead of the one most desired?

The fact is that while the voting machinery of the Nation is rightly arranged to give us a full voice in electing a President, the nominating machinery is nicely rigged to prevent us from having hardly any voice in determining the Presidential candidates.

Let us look at some unhappy examples.

Warren G. Harding wasn't the man the Republican voters wanted to nominate in 1920. He was the man the party professionals put over after they refused to nominate either of the candidates who showed popular strength, Maj. Gen. Leonard Wood, or Gov. Frank Orren Lowden.

John W. Davis wasn't the man the Democratic voters wanted to run against Calvin Coolidge in 1924; he was the choice of the party professionals after they had turned aside the choices of the rank-and-file Democrats, William McAdoo and Al Smith.

A nomination like that of Wendell Willkie in 1940, when the party is coerced into acceding to the public demand, is the exception.

The time is at hand when it ought not to be accidental that the Republican or Democratic Parties choose Presidential nominees whom the true proprietors of the parties, the rank-and-file voters, really want.

The time is at hand when the voters in each party should pick the team as a right, not as an accident. The voters should be the insiders, not the outsiders who have to hire the Western Union to send usually unheeded appeals to the conventions.

Degrading examples of party dictatorship over American democracy go back earlier than the twenties. A particularly bald, shameless, but representing illustration was the Republican National Committee's theft of the Presidential nomination for William Howard Taft over Teddy Roosevelt in 1912.

In the late spring, just before the GOP national convention, one after another of the great Republican States—Massachusetts, Pennsylvania, Illinois, Ohio, and the Missouri Valley—through the popular primaries, were unanimously demanding that Teddy Roosevelt be chosen. Rank-and-file sentiment was alive with the feeling that he alone could rescue the party from the debacle which awaited the bungling Taft.

How the Republican professionals averted every opportunity to accede to the Republican voters' wishes is told with vivid insight and detail by William Allen White, in his autobiography (The Macmillan Co.). What happened in the Republican National Convention of 1912 should have been a five-alarm warning of what was to happen later.

"It was plain," writes Mr. White, "that we had the Republican sentiment of the country, as it was uncovered by direct vote of Republicans in State primaries, rather overwhelmingly for Colonel Roosevelt.

"It was also clear that the Republican National Committee having the South, one-third of the convention, as its pawn, was instituting contests in convention States which would probably give the national committee an opportunity to organize the national convention. The committee seated such contestants as they deemed worthy or necessary to promote their plans."

Thus the Taft conservatives, by controlling the national committee, were able to shape the convention. That was how the nominating convention of 1912—and more than one subsequent convention—was manipulated.

Mr. White concludes with burning words which force all who support American democracy to ask: Must it happen again in 1948?

"It was done," Mr. White recalls, "with obvious malice prepense, with a sort of Gargantuan impudence, profligate and heroically indecent, which angered the Roosevelt majority in the country and turned Michigan Avenue, where the delegates milled up and down between the hotels, into a hell's broth of wrath.

"I knew, and I suppose the whole world of American politics knew, that Taft and his following were only a small minority of the Republican Party."

Isn't it time for minority rule in choosing Presidential nominees to be brought to an end?

If it isn't done, this theft of the people's sovereignty will happen once too often, and there will be a "hell's broth of wrath" not only on the Michigan Avenues but on the Main Streets of the Nation.

Lindsay and Crouse weren't fooling when they put this dialogue into their political satire, State of the Union:

Mary Matthews, wife of Presidential aspirant: "People ought to know where he stands before they nominate him."

Political Boss Jim Conover (angrily): "The people have damn little to say about the nomination. You two have lived in this country all your lives. Haven't you got that through your heads yet? You're not nominated by the people—you're nominataed by the politicians. * * *"

That's it. The President of the United States is not nominated by the people, he's nominated by the politicians.

And why? It is a common fallacy to say, as even Lindsay and Crouse did, that it is "because the voters are too damned lazy to vote in the primaries. Well, politicians are not lazy. Remember what happened to Willkie in Wisconsin."

The politicians are able to impose their Presidential nominees upon both parties not because the voters are too lazy to vote in the primaries, but because there are no adequate primaries in which to vote.

The number of primary elections grows fewer and their influence on the national party conventions smaller. They are consistently used to exploit favorite-son politicians without any reference to serious candidates.

Only 13 States now hold Presidential preference primaries. Few of these are binding, and they play a negligible part in the determination of the Presidential nominees.

Consequently, now more than ever, the Presidential election itself is not a method whereby the people really choose their Chief Executive, but rather a method of ratifying a predetermined choice.

This is a subordination of democracy by party dictatorship—and it's time for a change.

When this article was written the standing of the leading Republican Presidential aspirants in the Gallup poll, reflecting the preference of rank-and-file voters, was as follows:

Gov. Thomas E. Dewey, of New York, 52 percent.

Harold E. Stassen, of Minnesota, 17 percent.

Senator ARTHUR H. VANDENBERG, of Michigan, 9 percent.

Senator JOHN W. BRICKER, of Ohio, 8 percent.

Senator ROBERT A. TAFT, of Ohio, 2 percent.

That is the present unofficial preference of Republican voters. Most Republican professionals prefer Senator TAFT, would gladly take Senator BRICKER, can't stomach Mr. Stassen, and only with reluctance would renominate Governor Dewey.

There is at present no opportunity for rank-and-file voter preference to be even officially visible; there is no mechanism whatsoever by which the voice of the voter can be controlling.

It is time for a change, and nothing could be better than for the voters to tell their national committees: "Give us a national party primary—or else."

The political professionals don't deliberately prefer to cheat the people. They are just willing to cheat the people if it appears necessary to preserve their own party dominance.

The self-interest of the party professional is not synonymous with public interest. If the voter is to win he must be given the instrument by which he can win.

The instrument of the Presidential nomination is the party convention, which is almost perpetually in the hands of the organization. Its leaders are in a position to choose whether they wish to accept the voters' choice.

The need is to put the instrument of Presidential nomination in the hands of the voters. Their choice will then prevail by right, not by accident nor by gracious gift of the professionals.

A national party primary is a simple, workable, democratic method of determining the Presidential nominees. Its effect would be to transfer from the politicians to the people the right to choose the President.

There would be practical problems to work out to bring a national primary into being, but I know more than one party professional who believes it feasible.

As Lindsay and Crouse put it in the State of the Union, the "politicians have stayed professionals because the voters have remained amateurs."

There is a valuable and estimable role for professional politician, but it is not their role to purloin from the people the means of choosing the President.

Our political leaders have lately and reasonably been calling on the labor leaders to democratize the labor unions.

Isn't it time to call upon our political leaders to democratize their parties?

It cannot be said that the American people democratically elect their President until they democratically choose their Presidential candidates.

Are the Republican and Democratic National Committees for democracy or against it? Let's ask them. Let's ask: Why shouldn't the voters choose their President from 140,000,000 Americans instead of from 2?

National, preconvention primaries for both parties is the means to that end.

Postwar Germany

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. REED of New York. Mr. Speaker, there has come to my attention a very brief speech delivered by former Senator Sinclair Weeks, of Boston, before the quarterly meeting of the New England Council, at Manchester, Vt., on June 20, 1947.

Mr. Weeks had just returned from a trip with 14 leading industrialists to Germany on the invitation of the Secretary of War. These industrialists went over there to study the situation, and this speech by Mr. Weeks is a result of that trip. It so clearly sums up conditions from the viewpoint of an industrialist that I think it ought to be included in the RECORD for the purpose of information to the Members of Congress. Therefore, I ask that it be printed in the Appendix.

A survey of conditions in Germany today fills the observer with an impression of utter confusion A great industrial establishment is dismembered and flat on its back. The country is divided into four zones, one of which, the Russian, might as well be on Mars for all that it presently means to the other three. There is no central government—the people have not enough to eat—transportation is in a chaotic condition—coal supplies are inadequate—as are the supplies of lubricating oil and gasoline. Industry obtains raw materials with extreme difficulty and manufacturing supplies are scarce. And, finally, the people work for a mark which has no stable value, primarily, of course, because there is little or nothing to buy with it. The black market is in the seventh heaven—the cigarette flourishes—morality is at a low ebb—in fact the whole scene makes up into the most frustrating, mixed-up mess that the mind of man could possibly envisage.

To understand the picture one must look back at its beginnings. VE-day came and went and the victorious Allies took control of what had been, short years before, the most powerful military state in existence, but which on the 8th of May 1945 was on its knees—thoroughly whipped—but a shadow of its former self.

In company with our allies our principal objective, as stated in directive 1067 issued to the commander in chief of our occupation forces, was to complete the industrial disarmament and demilitarization of Germany and force a program of reparations and restitution. Such controls upon the German economy were authorized as might achieve these objectives and protect the safety and meet the needs of the occupying forces and assure the production and maintenance of goods and services required to prevent starvation or such disease and unrest as would endanger these forces.

The directive further stated that "except as may be necessary to carry out these objectives, no steps (will be taken) (a) looking toward the economic rehabilitation of Germany or (b) designed to maintain or strengthen the German economy."

There in a nutshell are the stated objectives of the United States and the other occupying forces. At Potsdam the program was further spelled out and implemented, principally by the following restrictions placed on German industry: In the first place, Germany was prohibited entirely from producing any shipping, airplanes, frictionless bearings, aluminum, synthetic oil or rubber, and certain other items; and second, all else produced by the German economy was limited under a so-called level of industry program which specified the various items and detailed the percentage of 1936 production in each item which was to be allowed, ranging from a low in automobiles of 10 percent of the 1936 output to a high of 80 percent in pharmaceuticals.

Morgenthau at Quebec originated this conception, that of making Germany in effect a pastoral country and of depriving her particularly of her heavy industry production. Essentially, it was a development of the New Deal philosophy that peace, prosperity, and the diffusion of wealth may be brought about by people working shorter hours and producing less.

At this point one may ask why should we be sympathetic to Germany's problems and why should we, after enduring the most costly war in history—not to mention the sacrifice in human life and suffering—continue to expend our substance in Europe, and particularly in Germany. Certainly our action in this regard cannot be ascribed to sympathy for the German people who, with their leaders, combined to bring more chaos and confusion to mankind than has been seen probably in the whole course of history.

At the outset we thought Germany should be punished—and certainly we need have no doubt that she has been. Germany, after World War II, has no more relationship to Germany after World War I than has the Moon to the planet Venus. The destruction of its cities is appalling and can never be appreciated unless seen. Picture in your mind's eye, if you can, any one of our large New England cities with some 80–90 percent of its buildings either totally destroyed, or stark, staring skeletons of masonry with neither roof, windows, nor interior, and you have a reproduction of that which exists to a vast degree all over Germany—and more particularly in the Ruhr, the great coal and heavy industry section. The people are leaderless, restless, discouraged. In fact without hope.

Yes—Germany has been punished. But so what? Why are we concerned and interested? First, because of decent humanitarian instincts—because even the defeated have to eat and presumably may expect to live like civilized human beings—and second, because of vital self-interest.

Seventy-one million people in the new Germany, if they would eat, must export. Today even one-third of the starvation diet of 1,500 calories is provided by us. The United States and Great Britain are expending $1,000,000,000 a year to bring food, medical supplies, and lubricating oil into Germany. The bipartite military governments of these two countries hope—but it is only a hope—that German industry may be put back on its feet to such an extent that by 1950 it will be exporting enough to pay this bill. But even that program, if successful, doesn't allow for the importation of the necessary raw materials and other items essential to make the wheels turn to their full capacity once again.

At this juncture we may ask ourselves once more—for what other reasons is it essential that German industry be made to function? In answer you must remember that Germany, particularly from the standpoint of heavy industry, was the industrial heart of Europe and today thoughtful nationals of the surrounding countries are quite convinced that Europe will not recover until the heart begins to beat again. By way of example, Holland, from the standpoint of its economy, was little more than another German state before the war. It found a substantial market in Germany for its food products—a great deal of traffic in and out of Germany passed through its ports. Today Holland has neither the market nor the traffic. From the east and from the Danube Valley food products poured into Germany in exchange for the products of Germany's industrial economy. Sweden and France sold Germany iron ore which was fabricated into the products of heavy industry—these products flowing back into the countries round about which needed them.

So to sum it up, Germany must produce and sell if her people would eat—and she must produce and sell and buy if Europe expects to return to normal conditions.

But above and beyond the motives I have just outlined which impel us to help Germany back on her feet there is another motive which should be, if it is not, plainly apparent to the American people today. You must know that I refer to Russia—one of the four Allies occupying Germany today, one of the four Allies who agreed at Potsdam to treat Germany as an economic entity—the only one of the four which has not lived up to its agreements insofar as the treatment of Germany is concerned.

Finally at Moscow we reluctantly came to the conclusion that Russia could not be expected to cooperate in putting Germany back on its feet, and the United States and Great Britain—and hope and expect France—now intend to proceed with the development of the western zones and let Russia come along or not as she chooses.

In my judgment Russia is convinced that there is not room on this earth for her ideology and ours. She talks, she procrastinates, she obstructs, to help breed chaos and confusion and, in my judgment, to the end that we may, sooner or later, get sick of it and go home.

If we fall for the bait and drop out of the ball game before Europe is back on its feet, communism will take over. And when communism takes over every vestige of freedom departs.

I suggest to you, and to every American who places any value on those ingredients of the free way of life which we, too much, take for granted, that he or she wake up and stop living in a fool's paradise. When we don't like our Government we are free to say so and vote accordingly in the next election. But in Russia, and, as a result of Russia's activities, today in Poland, Rumania, Bulgaria, Yugoslavia, Hungary, and who knows where next, if you don't like your government you're promptly liquidated.

The world is small and getting smaller every hour. Of all the nations on earth we are practically the only one left with the strength and resources which enable us, and should impel us, to stay in this game and see to it that the march of communism is stopped before it engulfs us and the other peoples of the earth.

If we fail to assume our obligations, of what avail the Atlantic Charter and all it stands for, and how completely will we have forgotten and scratched out the sacrifices of those American men and women who gave us all they had, including life itself, that their countrymen might continue to live as freemen and not be afraid.

Joint Housing Investigation

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. JAVITS. Mr. Speaker, the investigation of the national housing shortage by the joint committee authorized by House Concurrent Resolution 104 and its Senate counterpart will fix attention as never before on the Nation's No. 1 domestic problem and Congress' No. 1 domestic "must"—housing. There has been much discussion of the comprehensive housing bill, the Taft-Ellender-Wagner bill—S. 866, March 10, 1947; H. R. 2523, March 12, 1947—and this bill has become the focal point of controversy between those Members, like myself, who believe material Federal aid essential to the solution of the problem, which they regard as a continuance of the war emergency, and those Members who with equal sincerity believe that if let alone private enterprise will end the housing shortage seasonably. Many Members have suggested the advisability of making available a summary in nontechnical terms of the Taft-Ellender-Wagner bill so that it may be studied and discussed in their constituencies before the next session and the turning in of the joint committee's report and recommendation. As the sponsor of the bill in the House, with the permission of Senator TAFT, I have assembled a summary of the major provisions of the Taft-Ellender-Wagner bill, and some pertinent questions and answers on its background, and insert them herewith. In doing so and inviting study of the bill I wish to emphasize that it should be examined with a view to its immediate effects in enormously stimulating housing construction, of which I am convinced, as well as its longer-range effects:

I. BACKGROUND OF TAFT-ELLENDER-WAGNER COMPREHENSIVE HOUSING BILL (S. 866–H. R. 2523)

QUESTIONS AND ANSWERS ABOUT S. 866 AND H. R. 2523

1. Question. What is the background of the bill?

Answer. This bill is not a sudden inspiration. On June 1, 1944, hearings were opened on postwar housing by the Subcommittee on Housing and Urban Redevelopment of the Senate Special Committee on Postwar Economic Policy and Planning. These hearings closed on February 7, 1945, and covered more than 2,200 pages. It submitted a unanimous report on August 1, 1945, signed by its chairman, Senator Robert A. Taft, Republican, Ohio, and Senators Robert F. Wagner, Democrat, New York; George L. Radcliffe, Democrat, Maryland; C. Douglass Buck, Republican, Delaware; Allen J. Ellender, Democrat, Louisiana; Dennis Chavez, Democrat, New Mexico; and Robert M. La Follette, Jr., Progressive, Wisconsin. The recommendations in this report were substantially followed in S. 1592.

On July 3, 1945, a unanimous report on postwar public works and construction was submitted by the House Special Committee on Postwar Economic Policy and Planning, William M. Colmer, Democrat, Mississippi, chairman, containing recommendations essentially similar to those of the Senate special committee. This report was based on the study of a subcommittee consisting of Representatives Walter A. Lynch, Democrat, New York; John R. Murdock, Democrat, Arizona; John E. Fogarty, Democrat, Rhode Island; Eugene Worley, Democrat, Texas; B. Carroll Reece, Republican, Tennessee; Jesse P. Wolcott, Republican, Michigan; and Jay LeFevre, Republican, New York.

S. 1592 was introduced in the fall of 1945, and passed the Senate on April 15, 1946. S. 1592 was in the House Banking and Currency Committee when the Seventy-ninth Congress adjourned. S. 866 was reported favorably to the Senate by the Senate Banking and Currency Committee on April 24, 1947, after hearings. The House Banking and Currency Committee took no action on H. R. 2523 at the first session.

2. Question. Who supports the bill?

Answer. The organizations officially recorded in support of the bill include some which are quite conservative in their legislative approach and only infrequently support specific legislation. These include, for example, American Association of University Women, American Council on Education, American Home Economics Association, Council for Social Action of the Congregational Christian Churches of the United States, Federal Council of Churches of Christ in America, General Federation of Women's Clubs, National Board of the Young Women's Christian Associations, National Conference of Catholic Charities, National Congress of Parents and Teachers, National Council of Jewish Women, National League of Women Voters, Veterans of Foreign Wars in the United States, National Council of Catholic Women.

Other great Nation-wide organizations which have endorsed that bill in its entirety include American Association of Social Workers, American Federation of Labor, American Veterans of World War II, American Veterans' Committee, Congress of Industrial Organizations, Family Service Association of America, National Association for the Advancement of Colored People, National Council of Negro Women, National Federation of Settlements, National Institute of Municipal Law Officers, National Public Housing Conference, National Urban League, United States Conference of Mayors.

3. Question. What are veterans' housing needs?

Answer. The Bureau of the Census announced March 18, 1947, the results of a veterans' housing survey which it made between July 1946 and September 1946. The surveys were made in 70 selected cities and reveal some of the facts about the veteran's housing desires and his income which must be taken into account in considering any housing legislation.

The survey concretely presents the housing problem when it shows that from 30 to 40 percent of married veterans are living in rented rooms or doubled up with in-laws. In Los Angeles County, Calif., for example, fully 50 percent of the married veterans in that area are without desirable living quarters. In the New York City area some 44 percent of the married veterans fall into this category. For the New Orleans area in Louisiana, the Detroit area of Michigan, and the Philadelphia area of Pennsylvania the figures are respectively 32, 51, and 43 percent.

The survey also vividly demonstrates that veterans cannot afford either the rental or purchase cost of new housing. The median weekly income of veterans is shown to be between $40 and $50. In the majority of cases they cannot afford to pay more than $40 a month rent, and they cannot afford housing costing over $6,000.

4. Question. What are the best estimates of the total needs the bill seeks to supply?

Answer. The hearings before the Senate subcommittee and before the Senate Committee on Banking and Currency indicated that the housing needs from 1945 to 1955 would call for the construction of approximately twelve and a half million nonfarm dwelling accommodations. About half of this volume was based upon the needs of the net addition of families, while the other half was represented by construction needed in order to replace, during this 10-year period, about half of the number of substandard units in our existing supply of housing. More recent estimates are even higher. Mr. J. Frederic Dewhurst, of the Twentieth Century Fund, in the hearings before the Senate Special Committee to Study and Survey the Problems of Small Business Enterprises, has estimated that 19,500,000 nonfarm dwelling units should be built during the 15-year period 1945 to 1960. In the Housing Symposium recently published by Duke University, an article by two officials of the United States Bureau of the Census estimates that the needs for housing call for the construction of from 18,000,000 to 22,000,000 units during the same 15-year period.

5. Question. What would the program actually cost the Government?

Answer. Most of the funds used under S. 866 would be repayable loans and would cost the Government nothing. The only items that would represent nonreimbursable outlays would be represented by the contributions for the urban low-rent, the rural, and the land-assembly programs. After 5 years these contributions would reach a maximum of about $150,000,000 a year, or about 1 percent the total proposed Federal budget for 1948, exclusive of national defense and veterans' benefits items.

Attention is also invited to the report on the bill of the Senate Committee on Banking and Currency—report No. 140, Eightieth Congress, first session.

II. BRIEF SUMMARY OF TAFT-ELLENDER-WAGNER BILL (S. 866 AND H. R. 2523)

Title I, declaration of national housing policy: "The Congress hereby declares that the general welfare and security of the Nation * * * require a production of residential construction and related community development sufficient to remedy the serious cumulative housing shortage, to eliminate slums and blighted areas, to realize as soon as feasible the goal of a decent home and a suitable living environment for every American family, and to * * * enable the housing industry to make its full contribution toward an economy of maximum employment, production, and purchasing power."

Title II, National Housing Commission: This title provides for a permanent National Housing Commission composed of an Administrator (with his administrative staff) and a Coordinating Council composed of the Administrator, the heads of FHLBA, FHA, FPHA, and representatives of the Department of the Treasury, the Department of Agriculture, the Veterans' Administration, RFC, and any other Federal agencies that the President might designate. All of the powers of the Commission are vested in the Administrator. The Coordinating Council, which is an advisory body, provides the means for working out harmonious relationships with respect to the housing functions of the participating agencies. (NOTE.—This title is no longer necessary, due to the adoption of the President's Reorganization Plan No. 3, which creates an over-all Housing and Home Finance Agency, having the same general effect as title II.)

Title III: This title is no longer necessary, due to the adoption of the President's Reorganization Plan No. 3, which creates an over-all Housing and Home Finance Agency, having the same general effect as title III.

Title IV, housing research: "To assist in increasing the production of better housing and progressively reducing housing costs, and in making available data on national housing needs, demand, and supply," the National

Housing Administrator shall engage in technical research and provide technical advice and guidance to communities for local housing studies, surveys and planning.

Title V, existing home ownership and rental housing aids: Strengthens the existing tools of the Home Loan Bank and Federal Housing Administrations to enable them to service moderate-income families and veterans more effectively. For the Bank Administration, it (1) expands the lending powers of the home loan banks and of federally chartered savings and loan associations to permit their full participation in the FHA insurance and GI bill of rights home-loan programs, and (2) improves the insurance protection provided by the Federal Savings and Loan Insurance Corporation. For FHA, certain perfecting amendments are provided which relate to all three of its basic existing programs (home modernization and repair, home ownership, and rental housing), including, for example (1) a provision with respect to the lapsing of debt service payments when necessary as a result of unemployment or other misfortune beyond the control of the home owner, and (2) provisions to help FHA to cope with the problems created by higher construction costs.

Title VI, home ownership and rental housing for families of lower income: Contains a basic plan for enabling private enterprise to serve middle-income families who have been largely in a "no man's land" between private and public housing activity. In connection with new homes where the mortgage principal is not more than $5,000 (or $6,000, if required because of higher costs—the homes themselves would cost about $5,300 to $6,300 or less), the title adds three innovations to the FHA system: (1) to make initial purchase easier, the insured loan would cover 95 percent of the cost of the house (as compared with a present 90 percent maximum); (2) to lessen the monthly financing charges, the maximum period of repayment would be extended to 30 years instead of the present 25, and the maximum statutory interest rate would be reduced from 5 to 4 percent; and (3) to encourage participation by builders in this low-priced house program, the FHA would be permitted to issue firm mortgage-insurance commitments to builders up to 85 percent of the value of the house. The title VI plan would likewise assist private enterprise to serve middle-income families with rental or mutual ownership housing projects. It provides for 90 percent FHA insured loans; 40 years maturities; and a maximum interest rate of 4 percent. The title contemplates the FHA will collect premiums to cover both estimated losses and administrative expenses on these new insurance plans.

Title VII, yield insurance for rental housing: This title provides for a special program of yield insurance, to be administered by FHA, designed to encourage direct investment by institutional and other large-scale investors (such as large industrial concerns) in rental housing for families of moderate income. It guarantees a minimum return of 2¾ percent per annum on outstanding investment (plus 2 percent amortization of the full capital investment) until such time as only 15 percent of the original investment remains unamortized, in consideration for the making of such an investment on an annual-return basis upon outstanding investment ranging from 3¼ to 4 percent. As in the case of FHA's other programs, a self-sustaining program made possible by appropriate premium charges is contemplated. Altogether a billion-dollar insurance program is authorized.

Title VIII, land assembly and preparation for redevelopment: This title sets forth a program for Federal aid to localities for the clearance of slums and blighted areas so as to make such areas available for redevelopment with the active participation of private enterprise. The essence of this plan is that Federal and local aid will be combined to bring the cost of land acquisition and preparation for redevelopment down to the point where its reuse in accord with sound planning principles will be feasible. This write-down is to be accomplished by Federal and local contributions with the requirement that the local contributions must equal (1) at least one-third of the net project cost (i. e., the difference between the cost of the project and the new capital or reuse value of the land comprising the project area), and (2) at least one-half the Federal subsidy base. Federal aid under this plan extends only to the acquisition and preparation of the land and the write-down of its cost to its reuse value and not to the various building undertakings that will be put on the land as it is redeveloped. The title requires feasible methods for both the temporary and permanent relocation of the families who are displaced as a result of the clearance of the redevelopment area.

For this plan the title provides $500,000,000 in temporary Federal loans, which must be repaid in full with interest within 5 years, and for a 5-year program in permanent loans at the rate of $50,000,000 a year, repayable in full with interest in not more than 45 years. These Federal loans would cover only part of the projects costs; most of the borrowing would be local. For the Federal contributions to help cover the write-down, the bill authorizes annual contributions to be contracted for at the rate of $4,000,000 a year for each of 5 years next following the enactment of the bill, involving a maximum commitment by the Federal Government of $20,000,000 a year in annual contributions at the end of the 5-year period. Such contributions would run for not more than 45 years. These aids would be enough to cover about one and one-half billion dollars of land acquisition and preparation for redevelopment.

Title IX, urban low-rent housing: This title provides for the resumption of the public low-rent housing and slum-clearance program where local need is demonstrated by showing, first, that private enterprise cannot meet the need locally, and, second, that a gap of at least 20 percent has been left between the family income which will qualify for admission to the public low-rent housing and the family income required to pay the lowest rents at which private enterprise is providing locally a substantial supply of decent, safe, and sanitary housing. In order that the current higher costs of construction may not prevent the provision of housing needed for veterans and others of low income, the section (following the pattern established in title V with respect to FHA's programs) authorizes certain increases in cost limitations.

For the Federal contributions to help reduce rentals so that they will be within the means of low-income families, the title authorizes annual contributions to be contracted for at the rate of $26,400,000 a year for each of the 4 years next following the enactment of the bill, involving an additional maximum commitment by the Federal Government of $105,600,000 a year at the end of the 4-year period. Such contributions would run for not more than 45 years, as compared with a present statutory maximum of 60 years. This title would cover not more than 500,000 units of public low-rent housing built over a 4-year period.

(NOTE.—Congress has just passed S. 1361, introduced by Senator MCCARTHY of Wisconsin, permitting cities to make capital grants to local housing authorities, in order to permit them to go ahead with low-cost housing projects. These grants are necessary to make up the difference between statutory-cost limitations contained in the United States Housing Act of 1937 and the total development cost of such property at today's high construction costs.)

Title X, farm housing: The title provides for assistance by the Department of Agriculture to provide for farm families who cannot otherwise obtain adequate housing. For families on farms potentially capable of providing an adequate income, the title authorizes 33-year loans by the Secretary at interest not exceeding 4 percent, with limited subsidy assistance, where needed, for a period not exceeding 10 years, in the form of a partial credit against loan interest and principal. For families on farms not potentially capable of providing an adequate income, the title authorizes special loans or grants by the Secretary for minor improvements to meet minimum health standards. For the purposes of this title the Secretary of Agriculture is authorized to undertake loans totaling $250,000,000 for a 4-year period, and contributions or grants reaching a maximum rate at the end of 4 years of $10,000,000 a year.

Title XI, rural nonfarm housing: This title provides for rural nonfarm families who cannot otherwise obtain adequate housing. For such families, the title authorizes assistance by FPHA under a variant of the established public-housing program through which it is adapted to the special needs in rural areas. For the purposes of this title, FPHA is authorized to contract for annual contributions at the rate of $5,000,000 a year for each of the 5 years next following enactment of the bill, involving a maximum commitment of $25,000,000 a year at the end of the 5-year period.

Title XII, disposition of permanent federally owned housing: War housing may be sold by FPHA to local public agencies (who would be required, in selecting tenants, to give preference to families of servicemen and veterans) after the President finds that it is no longer needed for purposes of war and "when the governing body of the locality involved finds that it would be in the best interests of the community or of the families of servicemen and veterans therein to make such housing available as low-rent housing for families of low income."

(NOTE.—H. R. 3492, which provides for the disposal of war-housing projects built under the Lanham Act, by transferring such projects to the Federal Works Agency for supervision of such sales, was passed by the House but was not reported out by the Senate Banking and Currency Committee.)

Title XIII, miscellaneous provisions: This title contains various technical administrative provisions and standard miscellaneous provisions.

Agricultural Research in Alaska

IN THE HOUSE OF REPRESENTATIVES

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. DIRKSEN. Mr. Speaker, Congress has just passed the Agricultural Appropriation Act for the fiscal year ending June 30, 1948. Included in that bill is a provision somewhat unusual, but by no means unprecedented. I refer to the provision establishing an agricultural research program in Alaska under the administrative control of the Secretary of Agriculture. The bill withholds the customary annual appropriation of $44,940 for payment to the Territory of Alaska for allotment to the University Agricultural Experiment Station and makes instead an appropriation of $144,940 to the Secretary of Agriculture to enable him to conduct research on problems affecting agriculture in Alaska.

The unusual provision referred to is that the University of Alaska is required to make available to the Department all of the lands, buildings, and equipment heretofore used by the university experiment station and provides further that all Territorial funds available to the experiment station, including any such funds which may have been appropriated by the Territorial Legislature, shall be available to the Secretary of Agriculture for augmenting the fund of $144,940 appropriated by Congress.

This is merely a reversal of the practice heretofore followed, where the Federal funds appropriated for grant to the Territory, under the several land-grant college acts, have been merged with those appropriated by the Territory, the whole amount having been expended under the sole administrative authority of the university. Thus, the actual result of the provision under discussion is to let Uncle Sam occupy the driver's seat for a limited period, instead of the university, while a research program for Alaskan agriculture, deemed to be of present national need, is gotten under way on a much larger scale than such research has ever been carried on in the past.

ACTION A NATIONAL DEFENSE MEASURE

The primary, all-compelling reason for the action taken in this matter is wrapped up in the important consideration of national defense. In the present posture of world affairs, Alaska has become a highly strategic bastion of the outer ramparts of America, and will, no doubt, continue to be for some time an important link in the chain of our national security.

In this connection it is of the highest military importance that Alaska be made, as nearly as possible, self-supporting with respect to agricultural products. I have in my possession a letter from the then Secretary of War, Robert P. Patterson, emphasizing this point. This consideration is also emphatically underscored by the recent near-famine conditions which obtained in Alaska as a result of the shipping strike, as well as the situation during the war when the threat of enemy action to cut off sea communications necessitated the expenditure of large sums of money in the construction of the Alcan Highway. If, which providence forbid, there should be a third world war, Alaska might well turn out to be another Pearl Harbor. Steps to minimize such a possibility should be taken without delay.

Those were the reasons, Mr. Speaker, which, in the main, impelled our committee to report the provision now in the bill for a single, integrated program of agricultural research in Alaska under the sole administrative authority of the Secretary of Agriculture, who is directly responsible to the Congress.

UNIVERSITY EXPERIMENT STATION NOT TO BE ABOLISHED

This action does not contemplate the abolition of the University Experiment Station, nor the permanent discontinuance of making appropriations of Federal funds for grants to the Territory under the Hatch, Adams, Purnell, and Bankhead-Jones Acts for use by the university. The usual amount of such grants has been included in the total appropriated to the Secretary of Agriculture by this bill and the Secretary is under definite instructions, by the language of the committee's report to the House to "continue, so far as consonant with the over-all integrated program, the several lines of research in existence at the time of taking over," so that when the operation of the station is returned to the university, there will be possible an uninterrupted continuity of land-grant college research.

Thus, Alaska is required, under the provisions of the bill, to subordinate to the national interest for a brief period her rights to home rule as respects this matter which she enjoys under the act of Congress setting up a territorial form of government. I am sure, Mr. Speaker, that the overwhelming majority of the people of Alaska, who are so courageously engaged in the conquest of this vast wilderness of the north, will gladly accede to the necessities of the Nation of which Alaska is so important a part. It is my conviction, Mr. Speaker, that some day, in the not too distant future, Alaska is destined to be received into the great sisterhood of States in the American Union, a felicitous event so ardently desired by her brave people.

ADMINISTRATION OF STATION CONDEMNED BY FARMERS AND BY STAFF MEMBERS

A secondary, and by no means unimportant, consideration prompted the action of our committee with reference to this item. Several weeks before the committee hearings were begun, I received reports of a most disturbing nature touching upon the character of the administration of the agricultural experiment station by the authorities of the University of Alaska. By correspondence and otherwise, I carried on an extensive inquiry for the purpose of checking up on the accuracy of these reports.

I learned, among other things:

First. That among the farmers and farm leaders in Alaska the work of the university experiment station with respect to the value and usefulness of its agricultural research is generally in very bad repute. I quote from resolutions of farm organizations:

> It is the consensus of the organization that it appears to have been the policy of the university to operate the experiment station farm with an eye to the production of food for the university, with research being a secondary consideration. It has also been the observation of the members of this organization that competent research people will not stay and attempt to carry on research work under difficulties of this kind and this has resulted in a very rapid turnover of research personnel and a constant break in the continuity of research projects. (Tanana Valley Farmers' Association, Inc., Fairbanks, Alaska.)
>
> It is recommended by the grange that agricultural research and experimental work be under Federal control. (Northern Pioneer Grange, Palmer, Alaska.)

Second. That the consensus of the technical and supervisory personnel presently or formerly on the staff of the experiment station is that the president of the university and the director of the experiment station are wholly lacking in qualification for or interest in the carrying on of effective agricultural research; that their principal objective has been to produce food for the university dining table, that the research projects have been set up for that purpose, with research being a secondary consideration, and that this policy has resulted in a very high turn-over of research personnel, with disastrous results to the continuity and effectiveness of research projects.

The foregoing is substantiated by letters now in my files. Those who are no longer at the station say they left because of the conditions described, and those who are still on the station staff have declared they do not intend to remain if the conditions are not rectified.

CONDEMNED BY MEMBER OF TERRITORIAL LEGISLATURE

I also have in my files, Mr. Speaker, a letter from a member of the Territorial legislature, who says:

> I feel that all money should be expended under the administrative control of the United States Secretary of Agriculture and in no case under the University of Alaska. I further believe that the control of experimental stations should be taken away from the University of Alaska.

REACTIONS OF ALASKANS TO PROVISION IN HOUSE BILL

After our bill was reported to the House, Mr. Speaker, word of its action with reference to agricultural research in Alaska and to placing the university experiment station under the control of the Secretary of Agriculture was soon disseminated by press and radio to the people of Alaska.

From the editor of the Anchorage Times came the following:

> I am sure all Alaskans who are acquainted with the problem realize that you are acting wisely and for the best interest of the territory as well as the Nation.

From the Business and Professional Women's Club at Fairbanks:

> We are vitally interested as a club in securing funds for agricultural research for the Territory of Alaska, and certainly hope the bill passes whereby the research work will be done under the Department of Agriculture rather than our local university.

From the Matanuska Valley Chamber of Commerce, Palmer, Alaska:

> Bill placing Alaska agricultural experiment stations under United States Department of Agriculture has our wholehearted endorsement. University of Alaska administration definitely not interested in agricultural research.

From the Tanana Valley Farmers' Association, Inc., Fairbanks:

> Farming public rejoice Department of Agriculture directing experiment station. Research under University of Alaska experiment station has been a failure. The farmers have no confidence in any program conducted by the university under its present administrative head.

From the Northern Pioneer Grange, Palmer, Alaska:

> Farmers in Matanuska Valley heartily endorse agricultural research under United States Department of Agriculture auspices. Future of agricultural development here will be determined by your measure.

From the Wasilla Grange No. 2, Wasilla, Alaska:

Wasilla Grange No. 2 unanimous in support of House bill. Senate bill unsatisfactory.

"VICIOUS PIECE OF LEGISLATION"—BARTLETT

Mr. Speaker, my very good friend, the Delegate from Alaska [Mr. BARTLETT] in a recent press release denounced the provision of the bill relating to agricultural research in Alaska as "one of the most vicious pieces of legislation affecting Alaska which has ever been passed by the Congress of the United States." It would seem that a great many people in Alaska do not agree with that characterization.

Mr. BARTLETT was in the House on the day the bill was read for amendment. He did not avail himself of the privilege which a Delegate enjoys of speaking against the provision or of offering a motion to amend. It would seem to me, Mr. Speaker, that if he believed it to be a vicious piece of legislation and unfair to Alaska he should have made his voice heard at that time.

No, Mr. Speaker, I believe the record indicates that the good farmers of Alaska who are laboring under such adverse natural conditions have been made the victims, for, lo! these many years, of some pretty vicious administrative practices on the part of certain Territorial authorities, and that they are only too glad that Congress is enabled, through the provisions of this bill, to bring them some measure of relief.

More American Dollars—For What?—Let Us Not Waste Our Assets

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, American dollars alone will never restore order in this chaotic world. The United States of America financed two World Wars in 25 years. And between wars we loaned billions of dollars to refinance the same nations whom we assisted in war. Now we are considering the possibility of huge expenditures in an effort to prop up the economy of the whole world. What assurance is there that we can accomplish our purpose in view of our failure so to do in the past? It is not reasonable for us to pour money down that proverbial "rat hole" when there is every indication that our money alone cannot bring a just peace or economic stability to the world. The past record is bad; what can we expect in the future?

Mr. Speaker, the people should know what we have been spending for foreign aid in recent years. I have just received a report from the Department of Commerce that states, and I quote, "During the past 7 years the United States Government committed itself to an unprecedented expenditure for foreign aid totaling $73,590,000,000." We have spent $20,000,000,000 in the 2 years since the end of the war. I shall not take the time to break down these figures but they are factual, not fictional. No one knows, Mr. Speaker, or has any idea just what requests will be made in the future or how much they will amount to in dollars. Billions and billions are no doubt involved if we are to believe the experts.

Mr. Speaker, the great need in Europe and in other parts of the world is a good big dose of self-help. And in addition a willingness to spend its own resources to stabilize economic conditions. There is something wrong somewhere. People everywhere seem to have lost initiative and the will to work. We know today that socialism and communism have in many countries destroyed the will to work because these ideologies have promised the people less work and more rest on the theory that the government will provide for them. Hitler, Mussolini, and Stalin have looked after their people in their own way. The result was enslavement and ultimate destruction.

Consider, Mr. Speaker, the productivity, or lack of it, in British coal mines. In May 1946, just before the three-and-one-quarter-billion-dollar loan was approved, the mine force numbered 699,000 men. Their productivity per week was about 3,700,000 tons of coal. That output was 300,000 less than the amount needed for national survival.

Now, Mr. Speaker, 1 year later, May 1947, the number of miners had increased to 714,000. Thus, there were 15,000 more men in the mines than 1 year ago. Yet what happened? The mines were taken over by the government in May of this year—in short they were socialized—and immediately the workweek was reduced from 6 days to 5, with the result that production dropped from 3,700,000 to 3,500,000 tons, or 200,000 tons per week, even though 15,000 more men were employed. This does not make sense.

In France, Mr. Speaker, the situation is also disturbing. Early this year it received a total of $275,000,000 in advances from the new World Bank and from the International Monetary Fund. These advances were designed to assist France in solving her basic economic difficulties. But shortly after Communist-led strikes paralyzed her economy.

Mr. Speaker, it is obvious that more loans or gifts of money or goods will not solve the problem of coal production in Britain or stop strikes in France. These problems must be solved by the French and British people themselves.

If out of the conferences now under way in Europe come more suggestions or schemes for State controls and further regimentation—in short, plans for more socialism—our Government should refrain from giving more help. Why should the fruits of the American private enterprise system be used to advance the cause of socialism? The people of this country should not be called upon to water the roots of this foreign ideology, the progenitor of Communism.

Mr. Speaker, there are a good many signs that the American people—even though they are greatly misinformed or uninformed—will not appropriate more money for gifts and loans until they have a satisfactory answer to the question: For what?

Proponents of the so-called Marshall plan, Mr. Speaker, will have to convince the American people that the spending of additional dollars on European recovery will produce more tangible results than it has in the past 25 years. Our resources are limited and the time has come to stop the reckless spending of our national assets.

The Eightieth Congress—Its Record

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mrs. DOUGLAS. Mr. Speaker, the hour of recess is at hand and we are about to return to our respective districts to give an accounting to the people we were elected to represent. A casting up of accounts appears to be in order.

Let us see what such a statement, in terms of the welfare of the American people, would look like.

I shall limit myself to a consideration of our domestic policies.

Of course, both domestic and foreign policies are so closely interwoven that in effect they are one. For example, if we have a collapse and depression here in the United States within the next several years, it will affect our foreign policies. Already, domestic fears of shrinking markets, surpluses and depression have threatened our whole foreign policy of promoting world trade. The health or sickness of our domestic economy and our political and social standards will tone up or drag down the health of the rest of the world. Therefore, domestic conditions are of the utmost importance. What has the Eightieth Congress done to strengthen or weaken the home front.

First, let me make the preliminary statement that the credit or the blame for what has been done, left undone or badly done belongs to the Republican Party. That Party has a clear working majority in this Congress. In this House, it has the tightest control since the days of Speaker Uncle Joe Cannon.

Legislation to be considered in committee must be given the green light by the Republican leadership.

In order to have legislation brought to the floor of the House, it must be given the green light by the Republican leadership.

The Republican leadership in Congress is able to pass any legislation it wants to pass and to block any legislation it wants to block; unlike the Democratic majority in the Seventy-ninth Congress which lacking sufficient majority to protect it against a handful of Democrats who voted consistently with the Republicans found itself frequently outvoted.

Again and again, President Truman and the spokesmen for the minority in

this Congress have warned that we are rushing down a steep road into the sea. We have proposed comprehensive, carefully thought out and related legislative programs to balance the human budget for prosperity and peace, as provided for in the Employment Act of 1946.

The Democratic Party opposed the Republican attack upon organized labor.

It opposed the raid upon the Federal Treasury for the benefit of the Nation's biggest taxpayers, contending that tax reduction should wait until a substantial payment had been made toward reduction of our national debt.

Mr. Speaker, the Republican majority proposes to govern by fear—fear of labor, fear of other nations, fear of foreigners, fear of Communists and communism, fear of the future.

In fact, it seems that the Republican majority in this Congress has been afraid of nearly everything and everybody in this country and in the world except runaway prices, profits, and inflation itself.

This fear complex is, I submit, absurd. It would be funny if its results were not likely to be so tragic. Here we are, the richest, most powerful nation in the world, with the longest and strongest tradition of freedom and democracy, in danger of frightening ourselves into depression and isolation. And this, at a time when we should be like "young men who delighteth to run a race." We have the resources and the know-how, the food, the machinery, and the money to help the world to health and a peace of free men, to an age of shared abundance in which all peoples can afford and enjoy both security and personal liberty.

But, no, we are afraid, we draw back. We offer too little and too late. We are afraid to admit to this great country, already suffering from a lack of manpower, some 400,000 displaced persons who should come in under the accumulated unused immigration quotas. We need them; they need us. More important, we need to set an example to other nations, of willingness to do our share in delivering these victims of totalitarianism from the 8 years of hell to which they have been subjected. They are homeless and afraid, with reason; we are secure and afraid, without reason. Our fear is shameful.

Again, while unseen monopoly draws its silken noose tighter around the American economy and, particularly in a period of inflation and runaway prices for scarce materials, strangles small business and new business, the Republican Party frightens itself and some of the public into fits about the menace of communism. To fight communism and Communists, they have rammed through the House the Rees so-called loyalty bill which proposes to adopt the secret-police and star-chamber methods of the Russian Okhrana, the GPU, the OGPU, the Nazi Gestapo, and the Fascist Blackshirt Militia.

At a time when America is in the world's mind and in literal fact the exemplar and defender of personal liberty and opportunity, of the civil rights of fair trial for the individual citizens, the Republican-sponsored Rees bill would deprive American citizens of the basic civil right to be considered innocent until proven guilty. It would deprive American citizens of the right to trial in open court, of the right to know the evidence against them and to confront their accusers in open court, of the right of counsel and of trial by a jury of their peers.

Mr. Speaker, the leaders of the Republican Party are not really afraid of communism, nor of the admission of 400,000 displaced persons. They are, I submit, afraid of the American people. They are afraid that, if the pandemonium of fear is let down long enough for the American people to hear themselves think, they will add up what the Republican-controlled Eightieth Congress has done and intends to do to their welfare and hope for a future of security, opportunity, and personal freedom.

Now, let us see just what has been going on and what is about to happen to the hopes and plans of the average American family:

Mr. Speaker, in the early days of the war, when there was considerable opposition to the late President Roosevelt's indivisible seven-point anti-inflation program, opposition to which resulted in the defeat of some of its features and the weakening of others, one of the principal opponents of the Economic Stabilization Act, Mr. Edward A. O'Neal, president of the American Farm Bureau Federation, expressed the view that a little inflation would not do us any harm.

He joined with others, including the head of the Grange and the Cooperative Milk Producers Federation, in proposing that prices be allowed to rise to their natural level in the open market. One of these gentlemen expressed the view that, even with short supplies, prices could be used to ration, even to a surplus.

At the time, these smooth words were denounced as a proposal for limited starvation, for pricing millions of our people out of the market, so that they could not buy what they needed for the proper nourishment and clothing and housing of their families.

Under such a system, the rich would have rapidly become richer on rising prices, but the consumers would have fallen out of the market. Demands for higher and higher wages, made in a continuous attempt to chase the devil of inflation around the stump would have disrupted industrial relations, caused strikes, and interrupted and cut down war production.

Fortunately, these gentlemen's recommendations did not prevail.

We did have the Economic Stabilization Act.

Wages were stabilized.

Prices were stabilized to a substantial degree, though not as firmly as wages.

Because of the pressures of business and industry, the act's provision for stabilization of profits was honored more in the breach than in the observance.

Why was the suggestion that a little inflation would not do us any harm put aside as bad advice?

There were many reasons.

We had a great goal and we had vision and determination and a high degree of unity.

We had a war to win.

Most of us, including most of the 12,000,000 members of the armed services, most wage earners and, I am convinced, most businessmen, then believed that the winning of the war was the first stage in the making of a lasting peace based on the Atlantic Charter and the "four freedoms."

We were going somewhere, going forward, and we were fighting, working, planning together.

We were blessed with a leader, democratically chosen and elected, who gave the immediate goal of 50,000 planes, 75,000 tanks, and 8,000,000 tons of shipping.

I need not name the leader of the other political party, a man recommended for his youth and genius as an administrator and statesman, who said with little faith that this goal was fantastic and impossible of achievement.

It is enough to say that goal was reached and doubled and that the war was ended years earlier than it would have been on a timid business-as-usual basis—if, indeed, it could have been won at all that way. Millions of families have their men back because that goal was reached and doubled (as rapidly as it was).

But, Mr. Speaker, there was another reason why the advice of a little inflation was put aside.

It was because Franklin D. Roosevelt told the man who proposed it that there was no such thing as "a little inflation."

He said that a little inflation was like a little cocaine. A litttle led to a little more, and more and more, until it became a habit; a vicious. debilitating, degrading, deadly habit, growing by what it fed on until in the end the ravaged addict either had to accept a drastic cure or die.

Such boldness in planning, in the statement of goals, in the formulation of ways to attain them, such plain speaking to those who stand in the way are needed today.

President Truman has tried again and again to assert such leadership in the 2 years since VJ-day.

His task has been made more difficult, first, by believers of business as usual in the various war agencies who started a reckless, irresponsible decontrol stampede the day after VJ-day, ignoring the fact that effective controls should have been continued until the transition to peacetime production had been made and supplies and demand were in approximate balance.

These men also appeared to ignore the tremendous task of aiding the war-stricken world to get back to economic, political, and social health, back to a condition where the principles of the Atlantic Charter and the four freedoms could become everyday practice.

Aiding and abetting this stampede were those in the Congress who, to quote the present chairman of the Ways and Means Committee, thought we should "return to normalcy." During the war Members of this persuasion had compelled the President to install in the war agencies, particularly in OPA, persons who thought as they did and who, with the outbreak of peace, strove to plan and talk and act on a business-as-usual basis.

This is the reason for the $5 a ton increase in steel, the $200 and $300 increase in automobile prices, and the price escalators installed for many other items.

Despite this weakening of the stabilization program by these price bulges, it was not broken until a year ago, when the Congress gave the President a cynically contrived and wholly unworkable price-control bill with an "or else" ultimatum. He signed it with a gun at his head, only because of the very real danger of civil disorder if August 1, 1946, had arrived with no control to prevent wholesale rent increases and evictions.

Between then and November, 1946, the American people were the victims of a two-pronged blitz by the National Association of Manufacturers and the meat industry, both working for the election of a Republican majority in Congress that would remove what little economic stabilization was left, reduce Government expenditures for necessary economic and social services, cut taxes on high incomes and deprive labor of certain hard-won rights and protections in collective bargaining with employers.

Here let it be noted that (a) 1946 profits were running ahead of wartime peaks, and (b) labor had already been beaten in its attempts during the strikes of 1946 to maintain wartime take-home pay and the real purchasing power necessary to support a stable and healthy market for postwar full production.

This was not enough.

We had to travel the full route, all the way back to "normalcy" to the boom-and-bust of the twenties and early thirties.

Powerful reactionary forces in and out of Congress had forgotten nothing and learned nothing in 25 years.

The NAM offered the bait of lower prices if price control and other stabilization measures were removed.

The meat industry held back meat and went on a sit-down strike 60 days before election.

And the Republican Party put in electric lights against the night skies the taunting question that may yet boomerang against it and its candidates—"Had enough?"

Well, the campaign of cynical propaganda and deliberate confusion—most of it paid for with taxpayers' money in the form of deductions from income taxes—was successful.

A majority of those who voted 12,000,000 less than the nearly 47,000,000 who voted in 1944 said "Yes" to the question, "Had enough?"

The American people had paid for their own poison.

Now the Republican Party, having won a victory, having won a clear-working majority in the Congress, was stuck with that victory. It had to try to deliver, and to do so in such a way as to insure control of both the Congress and the Presidency in 1948.

How has it succeeded, to what extent and in what respects?

In achieving the immediate objectives of the NAM, the real-estate lobby, the railroad lobby, the private-power lobby, and the coalition of special interests comprising the antilabor lobby, the Republican Party has succeeded to an extent that must be gratifying to them.

I know that the gentleman from Michigan has complained that his party has sold out to the New Deal because the Republican majority did not in the first 90 days sweep away all vestiges of the National Labor Relations Act and other New Deal laws which, in his view, are abominations.

But I think the gentleman from Michigan is too impatient.

He does not understand or is not attentive enough to his party's problem of winning the 1948 election. In surgery, there is a difference between a saw and a scalpel; in medicine there is a difference between curative drugs administered orally and the hypodermic needle.

Leaving aside for the moment the question of wages, prices, and profits, on which the NAM and the Republican Party made certain promises, let us look at the record:

The year 1939 has been adopted as the basic point for Government program and expenditures.

In 1939 we had about 9,000,000 unemployed as compared with full employment today; our national income was $72,500,000,000 as compared with $199,500,000,000 in 1947; our population was 130,880,000 as compared with 143,338,000 today.

In 1939 we should have had in progress at least seven, not one, wealth-producing developments such as TVA, which later supplied the margin for victory in aluminum, fertilizers, and atomic energy.

Today the Republican Party proposes to try to shrink our Government's role in the economic and social rehabilitation of our country back to 1939 levels.

The Republican program does not include provision for the vast program of needed public works which should be authorized, planned, and blueprinted now, to be held in reserve for the time when supply and demand for consumer goods and housing come into balance and such projects are needed to maintain full employment and increase our productive resources and markets.

By action of the Democratic administration in the executive branch, the budget has been balanced and more than balanced.

The surplus for the fiscal year ended June 30, 1947, was $754,000,000.

For the present year, it is estimated to be at least $4,000,000,000.

This, as President Truman would be the first to state, is larger than it should be.

It is no fault of President Truman and his administration that a substantial part of this surplus is not being used today to balance the human budget, to balance the housing budget, the health budget, the educational budget, the budget for our senior citizens and those disabled by accidents and disease, the soil-conservation budget, the irrigation budget, the reclamation budget, the power budget, the reforestation budget.

The Democratic Party has consistently stood for balancing of the human budget, when necessary, putting it ahead of balancing of the money budget.

We can owe money to ourselves, but how can we rest easy knowing that we have a budget surplus achieved at the cost of human lives and human health, happiness, and opportunity for millions of our people?

Since we have this surplus, one would have assumed that the Republican Party, long an advocate of reducing the national debt, would have been the first to agree with President Truman on the wisdom of applying the surplus to a reduction of that debt.

The Republicans cried havoc and galloping ruination when the national debt in 1939 was $40,000,000,000; today, with a national debt of $258,300,000,000, they turn a blind eye to it and propose instead a tax reduction that would give $1,200,000,000 to 682,000 taxpayers with incomes above $10,000 and divide $2,900,000,000 among 49,000,000 taxpayers with incomes below $10,000.

What price debt reduction now?

I will go into the answer to this question when I discuss the matter of wages, prices, and profits.

I have put this matter of so-called economy and tax reduction first because the Republican Party put it first. It is important for a reason which I intend to make abundantly apparent.

More important in the record of Republic performance, in my opinion, are these items:

First. Wrecking of the veterans' housing program.

Second. Wrecking of all emergency housing programs by premature removal of priorities, allocations, and price ceilings on scarce materials.

Third. Wrecking of effective rent control and the deliberate exposure of 50,000,000 Americans to the legalized hijacking of rent increases. This obedience to the real-estate lobby is made more contemptible by the pretense that such increases must be "voluntary." Lacking Government enforcement, this hypocritical limitation has the strength of a piece of wet paper.

Fourth. Stalling on Federal aid to education until next year, when an inadequate ersatz bill may be passed in the hope of catching votes in the 1948 primaries and elections.

Fifth. Stalling on even the ersatz health program to be limited to charity cases; put off to next year for the same reason, to catch votes.

Sixth. Stalling on any long-range postwar housing program; probably killed by the real-estate lobby.

Seventh. Stalling on FEPC, on anti-poll tax and antilynch legislation until 1948, when one or more may be enacted depending on the Republican estimate of the election prospects.

On education, health, housing, and the civil-rights bills, the Republican majority could have legislated at any time in the past 6 months. Had there been the will, the way was open.

The Republican Party had the majority. It had the responsibility. It cannot avoid the blame.

In the other body, enough Democratic votes were available to adopt cloture and get a sure majority vote for the enactment of the three basic civil-rights bills.

Eighth. Systematic chopping down of services to farmers, ranchers, miners, and wage earners in reckless reduction of the appropriations for the Departments of Agriculture, Interior, and Labor.

Reclamation has been cut at a time when hundreds of thousands of veterans want farms and when a hungry world cries for food.

Irrigation development has been cut.

Power development has been cut, in the face of a present power shortage in the West and a shortage throughout the Nation, blighting industrial development, employment, markets, and hope for continuing prosperity.

Rural Electrification Administration funds have been cut, although 4 out of 10 of our farms still lack electricity.

Contradicting the fine phrases of friendship for labor that accompanied the Taft-Hartley bill, the various bureaus and services of the Department of Labor have been made a shambles.

The United States Employment Service has been weakened; the Bureau of Labor Statistics has been reduced so that facts needed by both labor and management in peaceful collective bargaining cannot be promptly and accurately assembled and made available while they are still timely; the Bureau of Labor Standards is down and very nearly out; the Wage and Hour Division, with an impossible administrative load imposed by the so-called portal-to-portal amendments, has a pitifully inadequate budget with which to attempt the job.

Ninth. Cutting back low-cost public power development by a set of bills that would require such projects to sell electricity at the generating point, at the same time exempting a large proportion of privately owned utilities from the regulation of the Federal Power Commission.

No neater formula for delivering consumers of electricity to the tender mercies of the private power interests at the private utilities' own price could be devised.

Tenth. Attempting to divide, weaken, and destroy labor unions by the Taft-Hartley Act which, in its various provisions, carries the seeds of the sort of industrial war this Nation suffered in the twenties and early thirties, when strong corporations attempted to club, gas, shoot, and terrorize workers into employment on the employers' own terms.

This is only a hasty and partial listing of the major achievement of the first Republican Congress in 16 years.

I have not dealt with the special raids, such as the gas utility bill, the bill to exempt the railroads from the antitrust laws, the bill to repeal the increased benefits of the Railroad Retirement Act and many others.

I have left what I consider the most important and sinister characteristic of the Republican performance, reserving it for final reference.

Earlier, I mentioned the Republican proposals for tax cuts, a little for the low-income, much for the high-income few. Tied in with tax cuts are prices, profits, wages, and adequate supplies of needed goods.

We are about to take off on another round in the inflationary spiral. With other nations crying for food, farm and industrial machinery, and materials, supply continues to be below the real demand at home and abroad. At the same time, millions of people, here and abroad, are being priced out of the market for food, clothing, cars, refrigerators, washing machines, farm machinery, and the heavy capital goods necessary particularly for rehabilitation of productive plant in other nations.

While prices continue their upward trend, with wage rates lagging, the monopolistic steel shortage throws tens of thousands of auto workers out of work for weeks at a time and cuts the workweek of other thousands to 4 days and $30 in wages.

Recent floods, the most disastrous in history because the Congress refuses to apply the successful experiment of TVA to the Missouri and other valleys, have cut our expected production of corn, pork, and other meats, aggravating the world-wide competition for what food supplies are going to be available.

These shortages of steel, foods, and other essentials boost prices so that, while inflation continues, deflation has already set in for millions of people, here and abroad. They are being priced out of the market.

Our economy, careening along on a dizzy spree, is building up to a big letdown. The economists tell us the bust that will follow the present boom will not be a little depression. It can be big, stubborn, and long-lasting. It can deliver the rest of the world to the final desperation of totalitarianism and put democracy in danger here at home. If, for example, the steel industry's shortsighted estimates of future steel capacity should be allowed to come true, we would have, by 1950, some 14,000,000 unemployed and a few years later as many as 20,000,000 unemployed.

So alarming is the prospect that the very man who a few years ago suggested that a little inflation would not do us any harm made the suggestion to a congressional committee a few weeks ago that it might be wise to restore price control.

"Not a chance," said the leader of the Republican majority.

Just like that. Instantly. Without a moment's hesitation.

Mr. O'Neal made the suggestion in speaking of the serious cuts in food production caused by the recent floods and the resulting danger of new increases in food prices in the months to come.

At last, 4 years later, Mr. O'Neal was afraid of inflation. Apparently he recognized that a little inflation was like a little cocaine. A year ago he had been for taking off price and rationing controls. But, after a year's experience, he had had enough and he was afraid.

But the Republican Party is not afraid. Oh, no. Not yet, or perhaps it is very much afraid and is determined to carry through the inflationary cycle until—well, until after the 1948 elections.

Intentional or not, that is the effect of the work of this Republican controlled Congress.

"Let prices rise to their natural level in the open market"—a market tragically short of need, actual human need as distinguished from purchasing power that shrinks as prices rise.

Let consumers with the longest purses buy new cars at $500 premiums and used cars at fantastic prices.

Let them buy all the food they want at any price while other nations, our allies in the war to make one world, reduce their rations below the wartime levels and share among themselves to stave off mass deaths by starvation.

Let the steel industry hold down production and refuse to enlarge its plant capacity out of fear of oncoming depression and gather the black rosebuds of high prices while it may.

Let landlords and tenants "voluntarily" negotiate higher rents—with a housing shortage of at least 2,000,000 units.

And, meantime, hamper and weaken labor in its efforts to negotiate wage increases that will keep the worker's family at least within sight of the soaring cost of living.

Chloroform the Wagner-Taft-Ellender housing bill.

Strangle the veterans' housing program.

Give novocaine to the bills for a 65-cent minimum wage, to more nearly adequate social-security payments to the aged, the handicapped, the mothers, and children.

Put a cheap charity mustard plaster over our national health needs.

Offer the cotton candy of civil rights bills, passed by the House but not by the Senate.

All this is consistent with the trickle-down theory of prosperity that has failed again and again in our history.

Let $17,000,000,000 and more in profits, after taxes, boil to the top and, say the proponents and addicts of this theory, inevitably it will trickle down to the many on the bottom.

But already there is proof that these profits are not trickling back down fast enough.

Already it is apparent that the circulatory system of our $225,000,000,000 economy is dangerously out of balance that profits are not getting back into wages, salaries, and purchasing power fast enough for the masses of our people to buy back what they produce and what they need to maintain an American standard of living.

Last Tuesday, July 22, this House confessed this fact when it adopted a prohibition against Government curbs on installment selling.

Is not this where we came in?

Installment selling, which has increased at an unprecedented rate in the past year as the NAM fell down on its promises of lower prices if controls were removed, can now be expected to soar to new levels. It will rise, as in the twenties, until the time comes when too many Americans have run out of money to pay any more first installments.

Mr. Speaker, with the adoption of this measure taking the lid off installment selling, this Congress will have completed the planning for inflation, for another boom and bust.

The easy resort to the cocaine of inflation, which we resisted during the war

because of President Roosevelt's warning and because we as a people were united in a purpose and a plan, has now been made the national diet. It has been asked for by short-sighted special interest groups and lobbies, greedy for immediate profits, whatever the long-run damage to the national economy, to the American people, and to their own long-run interest and survival as free enterprisers.

It has been prescribed and administered by this Republican-controlled Congress over the protests of a minority of Members who still remember the last depression and how it came to pass.

"A little inflation is like a little cocaine," said President Roosevelt.

Today our economic system is being dosed daily with the deadly drug of inflation.

Perhaps it will work. Perhaps the Republican Party can keep the patient feeling fairly happy until the 1948 elections are safely past.

If that happens, the Republican Party may win, but the American people and the people of the world who look to us for leadership and help will lose.

And we, all of us, will go down in history as Members of the inflation Congress, a cocaine Congress.

Mr. O'Neal has made his peace with his own conscience and with history. But the leaders of the Republican Party have waved aside his suggestion as ridiculous.

Theirs is the awful responsibility.

In support of certain statements I have made in the course of my remarks, I am inserting in the RECORD the following items:

First. An Associated Press dispatch published in the Washington Star, July 25, 1947, entitled "Wholesale Prices Climb 0.6 Percent Over Old High."

Second. A report in the Washington Post for July 26, 1947, quoting BLS findings that between May 15 and June 15, retail food prices rose from 187.6 to 190.5 percent of the 1935–39 index.

Third. An article by Thomas L. Stokes in the Washington Daily News, July 25, 1947, entitled "Mr. Truman's Appraisal."

Fourth. A letter from Elizabeth S. Magee, general secretary of the National Consumers League, published in the Washington Post, July 26, 1947, entitled "Postponed Minimum Wage Boost."

Fifth. A Washington Post editorial, published July 25, 1947, entitled "Last Chance" and making a final appeal to the House to act upon the Stratton bill to admit 400,000 refugees.

[From the Washington Star of July 25, 1947]

WHOLESALE PRICES CLIMB 0.6 PERCENT OVER OLD HIGH

Wholesale prices hit a new postwar peak last week.

The Bureau of Labor Statistics reported its index, based on the 1926 average, stood at 150.3, topping the previous postwar high of last March by 0.6 percent.

Substantially higher prices for farm commodities and a number of industrial goods were responsible for an increase of 1.3 percent in average wholesale market prices during the week ended July 19.

Farm products and foods rose 2.4 percent and 1.3 percent, respectively.

Food prices were 1.6 percent below the March peak but 18.3 percent higher than a year ago.

[From the Washington Post of July 26, 1947]

FOOD PRICES RISE 1.7 PERCENT IN MONTH HERE

Retail food prices in Washington rose 1.7 percent between May 15 and June 15 of this year, according to the Bureau of Labor Statistics, while in 56 other cities, the average increase was 1.5 percent.

The retail index here climbed from 187.8 on May 15 to 190.9 on June 15, a rise of 31.2 percent over June 15 of the previous year and 103 percent higher than the August 1939 index.

Nationally, the retail food price index rose from 187.6 to 190.5 percent of the 1935–39 index, the Bureau said. This was 31 percent above mid-June 1946, the last month of extensive Government price controls.

The sharp rise in the national family food bill was due mostly to an 8-percent increase in the prices of red meats and a 2-percent seasonal advance in eggs. These increases offset declines of 6 percent for fats and oils, 2 percent for coffee, and 1 percent for fruits and vegetables.

The Bureau found in its survey that food prices had risen during the last month in 46 of the 56 cities surveyed. In nine cities, prices were down, and in Denver, Colo., they were unchanged.

Advances ranged from 0.5 percent in Jackson, Miss., to 4.4 percent in Providence, R. I. Declines varied from 0.1 percent in Mobile, Ala., to 1.5 percent in Los Angeles and San Francisco.

[From the Washington Daily News of July 25, 1947]

MR. TRUMAN'S APPRAISAL

(By Thomas L. Stokes)

We are a $225,000,000,000 Nation—but we don't act like it.

That, in effect, is the reaction of at least one reader to President Truman's comprehensive and detailed economic report to Congress.

Sixty million of us, and a few over, have jobs, an all-time peak. This shows what we can do. There's no reason why we can't go on doing it for, as the President said, our country "has the physical resources, the technological skills, the managerial genius, and the trained labor for a steady expansion of national output."

But, as he pointed out, there are businessmen who still make decisions on the theory that "the consumption capacity of the country is severely limited * * * the occurrence of periodic depressions is unavoidable" * * * who seek relief from business difficulties by "limiting the capacity of their plants and industries and by withholding new production techniques." Some go as far as to "urge that a considerable volume of unemployoment is necessary in order to induce workers, under the threat of lay-offs, to produce efficiently."

As for labor, the President pointed out there are some there who believe the volume of available work is limited, so they resort to familiar practices to hold onto their jobs—slow-downs, made work, feather-bedding, soldiering on the job, which contributed to the enactment of labor regulatory legislation.

Despite present high prosperity and employment, there is real danger of recession or depression, which comes from our failure to act like a $225,000,000,000 nation. The President, singled out the sure signs of trouble that are ahead unless we take care. This, too, reveals a shortsightedness that is not complimentary to a $225,000,000,000 nation, for the President and his Council of Economic Advisers pointed out the same things 6 months ago.

Brains we have in plenty, which the President reemphasized. But, along with that, as he stressed again, is the need for discipline and restraint and willingness to adopt business and labor policies that will keep the economy in balance—willingness, too, to do certain things in Government.

As for Government's part, President Truman played over again the record of 6 months ago, a little late now, with Congress hurrying to recess and get away. He offered then a short-range program for this session of Congress, as well as a long-range program.

That part of the short-range program designed to check inflationary pressures, which was maintenance of present tax rates and use of the surplus to pay off the public debt, he got only by vetoing the same tax bill twice.

Nothing at all has happened on the part of that program designed to spread income to absorb our rapidly accelerating production and to open up new job opportunities, which included a comprehensive housing program; raising of minimum wages and extension of coverage; increase in social-security benefits to meet higher living costs. The other item, maintenance of rent controls, Congress disregarded to the extent of the 15 percent voluntary boost.

[From the Washington Post of July 26, 1947]

POSTPONED MINIMUM WAGE BOOST

The leadership of the House of Representatives withdrew last week from its earlier-announced decision to increase the 40-cent minimum wage in the Fair Labor Standards Act this summer. This is another example of the cynical indifference to the public welfare exhibited by the Eightieth Congress.

The controversy over restrictions on union labor has diverted attention from congressional policy affecting unorganized workers. The Fair Labor Standards Act, enacted in 1938, has provided basic protection for these unorganized workers, but the flat minimum of 40 cents per hour is now inadequate to meet even subsistence needs. In the closing days of the Seventy-ninth Congress, the 65-cent minimum wage bill, which had been passed by the Senate, was defeated in the House. This would have seemed to be one of the first items of unfinished business for the new Congress when it met in January. Senator TAFT, chairman of the Labor and Public Welfare Committee, however, has repeatedly given the same answer to queries as to action on minimum wage, "We do not know whether we will have time to get to minimum wage this session."

But the Congress had time to enact the extremely dangerous Gwynne-Donnell bill, which reduces to 2 years the period in which claims for wages due under the Fair Labor Standards Act (as well as other Federal wage laws) can be collected and, by various devices, undercuts the effective enforcement of the law. The Congress also had time to cut the budget for enforcement of the Fair Labor Standards Act—both its wage and child-labor provisions, the former by 25 percent and the latter by 60 percent.

The movement for minimum wage in this country began in the States in the early part of the century. It gained momentum during the depression years when wages fell to unbelievably low levels, when decent employers were caught in the competition with substandard employers and when public relief funds were used to supplement low wages. Twenty-six States and four Territories have adopted minimum-wage laws. The enactment of the Fair Labor Standards Act brought thousands of men and women under the protection of a Nation-wide, statutory minimum, and it established the principle of Government responsibility for minimum wages, which has been upheld by the courts and supported by public opinion.

The greatest number of the underpaid are among the unorganized workers. They are the people we forget when we hear about the wage increases secured by unions. They are the people who are hardest hit by rising prices because the major portion of their income must be spent for food and clothing. If they are to keep their heads above water, if they are to remain self-supporting consumers instead of recipients of relief, there must be an increase in their hourly wage rate.

Increased productivity makes increased wages possible. But it does not insure them. The history of American industry shows that, in the absence of controls, either of effective collective bargaining or legislation, increased productivity was not adequately reflected in the pay envelope. During the 6 years preceding the crash of 1929 productivity per man-hour increased 24 percent and wage rates only 3½ percent in manufacturing—a disparity which undoubtedly contributed to the collapse.

Congressman HARTLEY, chairman of the House Labor Committee, says: "It's all off until next January," but he makes no promise of action then. Must we wait for a new mandate of the people?

ELIZABETH S. MAGEE,
General Secretary,
National Consumers League.

CLEVELAND.

[From the Washington Post of July 25, 1947]

LAST CHANCE

The cartoon on this page gives an impression of the hopelessness that will be caused among the displaced persons by our vacated Congress. The hungry sheep are looking up and are not fed. This seems their lot as the result of the shelving of the Stratton bill to admit 400,000 refugees. The bill may come up next year, but in that event there would have to be another round of testimony to disprove all the arguments which have been marshaled against it.

Evidently the latest and principal argument is Representative GOSSETT'S. This is that 100,000 DP's are Russian Jews whom the Soviet Union is deliberately trying to plant in this country for fifth-column activity. This is quite untrue. The resort to such an argument shows an opposition bereft of either logic or bowels in resisting a measure which has Nation-wide backing. The fact is that of the 600,000 DP's, Jews of all nationalities number only about 130,000, and they are mainly Polish Jews. They are refugees, not missionaries—refugees from Nazi suppression and Communist repression alike. The Russians, far from wanting them to spread the Marxian gospel, are anxious to see them repatriated to what the Russians euphemistically call their homelands. The reason for this anxiety is in some cases that they are proscribed for anti-Communist activity, in others that they know too much about the kind of government in Russia or in the countries under Soviet sway, and could many a tale unfold. If this cannot be done, the next best thing from Moscow's point of view is to "put them down," as Deputy Foreign Minister Vishinsky is reported to have said to Secretary Byrnes at the Paris Conference, with a thumb-down gesture expressive of extermination.

In point of fact, it is not the Jewish DP's who want to come to America. Judging from the evidence of those who have visited the islands of refugees in Germany, the Jews have only one promised land in mind, and that is Palestine. The Balts and the Poles, who preponderate in the DP's camps, will go anywhere that promises a chance of life, liberty, and the pursuit of happiness. For 150 years this country, to its great benefit and greater glory, has been affording this chance.

Even the critics of the Stratton bill have withdrawn their case against inundation. The Stratton bill would admit 100,000 a year for 4 years. It would not do the slightest violence to our quota system, but would accommodate these people through an adjustment of the quotas, which have not been filled in respect of some nationalities for years back. The candidates for admission would not be in their present predicament if they were not more or less our kind of people. It is distressing to those who have seen these folk in their camps to read the epithets that have been hurled at them by opponents of the Stratton bill. One remembers such sights as the pioneer-looking woman presiding over her kitchen in the Wiesbaden camp for Balts. She fled from the tyranny in which she had to live and work as professor of home economics at Riga University when the Russians came in. That she and the others like her are no-goods is so gross an insult that the aspersion reacts upon any person making it.

For God and humanity, as Mazzini would say, let some member of the Judiciary Committee ask that the Stratton bill be called up before adjournment, so that Congress may reassert our moral leadership in a world of tumbling values. The jurisdiction of conscience has never yet stopped at the frontier. It will mark the eclipse of our civilization when it does.

Hearing Denied

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. PHILBIN. Mr. Speaker, the chairman of the House Armed Services Committee on July 21 presented a list of organizations and witnesses which testified for and against the subject of universal military training.

It ought to be clear that the great bulk of these organizations and witnesses testified in 1945, almost 2 years prior to the recent hearings. Many organizations which were heard 2 years ago have raised a question about the propriety of excluding them from public hearings this time. They point out that in 1945 we were in a state of hostilities, that the report of the President's Commission on Universal Training was not then before them, that there is an entirely different international situation now which requires comment and discussion. Furthermore, they point out that the bill which the Armed Services Committee considered was not printed until Thursday, July 10, 1947, and they therefore have had no opportunity to study or present testimony on it.

Among the organizations which were not granted time to be heard were the National Education Association, the National Grange, the National Farmers' Union, the American Association of University Professors, the Presbyterian Church in the United States of America, the Methodist Church, the National Association for the Advancement of Colored People, the International Association of Machinists, the Brotherhood of Railroad Trainmen, and other groups. Several of these groups through representatives who were at the recent public hearings before the subcommittee stated that they had even been promised a hearing by the chairman of the committee.

That the House may know the individuals and organizations who were heard in the recent hearings, I append a list of the dates and persons who presented testimony before the Committee and Subcommittee on Armed Services:

GROUPS AND INDIVIDUALS WHO TESTIFIED FOR OR AGAINST UNIVERSAL TRAINING BEFORE COMMITTEE OR SUBCOMMITTEE ON ARMED FORCES, 1947

Dr. Karl Compton (for universal military training), June 11, 1947.
Rev. Edmund A. Walsh (for universal military training), June 18, 1947.
Rev. Daniel Poling (for universal military training), June 19, 1947.
Mr. Truman Gibson (for universal military training), June 19, 1947.
Citizens' Emergency Committee for Universal Training, Justice Owen Roberts testifying (for universal military training), June 27, 1947.
Philadelphia Committee Against Peacetime Conscription (against universal military training), July 7, 1947.
Women's Committee to Oppose Conscription (against universal military training), July 7, 1947.
American Legion Auxiliary (for universal military training), July 7, 1947.
Socialist Party (against universal military training), July 9, 1947.
American Legion (for universal military training), July 9, 1947.
American Veterans' Committee (against universal military training), July 9, 1947.
Progressive Citizens of America (for universal military training), July 9, 1947.
Synagogue Council of America (against universal military training), July 10, 1947.
Father Dan Laning, individual, from Texas (for universal military training), July 10, 1947.
Woman's Christian Temperance Union (against universal military training), July 10, 1947.
Dr. Blake Van Leer, individual, president, Georgia Tech. (for universal military training), July 10, 1947.
CIO (against universal military training), July 10, 1947.
Rabbi Michael Aronson, DAV (for universal military training), July 10, 1947.
Representative ADAM CLAYTON POWELL (against universal military training), July 11, 1947.
Southern Baptist Convention (against universal military training), July 11, 1947.
Association of Junior Colleges (against universal military training), July 11, 1947.
Post War World Council (against universal military training), July 11, 1947.
Dr. Allan Bates, scientist, from Chicago (against universal military training), July 16, 1947.
Veterans of Foreign Wars (for universal military training), July 16, 1947.
The War Department, three officers (for universal military training), July 17, 1947.
The Navy Department, three officers (for universal military training), July 17, 1947.
The Marine Corps, two officers (for universal military training), July 17, 1947.
The Northern Baptist Convention (against universal military training), July 17, 1947.

Mr. Speaker, clearly the peacetime draft bill was jammed through the committee without giving an adequate hearing to very many groups which desired and had requested an opportunity to be heard. No good purpose can be served by this procedure. I hope that the next session of Congress will insist upon full hearing on this vital matter.

Many Happy Days, Mr. President

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of today:

MANY HAPPY DAYS, MR. PRESIDENT

We have been thinking of our President and the wistful gesture he made the other day—walking into the Senate, and with senatorial permission, sitting down in his old chair there.

Said our President, "I sometimes get homesick for this seat. I spent what I think were the best 10 years of my life in the Senate."

We think his return there might be arranged.

Some time ago Representative GORDON CANFIELD (Republican, New Jersey) proposed to the House that ex-Presidents, one and all, be given life jobs as Senators at large.

Such ex-Presidential Senators would sit with the regular body and would receive senatorial pay and mileage allowances. They would have no vote.

Right there, we think, is a practical and dignified way for Mr. Truman to assure himself many more days with his senatorial cronies, beginning perhaps in 1949. The bill will have to be passed first, of course. If Mr. Truman has any difficulty in this respect, we suggest that he call on practically any GOP Senator or Representative. They'll all be pleased to oblige.

United Nations' World Language Problem, America and the Philippines

EXTENSION OF REMARKS
OF
HON. C. JASPER BELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. BELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Maximiano Marmito Villareal:

UNITED NATIONS' WORLD LANGUAGE PROBLEM, AMERICA AND THE PHILIPPINES

(By Maximiano Marmito Villareal, former director of the Esperanto Association of North America and life member of the little Congress of the United States, House of Representatives Office Building, Washington, D. C.)

The author has been, for several times, member of the Washington delegation attending the Congresses of the Esperanto Association of North America, including that of July 1947 congress which took place at World Fellowship Center, Inc., Conway, N. H. As a delegate of the congress he made an extensive good-will tour of Canadian cities, representing both the United States and the Philippine Esperantists.

The Philippine and American comradeship during the Second World War was proven in the field of battle. That comradeship will forever be recorded by the historians in the future for generations to come. It is hoped that these splendid and brilliant records in the field of battle be made a permanent pattern for the two peoples and nations at the peace table conferences in solving vital world problems.

It is because of this that official representatives of the Philippines and that of American republics are sincerely urged to do their utmost to join their untiring efforts and powers in solving the vital problem in the adoption of one and absolutely neutral language for the official use of the United Nations at its future assemblies.

It is deemed as an inescapable task for the representatives to the United Nations to demonstrate their powers and fearless leadership toward reaching the goal of finding the solution by adopting an international language for the use of this important world organization.

In the democratic world of today the average citizen plays an important part in the problems that affects him and the world at large. The average citizen should feel it his patriotic duty to do his utmost in solving world problems by urging his United Nations representatives to vote in favor of the adoption of the international language Esperanto for official use of that organization.

Mrs. Eleanor Roosevelt, as American delegate to the United Nations, should be highly congratulated by the whole world for her fearless utterances in influencing the world forcefully in the matter of solving the language difficulty in the United Nations. While attending the United Nations Conference in London, the press of the Old and the New World commended her highly for her great efforts in trying to encourage leaders of the world to find ways and means of solving the very old problem of language difficulty.

The defunct League of Nations, in which the late President Woodrow Wilson devoted his efforts, and the present substitute, the United Nations, in which the great late President Franklin D. Roosevelt and President Harry S. Truman also devoted their efforts, faced the same difficulty in trying to solve the problem of a universal language.

Where Are We Drifting?

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. SABATH. Mr. Speaker, where are we drifting?

Are we going to forget our 170 years of glorious liberty and freedom and go back to the days of the czars, the kaisers, the Austro-Hungarian emperors?

Let us open our eyes to the facts.

Under the hysteria whipped up by a few professional Red baiters from the subversive smear bund, who day in and day out inject their poison of discord and disunity into our national life, we are faced in this country with such restrictions of thought and speech and writing as we have not known since the days of the Sedition Acts.

According to these reactionaries, many of whom are open disciples of Hitler and Goebbels, every liberal and progressive-minded person is recklessly charged with being a Communist.

Some of these smear artists who masquerade as patriots are open advocates of the Nazi-Fascist ideologies.

Others are merely dupes who make themselves victims of the race baiting and the bigotry of the zealots.

The net effect is to attempt to drive from public life every progressive and to use any legal or even illegal weapon at hand without scruples.

The latest sordid episode in the decline of human freedom in our beloved country is the conviction of Carl Marzani.

I know nothing about Marzani except what I have read in the papers.

I have never, so far as I am aware, seen him or spoken to him.

I express no sympathy for or against him personally, or for or against his views, for I do not even know what his views are.

I do know, merely from the record of the trial as published in the daily papers and in weekly magazines, that the circumstances of his prosecution are dangerous to political freedom, and to economic freedom, and even to religious freedom.

Marzani was fired from the State Department weeks after he had resigned, and was not indicted until 2 months after he had submitted his resignation.

He was not charged with treason, or with sedition, or even with perjury. He was, instead, indicted under a statute which this Congress adopted to safeguard the Government against fraud by war contractors.

Mr. Speaker, I am inserting in the RECORD part of a report on the Marzani case written by I. F. Stone, one of the most brilliant journalists in the United States, and published in a liberal weekly, The Nation, of July 12, 1947.

As I said before, I have no personal knowledge of the Marzani case, but I do have personal knowledge of what life can be under a rigid despotism. I love this country very much. I love it because it is free. I want it to stay free. I hope you will read this report, and ponder carefully what Mr. Stone says, that we may not risk the precious heritages of our Constitution and its Bill of Rights.

The report follows:

Marzani is Italian born, the son of a minor anti-Fascist official who came to this country in the early twenties and settled near Scranton, Pa. Marzani worked his way through school and went to Williams, where he was editor of the college literary paper and won a scholarship. He had 2 years at Oxford, visited Loyalist Spain—a damning fact in Washington today—and returned in 1939. He and his wife settled on the East Side, and he taught economics for a while at New York University. He did not come to public attention until last fall.

Marzani, to put it mildly, hardly fitted into the State Department. His own opinions—opinions he did not hide—were pretty much those of a fellow traveler. He was uncomfortable in the Department, to which he had been transferred with the remains of the Office of Strategic Services. Efforts were made to get him fired immediately on his transfer there in the spring of 1946. Marzani wanted to resign but was urged by his superiors to stay on. He began to organize a business to make films for labor unions and took leave of absence last summer to do a film, Deadline for Action, for the United Electrical Workers. General Electric and other firms bought prints to show at a private meeting as a horrid example of red propaganda. The film was attacked in the New York World-Telegram as "com-

munistic." The heat was on. Marzani resigned from the State Department in November after being assured that he was not resigning under fire. But a month later the department informed him that he had been discharged, and in January he was indicted. He has been sentenced to from 1 to 3 years in jail and denied bond pending appeal.

The indictment was framed in terms calculated to make the hair bristle on the heads of southern Congressmen, and reflect credit on the sleuths of the State Department. Marzani was accused of falsely denying that in 1940 and 1941 he did "counsel and instruct Communist Party members to sow resentment and discontent among Negroes by agitating the question of racial discrimination." It was charged that he did "instruct divers party members concerning a plan, policy, and program * * * for * * * disintegration of the morale of the military forces of the United States * * * to the end that the Communist Party might gain control thereof and thus bring about a revolt against the capitalist system." It was charged that he did "urge Communist Party members to protest to their Congressmen against the passage of an antistrike bill." The nature of the indictment—not for Communist activities but for false statement to Government investigators—made possible rulings which fatally handicapped the defense when Marzani came to trial. The prosecution could lug in an inflammatory matter of this kind to show how Marzani served the Communists, but the defense was limited to character witnesses and Marzani's denials.

Marzani's defense never really got into the record. The jury was told that in 1940 and the first half of 1941 Marzani operated on the East Side of New York as a branch organizer and section educational director for the Communist Party under the name of Tony Whales. During the last half of 1941 and the early part of 1942 Marzani, under his own name, was active in the same area as executive secretary of the East Side Conference to Defend America. Thus many people must have seen and heard him in both capacities, and one wonders how he could have been cleared for Government employment in 1942 if he had been openly active as a Communist official under such circumstances. The transcripts of Marzani's questioning in 1942 and 1943 by the FBI and the Civil Service Commission show that the Government knew of the Tony Whales charge. Marzani admitted then that he had once circulated a Browder petition but denied having been a member of the Communist Party under the name of Whales or any other. The upshot of the rather extended investigations and hearings at that time was his clearance for Government employment. He went into the OSS, first as a civilian, then with military status as deputy chief of the branch which prepared complex data for quick presentation to the General Staff. He went to the State Department when it absorbed the OSS. Marzani's war record, highly commended by his superiors, was not challenged.

The key witness against Marzani and the only one who testified to the highly improbable speeches which formed the basis for the more horrendous sections of the indictment was a New York City policeman, Archer S. Drew, who was assigned to spy on radical activities on the East Side. Drew's testimony showed that he also acted as an agent provocateur. He is a Negro, and one of the organizations he was to watch was the National Negro Congress. When he found no branch in existence on the East Side he proceeded to form one and to recruit Negroes for it. Drew's reports were the source of the Whales story, and these were available to other Government investigating agencies at the time. One is forced to assume that the FBI and the Civil Service Commission did not put much stock in those reports or Marzani would never have been cleared in 1943. But Marzani was unable to subpena the records of these agencies, and the judge, Raymond B. Keech, kept the question of the past inquiries out of the trial.

Judge Keech also barred evidence which seems to indicate that even the New York City police in September 1941, did not credit Drew's identification of Marzani with Whales. At that time Drew's reports were available in the Police Department. Marzani had just been made executive secretary of the East Side Conference to defend America. The organization was investigated by Inspector O'Brien, and he told the chairman, Meyer Goldberg, then a Republican member of the city council, that he had information showing Marzani was a Communist. Goldberg, now a member of Dewey's State Labor Mediation Board, came to Washington prepared to testify that he went with Marzani to O'Brien's office. The inspector withdrew his accusation and apologized after talking with Marzani. In February 1942, O'Brien voted to elect Marzani executive secretary of the Office of Civilian Defense on the East Side. Judge Keech refused to let Goldberg testify, and shut Marzani off with a rebuke when he tried to get the O'Brien incident into the record.

Drew could not have been produced as a witness at the Civil Service Commission hearing given Marzani in April 1943, because that would have ended his usefulness as a spy. But later that year Drew was exposed and expelled from the Communist Party as a police spy, and if the Government believed his Whales story it should then have tried Marzani for perjury. That it did not do so but on the contrary retained him in a confidential post leads one to believe that checks by other investigating agencies had failed to support the identification with Whales.

Here we come to the crucial point in the Marzani case. Under the statute of limitations the Government last winter was no longer able to prosecute Marzani for perjury. It got around this by using an act passed by Congress in 1944 to extend the statute of limitations until 3 years after the termination of hostilities in the case of fraudulent war-contract claims. If the Marzani conviction is upheld on appeal, the Government can use this same statute to send other liberals or radicals among its present or past employees to jail. As in the Marzani case, it need not prove attempt to defraud or misconduct in Government employment. It need only show misstatement in the original interrogation under oath to which all Government employees are subject. And if, as in the Marzani case, a jury can be persuaded to believe what the Civil Service Commission disbelieved, the unlucky Government employee faces penalties of up to 10 years in jail and a $10,000 fine for each misstatement. That's what hysteria is for.

Ships for Germany and Japan

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. WEICHEL. Mr. Speaker, at the request of the War Department I have introduced a bill to authorize the Maritime Commission to charter vessels to persons not citizens of the United States. The bill provides for the chartered use of Liberty-type ships, that is other than collier or tanker, and vessels designed or convertible for fishing purposes, owned by the United States, and under the jurisdiction and control of the Maritime Commission, which are not necessary to the defense of the United States or the promotion and maintenance of the American-owned merchant marine. The purposes of the proposed legislation is claimed to effect a substantial economy in supplying food to Germany and Japan by authorizing execution of a plan suggested by Mr. Herbert Hoover in his report to the President upon the completion of an economic mission to Germany and Austria, which he undertook at the request of the President.

The plan provided for the manning and operation of Liberty ships, now laid up, by Germans who would transport in these vessels food supplies for Germany. Later this proposal was extended to aid Japan. All of the cost of operation of these vessels with the exception of fuel and certain necessary expenditures at United States ports, could under this bill be paid for in marks or yen, respectively. Further, the plan provided for the chartering of vessels designed for or convertible to fishing purposes. The basis of this recommendation for Germany is that, although adequate supplies of fish are to be found, the present German diet is sadly deficient in protein content because the Germans have lost a considerable part of their deep-sea fishing fleet. It is claimed if the Germans obtain fishing vessels, not only would the German food supply be materially augmented by their catch of fish, but the German requirements for foodstuffs with high protein content, which must now be shipped largely from the United States at great cost, could be materially reduced. It is further claimed that a comparable situation exists in Japan.

Further, the War Department estimates that a minimum saving might be expected by the operation of 75 Liberty ships by the Germans, of about $14,000,000 for the first year of operation. In addition to that figure, it is also claimed that a similar saving would be possible in supplying Japan. While there have been no estimates given with reference to saving by the chartering of fishing vessels to the Germans and Japanese, it is claimed that it would be very substantial.

Mr. Speaker, the bill was introduced at the request of the Secretary of War, together with the representations made as to savings to the taxpayers of the United States in carrying out the relief and economic program to Germany and Japan.

Unjust Tax on House Trailers Should Be Repealed

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. McDONOUGH. Mr. Speaker, the Federal excise tax levied on house trailers is an unjust tax and should be repealed.

House trailers today are recognized as housing, and are being purchased to provide housing facilities when other types of housing are not available. They are purchased by people in all walks of life. In most cases they are used as permanent or semipermanent residences. In many cases they are purchased by people who do not even own an automobile. Yet they are taxed as automotive equipment.

Seventy percent of all house trailers are sold to veterans, and the present excise tax discriminates against them since this tax is not levied on any other segment of the housing industry. The housing situation continues critical throughout the Nation in spite of all the efforts which have been made to speed construction and the production of necessary building parts. Prices are high for all housing, and the house trailer or trailercoach is far less costly than any other type of housing. In many instances it offers the only housing within reach of the ex-serviceman.

Housing is not a luxury and no tax of this type is levied on any type of housing, prefabricated or otherwise, except on house trailers. Trailers were definitely classified as housing by the Federal Housing Administration which classified them as residential and gave their construction a priority over commercial building.

To continue to define trailers as automotive equipment for the purpose of levying excise tax is ridiculous in view of their widespread use as housing. H. R. 3878, introduced by Mr. GRANT of Indiana, a bill which is now pending before the Ways and Means Committee, would remove this unjust excise tax from house trailers. It would end discrimination against those who purchase trailers for use as housing, and I believe it should receive the support of the Members of the House.

Achievements of the Eightieth Congress

EXTENSION OF REMARKS
OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. LANDIS. Mr. Speaker, with the approaching adjournment of the first session of the Eightieth Congress, I wish to discuss the outstanding achievements made by this legislative body this year and extend my remarks with reference to my personal voting record.

The first Republican controlled Congress in 16 years has carried out its program by balancing the budget, cutting unnecessary Government expenditures, eliminating many government controls, enacting remedial labor legislation, and tried conscientiously to reduce individual income taxes.

A few weeks after the new Congress convened, many radio commentators, columnists, editors, and New Deal spokesmen, who advocate a continued New Deal policy of wasteful spending, inefficiency, and regimentation, termed the present Congress a "do-nothing Congress." However, the facts disclose that just the opposite is true.

It is true that the legislative machinery was delayed for nearly 4 weeks during the month of January but this delay was made necessary by the adoption of the Legislative Reorganization Act of 1946, passed by the Seventy-ninth Congress, which necessitated a complete overhauling of committees and committee assignments in both the House and the Senate. Since that time the Congress has enacted a program worthy of high commendation.

On two occasions attempts were made to enact measures which would give tax relief to our taxpayers, but in both instances the measures encountered Presidential vetoes which were sustained. The omnibus labor bill also was vetoed by the President, but this particular veto was overridden. The fact that key bills were ruthlessly vetoed in this session is not a matter over which the Republicans had any control and for which they cannot be blamed.

Through economy efforts the Government for the first time in 17 years has finished a fiscal year with a surplus budget. The surplus for 1947 was almost $754,000,000, which has been applied to the national debt.

The President's $37,500,000,000 request for appropriations for Government operating costs have been substantially reduced, still leaving adequate funds for efficient Government operation.

The Congress has unregimented the American people by doing away with many war controls, to which the executive branch was clinging tenaciously. The worst of these have been wiped out—some by congressional action, others by the President himself before the Congress could act.

As of this date approximately 250 bills have been enacted into public laws. In the field of major legislation, aside from the appropriation bills for departments of the Government, the following bills were acted upon this session:

First. H. R. 1030, to continue excise taxes.

Second. H. R. 1353, to extend the period during which veterans might reinstate their national life insurance.

Third. House Joint Resolution 27, to limit the tenure of the President to two terms.

Fourth. House Concurrent Resolution 20, to place a ceiling on Federal expenditures for 1948.

Fifth. H. R. 2157, to restrict portal-to-portal pay suits.

Sixth. H. R. 1, to reduce individual income taxes effective July 1, 1947. Later, H. R. 3950, which was identical to H. R. 1, except that the tax cut would be effective January 1, 1948, was passed.

Seventh. H. R. 3020, omnibus labor bill—so-called Taft-Hartley bill.

Eighth. House Joint Resolution 153, $350,000,000 general foreign-relief bill.

Ninth. H. R. 3203, housing and rent-control bill.

Tenth. S. 938, $400,000,000 Greek-Turkish aid bill.

Eleventh. H. R. 3342, to provide for information and cultural program abroad—Voice of America bill.

Twelfth. S. 350, to extend the Credit Commodity Corporation chiefly for the purpose of continuing the price-support program for agricultural products.

Thirteenth. H. R. 3961, to increase pensions of Spanish-American War and Civil War veterans and their dependents.

Fourteenth. H. R. 49, Hawaiian statehood bill.

Fifteenth. H. R. 4017, providing cash payments for veterans' terminal-leave bonds after September 1.

Sixteenth. S. 564, Presidential succession bill.

Seventeenth. H. R. 3813, to provide for investigation of loyalty of Government workers.

Eighteenth. H. R. 29, to abolish the poll tax as a requisite for voting.

Nineteenth. H. R. 4127, to liberalize civil-service retirement provisions.

Twentieth. Senate Joint Resolution 148, to terminate consumer credit controls.

Twenty-first. S. 526, to create a National Science Foundation.

Twenty-second. S. 758, armed forces merger bill.

Twenty-third. H. R. 3682, to continue Federal assistance to schools overcrowded by war-incurred enrollments.

Twenty-fourth. Senate Joint Resolution 130, to establish a Federal mine safety code.

Mr. Speaker, during the 1944 elections there were many false and misleading statements made about my voting record in Congress. For that reason, I wish to list my votes on major bills in the first session of the Eightieth Congress so that the people of my district will have the facts. I also wish to explain my reason for various votes on some of the controversial issues. I have made an honest effort to keep my campaign pledges and represent the people of my district to the best of my ability. Of course, I realize that it is impossible to please everyone, but I believe that the majority are in accord with my actions on most of the major issues.

First, an early vote on the measure to continue certain excise taxes on furs, jewelry, liquor, and so forth, was made necessary because the uncertainty of extending said taxes was retarding the buyers' market for luxuries by those who were anticipating a removal of luxury taxes. I voted for continuation of excise taxes which provided more than $1,000,000,000 in revenue to apply on the national debt and would have helped make possible a reduction in individual income taxes.

I supported legislation to outlaw portal-to-portal-pay claims except when required by contract or custom. This measure exempts employers from retroactive claims not filed within 1 year of the period for which pay is claimed. Had not this action been taken many claims suits already filed would have forced an alarming number of businesses into bankruptcy, particularly small concerns struggling for existence.

I supported the Republican-sponsored bills which carried out a campaign promise to reduce individual income taxes and provide tax relief from oppressive wartime tax levels; in addition to providing an incentive for investment capital

which would stimulate business expansion and maintain high production levels. The bill would have increased the take-home pay for approximately 49,000,000 individuals ranging from 30 percent in the lower-income groups to 10.5 percent for persons in the highest-income groups.

Remedial labor legislation was needed to create better labor-management relations and to protect our public in strikes involving their health and safety. I am certain that the public, and particularly the people of my district, are disgusted with strikes which have crippled production. They want to curb the power of arrogant, ambitious, and self-seeking labor leaders. They want protection from Nation-wide strikes which paralyze the country and endanger their own safety and health. They want labor peace. For these reasons I supported the so-called Taft-Hartley labor bill which resulted in enactment of the Labor-Management Relations Act of 1947.

As a member of the House Labor Committee for the past 9 years and as one of the conferees on the labor bill, I have worked hard and long to have a reasonable bill enacted into law. While the Labor Management Relations Act of 1947 may not be a perfect law, it certainly is not a vicious antilabor measure as many radical labor leaders have tried to make the rank and file of labor believe. The fundamental rights of both labor and management are protected in the act and I am convinced that if government, labor, and management will make an honest, faithful effort to comply with the provisions contained in the law, that it will provide the system for industrial peace and prosperity. The Presidential veto of this measure was overridden in the House by a vote of 331 to 83, and in the Senate by a vote of 68 to 25, which indicated a heavy demand for legislation of this kind.

I voted against the administration's request of $350,000,000 for the purpose of providing further relief to foreign countries for this proposed measure granted permission through an appointed commission to use a blank check method of spending the money in any country it chooses. During debate on the bill it was pointed out that the State Department had planned to spend a portion of the money in communistic-dominated countries which shows inconsistency on the part of the Government by asking to help communistic states in one move and in another appropriate money for Greece and Turkey in order to stop communism. Furthermore, no other country joined us in this proposed foreign-relief program and the entire burden of financing and assisting foreign countries rests with the United States alone. From a humanitarian standpoint we should be willing to aid people in devastated countries abroad with our surplus food and materials, however, we cannot continue to consistently finance the rest of the world without eventually bankrupting our own country.

I also opposed the Greek-Turkey loan which had as its aim a military adventure for the purpose of stopping Communist aggression. It is needless for me to say that I now and always have opposed any attempt to force any kind of totalitarian form of government upon our people and I have never hesitated to speak against Communist aggression and call attention to the menace of that foreign ideology. However, I voted against the Greek-Turkey loan for I believe that the situation in Greece and similar problems in the Middle East and elsewhere are in the realm of the United Nations responsibility and not that of the United States or any other one country alone. No one knows how much the new foreign policy we are embarking upon will cost or when that cost will end. Demands for aid will come from many other countries who will contend that they are endangered by Communist aggression. I believe it is of far more importance that we first try to set our own house in order by combating communism here at home. Instead of authorizing huge gift-loans for foreign countries I believe we should give first consideration to providing adequate hospitalization and medical care for our disabled veterans and better welfare benefits for our elder citizens.

Rounding out my votes on major legislation, I supported the following measures: First. To limit the tenure of office of the President to two terms; second, to increase pensions for Spanish American War and Civil War veterans and their dependents; third, the Voice of America bill; fourth, to permit former enlisted men to cash their terminal-leave bonds; fifth, the anti-poll-tax bill; sixth, to liberalize civil-service retirement provisions; seventh, Presidential succession bill; eighth, to provide for investigation of loyalty of Government workers; ninth, to create a National Science Foundation; tenth, all appropriation bills for operation of Government departments.

The first concern of every American is the security of the Nation. The American people are determined that their Government shall henceforth make proper provision for the continuous maintenance of such security. I have consistently opposed compulsory military training in peacetime for this practice is un-American and out-of-date in an era of atomic energy. As an alternate proposal I have introduced a resolution in Congress urging the President, the Secretary of State, and the United States Delegate to the United Nations to work unceasingly for an international agreement to abolish peacetime conscription on a world-wide basis. I have recommended the following defense program for our national security:

First. Seek an agreement between the nations of the world to abolish systems of compulsory military service. This would be greatly conducive to that restoration of peace which is so profoundly desired by all the plain peoples of the world and would release their energies and resources for rebuilding their war-devastated countries.

Second. Outlaw the atomic bomb throughout the world for war purposes.

Third. Establish a Federal school, similar to West Point and Annapolis, for scientific research on atomic energy and bacteriological warfare.

Fourth. Establish first-aid training schools throughout the United States.

Fifth. Establish a diplomat school, similar to West Point and Annapolis.

Sixth. Develop a plan to give us the strongest Air Force in the world.

Seventh. Create adequate stock piles of critical war materials.

Eighth. Place an embargo on oil and other strategic war materials.

In this session I introduced a bill to establish a code of health and safety in the coal mines and was instrumental in having the measure enacted. Under the bill Congress places squarely upon the States the burden of making the mines safe and keeping them safe for the protection of men underground until Congress has had an opportunity to study the problem thoroughly, and makes it clear that if the States do not guard the safety of the miners, the Congress will act further. The adoption of safety standards with respect to ventilation, rock-dusting, storage and use of explosives, roof and rib support, the use of water or other means of dust control where mining operations raise an excessive amount of dust, and prevention of fires, all within underground workings of mines, would go far toward effectively preventing further disasters such as occurred at Centralia, Ill.

Another bill I introduced which received favorable consideration in this Congress was a measure to continue Federal assistance to certain schools that are still overburdened with war-incurred school enrollments and which are unable to provide through local revenue and State contributions adequate schooling for this increased enrollment. During the war period thousands of war workers and their families migrated into war areas, greatly increasing school attendance and imposing severe financial burdens on local school systems. My bill will extend Federal assistance for 1 year to these areas and will include assistance for Perry School Township of Martin County for Crane, Ind., located in the Seventh Indiana Congressional District. Without such assistance many of these schools would have to close or reduce their school term to 4 to 6 months.

I feel that the matter of liberalizing and extending old-age assistance is one of the most outstanding problems confronting this country. Ever since I have been a Member of Congress I have advocated and worked for a reasonable, uniform Federal pension for our elder citizens. In this session I have introduced legislation for this purpose, and although the measure was not considered, I was given an opportunity to appear before the House Ways and Means Committee to testify on this subject. The committee has received other similar testimony and should be in position to act on this important matter next year.

In my testimony I pointed out that the costs of living have soared to a point where the pitiful allowances of the old folks in the form of old-age pensions have become so meager that it is a disgrace to the world's richest nation. Our executive agencies of the Government continue to come to Congress with requests for more and more money to spend in foreign countries to improve living conditions abroad. However, this

country has a tremendous domestic problem in caring for its own needy people, and I believe our Government should give first consideration to the matter of extending and liberalizing our social-security system so that the elders of America can maintain themselves in conformity with the American standard of living. Our responsibility is the elimination of poverty, insecurity, and unemployment in the midst of plenty.

Other legislation which I introduced was a bill to continue 90 percent of parity support loans on agricultural products, including dairy products; a proposed salary increase for elementary and high-school teachers; and a proposed increase in the minimum-wage rate.

The Eightieth Congress, like all preceding Congresses, has not enacted a program entirely satisfactory to everyone. It still has left much to be desired. The fact that cannot be discounted, however, is that the Republican Congress has carried out its promised program—a program that should win wide acclaim by the majority of the people of the United States.

There are many deserving flood-control projects in my district that I would liked to have seen approved. I have been vitally concerned with this particular subject and have appeared before the House appropriation flood-control committee urging that the needed projects be approved and funds appropriated for their construction. Personally I would have liked to have seen more consideration given to legislation dealing with old-age pensions, housing, minimum wages, education, and other matters, in addition to flood control. However, most of these subjects have been considered by various committees where careful and painstaking investigations and hearings have taken place, thereby giving the committees a clear and accurate account of what should be done along these lines which will enable them to be considered next year.

Aid to Foreign Countries

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. SPRINGER. Mr. Speaker, much has been said during the past several weeks regarding our aid to foreign countries, and in the debates in the House this question has taken a very prominent place. I know the people are greatly worried and distressed over this very question. They have read and studied over the many and various conferences; they have read of the huge loans made to many and various countries, and they have become advised of the many irregularities discovered in the extension of relief under the administration of UNRRA. Many of these operations have been very unwholesome, and they have reacted to the ultimate detriment of our own country. In other words, we have been the paymaster—while the people who administered this "supposed-to-be relief" certainly made a miserable failure in the performance of their task. Then, more recently a proposal was presented to the Congress for a rather large appropriation of money for the Voice of America—a plan to advertise the United States of America to Russia, and to other foreign countries. We must not be unmindful that this same Voice of America has been operated during the war, but at a much less cost than was requested for the future operations in time of peace. However, be that as it may, the kind and type of broadcasts, and advertising, that have been engaged for this particular work have been entirely inferior in character, and under such a plan the presentation of our country, our people, our activities and our enterprises were utterly and wholly misrepresented. The purpose of that character of advertising is without any considered judgment on the part of those presenting it.

Mr. Speaker, if Russia could hear, or see, this kind and type of advertising—I doubt if it would reflect any glory upon our country or our people. However, Russia does not get to hear or see that advertising because she has "the iron curtain" which prevents the subjects of Soviet Russia from hearing or seeing anything except that which the Kremlin approves. Therefore, the people of Russia do not get to hear or see any of this advertising. We do not reach the people that we desire to reach, and there is no method whereby they can be reached through this Voice of America.

Mr. Speaker, the fallacy of this position appeals to me because we are in a great financial distress in our own country. We have sickness, hunger, and distress within our own borders; we have the aged people—those who have worked throughout the years and who have helped build our country and make it great—but who have reached the age at which they cannot secure employment; we have distress on every hand; we have the very great problem of housing for our veterans, and for our people—and this problem must be solved in the interest of the people—housing must be provided at a low and a reasonable cost; we have unemployment—we have children who are underfed and undernourished; all of these problems are our problems, and we must solve them. Yet, we have those in our country, and in our Congress, who would, apparently, yield everything to any or every foreign country—and let our own people continue in their distress. That policy is far flung from my own way of thinking—because I have ever firmly believed that we should take care of our own people first, and then from any excesses we might collect—or from any surplus funds we might have—we can aid and assist in the distress in other countries. We have now reached that state at which we are in grave danger of a great financial disaster; no one can predict just what may happen in the future; but, if and when we suffer because of the great generosity of those in power, and those who seek to share that same generosity—while all will suffer together—yet, those who have aided in bringing about such a disaster will have to answer for it. I am happy to say that I will not be in that group, because my record is crystal clear in my position of trying to aid our own people, and to save our own country, without making unjust and unfair promises and commitments to others who are well able to support and sustain themselves during these days of reconstruction.

Mr. Speaker, I firmly believe in my own country, and in our form of government. I believe in our own people, and it is my sole purpose to aid them in their distress. This should be done—and this should be done first. And, too, I am not unmindful of the sad plight of those nations in distress—but many of them were in that same sad plight long before World War II, and they will continue to be in a very sad plight regardless of the money, aid, and sustenance we may give unto them now or in the future. Many of those nations are in far better financial condition than we, and many of them can and should begin to make their own way, again—and without looking to Uncle Sam for a continuous hand-out.

Ours is a great Nation. We must guard it—we must exercise care—we must look to the future. We must not sap away our resources to the extent that we will become weak and dependent. We must wage the fight to continue to be strong. And if and when we become involved in a debt that is too great—when our own people have a desperate struggle to continue to live—when the weight of the burden becomes too heavy and the people give up in despair—then the point of grave danger has arrived. Under those conditions we cannot continue to be great and strong among the nations of the earth. Let us guard carefully against those perils.

The International War of Nerves

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HCUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. BENDER. Mr. Speaker, I trust that every Congressman is well aware that the dozens of "help Europe" speeches and the current international circus which our newspapers daily report are altogether and entirely for the psychological benefit and the adult education of the Members of this House.

Mr. Speaker, to borrow a phrase, it seems that a war of nerves is being waged by our State Department on an international scale against the 435 men and women who have the honor to represent the American taxpayer here in the Capitol of the United States.

The Greek-Turkish fiasco convinced the bright boys at the State Department that the Congress needs not only a propaganda barrage from all over the country but also an international propaganda heat-up.

For my part, I had a bellyful of their psychological war of nerves during the Greek-Turkish military alliance deal.

All of us know today that the Greek-Turkish program is a failure. The three hundred million we voted can never accomplish its purpose because political democracy does not exist in Greece and there is no way to reconstruct the economy of Greece until the present corrupt and vicious monarchy is abolished and a goverment established which has the support of the great majority of the Greek people. Obviously also, the $100,000,000 which we are pouring into that international cesspool of greed and treachery, namely, Turkey, will never change the basic situation in the Middle East.

That famous and nauseating heat-up with which the President surrounded his Greek deal was designed to hide the basic fact that the whole business had one purpose; namely, to consolidate British control of the great tremendous oil reserves in the Near and Middle East.

The country did not like the smell of British oil. The whole policy was driving prices up and living standards down. Upon second thought, the State Department has decided to bury the Truman doctrine and we are now being treated to another psychological war of nerves labeled the Marshall plan.

This time, Mr. Speaker, the President and the State Department, along with the Government of Great Britain have decided that the Congress needs a 6 months' build-up, a campaign to persuade us that we have got to rob the American taxpayer for the benefit of God knows what.

The great psychological warfare now under way will come to a climax in October and November. The Council of Foreign Ministers will meet in November of this year to decide finally what to do with Germany.

Of course, there is nobody in the House who has ever seen a clear and definite statement concerning the so-called Marshall plan. There is nobody that has any specific idea of what is intended by this famous Marshall plan. There is nobody that can say where such a program begins or where it ends and there is nobody who has suggested what the effect of such a plan will be on our domestic economy. No one has said what the Marshall plan will mean to John Q. Citizen, the American taxpayer, in terms of new taxes. No one has said whether we will be able to reduce taxes. No one has mentioned the fact that a foreign Santa Claus program of five to ten billion dollars a year will reduce American living standards and push prices up.

It is a curious thing, Mr. Speaker, that the Administration expects to blame the Republican Party for the present inflation throughout America in the 1948 elections while, at the same time, the Administration by its foreign policy, is pushing prices up and up.

Where does the program begin and where does it end? What will its effects be? What, in fact, is the Marshall program? Does any Member of the House know the answers?

Well, Mr. Speaker, it seems that the Congress will have to wait until France, Britain, Portugal, and Luxemburg have had a series of meetings encouraged by our State Department and we will have to wait until they present a bill of particulars concerning what they want us to give to them and on what terms. In this connection, I wish to protest the exclusion of Lichtenstein from this circus.

Mr. Speaker, all of us, I think, are grown boys. We dislike being played for suckers. The Truman doctrine guaranteed the British by force of American arms their holdings of the great oil reserves of the Near and Middle East. Now, I would like to suggest to the House that the sum and substance of the entire hullabaloo currently called the Marshall plan is nothing but an effort to put the Ruhr, industrial base of the Nazi war machine, back into full production of coal, iron, steel, and armaments for the prime benefit of the British Empire.

Actually, Mr. Speaker, in international affairs there are only a few important economic elements. There is oil. The Truman doctrine and the Greek-Turkish deal took care of oil for the British. Second, Mr. Speaker, there is coal and iron. Who has got the coal and iron? Well, Mr. Speaker, the British saw to it that they got the Ruhr. Russia, Britain, the United States, and France were unable to agree at Moscow on what should be done with the Ruhr.

So, Mr. Speaker, the vast fog of words and headlines actually hides one basic purpose—to cover up the fact that Great Britain wants to put the Ruhr back into operation for its own benefit and for the furnishing of coal, steel, iron, and armaments to Britain and France. This is the substance, this is the beating heart, this is the real intent of the Marshall plan.

Mr. Speaker, some people have said that the Marshall plan is basically different from the Truman doctrine. This, of course, is nonsense because the foreign policy of the administration is very clear in its intent. That foreign policy is a military policy of entangling alliances. It is a policy which calls for the rearmament of every dictatorship and reactionary government in the world. It is a policy which called for the rearmament of South American governments, regardless of whether they are dictatorships. It is a policy which pours out billions upon billions of American wealth every year here at home on useless and obsolete arms of all kinds. It is a policy demanding universal military conscription. It is a policy which basically bypasses and undermines the United Nations and the entire concept of collective security against aggression.

To this end, the Truman foreign policy is daily committing the United States to maintain the British Empire. Our armaments are standardized; we lend billions to prevent British collapse; we commit our men to defend their oil reserves; now we are undertaking to build up the Ruhr for their benefit. The key to the entire Truman foreign policy is a complete alliance with the British Empire.

The devilish stupidity of pulling British chestnuts out of the fire is nowhere better illustrated than the events of the present moment. Bevin is talking about the terrible Russians in Paris while the British trade mission in Moscow reports excellent progress. At the same time that our State Department pushes hard against the eastern European governments, the British are daily making business deals with them. Is it possible, Mr. Speaker, that the British tell us how horrible the Russians are in order to get us to finance the rebuilding of the Ruhr for their benefit; and is it possible that they tell the Russians what terrible people we are so that the Russians do business only with the British? Is it possible, Mr. Speaker, that the British are playing both the Russians and us for suckers? Is it possible, Mr. Speaker, that the British in 1949 or 1950 will begin to wage economic and political warfare on us once they are back on their feet? Is our State Department being led around by the nose; is its policy based on British Empire security instead of on our genuine national interest? In my opinion, the Greek-Turkey deal was arranged for British security rather than ours. Likewise the present proposal to reconstruct the Ruhr.

In the meantime, terrible damage to world peace is being done. The Truman-British Empire alliance policy is daily eating away the vitals of the United Nations—the one and only hope of mankind for enduring peace. The Marshall plan and, as a matter of fact, the original Marshall speech of June 5 at Harvard, does not once mention the United Nations. I called the attention of the House to that fact immediately following that speech. And now as the great psychological war of nerves is waged against the Congress, do we find any single speech by any one of the dozens of State Department propagandists mentioning the part which the United Nations will play in this proposed Marshall plan?

As a matter of fact, Mr. Speaker, the United Nations has a European commission in which all European nations are represented. Any plans developed by that commission can be adopted by majority vote. No nation is in a position to block those plans and yet President Truman and Secretary of State Marshall have chosen to institute entirely new machinery outside of the United Nations. Why, Mr. Speaker? Because the basic intent of the Marshall plan, just exactly as the basic intent of the Truman doctrine, is nothing other than the bypassing and undermining of the United Nations. Our intent is to consolidate a world economic and military alliance with the British Empire. And all of these parts and pieces, Mr. Speaker, of the Truman foreign policy mean basically one thing—higher taxes, higher and higher prices, lower and lower living standards for the American people. This administration, because it is committed to a policy which destroys the United Nations, and to a policy which will lead to ultimate war, deserves the defeat which the American people will give it in November 1948.

Sanity needs to be restored to our foreign policy as well as to our domestic policy. The first premise, the only premise on which American foreign policy can function, is the building up, the growth, and development of the United Nations for collective security for peace. The Marshall program absolutely, completely is opposed to such a position. It is another part of the entire Truman

military alliance policy which can only lead to the division of the world into two armed camps.

Mr. Speaker, I trust that the current international war of nerves being waged for the benefit of the 435 Members of this House will end in dismal failure. I trust that the House, when it returns to Washington in October or November, will once and for all make absolutely clear its basic disagreement with a policy which drives taxes and prices up, living standards down; a policy which destroys the United Nations and launches this country on an unlimited armament race.

First Session of Eightieth Congress Aided Veterans

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. SPRINGER. Mr. Speaker, as we approach the close of the first session of the Eightieth Congress, I desire to commend the Members upon the forthright step that has been taken during this session, on behalf of the veterans of our wars; and especially do I wish to commend all of the Members who have so consistently, and so diligently, contributed to the passage of legislation which will redound to the benefit of those who have borne the brunt of battle in the past. I am particularly proud of the fact that the Congress has corrected one very grievous error, which was made in the past—an error that was prompted in the other body by the attitude of the administration—and an error that was prompted by the President—whereby the Senate declined to pass legislation which would pay to our GI's of World War II their terminal leave in cash. May I say that one of the very potent factors involved in this legislative matter was the fact that all of the commissioned officers had been paid their terminal leave in cash—but the GI's, the boys who fought World War II—the boys who lived in fox holes and who endured every element of danger and distress—were denied this payment in cash. There was but one exception, and that exception was that they could apply their bonds, which were payable in 5 years, to the payment of the premiums on their Government life insurance policies. That was the sole and only circumstance under which they could receive a credit for their bonds. Under every other circumstance these boys, the veterans of World War II who had not been fortunate in that they were commissioned as officers, were compelled to wait for a period of 5 years before they could cash those bonds which were issued to them.

Mr. Speaker, this appeared so unfair, and so unjust. Many of the GI's needed that money when they were discharged; many of them had wives and famililes, and they desired to establish a home, purchase furniture, or to engage in some business whereby they could support themselves and their families; but by the attitude of the administration in power, they were denied that right—a right which was merely simple justice to them. The Eightieth Congress, by the bill which was approved by the Armed Service Committee, and which was sponsored by Representative BLACKNEY, the able chairman of the subcommittee reporting out that measure, this wrong was corrected, and it was a high privilege and a distinct pleasure for me to aid in every possible way to secure the passage of that worthy piece of legislation. It was one of the must pieces of legislation upon my calendar—and I made my contribution to the end that this praiseworthy legislation was passed by the House.

Mr. Speaker, may I say that the first session of the Eightieth Congress has passed many beneficial pieces of legislation for our veterans. When one scans the scroll of legislative matters, passed by this session, the information will be revealed that this session of this Congress has given real aid to our veterans. And, may I say, that it has been my very great pleasure to aid in each and every piece of legislation for their benefit. We owe that great debt of gratitude to our veterans—a debt which can never be repaid—and the very least we can do is to make life a little easier for them, to heal their wounds insofar as possible, and to give them a pat on the back at every turn in the road—this we can do, and we should certainly do no less for them.

Fruits of Loyalty

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Wayne News-Sentinel of July 24, 1947:

FRUITS OF LOYALTY

Whenever organized labor makes gains in higher wages and shorter hours, it can never realize the maximum from those benefits if they are unattended by good relations with management.

It is, of course, a two-way proposition. If management concedes grudgingly it may not get the better results that more pay ordinarily would be expected to bring.

Or if unions browbeat management into submission, they cannot expect to have achieved a friendly relationship.

The entire problem resolves itself into a question of loyalty. No group of workers has found a more timely recognition of this truth than the Wisconsin State Federation of Labor (AFL).

It is distributing a poster on which appears these words from the pen of Indiana's Abe Martin:

"If you work for a man, in heaven's name work for him. If he pays you wages which supply your bread and butter, work for him—speak well of him—stand by him and stand by the institution he represents. If put to a pinch, an ounce of loyalty is worth a pound of cleverness.

"If you must vilify, condemn, and eternally disparage, resign your job and when outside damn to your heart's content, but as long as you are a part of an institution do not condemn it.

"If you do so, then you are loosening the tendrils that are holding you to the institution, and at the first high wind that comes along you will be uprooted and blown away and probably will never know the reason why."

It's an entirely different kind of wind—a refreshing change—that's blowing this solid philosophy into the offices of 1,100 Wisconsin locals.

And it goes without saying that more of the same could roll away the misunderstanding and rankling that often cloud management-employee relations in many other States, including our own.

Depression Breeders

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. BUCHANAN. Mr. Speaker, under permission to extend my remarks, I include a letter entitled "Depression Breeders" that appeared in a recent issue of the Washington Post:

DEPRESSION BREEDERS

The Republican Congress has designed a five-point plan for lasting depression in the price-control, tax, labor, rent, and wool bills.

By prematurely removing price controls, the road to depression was opened as a dislocation in the supply-demand situation made real income gravitate to the investing class and away from consumers. Then, to pave the road to ruin with rationalization, the Congress argued that, since taxes are raised on a graduated basis, they should be reduced likewise. This in the face of the removal of price controls which has already returned a disproportionate share of the national income to the "haves" while usurping the war savings and current earnings of the "have nots."

These two measures in themselves were almost sufficient to successfully bring on a depression. But the tax bill was vetoed and there still was the uncontrolled labor variable. So, while the archengineers of freak legislation were being variously photographed in the press with victory grins of maniacal intensity, the Taft-Hartley bill was sent to the President and plans were being laid to resubmit the tax bill. Thus, while prices remained high, labor's efforts to obtain comparable wages could be blocked.

It is hard to explain the rent bill except as the product of a group of minds geared toward developing a depression. For, unlike the price-control, tax and labor bills, the rent bill does not aid the rich and hurt the poor; it hurts everybody except the real estate owners. By taking away part of the consumers' dollar for rent (as a starter), his purchasing power would decline and he would have less to spend on manufactured products. This would result in curtailed production, increased unemployment, lower manufacturing profits, decreased reinvestment because of lower profits and shrinking markets It would help "bust" the economy in a most adequate fashion.

But these measures are all domestic. We have an internationally minded Congress. These American leaders now realize that, in order for the free-enterprise system to function, international trade is a basic essential.

Therefore, the wool bill, which, unvetoed, would have been a wonderful step toward crushing free trade and would have given Russia's quest for European hegemony greater inspiration than the sound of "no" gives to Gromyko.

In addition to the master five-point plan, little side efforts like undermining veterans and low-cost housing and practicing false economies, from slashing funds for Internal Revenue invesigators to holding up appropriations for European construction, have contributed to the "Drang Noch Depression."

Naval Appropriations

EXTENSION OF REMARKS
OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. LODGE. Mr. Speaker, although I regret the reductions in naval personnel at this time, I believe that the managers for the Senate and the managers for the House, in conference on the Navy appropriation bill, have, in many respects, achieved a fair and satisfactory solution of their differences.

In some areas the resulting bill provides less money than I believe necessary in the light of the world situation. It is less than that recommended by the President in his budget message in January of this year. Since that time the world situation has not improved.

The Moscow Conference has been held and was adjourned without the minimum accomplishment of a treaty with Austria for which the United States had hoped. The recent coup in Hungary, the war in Indonesia, and the guerrilla fighting in Greece symptomize the explosiveness of the international scene. The withdrawal of the Russians from the Paris Conference is further evidence of the dangerous implications of the foreign dilemma. We shall ignore these ominous portents at our peril. Nevertheless, much good was accomplished in conference. It is my understanding that the appropriations provided by the conference report will permit a Navy of 395,000 enlisted men and 43,000 officers. This is all to the good.

Indeed, the original House action was based upon a budgetary error. The President's budget message submitted to the Congress early in January 1947 recommended that the Navy, for the ensuing year, should be comprised of an average of 425,000 enlisted men and 90,000 enlisted marines, together with proportionate officer complements. It was contemplated that an active fleet would be maintained of nearly 900 ships, of which over 300 were in a combatant category. It was contemplated further, that over 8,000 aircraft would be maintained, of which 6,130 would be allocated for regular air operations and approximately 2,000 allocated for Naval Reserve training.

The President's budget message called for $3,663,000,000 in cash appropriations as well as $170,000,000 in contract authority for new aircraft, and $90,000,000 in contract authority for high-priority public-works construction. The amounts recommended in the budget were considered to be the minimum necessary in 1948, provision for items not absolutely necessary being deferred until a later date.

An examination of the hearings and reports of the House and Senate Committees on Appropriations reveals that the funds requested in the budget message would not have provided for the numerical strength I outlined a moment ago. Part of the discrepancy might be attributable to the almost impossible task of making firm estimates of dollar requirements months in advance, during a period of substantial and rapid price increases.

The Senate committee which was able to continue its study of the whole problem until a few weeks ago took testimony that the budget would in fact have provided funds for an enlisted strength of only 400,000 enlisted men in the Navy and 80,000 marines, with a reduced complement of officers. The budget message on the basis of current information would have provided for an active fleet of only 850 ships, 293 in the combatant category. It would have provided for the operation of only 5,793 aircraft, in addition to those assigned for Reserve training.

Within the limits of funds that would have been provided by an appropriation of the full budget request, we find, therefore, that naval strength already had been effectively reduced below the numbers contemplated as necessary at a time when the world situation was far less critical than today.

The action of the House, as a result of testimony heard in January and February of this year, reduced the Navy's funds for 1948 to $3,285,000,000, plus certain contract authority for construction of aircraft. Based on information available to the Congress this action had the effect of reducing the average number of enlisted men in the Navy to 355,000 although providing for an average of 80,000 marines. It had the effect of reducing the ships of the active fleet to 765, of which only 269 would be in the combatant category. The personnel reduction would have reduced the number of operable aircraft to 5,541, but with the rising maintenance and operation costs the funds provided would have permitted only 5,100 aircraft to be maintained in an operable condition. This certainly was not the intent of the House when the Navy's appropriation bill was passed. Our intent, I believe, was clearly stated by the distinguished chairman of the Naval Subcommittee on Appropriations when he was quoted as saying that it was not the intent of the committee to take a ship out of the fleet or a plane out of the air.

I am quite agreeable to practicable and economical reduction in expenditures consistent with national security. I believe that this was the motivating factor in the Senate committee's desire to keep the Navy within an expenditure limit somewhat below that which would have resulted from the House bill.

In attempting to make a distribution of funds which would keep naval expenditures from exceeding those allowed by the House, the Senate was faced first with the problem of determining the amount required to maintain the necessary naval personnel. The Senate committee report indicates that an average of 395,000 enlisted men and 43,000 officers would be maintained in 1948. Within these numbers it was, I believe, contemplated that the Navy could, by doing its utmost to achieve proper utilization of its personnel, maintain the number of ships in the active fleet and the number of operable aircraft that would have been maintained had the President's budget request been accepted without changes.

While restoring 1948 funds for the support of a Navy of this size, the Senate decided to make rescissions of certain usable funds which had been appropriated in prior years. It was felt that by an analysis of all of the work now under way in the Navy, certain projects could be curtailed to offset the funds restored in the 1948 bill. Accordingly, the sum and substance of the Senate action was, it seems to me, to use new funds and old funds to provide the greatest strength for 1948 within the expenditure limitations. I am gratified that this vital question has been answered in the conference report which is now law.

The original House action reduced the budget request by some $377,000,000. Senate action on the bill restored about $176,000,000 in 1948 funds but rescinded $161,000,000 of usable funds appropriated in prior years. The conferees reduced the amount of the Senate restoration by some $40,000,000 resulting in a net restoration in 1948 funds of some $136,000,000 but agreed to require the full rescission of $161,000,000. Over-all the amount of usable appropriations available to the Navy is therefore $400,000,000 less than contemplated in the President's budget message. The real gain was not in money but rather in a redistribution of funds among the numerous appropriations to achieve greater effective Naval strength in 1948 than would have been provided by the original House bill.

The reduction in total usable funds available makes it imperative, however, that provision be made for some degree of flexibility among the numerous appropriations in order that the country may get the maximum security out of this reduced sum as changing circumstances may require.

For this reason the Senate bill provided that—

> The Secretary may transfer not to exceed 5 percent of any of the foregoing appropriations to any other appropriation or appropriations made by this act, but no such appropriation shall be increased more than 5 percent as a result of such transfer: *Provided*, That a quarterly statement of any such transfers shall be transmitted to the chairman of the Appropriations Committees of the House of Representatives and of the Senate.

Both the Secretary of the Navy and the Chief of Naval Operations feel that in providing for the Navy during this uncertain period, the Secretary of the Navy should be granted flexibility within the limits of appropriated funds in order that there may be maintained a proper balance between the optimum fighting

forces and the shore establishment required for their support.

I note that the Navy had this authority during the past year and on inquiry I believe they used this authority prudently and reasonably. As a matter of fact, such transfers aggregated only $4,700,000, although 5 percent would have permitted transfers up to $235,000,000. It was used primarily to help provide for items required as a result of congressional action after passage of the 1947 Appropriation Act.

The Senate hearings provide a most logical reason:

In problems of fiscal management, the relationship of the Navy to the Congress is similar in many ways to the relationship of a management unit of a large corporation to its board of directors. The board of directors of such a corporation allocate to the management unit specific sums for specific purposes but allows the management units discretion to make minor adjustments between the allotments to meet unpredictable events. Good corporate business practice offers a sound analogy for the fiscal administration of a Government department.

It is vital that in the troubled times ahead—when the Congress is in recess—the Navy should, within the limits of the funds made available, have this moderate flexibility. I hope that this defect in the final bill may be corrected in the next session. This is no time to cut down on our own capacity for effective action.

Labor Relations

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. KEATING. Mr. Speaker, one of the most valuable parts of the Labor Management Relations Act of 1947 is title IV, creating a joint committee to study and report on the basic problems affecting friendly labor relations and productivity. It is provided that this committee shall report to the Senate and House of Representatives not later than March 15 next year, giving the results of their study and investigation and recommendations, if any, as to necessary legislation.

Probably no one who voted for this bill would contend that it is perfect or cannot be improved. Time alone will demonstrate the merits and deficiencies of the legislation. Certainly to date the inaccuracy of the charges that it is a "slave labor bill," that it will "destroy collective bargaining," or that it will "strike a death blow at labor unions," has been indicated by the fact that, following its passage, the workers in the coal mines throughout the Nation under the leadership of Mr. John L. Lewis have negotiated a contract which has been widely acclaimed as the most favorable in the union's history.

It is my earnest hope and sincere conviction that this measure will yield rich returns to the working men and women of this country, both within and outside labor unions, in happiness, properity, and freedom from restraint and that it will advance the best interests of the general public by reducing industrial strife. In any respect in which it proves to fail in achieving these objectives I shall be in the vanguard of those seeking alteration of its provisions.

There is one respect, however, in which, I have already been convinced, amendment is needed. In section 304 of this law it was sought to amend section 313 of the Federal Corrupt Practices Act, which had theretofore prohibited contributions by corporations to political campaigns. By amendment we provided that the same restriction should apply to labor organizations and in making that change we added the word "expenditure" to the word "contribution" in this section. The question has been raised whether, under the wording we have adopted, a labor newspaper is prohibited from advocating the election or defeat of a candidate for Federal elective office.

In my home city the Labor News is published weekly and is designated as the official publication of the American Federation of Labor Unions of Monroe County, affiliated with the Central Trades Labor Council. It is regularly entered as second-class mailing matter at the post office, has a control board, consisting entirely of union officials, a business manager, an advertising manager, and an editor. It carries general news, although predominantly informative material regarding the doings of various labor unions. It carries paid advertising and sells at 5 cents a copy, receiving subscriptions from the general public. I understand, however, that it is delivered free to many, if not all, of the members of labor unions affiliated with the Central Trades and Labor Council. The dues paid by members defray in part the cost of publication.

The Labor News in the last campaign officially opposed my candidacy in its news columns and in vigorous editorials. So far as I am aware, such continues to be the editorial policy of this paper.

On June 30 the editor wired for my views on the right of a labor newspaper under the Labor Management Act to publish political comment. My reply was as follows:

Provision in new Labor Management Relations Act amending Corrupt Practices Act to apply same prohibition against political contributions or expenditures to labor organizations as has applied to corporations does not, in my opinion, prevent editorial comment by any legitimate labor newspaper. Ban only applies, as I interpret new law, to so-called house organs financed entirely by corporation or labor organization funds. To construe statute otherwise would, in my judgment, be violative of constitutional bar against abridgment of freedom of press. In voting for this bill I have supported a measure which I conscientiously and sincerely feel will advance the cause of the workingman, strengthen collective bargaining, improve industrial relations, and react for ultimate benefit of labor, management, and consuming public. If, however, legitimate labor newspaper disagrees I shall defend to the limit its right to publish any fair comment in opposition. As a lawyer, I would welcome the opportunity to defend Labor News, without compensation, against any charge that its publication of a truthful attack upon me or other Members of Congress who voted for the bill violates the law. I may sometimes disagree with your views, but in the words of Voltaire, "will defend to the death your right to express them."

Various suggestions have been made for legislation which could not possibly be construed as violating the first amendment in abridging the freedom of the press. It has been suggested, for instance, that this entire section be repealed. To do that would be again to open the floodgates and permit corporations to expend unlimited funds in promoting the candidacy of their favorites. To meet a present deficiency we would be creating a greater evil.

Another suggestion is embodied in the amendment proposed by the distinguished Senators from New Hampshire and New Mexico [Messrs. AIKEN and HATCH] in S. 1613 wherein they eliminate from the section in question the words "or expenditure" where they occur. By this change only direct contributions fall within the prohibition of the statute and thereby no restriction is placed on incidental expenditures for political purposes. This probably would meet the specific problem regarding publications by so-called labor newspapers. It would at the same time so narrow the scope of existing prohibitory provisions that the salutary effects of the law both as regards corporations and labor organizations would largely be dissipated. Either could embark on a wild orgy of spending in a political campaign just so long as there was no direct contribution made to a political candidate, political committee or organization.

I have today introduced a bill which I believe on the one hand retains the substantial advantages now embodied in the law prohibiting political expenditures by any group of our economy while at the same time indicating the intent of Congress not to interfere or abridge in any way the free publication of an expression of political views either by corporations or labor organizations. This measure amends section 313 of the Corrupt Practices Act by adding the language:

Provided, however, That it shall not be a violation of this section for a corporation or labor organization to make expenditures in connection with the publication or distribution of a newspaper or news magazine, regularly published at stated intervals not less frequently than monthly.

It may well be argued that this provision is not necessary since a construction of the existing language in such a way as to prohibit such publication would lay this section of the law open to successful challenge for unconstitutionality. In my judgment, we should not wait for possible judicial condemnation of the statute. I am certain that it was never the intention of those who voted for this law to deprive any person or any group of persons of the free and untrammeled privilege of expressing their political views. We should now make that intention clear in a forthright manner by appropriate amendment.

Under leave granted I include editorials on this subject from the New York Times, the New York Herald Trib-

une, and the Rochester Democrat and Chronicle:

[From the New York Times]

AMENDMENT NEEDED

For nearly a quarter of a century it has been unlawful for a corporation to make a contribution for or against a candidacy for national office during a campaign. The theory behind this prohibition was that stockholders pay in their money to corporations for general corporate purposes and that it is improper to allow any part of those funds to be used for political purposes without the specific authority of the stockholders, since the corporation may be spending money in a manner completely opposed to the views of some of the stockholders who supply it. The new Taft-Hartley Labor Act endeavors to extend this prohibition to labor unions, and to expand the restriction to include expenditures as well as contributions. The theory behind this amendment is entirely similar, namely, that employees pay dues to their union for the normal functioning of the union in their behalf, and if the union expends any part of its funds for or against a candidate during a campaign without specific authorization from the dues-paying members it may well be that the union is spending it for a purpose diametrically opposite to the views of some of its members.

The basic principle established here seems to us to be a proper one; but the inclusion of the word expenditure as well as contribution has raised a question which bears on the freedom of press and speech.

During the debate on the new law it was Senator TAFT's view that a union could issue a paper and editorially comment for or against a candidate only if the expense did not come from the union treasury and if the cost of publishing the paper came from subscriptions or sales to the union members, so that the union members would have a choice of purchasing it or not and thus a choice of contributing toward the expense of the publication. He maintained that a union which regularly publishes a newspaper for the enlightenment of its members and pays for the paper out of the union dues collected in the union's treasury is prohibited by the amendment from commenting editorially, because that would be a union expenditure in support of or against a political candidate which would violate the act.

It is at this point that questions arise. In order to be free to comment editorially and express opinions on political candidates during a campaign, is it right to require that whatever is produced by the union for that purpose be individually subscribed for? Has it not become such an integral part of the conduct of a union's affairs to publish a union paper, in order to keep its members informed of their rights, of their union's activities, and of their problems, that it can be considered a regular part of the union's business to publish such a paper and pay for it out of union dues; and if that be so, does not a restriction which prevents editorial comment on a political candidate violate the freedom guaranteed to all citizens by the Constitution? Do not union members recognize that a part of the dues which they pay will be devoted to the publication of such a paper, and that if such a paper were not published the dues could be less? Certainly, in many cases, these questions must be answered in the affirmative.

We do not believe there is justification for the statements made by some of the new law's critics that a corporation which is in the business of running and publishing a newspaper is prevented from editorial comment. It would, however, seem to us to be clear that the evil of infringing the freedom of the press or freedom of speech is so much greater than the evil which the law attempts at this point to correct that this section of the act should be amended, in order to clear away all doubt and make it certain that the inclusion of the word "expenditure" does not interfere with the right to free expression of opinion.

[From the New York Herald Tribune]

REQUIRING CORRECTION

The wording of that section of the Taft-Hartley Act designed to curb the political activities of corporations and unions is a sample of those imperfections in the law which will need either court or legislative correction. As this section reads it would seem to forbid either the general press, corporate-owned, or the labor press from expenditure on ink paper, type, or editorial talent to influence the election of Federal officers or their choice as candidates in primaries, conventions, or caucuses. In other words, as studied by the Department of Justice, it would appear to be a press gag which is clearly unconstitutional and quite as clearly also beyond the intent of Congress in its enactment.

That intent, of course, was to cut off contributions to campaign funds from either management or union labor sources, to reinforce in this particular the corrupt practices statute. Probably there was not a Member of either House in Congress, whether in favor of the law or in opposition, who foresaw an interpretation of this provision which would interfere with the freedom of the press. And one can be fairly sure, when a test of it comes before the courts, they will take the plain intent of Congress into consideration and be guided by the rule of reason. Should they, on the contrary, throw the section out, that will not invalidate the rest of the law's provisions but simply call for an amendment eliminating all ambiguity.

The Corrupt Practices Act of 1925 prohibits national banks and corporations from making contributions toward a Federal officer's election. The Smith-Connally wartime Labor Disputes Act, now dead, included labor unions in the ban, but neither made mention of primaries, conventions, or caucuses. This left a serious loophole which the Taft-Hartley provisions, in addition to preventing organizations from electioneering, would close. It is important that it be closed, but certainly not at the expense of muzzling the press of the country, whatever its political complexion.

All of which points to the wisdom of Congress in providing for a joint committee to study the working of the new law and to suggest changes as the occasion requires. No doubt the need for other changes besides the one we have been discussing will be indicated sooner or later.

[From the Rochester (N. Y.) Democrat and Chronicle]

TOUCHES VITAL RIGHT

Senator AIKEN, Republican, and Senator HATCH, Democrat, have introduced a bill to amend the recently enacted Taft-Hartley bill by eliminating the phrase "in connection with" in reference to political contribution by unions.

This is the phrase on which union leaders and, as we understood, Senator TAFT himself, based their view that it would prohibit a newspaper financed by union funds or one published by any corporation from commenting on candidates for Federal office.

The phrase is one of those which lawyer-legislators love to put into bills; they are intended to capture all the situations which might be neglected otherwise. The New York State antidiscrimination law has such a phrase which we attacked as unenforceable and probably unconstitutional both before and after it was passed.

Senator TAFT told a Knight newspaper correspondent he would be inclined to interpret the phrase liberally, and might be in favor of a clarifying amendment.

As we have said here before, any application of the law which would prohibit anyone, union, corporation, or individual, from writing and publishing freely views on candidates or on any other question would be a direct violation of the constitutional prohibition against Congress abridging the right of free speech or a free press.

The disputed application could not be constitutionally made, in our view, and a proper amendment should specifically exclude publication or other comment as a forbidden object of expenditure.

The free press right is as much the right of the labor press or of any other special press as it is the right of the general press. It is, fundamentally, the right of any persons or group to express themselves in print. Abuses are properly actionable under existing laws.

National Land Policy

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. JENSEN. Mr. Speaker, there is a growing interest in the protection of our Nation's resources. Until we got into World War I, and more particularly World War II, little thought had been given as to whether we would ever run short of food, fiber, coal, oil, copper, and other essential materials. But during the last war period these essentials began to disappear like they were being swallowed up. Now, all earnest thinking people of this country are giving much concern as to how long some of our national resources will last. This is as true for land from which our food and fiber supply comes, as it is for minerals such as copper, oil, and other natural resources.

Our land problem is not new. Congress began dealing with land from the earliest. Many of you know of the debates during the Jackson administration out of which came the land-settlement policy. The question in these debates was, Shall land be sold to the highest bidder or shall the country provide cheap land to settlers who would clear it, make a living for themselves and contribute to the rapid development of the country? All of you are aware that this latter policy contributed much toward developing our Nation so rapidly and making it a great country.

We are faced with a somewhat similar situation today. We have a great country. To keep it so and maintain leadership in the world, our Nation must adopt a policy that will conserve its land and water resources.

The Federal Government has a great responsibility for doing its part in maintaining food supplies for the people of the country. As you know, the industrial cities, particularly those along the eastern seaboard, depend largely on the midwestern Corn Belt, the Great Plains Wheat Belt, the western ranges, and the vegetable and fruit growing southern and

western parts of the country for much of their food. It is through the Federal Government that the interests of the urban population will be protected so that land resources are maintained for future food supplies. Furthermore, we are now faced with supplying food to war-devastated countries in Europe and the Orient as a means of establishing peace and reducing starvation. All of these demands on the land for food hasten permanent damage to the land by soil erosion and fertility depletion. Therefore, it is most appropriate and urgent that we give immediate attention to the establishment of a national land policy based on the conservation of our Nation's soil and water resources.

Farmers and ranchers are showing great interest in soil conservation. They have learned that to use their land properly and to treat it with the practices and measures that it needs, not only produces more, but increases their net earnings. Therefore, it is in the interests of farmers, the tradesmen, the industrial workers, the professionals, and all the people of the Nation that we give thought to protecting our future food supply. Therefore, I am today introducing a bill which provides that the Secretary of Agriculture be given the responsibility of cooperating with the States through local governing bodies of farmers—soil conservation districts—in carrying out a Nation-wide soil and water conservation program.

The bill provides that technical assistance be supplied to farmers and ranchers in planning and applying conservation practices and measures, that conservation materials, equipment, seeds, and trees be granted where such materials are essential to conserving the land resources but does not provide cash payments. These grants in aid are to be made only after the local governing bodies of farmers determine that they are needed, and only then, when it is found in the interests of the Government that the land and water resources be treated as a protection against damage. I am deeply concerned with this all-important and far-reaching problem, as I know are most of my colleagues in Congress and most of the American people. I want to do all I can to put a stop to the devastating erosion damages taking place on our precious soil, which is the greatest asset of any nation. The only effective way this can be accomplished is by adopting a new land policy based on soil and water conservation:

A bill to provide for a national land policy based on the conservation of our soil and water resources, the orderly development and protection of the Nation's agricultural lands, and for other purposes

Be it enacted, etc., That it is hereby recognized that the lack of a sound national land policy based on the conservation of our soil and water resources as a foundation for other agricultural programs; the wastage of soil and moisture resources on farm, grazing, and wood land of the Nation resulting from soil erosion; failure to maintain and improve soil fertility; improper layout of farm and ranch irrigation systems and use and management of irrigation water thereon; inadequate farm drainage; improper use of land; and development of land unsuited for sustained agricultural use, is a menace to the national welfare.

And that it is hereby declared to be the policy of Congress to provide permanently for using the Nation's land in accordance with its capabilities and the treating of it in accordance with its needs; for the control and prevention of soil erosion; for the maintenance and improvement of soil fertility; for the conservation, proper use, and management of agricultural water resources; and for the sound development and use of agricultural land resources and thereby to preserve natural resources, control floods, prevent impairment of reservoirs, and maintain the navigability of rivers and harbors, and protect public health and public lands, and the Secretary of Agriculture from now on shall coordinate and direct all activities with relation to soil erosion, soil fertility maintenance and improvement; conservation, use, management, and disposal of farm and ranch waters; development and changes in use of agricultural land, and shall recognize as basic the conservation of soil and water resources in the formulation of other agricultural programs, and in order to effectuate this policy is hereby authorized from time to time—

(1) To conduct surveys, investigations, and research, in cooperation with the State experiment stations, relating to the character of soil erosion, loss of soil fertility and productive capacity, water wastage, land misuse, and the preventive measures needed, to publish the results of any such surveys, investigations, or research, and to disseminate information concerning such methods;

(2) To provide technical assistance to soil conservation districts and other conservation districts deemed by the Secretary to be qualified essential in preparing, carrying out, and maintaining locally developed and adopted programs for soil and water conservation, preservation, and improvement of soil fertility and sound land use of farms, ranches, and other units of land in such districts; for rehabilitation or construction of needed individual small group farm and ranch drainage and irrigation systems and in conserving, managing, and disposing of farm and ranch irrigation water in such districts; and for necessary guidance of a widespread application program of starting conservation practices requiring little or no "on site" (on farm or ranch) technical assistance for those farmers and ranchmen not yet reached in the schedule for assistance in adopting a basic conservation farm or ranch plan or not desiring to participate in the comprehensive program in such districts;

(3) To provide technical assistance, supplementing the educational efforts of the State extension services, to landowners and operators in those agricultural areas not included in soil or other conservation districts in the widespread application of starting conservation practices requiring little or no "on site" technical assistance. In addition, technical assistance may be provided in these areas in the preparation of basic conservation plans on farms or ranches for demonstration purposes on not to exceed 1 percent of such units in the area;

(4) To complete, as rapidly as possible, a conservation survey of the Nation's farm and ranch lands; to analyze, publish, and distribute the inventory thus secured; to provide copies of land use capability maps to landowners and operators for their own units of land and to assist them in interpreting and utilizing such maps; to survey and classify by capabilities for agricultural use the lands in existing, proposed, or potential agricultural development projects or the agricultural parts of multiple-purpose projects; to determine the suitability of such lands for sustained agricultural use; and to provide technical and other aids necessary to, or to clear, level, and otherwise develop project, woodland, cut-over, and other lands needed and suitable for agricultural use; and

(5) To provide such grants-in-aid as may be necessary to supplement the contributions of landowners and operators in carrying out the practices and measures needed to prevent soil erosion, loss of soil fertility, water wastage, and land misuse; and, the technical assistance necessary to assure their proper utilization. Such grants-in-aid may include conservation materials, planting stocks, and seed, use of equipment, and the like, for establishing conservation practices, but shall not include cash payments.

(a) Such grants-in-aid shall be made by the Secretary on the basis of the intensity of assistance needed to prevent irreparable damage to or loss of the Nation's basic soil and water resources and the availability of technical guidance adequate to safeguard efficient use of such grants.

(b) As an aid in determining an equitable distribution of such assistance as may be made available under this act, the Secretary shall, prior to August 1 of each year for the following fiscal year, seek and give consideration to the recommendations of the governing bodies of soil and other conservation districts concerning such grants-in-aid as may be necessary to supplement the contributions of landowners and operators in preventing irreparable damage to and loss of the basic soil and water resources of such districts.

(c) in order to insure local participation and guidance in determining an equitable distribution of grants-in-aid in those counties or portions of counties not now in soil or other conservation districts, the Secretary shall establish a temporary county conservation committee in each such county or portion of a county. The Secretary shall invite the State soil conservation committee (board or commission) established by the State Soil Conservation District Enabling Act, to nominate 10 land-owning and operating farmers or ranchmen and the Secretary shall appoint, and fix the terms of office, of a committee of five from those nominated. The county agricultural extension agent shall be ex officio a member of the temporary county conservation committee. The temporary county conservation committee will function until such time as there is organized in the county, or part of the county, a legally constituted soil conservation district under the enabling act of the State, at which time the committee will be dissolved.

(d) The members of conservation district governing bodies or of temporary county soil conservation committees shall not receive Federal compensation for services rendered or reimbursement for expenses incurred under the terms of this act. This provision regarding Federal compensation and expenses, however, does not preclude their being compensated for their services, travel, and other expenses by the State, county or district. The Secretary shall make available to the governing bodies of conservation districts, and to temporary county committees, necessary administrative, clerical and other help needed to handle the grants-in-aid program.

(6) To provide for the employment of, and with State extension services to jointly select, necessary personnel to assist locally with conservation educational activities primarily (a) in the areas critically in need of conservation treatment not now in districts and (b) in supplementing the county extension staffs in soil and other conservation districts in preparing the way for conservation action on the land.

(7) To cooperate or enter into agreements with, or to furnish financial or other aid to, any agency, governmental or otherwise, or any person, subject to such conditions as he may deem necessary, for the purposes of this act; and

(8) To acquire submarginal agricultural lands, or rights or interests therein, by purchase, gift, or otherwise, and to sell federally owned lands suitable for agricultural use to

neighboring landowners needing additional acreage to complete a sound farm unit, or in family-sized units to veterans and others desiring to engage in farming or ranching using procedures consistent with title I of the Bankhead-Jones Farm Tenant Act, approved July 22, 1937, whenever necessary for the purposes of this act.

SEC. 2. The acts authorized in section 1 (1) and (2) may be performed—

(1) On lands owned or controlled by the United States or any of its agencies, with the cooperation of the agency having jurisdiction thereof; and

(2) On any other lands, upon obtaining proper consent or the necessary rights or interests in such lands.

SEC. 3. As a condition to the extending of any benefits under this act to any lands not owned or controlled by the United States or any of its agencies, the Secretary of Agriculture may, insofar as he may deem necessary for the purposes of this act, require—

(1) Agreements or covenants as to the use of such lands; and

(2) Contributions in money, services, materials, or otherwise, to any operations conferring such benefits.

SEC. 4. For the purposes of this act, the Secretary of Agriculture may—

(1) Secure the cooperation of any governmental agency;

(2) Subject to the provisions of the civil-service laws and the Classification Act of 1923, as amended, appoint and fix the compensation of such officers and employees as he may deem necessary; and any persons with technical or practical knowledge may be employed and compensated under this Act on a basis to be determined by the Civil Service Commission; and

(3) Make expenditures for personal services and rent in the District of Columbia and elsewhere, for the purchase of lawbooks and books of reference, for printing and binding, for the purchase, operation, and maintenance of passenger-carrying vehicles, and perform such acts, and prescribe such regulations, as he may deem proper to carry out the provisions of this act.

SEC. 5. In recognition of (1) the necessity for technical assistance in determining and applying needed conservation practices and measures, and in assuring the effective use of such grants in aid as may be necessary to supplement the contribution of landowners and operators in establishing such conservation practices and measures; (2) the impossibility of practically separating the responsibility for the conservation of water or the sound use of land from the responsibility for soil conservation and the prevention of soil erosion; (3) the desirability of having all technical action and grant-in-aid programs involving conservation, irrigation, drainage, water development, and flood control on farm and ranch lands, as well as the development of new agricultural lands, technically directed by one agency thereby reducing to the minimum contacts with individual farmers and ranchmen respecting such programs; and (4) the desirability of taking advantage of existing relationships and working arrangements already developed with conservation districts organized under the laws of the respective States, the Secretary of Agriculture shall utilize the agency known as the "Soil Conservation Service" in carrying out the powers conferred on him by sections 1, 2, 3, and 4 of this act and in order that there may be proper coordination of the activities including grants-in-aid involving soil and water conservation, sound land development, and use, drainage, irrigation, and other physical adjustments of farm and ranch lands, the Secretary of Agriculture is authorized and directed to transfer to the Soil Conservation Service such functions, funds, personnel, and property of other agencies in the Department of Agriculture as he may from time to time determine necessary to avoid duplication, achieve economy, and carry out the spirit of this act.

SEC. 6. There are hereby authorized to be appropriated for the purposes of this act such sums as Congress may from time to time determine to be necessary, and the Secretary is directed in presenting his first budget to Congress after the passage of this act to recommend a preliminary conservation time-table, based on currently available information, as a guide to Congress in making appropriations. On completion and analysis of the conservation survey of the Nation's land, the Secretary shall revise and improve the conservation time-table and present it to Congress for use in determining annual appropriation needs.

Truman Foreign Policy

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. ELLIS. Mr. Speaker, the story of the fiscal policy of this Government beginning shortly after the advent of the Roosevelt administration and continuing through and up to the Marshall proposal has been fantastic beyond comprehension and the wasteful expending of our resources without compensatory returns has no counterpart in all history.

The spending has been carried on in such a rapid and ever-expanding rate and in sums so enormous that it is difficult for the average citizen to comprehend the seriousness of the situation. Crisis has followed crisis; emergency has followed emergency in rapid succession; and in turn failure has followed failure, and each dismal failure in promises and objectives has been drowned out and covered up by the ever-increasing tempo of administration chestbeaters and propagandists pointing to new objectives, new ideals, new utopias, and new spending.

The story of New Deal spending would require volumes. The story of the administration's cleverness and cunning in covering up its mistakes and directing the people's attention to new ventures, new hopes, new glories, and new spending would require more volumes.

Consequently, in the time I have today, I want to direct attention to the miserable failure of the Truman foreign program and ask the simple question: What right have those who have failed so miserably to ask the American people to follow them again when the record before us gives no basis for hope of success?

It has been noted for the past few weeks that the minority leadership has been very touchy on this subject and were quick to challenge anyone who ventured to ask questions. They were quick to challenge any intimation that the State Department had made serious and very costly mistakes. In this connection an interesting item appears in the morning paper.

An AP item reports Robert P. Patterson, retiring Secretary of War, as saying yesterday that the State Department had overruled a War Department proposal to make public a report on the economic conditions in the American and British zones of Germany.

The former Secretary of War was asked at a news conference if the story describing the report as embarrassing was blocked by the State Department. He replied: "In the main, the story is true."

The Truman foreign policy has been vacillating, negative, and has become the most mismanaged problem that confronts the American people. Not one moment should be lost in bringing to the attention of our people the weakness of a program that has brought us face to face with heart-breaking situations throughout the world.

By agreement at Yalta, it appears, Roosevelt, Churchill, and Stalin, on their own, in utter disregard to history or human welfare, reached private and secret conclusions. Certainly, they forced upon their own countries, unconstitutionally, commitments from which there could be no retreat short of war. All these portents of evil were confirmed by the Big Three at Potsdam. Entirely as a result of these decisions, the world is divided and completely confused. Finland, Albania, Czechoslovakia, Rumania, Yugoslavia, and Poland were surrendered to Russia by agreement. Here the Atlantic Charter and the "four freedoms" went out the window, except they are retained to be held up as ideals to entice America to contribute more billions.

It took the investigation of Mr. Herbert Hoover to bring us to our senses in respect to Germany. Herbert Hoover's report to the President is a direct attack on the Morgenthau plan as a proposal designed to subject the people of central Europe to total absorption in the Soviet Empire. Certain aspects of the Morgenthau plan have received too little attention, but in a document published in the former Secretary of Treasury's book outlining the plan, it is obvious that it was not a design for permanent peace, nor was it in harmony with the Atlantic Charter, nor did it serve the United States.

At the beginning of the third summer, after the close of the war in Europe, it took a detailed investigation and constant hammering by Mr. Hoover before the President decided that the Truman doctrine and the Marshall plan meant nothing and would fail so long as the Morgenthau plan, premised on hate and revenge, continued to be the controlling policy in Europe. Mr. Hoover said:

> We can keep Germany in these economic chains, but it will also keep Europe in rags.

He asked the extremely pertinent question as to how long the American taxpayer can continue to stand the strain of the heavy contributions to Germany. He said:

> The United States, through loans, lend-lease, surplus supplies, and relief in the last 2 years has spent, or pledged itself to spend, over $15,000,000,000 in support of civilians in foreign countries.
>
> Even we do not have the resources for, nor can our taxpayers bear, a continuation of burdens at such a rate.
>
> There is only one path to recovery in Europe. That is production. The whole

economy of Europe is interlinked with German economy through the exchange of raw materials and manufactured goods. The productivity of Europe cannot be restored without the restoration of Germany as a contributor to that productivity.

The measures applied have in general been those of brutal, ruthless, and unintelligent revenge. Now the bitter fruits of this policy is immediately before us. If grinding Germany to fragments were in any way advantageous to us, the operation will be understandable, regardless of the human misery involved.

The American people cannot be blamed for the last war, though certainly the Roosevelt administration did nothing effective to avert it, but we can and will be indicted for a postwar policy which, in effect, has made the ruin of Europe almost complete; its recovery in the foreseeable future is highly improbable. For better or worse Germany is the industrial and economic heart of the Europe that is now dying. That fact seems to have escaped those Americans who have tried to determine Europe's future without taking the pains to acquire any knowledge of its economic past.

Former President Hoover in a letter to the Senate Finance Committee said:

The greatest danger to all civilization lies in the possibility that the United States will impair its economy by drains which cripple our productivity. Unless this one remaining Gibraltar of economic strength is maintained, chaos will be inevitable over the world.

Now, with all this at our door, the administration is requesting the American people to support them in another program of insane spending without looking.

This simple truth was recently stated by Jacob Viner, professor of economics at Princeton University, in an essay entitled "America's Lending Policy," as follows:

As between great powers, it is not the creditor status but rather the possibility of refusing to be a creditor which is a potential source of political strength. A loan, once granted, yields no direct fruit beyond those specified in the bond—and often, as we know, not even much of that. Loans, once granted, rarely command gratitude. * * * Once the loan is transferred, moreover, the power shifts from the creditor to the debtor, since the withholding of repayment can be made to exercise the same manner of influence as the withholding of loans. From the point of view of influence on foreign policy, therefore, past loans should be regarded as water over the dam, and the potency of finance as an instrument of diplomacy—or of strategy—should be appraised in terms of our command over the granting of new loans.

Thus we have not assumed leadership—we have surrendered leadership by an impracticable and uncontrolled spending policy.

The conclusion seems irrefutable that as the result of our rate of giving and lending we are overexporting goods and cannot continue at such a rate with our present production and consumption without further evil consequences to our stability.

American foreign policy should take as its standard the national interest of our country in the meaning of national security and the preservation of peace. It ought to give up ideological objectives which are in contradiction to that conception of the national interest and which, furthermore, may be unattainable or may only be attainable at the price of war. It should marshal the national energies behind a foreign policy clearly defined and capable of wholehearted support by the American people in the light of their national traditions.

Housing

EXTENSION OF REMARKS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. JONES of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution passed by the City Council of Seattle, Wash., protesting the passage of Senate bill 1459—Cain-Russell bill—and the provisions of H. R. 3492—Wolcott housing bill:

Resolution No. 14774

Resolution protesting the passage of Senate bill 1459

Whereas Senate bill 1459, known as the Cain-Russell bill, has been introduced in the Congress, which said bill provides for the mandatory sale of all permanent and temporary war housing on or before a date certain; namely, December 31, 1948; and

Whereas there are now in effect Federal laws which provide for the orderly and economic disposition of the war housing, which said laws are being well and properly administered in the city of Seattle; and

Whereas the present laws provide for the disposition of public housing after consultation with local communities; and

Whereas there is still an acute housing shortage in the city of Seattle and it is our considered opinion that said housing shortage would not be alleviated by the passage of the said Senate bill 1459, but on the contrary the orderly solution of the housing problem in this city would be confused and severe, and economic and social problems would be thrown upon the community: Now, therefore, be it

Resolved by the City Council of the City of Seattle (the mayor concurring), That the city council go on record as opposing the passage by the Congress of Senate bill 1459 and/or H. R. 3492 (the Wolcott bill) as being detrimental to the best interests of the city of Seattle and this area; be it further

Resolved, That copies of this resolution be sent to each member of the Washington congressional delegation and to the chairman of the Senate Banking and Currency Committee.

Passed the city council this 21st day of July 1947, and signed by me in open session in authentication of its passage this 21st day of July 1947.

M. B. MITCHELL,
President of the City Council.

I concur in the above resolution.

WM. F. DEVIN,
Mayor.

Filed by me this 21st day of July 1947.
Attest:

W. C. THOMAS,
City Comptroller and Ex Officio City Clerk.
By O. G. ERLANDSON,
Deputy Clerk.

A Layman Looks at United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks, I include the following address, A Layman Looks at United States Foreign Policy, made before the Northwest Institute of International Relations held in Portland, Oreg., on June 19, 1947, by Palmer Hoyt, editor and publisher of the Denver Post:

The address follows:

A LAYMAN LOOKS AT UNITED STATES FOREIGN POLICY

(By Palmer Hoyt, editor and publisher, the Denver Post)

Some years ago, in 1943 to be exact, the well-known columnist and historian, Walter Lippmann, published a book with a most intriguing title. It was United States Foreign Policy, Shield of the Republic. Mr. Lippmann, under that most interesting title, made, of course, a very excellent and interesting presentation. However, the book was written before the war's end and before the atomic bomb. Therefore, in a general way, I think he would agree that the suggestions made as to foreign policy for the United States would not be entirely relevant today.

Mr. Lippmann did point out, however, in no uncertain terms, that the United States had lacked a foreign policy for 50 years or since the Spanish-American War, and thus the United States has found it most difficult to deal satisfactorily with foreign powers either in times of war or in times of peace.

In a general way, the United States operated under the Monroe Doctrine as laid down in 1823, which continued with obvious ramifications up to the time of the Spanish-American War.

DOCTRINE ISOLATIONIST

The Monroe Doctrine was isolationist in effect, for it warned the world that the United States intended to be secure in its own hemisphere. That was feasible in the world of 1823. But in the twentieth century world it became obvious no nation could find security in an ocean barrier. Thus in a shrinking world we found ourselves without a foreign policy.

This lack of foreign policy made it all but impossible for Woodrow Wilson to sell the League of Nations to this country, because we did not know what we wanted. It made it very difficult also for Mr. Wilson to get in the war because we faced both British and German sea power, and it wasn't until the issue was finally resolved on the side of submarines and the general threat of German aggression that we decided to throw our lot with the Allies.

SECURITY REAL GOAL

In Mr. Lippmann's most engaging and erudite study, a point that is extremely applicable today was clearly brought forth. Mr. Lippmann says: "So we must examine our national prejudices and we may begin by asking ourselves whether peace, as so many say, is the supreme end of foreign policy. * * * At the moment it is obvious that the survival of the Nation in its independence and its security is a greater end than peace. * * * If the logic of peace as the supreme national ideal leads to absurdity, then it must be a grave error to think and to say that peace is a supreme end.

* * * They (i. e., national ideals) should express the serious purposes of the Nation, and the vice of the pacific ideal is that it conceals the true end of foreign policy. The true end is to provide for the security of the Nation in peace and in war."

TWO OBJECTIVES SAME

This commentary by Mr. Lippmann is extremely sound. However, today, the two objectives have met and are one.

Because of the complexities of modern warfare in the atomic age, peace and national security become one and the same thing. However, that does not mean that peace must be sought, or can be found through the narrow devices of nationalism. We know that peace and security, if they are to be found in this atomic age, must be attained through international agreement. That does not mean that we should subscribe to any peace at the cost of unilateral disarmament or by abandonment of our obligations or by subscribing to any one of the many Munichs that seem in the offing.

To do any of these things would be not only to eliminate the possible attainment of peace, but would eventually reduce us to slavery status.

So, I think we can say as of 1947 that peace and national security are one and the same, indivisible.

ISSUES ARE CLEAR

Presently I think everyone will agree that we have a desperate need to formulate a foreign policy so embracive, so strong, so unmistakable, that it will furnish and fulfill the promise given in Mr. Lippmann's title of 1943, "United States Forcign Policy, Shield of the Republic."

Today the issues are only too clearly drawn. Initially it is perfectly obvious even to the dullest among us that the U. S. S. R. and the United States of America must agree and reach an accord if the world is to have peace. In other words, Russia and America are the only powers which by joint action could enforce multilateral disarmament, including enforceable decrees concerning the use of the atomic bomb and other ultramodern weapons which threaten to put the human race itself out of business.

The difficulties surrounding any such vital agreement are plain. They appear not only in the past and present history of Russia, but in the basic difference in ideologies between the two states now competing for world leadership.

Mr. Henry Wallace presses the claim as to Mr. Stalin and the Russian newspapers that communism, social democracy, and capitalism can live in the same world side by side. Russia's actions, particularly in recent weeks, would cause anyone with an open mind to seriously doubt that statement. Particularly in view of the conduct of Russia since VE-day 2 years ago, and more specifically in view of the statements made in the Problems of Leninism.

LENIN SAW WAR

In that book, which remains Stalin's principal theoretical work, and as such as a basic document of international communism, Stalin endorsed this passage from Lenin:

"We are living not merely in a state, but in a system of states, and it is inconceivable that the Soviet Republic should continue to exist for a long period side by side with imperialist states. Ultimately one or the other must conquer. Meanwhile a number of terrible clashes between the Soviet Republic and the bourgeois states is inevitable."

If there is any doubt that the above quotation still represents the Soviet view of the world conflict, bear in mind that Dictator Stalin restated it no longer ago than the spring of 1945. Notwithstanding recent interviews which seem to contradict this belief in the inevitability of conflict, it may be seen as a basic motive in Russia's aggressive creation of buffer states along her western borders.

Actually it isn't a question of whether or not communism, social democracy and capitalism can live in the same world. It is a question of whether totalitarianism and democracy can abide side by side in the teeth of this new "wave of the future."

RED INTENTIONS OBVIOUS

Russia's intentions toward countries with any type of popular government as evidenced by the recent coups in Bulgaria and Hungary are quite obvious. The Communist "gauleiter" in Austria recently made it quite clear to Leopold Figl and the other duly elected members of the Austrian government what the Russians have in mind for Austria.

In the case of Austria there is a demonstration of Russia's intolerance for any kind of socialism except her own. Austria, marked as an intended victim of the totalitarian onrush, stands as proof that the central conflict is not capitalism versus socialism—the conflict is rather freedom versus totalitarianism. It is the world of many democratic ideas versus the Soviet one idea.

Everyone is familiar with the recent coup in Hungary (everyone, that is, save Henry Wallace who doesn't believe a word he reads in the American press). But what preceded that famed coup d'etat?

TRIAL DESCRIBED

I would like to quote from a letter received from my son, Palmer Hoyt Jr., after his trip to that unfortunate country in February:

"DEAR DAD: The problem of writing about Hungary is very complex for me. I try very hard to be completely impartial, but I have come up against something here that I have never run into before. The whole situation is so contrary to anything that I have ever seen or experienced, that it frightens me to sit down and write it.

"I went to the trial of the Committee of Seven, the opening day. It was quite evident that these people were going to be convicted. When the Russians 'liberated' Hungary in 1945, they established people's courts. They have no juries, no prosecutors. These men are tried by one of these. The judge does the examining. There are four other men—members of the four important political parties, on the court. Eventually these five men decide as to whether or not the accused die, go free, or go to prison.

"In this trial, the defense had about 3 days to prepare its case, to read the evidence. The defense attorneys were not allowed to talk alone with the defendants.

"The Communists in Hungary control all the police. It is so monstrous and so simple that it is hard to comprehend, or to even think about."

OPPOSITION NUMB

"Frankly, I don't like to write about it. I talk to people. The newspapermen I talk to say that communism is coming in full blast. It certainly looks like it. Others say that this is democracy. These are Communists and leftists.

"It may be democracy, but it's not the kind of democracy that I can understand. The Smallholders are either numb or they are lackadaisical. The explanation I get from our American political observers is that they are afraid to make a definite decision. The rightists are afraid to take a definite stand against the Communists and the other leftists.

"The leftists say the Smallholders Party is crammed with Horthy people—traitors, Fascists—who fought against the Allies. This is partially true. But under the Horthy regime, as under the Hitler regime, and under the Communists—you can't be against me—you've got to be for me or dead.

"This 10 percent minority of Communists is taking over the country right in front of the people who are the majority—and the majority isn't doing anything about it.

"It is almost impossible to believe that a party which alone controls more than 50 percent of the seats in the legislative body can allow itself to be bulldozed and kicked around this way."

RUSSIAN PEOPLE LAUDED

There never has been any doubt as to Russia's concept of inability to get along with capitalism. That has been set down too many times.

When one talks about Russia, there is a grave danger that he will by some be considered a warmonger, that is, unless he subscribes 100 percent to everything that the Russians want to do, and 200 percent to Henry Wallace's vague, nebulous, and unrelated phrases.

I should like to make it clear that I yield to none in my admiration for the Russian people. I go along completely with those who believe that the Russians have more love for their fellow men than any other nationality, and an immediate proof is at hand in the way that the Russian people—the peasants and small farmers—treated the Germans even after they had invaded "holy Russia."

They insisted on feeding these Germans these "supermen" who had threatened to wipe them from the face of the earth, and when questioned by their political mentors, the Russian people gave as an excuse that these men were hungry.

FREEDOM THE ISSUE

However, the fact that the Russians are friendly, curious, peace-loving folk unfortunately has little or nothing to do with the situation. The further and more grim fact is that the Russian people and those people in her satellite states are under the domination of a growing hierarchy, which enforces its will by secret police, efficient, ruthless, and cruel, and there is little chance that the Russians or any people under their domination will soon be able to express themselves.

Actually the issue before us comes down squarely to one: human freedom. In this connection, I would like to quote from a hitherto unpublished essay of Woodrow Wilson:

"There is one thing I have a great enthusiasm about, I might almost say a reckless enthusiasm, and that is human liberty. The individual is indispensably the original, the first fact, of liberty. There is no such thing as corporate liberty. Liberty belongs to the individual or it does not exist."

NOT A DEMOCRACY

That is a subject, human freedom, which I find the Communists, fellow travelers and Mr. Wallace, America's No. 1 dreamer and principal apologist for Russian totalitarianism, strangely unwilling to talk about.

And yet I believe that Mr. Wallace and those "good Americans" who never make up their minds about a foreign matter until they get the party line from their copy of the Daily Worker or their local "gauleiter," do themselves, the United States, and Russia, a great disservice. It occurs to me that we can have enough trouble and that there are enough problems difficult of solution if we view Russia clearly for what she is—a police state now bent on aggression in order to establish communism immediately in Asia and Europe and eventually by her announced purpose, throughout the world.

I would like to say again that we can only do ourselves and our country a disservice by trying to present Russia as a democracy because even Mr. Wallace occasionally has admitted regret as to the absence of civil liberties in the land of the Soviet.

II

The coincidence of the end of the war and the arrival of the atomic age has created a frightful compulsion for peace never before known in man's 5,000 years of recorded history. Never before has informed man realized that he faced the possibility of complete extinction.

And in the mad onrush of science it is not alone the atomic bomb. There are other deadly weapons announced or indicated, such as bateriological warfare, supersonic planes, rockets, and more devastating incendiary bombs.

Only a few days ago Drew Pearson, quoting an Army authority, referred to Russian rockets that would now shoot 1,800 miles with deadly accuracy, and "shooting star" airplanes equally efficient and effective as those developed by us. He also referred to Russia's possession of 300 bombers with a flying range of 15,000 miles.

Within the week also Gen. George C. Kenney, formerly MacArthur's air commander, referred to potential weapons as deadly as the bomb in the form of controlled off range light and sound waves with an unbelievable lethal potential against human life.

TIME RUNNING OUT

Yes, we all must admit that time is running out, and that the sands of sanity are rapidly dropping from the international hourglass.

As a matter of fact, Drew Pearson in his broadcast not only made the remarks which I have attributed to him, but also quoted his source as warning United States officials of the potential of a war in 1 year or 2 years.

There is little time to lose. It is clear that we have squandered a great deal of time. America has survived victoriously in two major wars, neither of which she was prepared to wage at the time they were joined.

In these two wars, because of the vast distances of seas and land, America had a defensive lag in time which we cannot hope for in this atomic age.

III

Unfortunately for the world and history, the United Nations charter was written before the atomic bomb became a fact. I say again as I said on August 7, 1945, that the President of the United States should demand a reconvening of the United Nations to write a charter as streamlined as the bomb and as modern as the other weapons of death which have come into being since the charter was solemnly signed at San Francisco.

But I have no hope nor have you that such an obvious thing will be done. You may remember that the late great Justice Holmes in one way or another was wont to remark that he was continually astonished at the failure of brilliant minds to recognize the obvious.

However, there is what seems to me, as a layman, to be a ray of hope dawning on the international sky, and that is the much maligned and misunderstood Truman doctrine.

TRUMAN DOCTRINE DEFINED

I say and believe that the Truman doctrine properly expanded and properly applied could be that United States foreign policy which would be the shield of the Republic and the buckler of the world.

In its present form, what is the Truman doctrine? As I see it, it is simply this: A statement that the United States will not refuse aid to any threatened country which wishes to preserve its freedom.

What's wrong with that?

I find very little wrong with it unless we in this country which was born of man's desire for freedom are ready to abrogate that very freedom for which our forefathers fought so grimly; unless we are ready to admit that freedom is a vain and foolish thing.

The Truman doctrine—let us call it rather United States foreign policy—is undergoing an expansion which has been greeted with hope and enthusiasm by the still free nations of western Europe. The principle proclaimed in the Harvard speech of Secretary of State Marshall is of great importance. Secretary Marshall has called upon the nations of Europe to collaborate in drafting their own plans of reconstruction, to which the United States would lend its economic strength. The implications of this proposal are tremendously significant. First, it points Europe back on the road to self-reliance. Second, it offers hope that American aid will be used most effectively for the ends we seek in our foreign policy. Finally, it points the way to a peaceful collaboration among the nations of Europe.

POLICY NEEDS SELLING

I'll admit, however, that the Truman doctrine needs not only to be expanded but to be sold to the world. In this connection an article in a recent issue of the Saturday Evening Post by Ernest O. Hauser is highly relevant:

"Ideas will have to be fought with ideas. It is hard to convey to Americans that the people of Europe are more starved for ideas than for bread, but it is nevertheless true. In our attempt to hold the line against Russia in Europe, we have not even begun to use ideological weapons. Recently, in Frankfurt on the Main, I spent a day discussing the Communist surge with a top-ranking American business executive who had just completed a swing through Germany and who was distressed at what he termed the 'unconditional surrender' of the western powers in the ideological field. 'I had always thought,' he said, 'this democracy of ours was a pretty good thing. Why isn't everybody selling it?'

"While most of our ideological outposts in Europe, thus far, consist of tucked-away, inadequately staffed and supplied information centers and reading rooms, struggling along on puny budgets, the sledge-hammer blows of Soviet propaganda fall everywhere. William Benton, United States Assistant Secretary of State for Public Affairs, recently charged that the propaganda amounted to 'psychological warfare' now being waged on a world-wide front against us. Moscow is currently reported spending as much on political advertising—mostly in Europe—as the rest of the world combined, and every ruble pays dividends. And throughout Europe, Moscow can depend on the superb organization of the Communist Party, on Communist domination of organized labor—already a fact in such pivotal countries as Italy and France."

WHY THE DEBATE?

All of these things are well known. And, in view of this situation, it is amazing that there is even any debate in Congress over the Voice of America or the general State Department cultural plan as endorsed by Marshall and Eisenhower.

There should be no question in anybody's mind but that we must have an adequate information service to penetrate those areas where our news services can't penetrate to tell the world how we live in America, about our automobiles and our gadgets, about our civil liberties and the freedoms we enjoy. Speaking of our freedom, may I answer in advance the fellow-traveler line that we have no freedoms in America; that I refuse to believe that everything is right in Russia because some things are wrong in Georgia.

TRUTH BEST WEAPON

It is almost inconceivable that the same Congress that voted $400,000,000 to activate the Truman doctrine initially with aid to Greece and Turkey should refuse to tell the world about it as a very practical part of that same doctrine.

It is interesting to note in this connection that most of the men who are actively opposing the Voice of America in the House of Representatives are the same men who thought you could do business with Hitler.

It is interesting also to note the public flinching from any type of propaganda; those who so recoil forget that the greatest propaganda in which the United States can indulge is the truth itself, and if we could but sell the world on the truth of what we are doing in this country we would have gained a long march in our objective of peace and understanding.

IV

In view of a world situation which no one can predict, and about which there can only be guessing, it is almost unbelievable that we are disarming so rapidly; in fact, I doubt if our people generally understand how weakened is our condition at the present time. Certainly the Truman doctrine will mean little unless the world can see that we are prepared for any emergency.

Currently we have it on the authority of some of the ablest men in the United States, constituting the President's Advisory Commission on Universal Training, headed by Dr. Carl T. Compton, that our military forces are but a hollow shell.

Dr. Compton's committee went further. It said that weakness is an invitation to extermination, and that we might expect a fatal sneak attack within 10 years.

The cost of the universal military training program as advocated by the Commission amounts to $1,750,000,000 a year. It seems a small sum in view of the $300,000,000,000 we spent on the last war, and an even smaller sum when we think of the awful results that the sneak attack mentioned by the Commission might bring.

WHY AID ENEMIES?

In the area of armed might it is stupid, and criminally so, even to think of revealing our atomic formula unless we have at least reasonable safeguards as agreed upon between nations.

The Truman doctrine clearly specifies economic aid to countries in distress, but if we are interested in self-preservation we must withhold American goods and money from any country which will not tell us to what purpose this money and these goods are to be put.

To illustrate, one of the marks of shame on our national record should be the fact that we permitted Yugoslavia to be the principal beneficiary of UNRRA aid when we were supplying 72 percent of that aid.

Because, despite the wails of Fiorello LaGuardia the indisputable fact remains that we did make it possible for Yugoslavia under Tito, the Stalin stooge, to develop a standing army estimated up to 800,000 men, an unfriendly and dangerous army.

Let no one think that we can abandon to any degree the United Nations. I agree that we must support fully the United Nations and the principle of world organization as a final and ultimate hope of permanent peace. I say this, but I say that we should give this support with or without Russia. Our complete and continued support of the United Nations must of course be a permanent and enduring part of United States foreign policy.

It is vital to our over-all objective that our State Department, as a matter of foreign policy, give all aid to our three great news services, the Associated Press, the United Press, and the International News Service, so that they can get more clients and increase their international network. Thus, objective news, American style, will be spread further throughout the world. It is also important that similar aid be given to the press in general, which covers magazines, radio, and motion pictures, as well as newspapers, in the distribution of their products throughout the entire world.

And in the same connection it is vital that we, as a country, seek as a matter of permanent policy all possible unilateral and multilateral agreements to the end that censorships may be eliminated and communications facilitated.

TRADE IMPORTANT

I do not think that anyone here or anyone in this country who has given the matter any thought has any faint or lingering idea that these United States can long continue to exist as an island of prosperity in a world-wide sea of poverty and human distress. And

to that end we should remember that reciprocal trade, free trade between the countries of the earth cannot help but be one of the great basic hopes of permanent accord between nations.

There must be increased hope for the world both spiritual and economic. The Communists have plenty to say, they make plenty of promises. We, too, have made promises, but many of our most effective promises have been withdrawn. It must be a part of the Truman doctrine that these promises be restored.

One of these promises was the Atlantic Charter. It came about as a result of the four freedoms expression made by Mr. Roosevelt on January 6, 1941. The charter itself was discussed and drawn up aboard the United States cruiser *Augusta* on August 14, 1942. Its release to the waiting and troubled world was like a tonic. Whether or not Russia would subscribe to it, no one knew. However, the Russians did reluctantly subscribe to the principles of the charter. Then days and weeks marched on. The Atlantic Charter, a Magna Carta of confidence and hope and inspiration to the little people of the world was first kicked out of the window by Mr. Winston Churchill, who said, "I did not become the King's First Minister to sit in at the liquidation of the British Empire."

REAFFIRM PRINCIPLES

Then a few months later, Mr. Roosevelt gave the poor old charter another boot when he said, when asked about the original document, "We didn't even bother to write it down." A more supreme piece of casuistry has never come to my attention.

Make no mistake, the principals of the Atlantic Charter and the "four freedoms" must be in our foreign policy and the world must know it.

We must go back and reaffirm our steadfast adherence to the principles set forth in the Atlantic Charter. There we proclaimed our "hope to see established a peace which will afford to all nations the means of dwelling in safety within their own boundaries, and which will afford assurance that all the men in all the lands may live out their lives in freedom from fear and want."

To that principle of self-determination of the Atlantic Charter, Russia solemnly agreed in the Declaration of Moscow in November 1943. A month later, at Tehran, Stalin looked forward with Roosevelt and Churchill "to the day when all peoples of the world may live free lives, untouched by tyranny and according to their varying desires and consciences."

And these pledges were recited again and again—at Dumbarton Oaks, at Yalta, at San Francisco, and at Potsdam.

THE FOUR FREEDOMS

Then, too, we should recall our pledge as given by President Roosevelt on January 6, 1941, in an address to Congress:

"In the future days, which we seek to make secure, we look forward for a world founded upon four essential human freedoms.

"The first is freedom of speech and expression, everywhere in the world.

"The second is freedom of every person to worship God in his own way, everywhere in the world.

"The third is freedom from want—which, translated into world terms, means economic understandings which will secure to every nation a healthy, peaceful life for its inhabitants everywhere in the world.

"The fourth is freedom from fear—which, translated into world terms, means a worldwide reduction of armaments to such a point and in such a thorough fashion that no nation will be in a position to commit an act of aggression against any neighbor anywhere in the world."

V

We must make clear to Russia that we expect the fulfillment of these promises as the basis of peaceful understanding. We can no longer look upon their violation in any spirit of forgiving. We must say to Russia—and mean it—"Thus far and no farther."

The supreme cynicism of the Russians in finding Fascist plots wherever they desire to occupy a country is frighteningly reminiscent of the ability of Mr. Hitler to find plots against the Germans in all the countries he sought to enter. In fact, the mad desire of the Soviet for a cordon sanitaire is entirely too akin to the lebensraum that Hitler demanded.

I have finally come to the firm conclusion that many of you have reached that only by the broad assumption of moral leadership by the United States of America can we have any slight hope for peace.

UNITED STATES ALTRUISTIC

And let us all remember this, that the history of this country, despite its critics and despite those who yowl about Yankee imperialism, has shown a tremendous amount of altruism in foreign affairs. For example, our defense of the open-door policy in China was never borne out by our foreign trade with that great country, which never reached more than 4 percent of total volume.

I believe that when the chips are down that this America, this America of yours and mine, believes basically and tremendously in human freedom, and I do not believe that this America of yours and mine is willing to go along with any total state that proposes in some dim and distant future to achieve a new and very superior type of democracy. By such means losses are made and gains are never achieved.

WHO CAN DISAGREE?

Who will not agree that if the Truman doctrine could be immediately enlarged to include the 10 points to which I have alluded, that it would be an immediately effective instrument of peace beyond our wildest dreams? Let me summarize those 10 vital points:

1. The United States must make known to the whole world that she will give aid to threatened countries who wish to preserve their freedom.

2. This Nation must be kept so strong that she will command the respect of aggressors. Our atomic formula must not be divulged until reasonable safeguards are set up and agreed to between nations.

3. American aid must be refused any country which withholds knowledge of what it does with American money and goods, whether or not they be furnished directly or through the United Nations.

4. The United States must support fully the United Nations and the principle of world organization for peace—with or without Russia. It should be made clear to the world that world peace is the dominating objective in working out details of domestic as well as foreign policy.

5. To carry its message of freedom to all people and to combat the false propaganda of totalitarians, this country must maintain an adequate international information service, which includes "the interchange of persons, knowledge, and skills between the United States and other countries."

6. All possible aid must be given United States news services in spreading their networks of objective news, American style, throughout the world, and to the press in general—magazines, radio, and motion pictures as well as newspapers—in global distribution of their products.

7. The United States must support the broadest possible agreements calling for freedom of press, reciprocal rights for correspondents, abolition of censorships, and elimination of discriminatory communications controls, economic or political.

8. The principles of reciprocal trade must be recognized as sound and basic for international harmony.

9. The United States must work positively toward implementing the principles of the Atlantic Charter and the "four freedoms" and make clear to all nations that these principles are a basic part of the United States foreign policy.

10. We must insist that Russia keep its signed war agreements, with particular emphasis upon those formulated at Potsdam. Safeguarded economic unity for Germany and immediate freedom for Austria are high among the essentials to peace.

These, then, are the issues of the day. Issues so compelling as to demand the immediate attention of every American citizen. Solution of the problems of peace admits of no delay. Our lives and liberties hang in the balance. An adequate United States foreign policy is the first line of defense not only for America, but for the world.

Physical Fitness of American Workers

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. MILLER of Connecticut. Mr. Speaker, during debate on the Federal school-lunch program the statement was made on several occasions that more than 50 percent of the men examined by selective-service boards were found physically unfit for military service, their physical defects being due to malnutrition at the time they were growing up.

I do not want people throughout the world to think that we are a Nation of weaklings. To offset the statements made during debate on the school-lunch program I insert the following quotation taken from the July issue of Good Housekeeping:

Selective-service rejection statistics have been used to prove the deplorable physical state of American workers. Yet in a wartime industry almost 11,000 persons were examined and 93.8 percent were fit for employment. Investigators say that economic usability, not the stringent standards of wartime armed services, should be the yardstick for measuring physical fitness. Wartime women workers were capable of filing 83 percent of the jobs occupied by men. Employee for employee, white, Negro, brown, and yellow workers were equally capable. A study of 605 veterans and 603 men rejected by selective service showed both groups 97.6 percent employable.

Gulf States Fisheries Compact

EXTENSION OF REMARKS

OF

HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. DOMENGEAUX. Mr. Speaker, congressional consent and approval is needed of the Gulf States marine fisheries compact. This compact would promote, develop, and conserve the Gulf coast fisheries, and for this purpose would establish a continuing interstate

fisheries commission similar to the highly successful Atlantic States Marine Fisheries Commission.

The compact has been developed and approved by representatives of all of the Gulf States. The representatives attending the meetings were legislators, attorneys general, and representatives of the conservation commissions.

The compact has been recently ratified by the States of Alabama and Florida. It provides that Louisiana, Mississippi, and Texas may also join, but imposes no obligation whatsoever on any of those States until they see fit to join. It is expected, however, that these States will ratify the compact at the next session of their legislatures.

It has been the policy of this Congress to encourage the States to handle problems of this type rather than seek a solution through Federal authority or interference. The Council of State Governments has long urged the States to set up the proper agencies whether they be on a regional basis or otherwise to handle problems of this type.

Each State which ratifies the compact will have three representatives on the interstate commission, the head of the State administrative agency responsible for the conservation of fisheries resources, a member of the State legislature, and a citizen interested in marine fisheries appointed by the governor.

The Interstate Fisheries Commission, established by the compact, is empowered to inquire into and report on methods, practices, circumstances, and conditions relative to the prevention of depletion and physical waste of the Gulf fisheries. It is to promote the development of a joint program for the protection of fisheries. It is empowered also to recommend the coordination of State police power and to draft and recommend legislation to further the basic purposes of the compact. The United States Fish and Wildlife Service is designated the primary research agency of the Commission and would cooperate with comparable agencies in each of the compacting States; this being incorporated under H. R. 4365, which I introduced Thursday.

It is believed early congressional action in giving consent to this interstate compact will mean much to the future of the Gulf fishing and related industries and would further the States' control over their offshore resources.

Displaced Persons of Europe

EXTENSION OF REMARKS
OF
HON. GEORGIA L. LUSK
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mrs. LUSK. Mr. Speaker, on Monday, July 7, the President urged the Congress to give special attention to legislation which would revise immigration quotas temporarily, or provide other special means, to allow a substantial number of those unfortunates we call displaced persons to enter this country.

Objections to this legislation are heard in many quarters. To my mind, they represent a total amnesia on the part of the objectors to the historic and generous helping hand offered by the United States to the oppressed of the world. This amnesia, unfortunately, seems to be pervasive enough to preclude an understanding of the situation itself.

The hard, cold facts are that the displaced persons now in European camps are a deterrent to our attempts to bring order out of economic chaos, and a drain on the resources we are able to devote to such attempts. They stand today as evidence, if you will, that we are moving only half-heartedly to fulfill our promises, made during the war, to assist and help in the rehabilitation of those who would make sacrifices in the war against a common enemy.

It is true that the United States does not have the capacity now to assimilate an influx of foreign populations in unlimited numbers, but that is not proposed. It is true that what we formerly encouraged and solicited, we have in recent years limited and discouraged, as a matter of national policy. But that policy of recent years was not formulated with callous disregard for the plight of homeless and dispossessed persons whose plight was brought about by war. It was formulated as an expression of self-interest, not necessity, at a time when this Nation had not assumed its position as one of two leading nations of the world. From policies undertaken during tranquil years of secure, isolated peace and plenty, we can draw no guidance now in making policies for an insecure peace, when the mantle of leadership rests uneasily on our unaccustomed shoulders. Every step, domestic or foreign, we take, now and in the future, must be taken only after mature consideration of the effect it will have on that leadership, which is now ours for better or for worse. Each act of selfishness, of hesitation, of obstruction, placed in the path of that leadership not only undermines the basis of our role but causes us to lose face in the eyes of those nations which have joined their destiny with ours. Conversely, each act of boldness and unselfishness strengthens our leadership and gives us the opportunity to illustrate to the world our faith in the vigor and competence of our democracy.

From the events leading up to the late war, it takes no effort to draw the obvious conclusion that misery and hopelessness and lack of faith are the most potent and prolific breeders of war. There is a point reached by men and women who have lost their hope at which promises—fantastic promises—made by demagogs seem to offer solution for their fate; yet, if those men and women who believe those promises had a single reason to reflect upon them, they would perceive their basic falseness. Recent examples of such promisors include Hitler and Mussolini. And from the examples cited, their memory and the memory of all they wrought so fresh in our minds, it takes little discussion to conclude that conflagrations anywhere in the world will so probably involve the United States as to be almost a certainty.

Entirely apart from the moral and political considerations so ably presented by President Truman, we will do well to reflect upon the possible consequences of the continued existence of displaced persons as such. So long as there is in the world such a situation, so long will there be an open sore ready at any time to become raw and infected with that now more deadly disease—war. To prevent any excuse for another war happening should be our first consideration as Members of the Congress, entrusted with that obligation by the people of the United States.

Believing that it is conceded that we have the obligation, then to use our full effort and resources to achieve the end is no less than our plain duty. To reach the solution of the problem, it will be necessary to act in concert with other nations, but the first steps should be undertaken by an acknowledged leader whose resources can insure success or failure. Immediate remedies, though they be only temporary solutions, are needed so that we will not again be haunted by the expression, "too little and too late." I am pleading now for immediate action, stopgap action, to show the displaced persons and the world our sincerity, good faith, and willingness to assume our share of the responsibility in relieving this situation. The Stratton bill seems to be the best of the temporary solutions put forward.

The objections to the entry of a limited number of displaced persons into the United States are on several grounds: that our economy will be upset; that our precarious housing situation will be that much further from solution; that there is still too much to do for our own citizens before we help others; that isms foreign to democracy will be imported; that the persons who would enter are obnoxious on the basis of race or religion—yes; I have heard these shocking sentiments. Partially to answer these arguments, I point to our great and gallant neighbor, Canada. Without fanfare, she has given haven to a number of displaced persons, and the results of her unselfish action have been encouraging. Her economy has not been upset, her housing situation is no more acute than before the entry of these people, and the answer is that grateful countrymen of those allowed to enter have assumed the burden of seeing that these dire predictions, outlined above, do not come to pass. So here, as provided in the Stratton bill, the priority granted to displaced persons who are relatives of American citizens and war veterans would make a small adjustment proportionately smaller.

To the argument that there is still much to do for our own citizens, one can only say "amen," grateful that those who now advance the argument realize this fact, though formerly some seemed blind to it. There is much to do in the way of providing adequate housing, or finding an equitable solution to ease the hardship caused by the high cost of living, of advancing reclamation projects to reclaim wasteland and prevent recurrence of floods such as we have recently experienced, and others of equal importance. But it seems that such an argument merely begs the question, citing the expense and dislocation of such a pitifully small immigration. Certainly, there will be no more expense involved in trans-

porting these displaced persons here than in maintaining them abroad in camps; it is not beyond the realm of possibility that the skills they possess, unused abroad, could assist in the solution of our pressing domestic problems. Their added production and purchasing power should not cause a break-down in our economy. Certainly, in this great, broad land there is the ability to assimilate a small number of these displaced persons to make them once more useful citizens of the world, and to improve the moral fiber of this Nation by an outstanding act of unselfishness.

In opposition to this plan, it is said that the displaced persons will bring with them isms repugnant to our political beliefs. In that connection, it is important to understand just who these people are, and why they are displaced. For sake of brevity may I say briefly that the vast majority of these people are those who were arrested by the Axis Powers for their dangerous political beliefs, dangerous because politically they understood and were repulsed by the basic philosophy of fascism. Their abhorrence of any kind of state dictatorship has made them suspect by those who advocate communism. Many come from behind the iron curtain, and refuse to return out of fear of the same political persecution they knew under the Fascist powers. Further to allay fears is the careful screening with which we will be able to prevent entry of those undesirable on any ground. But simply because some undesirables might escape detection seems very poor reason to deny the many.

To advance the excuse that we should not permit these persons to enter the United States because of undesirability based on race and/or religion does no more than reflect the warped and un-American attitude of him who advances it. From us, it deserves no answer; but if answered, only contempt. Such an argument deserves no further consideration because it is patently and openly demogogic, unworthy of countenance by this body.

Mr. Speaker, the plight of these desperate people presents the strongest argument for action on our part. The bill introduced by the gentleman from Illinois is in the finest tradition of American willingness to extend a helping hand, to stand before the world as the haven for the oppressed. The greatest assistance we have it in our power to offer these displaced persons is hope; it would ill become a great, proud, and wealthy Nation to withhold that which is so inexpensive to it, but which is more precious than gold to them.

Brooklyn Trust Co. Strike

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF THE UNITED OFFICE AND PROFESSIONAL WORKERS OF AMERICA, CIO, ON THE BROOKLYN TRUST CO. STRIKE

The effects of the vicious Taft-Hartley law have already been manifested in Brooklyn, N. Y. There, a giant corporation has used intimidation, force, and violence to attempt to break the organization of its employees.

On the afternoon that the Taft-Hartley law was finally passed over the President's veto the Brooklyn Trust Co., one of the few organized banks in the country, began its campaign to smash the union to which its workers belong. This union is Local 96 of the United Office and Professional Workers of America CIO.

Within the next few days three union members, one a head teller with 17 years' service, were fired without warning. Union members were transferred to inferior positions. The bank refused to meet with the union to discuss the firings. The bank refused to discuss any adjustments in wages, although workers whose jobs require skill, training, and integrity receive as little as $30 a week. The union proposed the use of the mayor's committee on labor relations or the New York State Mediation Board, but the bank refused.

The workers, in the face of firings, arbitrary and discriminatory transfers, and denial of just wage increases, had no alternative. They went out on strike.

They threw peaceful picket lines in front of the bank's branches. These picket lines were met by squads of armed police. In front of the bank's main office, in a brutal attack that made the headlines of the Nation's press, one union member was so badly beaten by the police that he was hospitalized. Three unions members, including the vice president of the national organization, were taken to jail.

Spontaneous and mounting community protest stopped the police brutality. But it has not made any change in the attitude of the Brooklyn Trust Co. When the New York State Board of Mediation requested a conference the union was there. The bank arrogantly refused to send a representative. All of the striking employees have been notified by the bank that they are fired.

The Brooklyn Trust Co. workers have not given up. They are continuing their fight. They have behind them the support of decent thinking people in their community.

But the giant corporation which is fighting them is supported by money and power. Inspired by the Taft-Hartley law, this corporation considers itself privileged to push its workers around, fire them after long and faithful service, and refuse to discuss their problems with them.

Problems of a 12-Year-Old Girl

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. MILLER of Connecticut. Mr. Speaker, it is always gratifying to learn of youngsters who take an interest in what is going on in Congress. It is fine for the youth of America to have confidence in their Government and in their duly elected Representatives.

The other day, however, I received a letter from a 12-year-old girl. I don't want her to lose faith in her Representative but I am frank to admit that I found it exceedingly difficult to compose an adequate reply. I am inserting as part of my remarks this little girl's letter as well as my reply thereto.

If any of my colleagues have time during these busy days to compose a more adequate reply to this letter, I would appreciate hearing from you.

The letters follow:

JULY 17, 1947.

DEAR SIR: Could you please tell me what I could do. And some other children in my block. I live on ——— Street and when my friends and I go to play a game in the back yard we are chased out by the boys, who day and night continually play baseball which gives us girls no chance to play. We go out in front to play a game and we are chased away by the landlord. We go to the park but it is too far away and is a very long walk. I wish you would advise me what to do. Or could you tell me if there's a law against such things?

Another thing I would like to ask you is that most of us girls don't get as much money as the next girl and they think our mothers are mean just because we can't get money all the time. I would like it very much if you told me what to do or say to these girls.

Respectfully,

——— ———.
(Age 12 years.)

JULY 23, 1947.

DEAR ———: Your very nice letter reached me during one of the busiest times a Member of Congress has—the time just before we adjourn—so I have not had a chance before this to sit down and write you the reply such a letter deserves.

It seems to me, Joan, you are facing the same problems which girls of your age have faced from the beginning of time. For some strange reason boys don't like to have girls around when they are your age, but later on they want them around all the time. So don't feel too bad that the boys chase you away right now. Later they will be chasing after you.

But seriously, I know you have a problem of finding a place to play. That's true of girls your age in most big cities. Down here in Washington we have many parks and playgrounds, but there just aren't enough for all parts of the city. That means many boys and girls have a long walk to the park, just as you and your friends do.

As to the other girls who don't like it because you don't have as much money to spend as they think you should have, I wouldn't worry a bit about that. No doubt your mother gives you whatever she can afford and if you take that and use it wisely you needn't worry about what others think.

I know how you feel about that because some of us Congressmen are criticized by our friends because we are trying to save some of the taxes that your parents and other Americans must pay. This year we didn't let the people who work for the Government spend as much as they wanted. They said we were mean, just as some of the girls say your mothers are mean because you can't get money all the time, but that didn't worry us. We know the Government can't spend as much as it has been spending without getting us all into trouble, so we just had to tell the people who work for the Government that they couldn't have as much money as they wanted.

Next time the girls say your mother is mean just laugh and tell them you're helping your parents save their money so they won't have trouble later on. That's what some of us Congressmen in Washington are doing—and we're pretty proud of it.

Sincerely yours.

What About Monopoly?

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. KEFAUVER. Mr. Speaker, it has not been possible to secure any action in this Congress to prevent the alarming monopolistic merger movement which is threatening our free enterprise system. The Judiciary Committee of the House reported a bill which would amend section 7 of the Clayton Act and prevent this unhealthy trend. The Rules Committee, however, refused to allow consideration of the measure. Let us hope that it will be high on the agenda for consideration in the next session of Congress.

Under leave to extend my remarks, I include an editorial of the Washington Post of July 26 which explains the issue succinctly. The editorial is as follows:

MONOPOLY

Congress is about to adjourn without taking action on a bill to amend the Clayton Act so as to permit the Federal Trade Commission to proceed against corporate mergers that unduly restrain trade or tend to create a monopoly. A few days ago Representative KEFAUVER castigated Congress for its failure to plug loopholes in the existing law that enable corporations to acquire the assets of other companies and build up huge vertical and horizontal combines constituting a serious threat to smaller competitors.

Mr. KEFAUVER points out that the FTC has year in and year out vainly petitioned Congress for amendments to the law that would make it more effective. A recently completed FTC survey of merger developments during the past few years reveals a degree of concentration that is truly astounding and in certain aspects alarming, owing to the fact that most of the mergers have been effected through purchase of small concerns by large corporations. Some mergers, of course, are desirable, resulting in gains in efficiency and consequent benefits to the public. But there are types of mergers that because of their sheer size and other strategic advantages in effect strangle competition and lead to the disappearance of small business not merely by absorption but by elimination of competitors and destruction of the incentive to engage in new undertakings. In short, mergers are sometimes as instrumental in destroying free enterprise as outright monopolies.

That being the case, there is unodubtedly need for revision of the law to enable the FTC to arrest the progress of mergers that constitute a threat to our competitive economic system. The FTC already has the power to prevent a company from acquiring the stock of another company if the purchase would lessen competition or tend to create a monopoly. But the purpose of the law is easily circumvented by the purchase of assets. Passage of amendatory legislation would, therefore, not introduce any new principle of control; it would merely make it possible to carry out the intentions of our lawmakers which have been thwarted by interpretative court decisions.

Presentation of Portrait of Hon. Hatton W. Sumners

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proceedings of presentation of the portrait of Judge Sumners to the Committee on the Judiciary:

PROCEEDINGS IN THE HOUSE JUDICIARY COMMITTEE ROOM ON THE OCCASION OF THE PRESENTATION TO THE COMMITTEE OF THE PORTRAIT OF THE HONORABLE HATTON W. SUMNERS

The Subcommittee on Arrangements was composed of the following subcommittee of the House Judiciary Committee, to wit: ED GOSSETT, of Texas, chairman; SAM HOBBS, of Alabama, and JOHN JENNINGS, of Tennessee, members.

The meeting was called to order by Mr. GOSSETT.

INTRODUCTORY STATEMENT BY MR. GOSSETT

My colleagues of the Judiciary Committee, Mr. Nathan Adams, and distinguished guests, as spokesman for the Judiciary Committee of the House, it affords me pleasure to welcome all of you to this ceremony. We are happy to see in this overflow audience of distinguished visitors and friends of our former chairman, Hatton W. Sumners, the Attorney General of the United States, Hon. Tom Clark, our United States Senators, Hon. Tom Connally and Hon. W. Lee O'Daniel. We are also honored by the presence of Mr. Justice Reed of the Supreme Court. You will note a full attendance of our committee, which in itself is an expression of the esteem in which our former chairman, Hatton Sumners, is held. We are happy that he has honored us with his presence on this occasion.

As master of ceremonies, I want to thank Mr. Nathan Adams, Mr. Waverly Briggs, and other distinguished residents of the city of Dallas, who are today presenting us with the elegant portrait of Mr. Sumners, which you observe hanging just above the chair of the presiding officer of this committee. This portrait is a token of the love and esteem in which Mr. Sumners is held by the people of Texas in general, and the people of Dallas and Dallas County in particular. Mr. Nathan Adams, who served as chairman of the Dallas committee, has long been one of our leading Texans. He has for years been President of the First National Bank in Dallas, and a civic leader in the Southwest. I wish at this time to present to you Mr. Adams.

REMARKS OF HON. NATHAN ADAMS

Mr. ADAMS. Mr. Chairman, members of the Judiciary Committee, ladies and gentlemen, it gives me great pleasure to attend this ceremony in honor of a distinguished citizen of Texas.

The life of Hatton W. Sumners should be an inspiration to the youth of this Nation. He came up the hard way and through his life's work he is regarded as one of the great constitutional lawyers of this country. He represented my district for over 30 years and was elected and reelected without making any speeches. It is true, maybe, that a lady scared him just a little and he decided to retire. [Laughter.]

On his way to Texas he had to stay in my home town in Tennessee in order to catch a train and spent the night with probably the only white Republican family in the county. [Laughter and applause.]

In presenting this portrait we do so knowing that he has fulfilled every obligation to his people with fidelity and courage. We hope he lives many more years to carry on his great fight for constitutional government, the preservation of which in the integrity of its original conception by the founders of this Republic and its steadfast and ardent support and defense by everyone who enjoys its benefits and is sustained in liberty by its stalwart protection, comprise the paramount and absorbing duties of all true and loyal Americans.

Mr. Chairman and gentlemen of the committee, we are grateful for this audience; and realizing the pressure of official responsibilities upon you all—here's where I stop.

Thank you, Mr. Adams.

Ladies and gentlemen, I next present to you a man who has been an able and distinguished member of this committee for more than 10 years, the Honorable SAM HOBBS, of Alabama.

ADDRESS OF HON. SAM HOBBS, OF ALABAMA

Mr. HOBBS. Mr. Chairman, Mr. Nathan Adams, Mr. D. A. Hulsey, Mr. Ben Critz, and Mr. Waverly Briggs, representing the people of Dallas in this presentation of the portrait of Hon. Hatton W. Sumners to the Committee on the Judiciary of the House of Representatives, it is my happy privilege as the designated spokesman of our committee to accept this princely gift from his friends and former constituents.

Before I proceed, I cannot refrain from expressing my own and my party's deep appreciation of the gracious insistence of the chairman and the majority members of our committee that I as a member of the minority should represent the committee in accepting the portrait.

Having been born in Dallas County—though in Alabama, not Texas—and having begun the practice of law in his native Tennessee, and having had the priceless privilege of sitting for 12 years at the feet of this Gamaliel, at least partially qualifies me to accept your gracious gift and attempt to voice the thanks of this committee to you men of Dallas.

There is one amendment to the statement just made which I must concede. None of us who served on this committee under the leadership of Judge Sumners ever had a chance to do much sitting. Particularly is this true of me, for from the outset, because of my peculiar qualification, I was chosen as errand boy. I was in Alabama when I was elected by the House as one of the managers on the part of the House to present the evidence substantiating the articles of impeachment against Judge Halsted Ritter. Upon my return, realizing that the House had acted upon the recommendation of Chairman Sumners, I called on him to express my thanks. When I had done so, he said, "Now, boy, don't you get the big head. Randolph and I talked it over. We knew that we had all the brains necessary to do this job. But we decided that we needed an errand boy and that you had the biggest feet in the committee, so we put you on to run errands."

Isn't it true that some of the genius of any executive manifests itself in putting others to work? We worked our hearts out for him, and in doing so, learned to love him fervently. Isn't that the way of life? Isn't the only way we really learn to love by serving?

That was certainly true of him. He loved you all from the beginning, but that love deepened into a consuming passion by serving you. You put him to work. You kept him at work for half a century—glorifying Dallas. Not only in the mores of the chamber of commerce, but also as your repre-

sentative, your minister plenipotentiary, and your envoy extraordinary. "Birds of a feather flock together," is just as true of congressional representation as in the choice of personal friends. The Nation knows and loves your district because you were the kind of people represented by Hatton Sumners. We know you not, but know you well. We love you, because we first loved him. And from the depths of that fervent devotion we know how to appreciate this new representation of your Representative, who, at the height of his power and glory, relinquished the official authority you had given him, to wear the crown of private citizen—the only king this Nation knows. In that appreciation our words are weighted with unique significance when we say we thank you.

Proud of our chairmen

We of this committee are proud of each of the 40 men who have led us as chairman. Thanks to our distinguished colleague, Hon. LOUIS E. GRAHAM, who has done prodigious research and written a history of this committee, we have the facts. Beginning with Charles J. Ingersoll, whose brother, Joseph R. Ingersoll later became chairman (the two Ingersoll brothers being the only two members of the same family who have had this distinction), Hugh Nelson, John Sergeant, Daniel Webster, Philip P. Barbour, and James Buchanan and running through the list to Hatton W. Sumners, who served longest, and the distinguished gentleman who now adorns the chair, Hon. EARL C. MICHENER, each has exercised the office with becoming dignity and honor.

Proud of our committee

This committee is also proud of its membership. Three, Franklin H. Pierce, James Buchanan, and William McKinley, have been President. Three other members have been candidates for that high office, John Bell, Stephen A. Douglas, and John W. Davis. James S. Sherman became Vice President, while three others were candidates for that office, George H. Pendleton, Allen G. Thurman, and John Sergeant. Seven were Speakers of the House, Philip P. Barbour, John Bell, John W. Jones, Michael C. Kerr, Thomas B. Reed, David B. Henderson, and Frederick C. Gillette. Three were candidates for that office, Timothy Pitkins, Samuel S. Marshall, and Joseph W. Bailey. Armistead Burt served as Speaker during the absence of Speaker Winthrop. Three served as President pro tempore of the Senate, Allen G. Thurman, Isham G. Harris, and William P. Frye. Fifteen have been Cabinet members, Daniel Webster, James Buchanan, Edward Livingston, Charles Toucy, John C. Spencer, John Bell, William Wilkins, George W. McCrary, George S. Boutwell, Thomas Corwin, Hilary A. Herbert, Edwin Denby, Charles A. Wickliffe, Nathan K. Hall, William L. Wilson. Two served as Solicitor General of the United States, John W. Davis and James M. Beck. Twenty-two served in the diplomatic service, one as an Associatice Justice of the Supreme Court, Philip P. Barbour. Three were circuit court judges, 12 as district court judges, 4 as judges of Territorial courts. One became chief justice of the Supreme Court of the District of Columbia, and one chief justice of the United States Court of Claims. One became Judge Advocate General of the Union Army. John A. Bingham, who also served as special judge advocate in the trial of the conspirators against the life of President Lincoln. Several were Assistant Attorneys General of the United States. Thirty-four were United States attorneys, 49 United States Senators, 37 State governors, while Romulus Saunders was defeated by one vote for the office of Governor of North Carolina. Twenty-five have served as State attorneys general. Ten have served as chief justice of their State supreme courts. Twenty-two became justices of their State supreme courts. Four became presidents of colleges or universities, and many were professors of note. More than 300 of the total number of 588 filled, with honor and distinction, various minor offices.

Judge Sumners gave expression to our self-satisfaction. It was in the lengthy hearings some years ago on his resolution giving the residents of the District of Columbia the vote and a measure of self-government. We had been holding these hearings for 3 weeks, frequently running into the night. The leading proponents including practically every president of dozens of local civic clubs, predominantly feminine, had read to us their testimony. Almost without exception, each statement had begun, like Paul before King Agrippa, eulogizing us and stressing the fortunate lot of the witnesses in having the privilege of appearing before such an able and distinguished group of legislators. Finally the representative of the CIO appeared, late at night, and with the "Harvard accent" usually characterizing such chosen spokesmen, began, "Mr. Chairman and gentlemen of this great committee, during the weary sessions of these long hearings, I have been thoroughly sympathetic with you gentlemen, as witness after witness piled eulogy on eulogy and read page after page of unctuous flattery. But I know that you gentlemen are far too astute and discerning to be swayed in the slightest degree from your high sense of duty by any compliments paid you." At this point, Chairman Sumners broke in, "Buddy, if you have any papers to sell, you'd better sell 'em, for we take judicial knowledge of the fact that we are pretty damn smart." This effectively cleared the atmosphere and sped the hearings after a gale of laughter had swept this crowded chamber, relieving the tension.

This portrait will be cherished here as it hangs in this historic room, for we love the judge and you! It will always serve us as an inspiration; challenging us to remember the Sumners leadership, acclaimed through the years by his colleagues in the Congress, by Chief Justice Taft, who referred to him as "the best lawyer in Congress"; and, "the only man who ever overruled the Supreme Court"; by Senator William E. Borah, who wrote: "You had a delicate and difficult task to perform, and you did it with fine judgment, good taste, and inspiring patriotism." And again, "Your State will be proud of you for what you did and your country will always be indebted to you. Congratulations, from your friend." By Secretary of State Cordell Hull: "Let me take this occasion to express my deepest appreciation to you for your intelligent interest in and exceedingly helpful attitude toward many of the most important phases of our foreign affairs. This cooperation on your part has been of the greatest help and service to the State Department and to me personally." By Attorney General Francis Biddle, in an article in Collier's in 1942: "As a result of a suggestion from Congressman Hatton W. Sumners, of Texas, chairman of the House Judiciary Committee, who was very much concerned with our experiences in the last war (he became a Member of Congress in 1913), I set up a War Frauds Unit in the Department of Justice in February 1942." And in a personal letter, later: "The signing by the President of the antitrust legislation to speed the war effort leads me to take this opportunity of telling you how much we appreciate your assistance on this legislation. Your expert and wise handling of such war measures as the First and Second War Powers Acts and the Foreign Agents Registration Act will, I am sure, in the perspective of history, be found to be a marked contribution to our prosecution of this war."

By Secretary of War Robert P. Patterson, who, when Under Secretary, wrote: "I wish to express to you the warm appreciation of the War Department for the constructive work you have done recently in carrying the small-business bill to a successful conclusion in Congress. Your assistance in this matter, as in many others, has been of great value to the war effort. I am also mindful of the good work you have done over the past 2 years, in Congress and out of Congress, to arouse the Nation to an awareness of the perils forced upon us by the ambitions of the dictators who control the Axis Powers"; by the award of the American Bar Association medal for distinguished service to American jurisprudence—an unprecedented award; by Washington correspondents, who called him "the ablest and most potent advocate in Congress," "wisest as well as smartest."

Not only was he held in such high esteem by these eminent gentlemen but also he won national approbation gained by few.

On the occasion of the informal celebration in the House of the completion of a quarter century of service in Congress of Hon. Hatton W. Sumners—CONGRESSIONAL RECORD of April 7, 1938, pages 4982-4986—several of his colleagues made heartfelt remarks concerning his career. There may be found fuller treatment than propriety permits today.

Again, on the day of the death of the Seventy-eighth Congress, the honor that had come to our committee and to Congress by the award of the American Bar Association medal to Judge Sumners, was called to the attention of the House and the speech of presentation quoted. CONGRESSIONAL RECORD of December 19, 1944, pages 9801 and 9802.

Judge Sumners, when it had to be done, could criticize. And he could be stern. But he always tempered his criticism with humor—that oil that keeps machinery running. The philosophy, both of his private and public life, was that of the "God-fan," as he loves to call himself. He knows beyond cavil or question that God is the "Big Boss" and that neither life nor law can be good unless in consonance with His will and plan. As a pound of example is worth a ton of talk, his life and leadership will always be revered above all other emphasis because he lived and lives his philosophy.

The Honorable EARL C. MICHENER, of Michigan, chairman of the Committee on the Judiciary, when Mr. GOSSETT had thanked him and the committee for the privilege and hospitality which had been granted the group of donors from Dallas, and turned the gavel back to him, made a gracious and graceful response, closing by saying that although not on the program, the occasion would not be complete without a word from Judge Sumners.

Judge Sumners began his remarks by saying that the portrait was a fine work of art, by a great artist, but that it would have been better if the advice he gave the gentleman for whom he was sitting while the work was progressing, that it should be made as little like him as possible.

He continued:

I have not retired from public life. I want to cooperate with the Members of Congress who are working their lives out trying to do a proper job for their country when they are faced with the mightiest issues of all time.

More depends on these men than on any other group in all the history of the ages.

They are doing the best they can in an utterly impossible situation. There is piled up here great volumes of stuff that ought to be left to the States and local communities. Our legislators are ground down by little stuff, by things brought here by people who want to get things done quickly and to escape responsibility.

I have this advantage: I'm not running for office. I don't have to lie. I'm not scared of anybody. I've got a little money and great ability to live off of others. Under the situation there is not and cannot be the high type of statesmanship there would be here if these men had the time to study the great problems. And this is a matter for the Nation to be concerned about.

The Loyalty Question

EXTENSION OF REMARKS
OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD the following letter and statement from Assistant Secretary of State William Benton, in reply to my request for information concerning certain personnel of the State Department whose loyalty has been questioned on the floor of the House:

DEPARTMENT OF STATE,
Washington, July 25, 1947.

The Honorable JAMES P. RICHARDS,
House of Representatives.

MY DEAR MR. RICHARDS: In response to your request, I am sending you a statement commenting on certain questions about the loyalty of specific personnel in my area of the Department, raised by critics in Congress of the Department's information program.

I shall be glad to have you make whatever use of this material you see fit.

Sincerely yours,

WILLIAM BENTON.

JULY 21, 1947.

To: Mr. Benton, Assistant Secretary of State.
From: Howland Sargeant, Deputy to the Assistant Secretary.
Subject: Criticisms of the loyalty of State Department personnel.

Critics in Congress of the Department's information program have raised questions about the loyalty of specific personnel working on the information program. I am having every allegation investigated.

Here is a report on the charges against four of our personnel made in the House of Representatives.

Since you are responsible for the work of these four persons, I am attaching a report on each person, stating the allegations and the information which I have found.

WILLIAM T. STONE

Biographical sketch

Stone, William T.—A. B., Reed College, Portland, Oreg., 1922; graduate study, London School of Economics, University of London, 1923; reporter, Portland Telegram, 1922; free lance correspondent in Europe, 1923; editor, Foreign Policy Association, 1924-33; vice president, and director Washington Bureau, Foreign Policy Association, 1933-41; assistant director, Board of Economic Warfare, 1943; director, Special Areas Branch, Foreign Economic Administration, 1943-44; Special Assistant to American Ambassador, London, England, and Director, Economic Warfare Division, American Embassy, London, 1944-45; member, Joint Intelligence Committee, United States Joint Chiefs of Staff, Washington, 1942-45; Director, Office of International Information and Cultural Affairs, Department of State, since November 12, 1945.

Comments on charges

1. A critic stated that Mr. Stone was a member of the editorial board of Amerasia, 1937-41. He added: "Chairman of this board was Frederick Vanderbilt Field, now a regular columnist for the Daily Worker and a member of the Communist Party. Managing editor was Philip Jacob Jaffe, indicted and fined for the possession of confidential Government documents."

Two articles were quoted from Amerasia, one written by Frederick V. Field in October 1940, the other by Harriet Moore in January 1940. The views in these articles were attributed to Mr. Stone.

My information

Amerasia was founded in March 1937 by a group of writers and scholars interested in the Far East. Mr. Stone was asked to serve on the editorial board because of his reputation as an independent expert on foreign affairs and his position as vice president of the Foreign Policy Association.

Contributors to the magazine included many well-known authorities on foreign affairs, holding many different points of view, among them the following: Samuel Flagg Bemis, professor, international law, Yale University; Erwin D. Canham, editor, Christian Science Monitor; Phillips Bradley, professor, Amherst College; Stanley K. Hornbeck, then Chief, Far Eastern Division, Department of State, later United States Ambassador to Holland; Arthur W. Hummell, Library of Congress; Kenneth W. Colegrove, professor, international law, Northwestern University; Roger S. Greene, vice president, Rockefeller Foundation, director, China Medical Board, and former United States consul general at Hankow, China; Ernest O. Hauser, author and contributor to Saturday Evening Post, etc.; Charles E. Martin, professor of history, University of Washington; Chester H. Rowell, editor, San Francisco Chronicle.

The purpose of the magazine was to serve as a forum for critical discussion of American policy in the Far East representing a cross section of opinion. The editorial board never met as a whole and never functioned in the usual sense of an editorial board, since individual editors were scattered between Washington, Chicago, New York, etc.

Between 1937 and 1941 Mr. Stone contributed three articles, seven brief editorial notes and one book review to this publication. He received no compensation. A critical review of Mr. Stone's writings reveals no trace of communistic leanings and reflect views which differed from those expressed by other members of the editorial group. The full list of articles and editorial notes follows:

Articles: Naval Bases and American Policy in Asia, volume I, No. 4, page 175, June 1937; The Navy as an Instrument of Diplomacy, volume II, No. 1, page 63, March 1938; The Navy and Its Strategic Problems, May 1940, page 111.

Editorial notes and book reviews: American Naval Policy, volume I, No. 2, page 52, April 1937; American Policy in Asia, volume I, No. 7, page 292, September 1937; China's Case Before the League, volume I, No. 8, page 339, October 1937; Neutrality and the Far East, volume I. No. 1, page 3, March 1937; Trend of American Foreign Policy, volume I, No. 9, page 386, November 1937; Fleet Maneuvers and Far Eastern Policy, volume II, No. 6, page 275, August 1938; Neutrality and the Far East, page 98, May 1939; America's Problem of National Defense: Review of Ramparts We Watch by George Fielding Eliot, volume II, No. 10, page 505, December 1938.

Mr. Stone resigned from the editorial board of Amerasia in November 1941, 4 years before the editor of the magazine was indicted under the espionage act.

2. A critic quotes out of the context three sentences written by Mr. Stone in the September 1937 issue of Amerasia. He compares these sentences to the Communist Party line of 1937, as expressed by Earl Browder in an NBC broadcast on August 28, 1946.

My information

Neither the excerpts quoted, nor Mr. Stone's article as a whole, corresponds in any respect with the Communist Party line. On the contrary, a reading of the full article will show that Mr. Stone pointed out the case for invoking the Neutrality Act as laid down by Congress, in sharp contrast to the Communist Party line which at that time favored the scrapping of neutrality legislation and undertaking collective action "against the Fascist aggressors."

3. A critic states that Mr. Stone "is reported to have appointed George Shaw Wheeler, while Stone was in London for the Board of Economic Warfare. Wheeler has a long record of Communist affiliations and activities."

My information

As head of the Economic Warfare Division of the American Embassy in London, Mr. Stone was not responsible for either the appointment or security clearance of FEA employees in London. He was not responsible for the appointment or clearance of FEA personnel assigned to the Army or other United States agencies in London. Mr. Wheeler was sent to London by the FEA in Washington for assignment to the United States control group for Germany, as a civilian employee of the Labor Division, headed by Col. David Morse. When questions were raised about Mr. Wheeler's loyalty, Mr. Stone requested a reinvestigation of the charges by the Civil Service Commission. Pending review of the case by the Civil Service Commission, Colonel Morse had to decide whether Mr. Wheeler should remain in London during the period of the investigation. Colonel Morse sought Mr. Stone's judgment on this point and asked Mr. Stone whether he could vouch for Mr. Wheeler's loyalty. Mr. Stone replied that he did not have sufficient knowledge of Mr. Wheeler's background to pass judgment on his loyalty but that in his opinion and to the best of his knowledge Mr. Wheeler was trustworthy. Mr. Stone's statement was not given or received in lieu of security clearance. The Civil Service Commission, upon reinvestigation, declared Mr. Wheeler eligible for appointment to the United States Government service.

HALDORE E. HANSON

Biographical sketch

Hanson, Haldore E.—Carleton College, bachelor of arts, 1934; teacher in Chinese colleges, 1934-47; Associated Press correspondent in China 1936-39; staff writer for Associated Press, Chicago, 1939-42; appointed divisional assistant in the Department of State February 19, 1942; executive assistant to the Assistant Secretary since December 1944.

Comments on criticism

1. It was stated that the magazine Review of Reviews, February 1937, page 95, contains an article in which Mr. Hanson is referred to as "smuggler, soldier, and diplomat."

My information

As was later pointed out by the same critic, this magazine contains an article entitled "Smuggler, Soldier, and Diplomat." Mr. Hanson is the author. The article describes the smuggling activities of the Japanese Army in north China.

2. It was stated that during the war Mr. Hanson held a position in the Department of Agriculture.

My information

Mr. Hanson has worked for no Government agency except the Department of State, which he entered on February 19, 1942.

3. A critic gave a number of quotations from Mr. Hanson's book entitled "Humane Endeavor," indicating that Mr. Hanson traveled with the Chinese Communist armies, was given safe conduct through their lines, traveled in the commander's motor car, and received Chinese Communist documents.

My information

It was not pointed out that Mr. Hanson's book is a description of the Japanese invasion of China in 1937-38, that Mr. Hanson was writing as a war correspondent of the Associated Press, that he carried press credentials from both the American Embassy and the Chinese National Government, that the Associated Press assigned him to cover the northern Chinese front which was defended by the Communist armies. Mr. Hanson's dispatches, as well as his book, pointed out that the Chinese Communists were still engaged in Communist proselytizing, despite the Japanese invasion. Mr. Kent Cooper, general manager of the Associated Press, sent Mr. Hanson his personal commendation on these reports from the Communist front, and Mr. Hanson's reports were reprinted at length in both Time magazine and Reader's Digest.

4. It was stated that under fire of recent criticism, Mr. Hanson has been transferred to the Political Affairs Committee of the State Department.

My information

Mr. Hanson is still executive assistant to Mr. William Benton, a position he has held since Mr. Benton entered the Department of State.

CHARLES A. THOMSON

Biographical sketch

Thomson, Charles A.—Wittenberg College, bachelor of arts, 1914; Universidad Nacional de Mexico, master of arts, 1922; University of Chicago, 1928-29; Columbia University, 1932-33; United States Army 1918-19, overseas service; Mexican immigration work; Latin American section, Fellowship of Reconciliation, 1929-32; Foreign Policy Association, research associate and specialist on Latin American Affairs, 1933-39, and Washington representative 1936-37; appointed Assistant Chief, Division of Cultural Relations, Department of State, February 15, 1939; Chief, Division of Cultural Relations, July 5, 1940; adviser to the Director, Office of Public Information, January 15, 1944; executive secretary, United States National Commission for UNESCO since September 24, 1946.

Comments on criticism

1. A critic quoted from a study entitled "The War in Spain," dated May 1, 1938, written by Charles A. Thomson, as a staff member of the Foreign Policy Association. This article was called a eulogy of the work of the Communists in Spain.

My information

Foreign Policy Reports, published by the Foreign Policy Asociation in New York, are balanced and objective statements on current international issues, giving conclusions supported by evidence. Each report, before publication by the FPA, is submitted to outstanding authorities for criticism.

The critic, in his statement, removed three paragraphs from the context of this report by Mr. Thomson. The paragraphs concern the military discipline and organizing ability of Spanish Communists. There was no mention of a number of paragraphs in the same report by Mr. Thomson concerning the work of the Communist political police, including references to assassinations and clandestine prisons. Ambassador Hayes, in his book Wartime Mission to Spain (p. 50), comments on the discipline of the Spanish Communists. He writes:

"The number of outright Spanish Communists had never been large, but they were the one group in Spain, aside from the Falange, which had been efficiently organized and disciplined, which had known precisely what they wanted and which had not hesitated to use any means to achieve it."

2. A critic stated:

"According to Mr. Carlton J. H. Hayes, former American Ambassador to Spain, in his book, Wartime Mission to Spain, Mr. Thomson was responsible for the appointment of Abel Plenn as cultural attaché in Spain. Mr. Plenn's ideology can be determined from his recent book, Wind in the Olive Trees, which is severely critical of every phase of American policy in Spain during the war. His pro-Communist bias is evident throughout the book which has been enthusiastically promoted by the Communist press and Communist book shops."

My information

Abel Plenn never served as a cultural attaché in Madrid. Abel Plenn is not mentioned in Mr. Hayes' book.

Abel Plenn was sent to Spain by the OWI early in 1944 to take charge of picture exhibits. He was ordered home by OWI after 7 months of service in Spain. OWI records available in the Department of State show that Mr. Plenn was terminated involuntarily on January 9, 1945. Charles Thomson had nothing to do with this appointment by OWI.

Ambassador Hayes does mention in his book, page 75, that he wrote to Charles Thomson, requesting appointment of a cultural attaché. He also states on page 77 that Prof. John Van Horne of the University of Illinois, a specialist in the Spanish language and literature, was sent. Ambassador Hayes speaks favorably of the work of Professor Van Horne.

3. A critic stated:

"According to the Daily Worker of July 4, 1946, page 11, Mr. Thomson entered into hearty cooperation with Tom Brandon, producer and distributor of pro-Communist films. This is enough to show where Mr. Thomson stands."

My information

The Daily Worker on July 4, 1946, page 11, does not say Mr. Thomson entered into hearty cooperation with Tom Brandon.

The Daily Worker's story reports that the American Council on Education invited 82 national organizations to discuss an international film program for UNESCO. The article concludes: "The meetings were addressed by Thomas J. Brandon, New York Film Council; William H. Wells, of UNRRA; Charles A. Thomson; and others." This is the only reference to Charles Thomson.

DR. ESTHER CAUKIN BRUNAUER

Biographical sketch

Mills College, A. B., 1924; Stanford University, Ph. D., 1927, specializing in modern European, American-European diplomatic history, and political science; Mills College, LL. D., 1945; international-relations secretary, American Association of University Women, 1927-44; chairman of the National Defense Commission set up by National Committee on the Cause and Cure of War, 1936; chairman of committtee which organized the Women's Action Committee for Victory and Lasting Peace; Women's National Press Club award for public service in international relations for 1946; appointed divisional assistant, Department of State, March 8, 1944; appointed specialist in international organization affairs in Division of International Organization Affairs, November 7, 1945; technical expert on the United States Delegations, San Francisco Conference; technical adviser to UNESCO Conference in London, November 1945; United States representative on the Preparatory Commission of UNESCO, with the personal rank of Minister, February 1946; senior adviser to United States Delegation at General Conference of UNESCO, November 1946, in Paris; now a member of the UNESCO Relations Staff, Department of State.

Comments on criticism

1. A critic stated:

"Dr. Esther C. Brunauer was selected by the State Department as United States representative to UNESCO with the rank of Minister. Speaking over NBC on May 31, 1946, at 6 p. m., she declared:

" 'There are many barriers to the concept of (peoples speaking to peoples). There are the barriers * * * of monopolistic practices to be overcome.'

"What did Dr. Brunauer mean by this? What country was she criticizing? Was she aware of the fact that she was echoing Soviet propaganda against the United States? Has this lady ever taken a critical attitude toward conditions in the Soviet Union?"

My information

This quotation was removed from its context in a broadcast entitled "Is UNESCO the Key to International Understanding?" The quotation is taken from the end of a half-hour broadcast.

Preceding this quotation, Dr. Brunauer had stated in the same broadcast:

"But equally important, if you see UNESCO as a real agency for building the attitudes that will make for peace is to break down the barriers to a free flow of information between countries. It is strictly within UNESCO's sphere to explore what this means and how to achieve it. There are now, I am told, 53 restrictions on the distribution of films in Europe alone. It's up to UNESCO to free the press, movies, and radio of senseless restrictions."

The entire broadcast was discussing the world-wide problem of UNESCO, including freedom of information. It is self-evident that the communications monopoly of the Soviet Union is one of the principal large-scale examples of monopolistic practice in the field of information, and that it constitutes one of the most serious barriers to the free flow of information today.

This statement by Dr. Brunauer could hardly be Soviet propaganda, since the criticism applied more to the Soviet Union than to any other country.

2. A critic stated:

"Evidently again under fire of recent criticism, she has been shifted to the Office of Public Liaison in the State Department."

My information

The Department is not aware of any recent criticism of Dr. Brunauer's political views. She is now in the UNESCO Relations Staff, Department of State.

United Nations Must Be Strengthened

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. KEFAUVER. Mr. Speaker, Members of Congress, the enlightened press, and the people of the country are tremendously interested in the success of the United Nations. There is a great demand for the strengthening of this organization which represents the hope of the peace-loving world. Under leave to extend my remarks, I include an editorial from the Chattanooga Times of July 25, 1947, which clearly expresses the apprehension of many thoughtful

people over the present plight of UN and of the hopes for its strengthening:

THE EMBATTLED UN

World events, great and small, are shaking the bases of the United Nations, founded in hope and nurtured by the peoples of the earth in the belief that man could, through a cooperative effort, make peace instead of waging war.

The explosive Balkan question, of which the fighting in Greece is but the first outward violent manifestation, hangs heavy over the heads of the UN delegates; the sudden outbreak of open war in the Netherlands East Indies will test the wisdom and fortitude of those gathered at Lake Success; and the situation in Palestine grows uglier by the day despite the presence of a UN investigating committee.

Of all problems facing the United Nations, there is none more important than the control of atomic weapons. Yet, where is a solution? None can say. It lies buried beneath the bickering delays of the Russian representative.

Mankind pinned its hopes on the UN. Those hopes are faltering. Perhaps, sickened by war and yearning for peace, we were at fault in believing the UN would accomplish miracles overnight; perhaps, fearful of the future for a world community in which neighbors still snatch at the sword too quickly, we are just as much at fault in feeling doubts of UN's ultimate success.

For the United Nations, we firmly believe, has not failed. If in nothing else it has succeeded in bringing together nations for deliberative actions known and open to the world. This at least affords the possibility of settling differences which might have, in the past, inevitably led to war.

We have witnessed the spectacle of a single nation, apparently possessed of a congenital aversion to peaceful cooperation, hindering and hampering almost every move made by the UN Assembly or Security Council. Statesmen of other nations have had to fight their way, inch by inch, through Russian obstructionism. The adamant Soviet refusal to agree on anything has been made more galling by its tirades of investive and untruths aimed principally at the United States and Great Britain.

Human endurance can be stretched too far, however, and we are thoroughly sympathetic with the British and American representatives who, on Wednesday, answered a Russian speech in language stripped of the usual diplomatic niceties. They called the Soviet statement on Albania "a regrettably offensive production" and added resentment "at the tenor of his remarks."

Russia must be brought up short somewhere. The remainder of the world cannot, in dignity and decency, allow itself to be subjected interminably to the Communists' backbiting refusal to cooperate.

We find ourselves in agreement with the American Legion's apt description of the Security Council as a "perpetually hung jury," applied in the course of its recommendations that the United Nation's Charter be amended in certain respects, particularly as to the veto power.

It is apparent that Russia will not allow UN to function under its present set-up, but we believe that the UN must be made to work if mankind's dream of peace is realized.

I also include an article by J. Z. Howard, managing editor of the Press-Scimitar at Memphis, Tenn., which is as follows:

WAITING FOR INTERDEPENDENCE DAY—PATH IS ALREADY OPEN TO A WORLD FEDERAL UNION OF THE FREE

In 1776, the important thing for America was independence.

In 1947, the important thing for America, and for the other free nations, is interdependence.

When America formed an independent government democratic in principle and republican in form, we set a pattern that was hungarily seized on by freedom-and-peace hungry peoples throughout the world. Many new nations were formed on this pattern, many old nations remodeled themselves to varying extents on the American principle.

The yeast of this great movement for freedom, justice, and peace is still working among the world's peoples. It has been especially active in building up the Atlantic community of nations and their outposts over the globe.

But two World Wars have pauperized man and weakened his spirit. There is still the longing for peace with freedom, but the vigor and enthusiasm—the confident will—to stride forward to this goal against all obstacles has flagged in many lands.

And over the confused, devastated world stalks the war-born monster of the police state, crushing lives and hopes and ideals beneath its red feet.

These, as in 1776, are the times that try men's souls.

BUT THERE IS HOPE

But as the 13 weak and confused and sovereignty-proud States of North America found new strength and freedom and peace by pooling their ambitions and assets in a Federal union, the freedom-loving nations of today's world can still find peace with freedom down the same path that the United States opened when it threw away the futile Articles of Confederation and became e pluribus unum—one from many.

The 13 little sovereign nations that were the seeds of the great United States surrendered much of their sovereignty—but not to any other nation or state. They contributed bits of sovereignty to make a greater sovereignty which served them all. They pooled their tiny pieces of power and built a great power with them.

That is the lesson for the freedom-loving nations of today.

TIME FOR NEXT STEP

It is time for them, including America, to take the next step—a declaration of interdependence.

It is time to advance from the modern Articles of Confederation, the United Nations, to a world federal union of the freedom-loving nations. The United Nations has served a good purpose in bringing representatives of the different nations together and habituating them to peaceable discussion and cooperation. And it has shown which nations belong in a union of the free—and which are not yet ready.

But the UN at best is only a league of nations, each jealous of its sovereignty. To stop a war, the UN by its very nature would have to make war. The Communist rulers of Russia have shown by their obstructive tactics and use of the veto that they have no intention of letting the UN function as anything stronger or more important than a debating society.

TWO WAYS TO ACHIEVE IT

How can a federal union of nations—the United Free States of the World—be achieved?

There are two ways, both of which were blazed by America:

First. The freedom-loving states can send representatives to a convention and draw up a Federal constitution. All participating nations would then become members of the union as soon as their governments ratified the constitution. This is the way the original American Federal Union of 13 States was formed. Other nations could then be admitted to this world union of the free when they became willing and met the admission requirements.

Second. Other freedom-loving nations could be invited to seek admission to the United States of America, or could apply for admission. This is the way 35 of the 48 American States became members of the United States Federal Union.

Perhaps the most practical way of forming the new world union of freedom-loving nations would be for each to be admitted to the American Federal Union. As more and more nations outside this hemisphere were admited to partnership in our union, the American union would of course cease to be the United States of "America" in the present sense, and become the United Freedom-Loving States of the World.

NO LEGAL BARS IN WAY

There is no bar in the United States Constiitution to admission of States or other continents. Here are the provisions in the Constitution which bear on the possibility:

Article IV, section 3, clause 1: "New States may be admitted by the Congress into this union."

Article IV, section 4: "The United States shall guarantee to every State in this Nation a republican form of government, and shall protect each of them against invasion."

Think what a guaranty of freedom and security it would give Holland, Belgium, France, Australia, or Finland to become one of the United States, which would be pledged to "protect each of them against invasion."

Of course, it would mean the United States would have to keep strong.

Some pride would have to be swallowed—just as it had to be when Virginia and Massachusetts gave up their independence to become interdependent members of the American Union.

BRITAIN, FOR EXAMPLE

But suppose Britain were admitted to the new Union. It would not be Britain stepping down from her national heights to take a subordinate position as a dominion of the present United States of North America. It would be Britain stepping up with the present United States to create a greater joint nation in which Britain, becoming the most populous State of the new Union, would be relatively stronger than ever—and the United States as a whole and as individual members, gaining strength from the greater pool of power which would result from Britain's joining.

The same for all new nations that might be admitted.

Reconciling the nominal kingships of the democratic monarchies to republican form of government should not be too hard.

When Hawaii—far out in the Pacific, and once an independent kingdom—is admitted to the American Union as the forty-ninth State—which seems likely soon—the United States will cease to be an American Union. When we admit Hawaii, the United States will be on its way to the very world federal union we have been considering.

For the sake of security with freedom and democracy, freedom-loving people in America and freedom-loving peoples all over the world should begin to think hard on this American Independence Day about declaring an early interdependence day.

Red Lake-Clearwater River Project Should Be Started At Once

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. HAGEN. Mr. Speaker, for many weeks now newspapers all over the Nation have carried stories of floods in the Missouri and Mississippi River Valleys.

Headlines have told of thousands of acress inundated and hundreds of communities endangered from rising waters and millions of dollars in damages to property, crops, and land.

However, the serious flood conditions caused by the Red Lake and Clearwater Rivers of northwest Minnesota have received only local or State attention in spite of the fact that many thousands of acres have been covered with water and many farm buildings and communities made inaccessible because of the flood and hundreds of thousands of dollars damages suffered.

The stories about the floods along the great Missouri and Mississippi Rivers are dramatic inasmuch as the rivers are surging with tremendous velocity toward the Gulf of Mexico. This rapid flow of flood waters endangers lives along the way and creates human interest articles which hit the headlines.

In the case of the Red Lake and Clearwater Rivers floods the water creeps over the flat land for miles on both sides of the river banks and gives the residents ample warning. The water lies on the fields from a few inches to 2 or 3 feet or more in depth. However, the devastation and the loss of production is far more destructive per capita than is the more dramatic floods along the larger rivers.

The Congress today voted an initial appropriation of $400,000 to straighten river beds and to carry on any other work necessary to control the flood waters of the Red Lake and Clearwater Rivers.

Although this sum will be far short of the amount needed to finish the job, the farmers and the businessmen in the flood area are extremely grateful that a start will be made this year. In cooperation with local committees of farmers and townspeople, I have worked on this project for more than a dozen years. For that reason, I was greatly pleased when this appropriation was approved by the House and the Senate.

Because the House will shortly vote again on another appropriation for this worthy project next year I would like very much to present for the consideration of the Members a statement which I recently submitted to the House Subcommittee on Appropriations for the War Department Civil Functions.

The statement follows:

STATEMENT OF HON. HAROLD C. HAGEN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MINNESOTA

Mr. HAGEN. Mr. Chairman and gentlemen of the committee, I am Congressman HAROLD C. HAGEN, representing the Ninth District of Minnesota in which is almost entirely located the so-called Red Lake and Clearwater Rivers project.

I will file a statement giving my views, if it is satisfactory with the committee.

(The statement of Mr. HAGEN is as follows:)

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 9, 1947.

Hon. ALBERT J. ENGEL,
Chairman, Subcommittee on War Department Appropriations, Committee on Appropriations, House of Representatives, Washington, D. C.

DEAR COLLEAGUE: In an effort to support this distinguished delegation, I wish to contribute my own written report and statement relative to the urgent need for immediate action in connection with the Red Lake-Clearwater River flood-control project.

Since 1919 a great many public officials, civic-minded citizens, township officials, businessmen, and farmers have cooperated in efforts to secure funds to widen, deepen, and straighten the channels of the Red Lake and Clearwater Rivers and to undertake other measures necessary to prevent frequent floods and occasional drought situations in the area.

The Red Lake River which is the principal tributary of the Red River of the North has its source at the outlet of lower Red Lake in the northwestern part of Minnesota. It flows generally westward through a meandering course for 196 miles and empties into the Red River of the North at East Grand Forks, Minn, and Grand Forks, N. Dak.

The drainage area contains 5,711 square miles, of which about 500 square miles are water surface. The principal tributary of the Red Lake River is the Clearwater River, which enters from the south and east at Red Lake Falls, about 90 miles from the mouth of Red Lake River.

The Chief of Engineers of the United States War Department has completed an investigation of the flood problem on the Red Lake River and its tributaries pursuant to authority contained in the Flood Control Act approved June 28, 1938. This report has been submitted to Congress with a recommendation that a Federal project be initiated for the regulation of floodwaters in that area. This project will include the installation of three hand-operated taintor gates and other appurtenant works. It also provides for the rectification, clearing, and enlarging of the channels of the Red Lake River and Clearwater River.

Many years ago farmers settled in the rich valley, large numbers having been encouraged under the Government's Homestead Act. They built fine homes and worked hard to clear the land and develop the soil into what became known as the "bread basket of the world." During those early years the river beds of the Red Lake and Clearwater Rivers were sufficiently deep to channel the water to its outlet without flood conditions arising.

However, as the years went by, the channels became filled with wind-blown and waterborne soil and vegetation. Each spring the banks would overflow onto the fertile land for many miles outward on both sides of the river banks.

As the years passed, the damage caused by floods increased. In 1940 a report of the United States Bureau of Agricultural Economics stated that farmers and taxpayers along these two rivers and their tributaries suffered a loss of more than $3,384,000 during the years 1919 to 1939, and $8,667,000 for the period 1901-39. Since 1939 the losses have been considerably greater in proportion by reason of eight consecutive flood years. This represents only the direct loss of crops and is only a small amount as compared with the loss of use of potential croplands.

As I stated before, the Office of the Chief of Engineers of the War Department finished their survey. The project was authorized by Congress under the Flood Control Act of December 1944 (78th Cong., Public Law 534).

The War Department has already expended $109,800 in completing plans for this project. These funds were made available by the three following acts: War Department Civil Functions Appropriation Act of March 31, 1945; April 25, 1945; and May 2, 1946.

I was told a few days ago by an official in the Office of the Chief of Engineers that the survey and plans for the project are complete and that construction can be started the latter part of this month (June 1947) providing funds are made available by congressional appropriation.

The War Department has estimated that the total cost of this project will be $2,316,000. It will not be necessary to make this appropriation in its entirety at this time. The Office of the Chief of Engineers has indicated to me that an appropriation of approximately $1,000,000 will permit them to begin construction and carry on their program efficiently in accordance with their plans until such time as the balance of the funds are made available.

Further delay entails great additional loss to the farmers in the flood area and depletes to that degree the economic strength of our Nation.

During the last 2 years the people in my district have naturally believed that this project would be started in 1946 or 1947.

They had been given every reason to think that this would be done. It has been repeatedly stated that this was a worth-while postwar project and that as soon as the war was over an appropriation would be included in the budget. I was very much disappointed when I was informed that the President's budget message did not include an appropriation for this project. I was also told that the President had instructed the Office of the Chief of Engineers not to request an appropriation for any projects which were not already under way. Those of us who have been working on this project for so many years are now compelled to ask for this appropriation which will be over and above the recommendations of the President in his budget message.

I have recently received dozens of letters from farmers living in the flooded area who have indicated that unless Congress takes action this year, they will be compelled to desert their fertile lands and go elsewhere to make a livelihood. These people have expended the best part of their lives in an almost futile effort to conquer the vicious floodwaters. In spite of the tremendous handicaps, their record of production of food and raw materials is to be commended.

It will interest this committee to know that the Red River Valley is situated in the Ninth Federal Reserve district. This district raises approximately 90 percent of the flax in the United States. In fact, Minnesota and North Dakota are the largest producers, each with approximately 1,500,000 prospective acres this year. In addition to that, the Red Lake River Basin contains approximately 8,700 farms totaling over 1,875,000 acres. Besides flax, the farmers produce a great deal of livestock, dairy products, poultry, sugar beets, seeds, small grains, and other farm products.

Other than the flood problem presented by Red Lake and Clearwater Rivers, there is also the problem of an adequate supply of water during the seasons when the shallow river bed has dried up. Permit me to quote from a newspaper article which appeared in the Stephen Messenger on April 19, 1945:

"Mr. Bingham of the Crystal Sugar Beet Co. pointed out that a shortage of water was the main factor in deciding whether more sugar-processing plants should be built in the valley. He stated that plans were under way for two new sugar-beet plants, similar to the one at East Grand Forks, for Crookston and Moorhead as soon as possible.

"Marshall County's main interest in this program is to show the losses due to excessive moisture in the wet years, as well as losses due to inadequate moisture in the dry years. The western two-thirds of the county is affected by flood conditions along the Snake, Middle, and Tamarac Rivers. It is the opinion of those who have been studying these problems that a complete survey by the Army engineers of the whole Red River Valley is the first step in the problem of flood control, drainage, and water conservation, and since the three rivers in Marshall County are a part of the drainage system these rivers will receive due consideration by the district engineers."

I would also like to quote an editorial which appeared in the East Grand Forks

Record on March 28, 1947, also pointing out that flood and drought are invariably associated.

"The significance of the Red River Valley's long-range water problem was driven home to city officials and industrial leaders at the water conference held in Grand Forks, March 20. Progress made so far toward solution of that problem is heartening, but it was made evident that there is still a long, long way to go, and that while the big share of the cost involved in water-conservation projects will be borne by the Federal Government, local communities undoubtedly will be called upon for substantial contributions.

"Most people fail to realize that the average of 20 inches or so of rainfall received here annually place this region under a semi-arid classification. Only the topography and type of soil keep this valley green with that small amount of rainfall, and present water supplies are just barely adequate for the present needs. Another dry cycle such as we had in the thirties could create a large-scale disaster unless we provide water reserved beforehand.

"Any hopes for industrial expansion to utilize agricultural products of the valley must depend to a great extent on adequate water supplies, all year every year. The meeting March 20 outlined the work which must still be done to develop the Red River Basin's water resources; it is now up to valley residents to fill in the outline."

I have been informed by officials of the Red Lake Drainage and Conservancy District that they have submitted formal assurances to Col. Walter K. Wilson, district engineer of the Office of the Chief of Engineers in St. Paul, Minn., that they are willing and able to fulfill the requirements of local cooperation set forth in the authorizing legislation.

All that remains to be done at this time is for Congress to appropriate the necessary funds so that the Office of Engineers can start work on the river beds this year. Even though the project is only partially completed this season, the farmers will take heart and feel that their Government is not "letting them down."

Following is a brief on the Red Lake River flood control project prepared by former State Senator E. L. Tungseth, who was chairman of the Red Lake River Flood Control Association in 1943:

"The land and water area of the Red Lake River Basin is some 5,850 square miles. It includes portions of Beltrami, Clearwater, Itasca, Koochiching, Mahnomen, Marshall, Pennington, Polk, and Red Lake Counties. The major tributaries of the Red Lake River are the Clearwater and Thief Rivers. Red Lake River is the outlet for Red Lake, the largest lake wholly within Minnesota. This lake has an area of 440 square miles. The Red Lake Indian Reservation is also within the land and water area of this basin.

"The cities of Crookston (population, 7,161), East Grand Forks (population, 3,511), Red Lake Falls (population, 1,530), and Thief River Falls (population, 6,019), Minn., and Grand Forks (population, 20,228), N. Dak., are dependent upon this source for water. Conservation and control of water levels are essential to the welfare of the Indian population on the said reservation as well as for the large rural communities and cities throughout the territory. There is a total of 24 municipalities in the area.

"Flood-control facilities in this basin will be of benefit to the whole area and in fact to the whole State and Nation. The area contains some of the finest of agricultural land in Minnesota. In 1935 statistics show 8,710 farms in the basin. The total value of these at that time was estimated at $36,340,000.

"The section of this basin which suffers most acutely from flood difficulties is in eastern Pennington, southeastern Marshall, northeastern Red Lake, and parts of Beltrami, Clearwater, and Polk Counties. The distribution per county is approximately as follows: Beltrami, 1½ townships; Clearwater, 2½; Marshall 5, Pennington, 5; Red Lake, 2½; and Polk, 1½. This totals 642 square miles or 462,240 acres. About 30 percent of this flood section is waste or wild land, which in most years is too wet to farm. About 50 percent of the remaining 308,160 acres, or 154,080 acres are seriously affected by most floods. This section is very flat and provides only 0.71 feet per mile fall. The stream beds are exceedingly crooked, frequently extending some 3 or more miles for every mile of actual progress.

"Most of the Marshall and Beltrami County portions of this flood section drain into Mud Lake and Thief Lake (these two lakes now game refuge) and then down Thief River. The remaining part of this flood section is crossed by the Red Lake and Clearwater Rivers, which run almost parallel some 4 to 8 miles apart, a distance of some 18 miles across this flood section. Very frequently floods will cause the two rivers to join as one body of water. The Red Lake River carries overflow from an area of about 2,000 square miles when it reaches this flood section. The Clearwater River also has a comparatively large source area from which it carries surplus water across said section.

"According to flood damage data there have been 15 major floods up to and including 1943. These have occurred in 1901, 1902, 1904, 1905, 1908, 1915, 1916, 1922, 1925, 1927, 1938, 1940, 1942, 1943. Minor floods have occurred in 1903, 1906, 1907, 1909, 1911, 1914, 1926, 1928, 1930, 1939, 1941. (There have been serious floods each year since 1943—added comment.)

"Flood damages cannot be figured in dollars and cents because many of them are intangible. Sanitation, water supply, inundation of basements where food supplies are stored, damage to gardens and stacked hay. Retarding of stock-feeding programs and loss in production from dairy herds and poultry, road destruction, and the many indirect damages to inundated fields and pastures make a compilation of figures only a feeble attempt to present any actual picture."

Attached are two photographs of 1947 flood conditions of the Clearwater River near Gully, Minn. A short time before these pictures were taken this land had been cultivated and seeded. The flood cost this farmer weeks of labor and a large part of his remaining capital.

These pictures are representative of conditions throughout the whole flood area.

In conclusion, I sincerely hope that your committee will favorably recommend the appropriation of funds so that the War Department can begin construction this year.

HAROLD C. HAGEN.

Address of Hon. J. Strom Thurmond, Governor of South Carolina

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. J. Strom Thurmond, Governor of South Carolina, before the annual meeting of the governors' conference, Hotel Utah, Salt Lake City, Utah, July 15, 1947:

Mr. Chairman, fellow governors, distinguished guests, ladies and gentlemen:

I. WHY PREPAREDNESS IS ESSENTIAL

The paramount problem which today confronts all mankind is finding the formula for a fair and enduring peace. This Nation, these United States, comprising the 48 States and the Territories we here have the honor to represent, is engaged in an all-out effort for peace, not peace in our time but for all time.

We cannot escape the inevitable fact that this peace for which we strive depends upon the prestige and influence of the United States, the world's greatest stronghold of economic power and the Gibraltar of freedom and democratic processes.

Because of the way the world reckons, our prestige and our influence in international affairs depend upon the efficiency with which we attend to our own national security.

We may as well face facts. What has transpired at the council tables of the world during recent months points not to peace but to war. One of our great allies in the recent war has embarked on what appears to be a policy of isolationism. At this very moment, one group of European nations is meeting in Paris in an effort to design plans for the rehabilitation of war-devastated Europe. Another group of European nations under the leadership of the Soviet Union, has remained away from the Paris conference.

This choosing up of sides in Europe, this forming of spheres of economic influences, is following a path that leads to war and not to peace.

We are a peace-loving Nation. We hate war. As a nation we are pledged to peace, but when we see one of the great powers of the world adopting a policy of isolationism, of refusing to join with her sister European countries in preparing a plan for rehabilitation of Europe, and when we see that Government using its veto power to block the effectiveness of the United Nations we in the United States are deeply concerned.

When hostilities in World War II ceased the United States was the greatest military power the world had ever seen. We believed that all of our allies meant what they said when they accepted the charter of the United Nations. We sincerely believed that every nation, including the Soviet Union, wanted peace and would work and sacrifice to attain a just and lasting peace.

The result was an all-out demand for demobilization of our armed forces. Within a few months we permitted our military might to fall away from us. We shed it like an outworn garment.

The recent trend of world events forces us to reexamine our state of preparedness. Seldom in our history has it been adequate and now we find ourselves only a few months after the end of a miraculously victorious war, again in a state of unpreparedness.

It seems that a state of chronic unpreparedness has been always our chief military characteristic.

At a time when war can strike without warning our ground forces have uncommitted only two and one-third combat divisions. Our air and sea forces are somewhat better prepared for any emergency, but both are dwindling so rapidly that they cannot long be regarded as insurance against attack.

We have the word of our respected Chief of Staff, General Eisenhower, that our Army is now a poor second to that of the Soviet Union. He tells us that, while war is not regarded as a probability within the next 12 months, it is regarded as a possibility; that the Army now exerts far less pressure for peace than it did when fully mobilized; and that further reduction of the Army would endanger the safety of the Nation.

In regaining our state of preparedness we will be making a contribution for peace. When our Army dwindled to a few hundred men after we won our independence, George Washington told us that "to be prepared for war is one of the most effective means of preserving the peace."

The wisdom of Washington is more pronounced today than it ever was. We are struggling to build a United Nations that

will assure world security and bring an end to war. The United Nations is passing through its most critical period. We must not let it fail. To assure its success the United States must remain strong and powerful and by all means it must retain respect and influence around the council table of nations.

We must approach this problem not as Democrats or Republicans—but as Americans. Patriotism, not politics, must be the motivating force by which we again attain national preparedness.

II. HOW PREPAREDNESS CAN BE ACCOMPLISHED

What must we do to achieve national preparedness? History and our own experience provide the answers to this question.

1. Total mobilization: World War II brought realization of a basic principle of the Prussian student and practitioner of war, Von Clausewitz—that the way to win wars is to destroy the enemy's ability to make war. This, with improvements in weapons and methods, has brought the civilian populace into the front lines and has made the home and the factory as much a point of contact as the infantry, armed patrol, or the combat crew in the air.

Man in his madness has achieved what can be described only by a new phrase, "total war."

The only answer to the threat of total war is total mobilization.

Experience indicates that we cannot finance another war on the same basis as we have financed other wars. During World War I, we borrowed 30 billions and during World War II, 10 times that much. It has been the history of our major wars that each succeeding one cost 10 times as much as the preceding one.

Furthermore, we are told, and we have reason to believe, that in future wars we will not have the time to mobilize our manpower and our financial and industrial potential in the manner we have before. There will be no time for the recruiting of war workers and there will be no time for the negotiation of contracts for the manufacture of armaments.

It appears possible that if war comes again, we will have to call into national service every man, woman, and child of our Nation in order to provide the weapons of war, supply the combat elements, and maintain the civilian population.

Total mobilization must embrace all of our scientific, industrial, and manpower resources, in accordance with an instantaneous pattern of conversion and mobilization.

We should not leave total mobilization to be written or put into effect if and when war comes. No man or group of men should be left to decide such a vital matter under the shock and confusion of the outbreak of atomic war. On the contrary, we must write into law now the legislation necessary to carry it out, and such legislation should be made self-activating upon the declaration of the existence of a national emergency or state of war.

Total mobilization must embrace the instant conversion of all industry to war production, in accordance with plans and arrangements worked out in advance with each industry, and revised at regular and frequent intervals.

It must also embrace the instant availability on a wartime basis of experienced personnel to operate all war plants and converted industries, in accordance with plans and arrangements worked out in advance with representatives of the working men and women of the Nation, and revised at regular and frequent intervals.

We must also see to it that we have available at once an already organized civilian defense set-up on a Nationwide basis, because local disaster will certainly accompany the initial blow or blows against us, and we cannot know where these blows will fall until they land.

We must revise, reduce to law, and have ready for immediate and automatic activation the measures necessary to insure efficient control of prices, priorities, and rationing of all civilian goods and of the foods in which shortages are likely to develop because of the requirements of the armed services; and regulate wages and limit profits, so that as nearly equal contribution to the war effort as possible will be made by each of our citizens.

Our responsible leaders must give thought to this challenging problem and exert the pressure of public opinion necessary to cause it to be faced and solved.

2. Unification of armed services: Congress is considering legislation to unify our armed services under a single Secretary of National Security. The necessity for unity of command in the field was conclusively demonstrated in World War II, and I am convinced that the principle should be extended to the War and Navy Departments as an integral part of our preparedness program.

3. Organized military strength: Even with a plan of immediate total mobilization and with a streamlined system of command, we must have ready always a balanced striking force capable of defending our homes and industries and of carrying the fight to the enemy's own territory. The constitution of such a force, its scale, and its composition must, and can with confidence, be left to the armed services to handle in the light of their experience in past wars and in view of current and future developments.

However, civilian leadership must realize that the day of so-called push-button warfare has not yet arrived and must see that we remain effective on the ground, on the seas, and in the air.

This they must do in full consciousness of the fact that the largest defensve force may not be the best. The superiority of armies is determined now, as always, less by numbers than by such things as organization, training, leadership, and national spirit. We must be careful to see that our standing Army is a well-trained, well-equipped, and highly mobile striking force; that our Navy is a strong, well-balanced, and well-manned service; and that our Air Force is second to none in training, equipment, and constant development. We must also see that such organizations as the National Guard, the Organized Reserve, and the Naval Reserve are promoted, so that trained personnel will be almost immediately available to expand the standing armed services.

Finally, we must enact and have ready a fair and efficient selective-service law, dovetailing with our other preparedness legislation, to provide immediately the reenforcements and replacements which will be necessary to bring the war to a speedy and successful conclusion.

It is well for us to remember that our ability to strike back quickly and successfully will do much to discourage the ambition of a potential aggressor, and organized military, naval, and air components designed to do this will exert strong pressure for peace.

4. Universal military training: To provide a speedy means of expanding our initial defensive or striking force and to insure perpetuation of our Reserve elements, we must put into effect a program which will prepare all our potential combat manpower for a proper place in our fighting force.

Aside from the fact that the necessary haste with which we trained our young men for military service in the recent war resulted in unnecessary casualties, we cannot be sure of time to do even that well if and when we must again fight to defend our lives and freedom.

We must, therefore, adopt universal military training. Such a program, substantially in the form recommended recently in the report of the President's Advisory Commission, is essential to a well-rounded and comprehensive preparedness program.

We have never thought that military training had militaristic effect upon our people. Such has not been our experience with the military academies or colleges of which our country has so many, nor with the State militia organizations, or the CCC, or the CMTC. If it is interposed that attendance upon or service in these was voluntary, certainly this was not true in most cases of service in the armed forces during the recent war, and yet nearly 14,000,000 of our men and women served for periods up to 7 years, hastened back as soon as possible to civilian pursuits, and are now generally better and less warlike American citizens than they were when they entered the service. As one who spent 3½ years in the service in World War II, I know of my own knowledge that this is true.

It is also contended that modern war has rendered large numbers of men obsolete; but this contention overlooks the significant fact that, although World War II was the most mechanized in history, nevertheless, it required the largest armies.

Finally, it is urged that universal military training will be wasteful; but its cost, while large, does not compare with the cost of war, and especially with that of defeat. If we could have shortened World War II 3½ days, the saving in cost would have paid for the training of a million men for a whole year.

The program of universal military training is designed to produce the following results:

(a) In the event of an emergency the machinery will already exist whereby the Nation can rapidly mobilize and train its wartime citizen forces.

(b) In peacetime, it will enable the Nation to maintain its Regular and Reserve armed forces at the highest level of readiness on a voluntary basis, because of the previous training of most enlistees.

(c) It will afford the opportunity of choosing individuals with demonstrated capacity as leaders and giving them further training.

(d) It will train and develop, throughout the country, a pool of persons with special skills required in modern warfare.

(e) It will provide in each community men trained to assist in repelling invaders, and in coping with the disaster, demoralization, and destruction attending the initial blows of sudden or sneak attacks.

(f) It will offer real educational values to those undergoing the training, including extensive vocational and trade instruction, and it will afford an opportunity of reducing illiteracy, which ordinarily would preclude military service.

(g) It will result in the detection and correction of many physical defects ordinarily undetected until beyond help, and will improve the national health by the physical benefits accruing to the trainees.

It is obvious that universal military training will be invaluable in implementing the measures which will be taken to guarantee organized military strength and provide for total mobilization, because there will be created an enormous pool of men available for the armed services as well as men trained for industrial work and civilian defense duties.

I am convinced that universal military training will strengthen our war potential in personnel in advance of war with a minimum of dislocation of the lives of our people and the peacetime economy of the Nation, and that whatever the cost, we cannot afford to do without it.

5. Scientific research and development: Our side won the race to develop the atomic bomb as an instrument of destruction. Had our enemies won, what a different ending World War II might have had. The havoc wrought by the proximity fuze, developed by

the Navy in conjunction with the Office of Research and Development, startled the forces of the Axis. Designed to protect surface vessels from air attack, it played a strong part in turning the tide in the Battle of the Bulge and in defense against the buzz bombs and V-2 rockets. It is possible that without this fuze the suicide kamikaze attacks upon our fleet at Okinawa might have attained their objective.

In the recent war we saw the development of radar, electronic devices of various types, recoilless weapons, pilotless aircraft, and the beginning of warfare with guided missiles and atomic bombs. Science will make even greater advances and have even greater application in any future war, not only in the atomic field but also in the fields of electronics, radio activity, jet propulsion, supersonic speeds, and biological agents. These examples and many others demonstrate that the turning point of modern wars will depend more and more on the earliest development of new weapons, or new uses for, or perhaps new defenses against, existing weapons. Hence, under present-day conditions, we must provide for constant peacetime research and development to stay ahead of the rest of the world. A permanent and well-supported agency to this end is an imperative part of our program.

6. A world-wide intelligence service: Who can say when war will come? We are told that it will come without warning, by sudden attack. To make our defense effective, we must know as soon as possible of the enemy's intentions. We cannot wait until his ships appear on the horizon, or until our radar, what little we have in service, tells us of the approach of his bombers. We must strive to be forewarned.

Therefore, it is today vital to our security that we create a world-wide intelligence service on a career basis. Such a service would function for all departments of our Government alike, the diplomatic and the economic, as well as the military. One of its functions would be the coordination and proper evaluation of all information collected and reported by any agency of the Government. Pearl Harbor graphically illustrated the critical importance of coordination and evaluation of intelligence.

7. Closest coordination between those responsible for our foreign policy and those responsible for our armed services: The complexity of the modern world and the increased telescoping of time and space make it vital that the closest possible relationship exist between the officers and agencies which frame our foreign policy and those responsible for the strength, condition, and disposition of our armed services. This will enable us to gear our military strength to our considered foreign policy, and prevent the growth of a vacillating foreign policy geared to our military strength, which policy in itself is a symptom of weakness and could lead to war.

8. Uniform hemispheric armament and training: There is now pending before the Congress a bill to provide for standardization of armament and training in this hemisphere to make South America, Central America, and North America a complete unit in case of war. The value of hemispheric defense was proven in World War II, and it should be provided for now, and not after war breaks out.

9. Support of merchant marine: We entered World War II, as we had earlier entered World War I, deficient in cargo ships, and had to depend on the shipping resources of our Allies until our construction program overcame the deficit. We all vividly recall how close the submarine campaign of the enemy came to victory in both wars.

We are an ocean power and realize the importance of utilizing the oceans as highways to our objectives. Our basic concept of national defense is that the engagements, the operations, and the inevitable destruction of war shall take place as far as possible from our territory. Hence, we must be prepared to project our power overseas; and we must be equipped to supply our forces by sea as well as air transport. Moreover, we must have the ships necessary to bring from abroad, both in peace and in war, the critical raw materials necessary in the manufacture of our war needs.

We have emerged from World War II once again with a great merchant marine. We must recognize its indispensable position in our preparedness program, see to it that it is not again junked or scuttled, and keep it in condition to meet normal as well as emergency needs.

10. Stock taking, stock piling, and conservation of natural resources: To be adequately prepared for an emergency, we must have an accurate knowledge of our raw material resources. This calls for a detailed inventory of what we have within our borders, and a like inventory of what can only be obtained from without and where obtainable. The present study of our own natural resources is particularly important because we expended them so freely in the winning of World War II.

We were told by the President in his State of the Union message this year that we are rapidly becoming a have-not Nation as to many of our minerals. Included in this category is the raw stuff from which fissionable material is made, as well as alloyable ores needed in the manufacture of steel capable of standing extreme heat. Hence, our production of atomic energy and of jet propelled engines may depend in the near future on importing those raw materials, and stock piling them from time to time as we are able to locate and obtain them.

Only a few days ago, the Navy announced that it was so short of oil that it could not cope with an emergency at the present time, and must buy 3,000,000 barrels from the Near East to meet its requirements. By this means, it was estimated that in 6 months' time east coast naval stocks could be increased to a position compatible with the Navy's obligations for national security.

Furthermore, our increased national income has brought about increased consumption of our domestic production to the extent that we will now have to import minerals and metals which formerly we were able to export. For instance, we formerly produced enough lead to care for our needs and permit us to export about 100,000 tons a year, while now we are short about 300,000 tons annually. To a lesser extent, we face the same situation with zinc, copper, and petroleum, which in the past were among our chief sources of wealth.

We must, in the national interest, set up the machinery to take stock of our natural resources and see just where we stand. Then we must make plans to import for domestic use those materials in which we may run short in time of war. This presupposes the requisite measures to conserve those resources determined to be vital to our war potential, to locate resources for import in other parts of the world and arrange for their acquisition, and to stock-pile such resources, not only to increase our war potential, but also to permit war production to begin at the very moment of attack.

All this must be done now, long before war comes, and adequate legislation should be enacted as early as possible to enable such a program to be carried out on a practical basis.

11. Decentralization and dispersal of industries: The geographical location of the next Pearl Harbor will be determined by industrial, rather than military or naval, concentration.

The concentration of important industrial establishments will put a premium on sudden attack, whereas decentralization of giant industries and a more general distribution of the part of our industrial economy upon which our war effort will depend, will tend to protect our productive capacity, and render a sneak attack less destructive in a military way, and consequently less likely.

The nature of modern war dictates that the industrial system of the Nation be dispersed, and that underground location of those industries most vital to our war potential be planned against the hour of need.

12. Control of sabotage, sedition, and subversive activity: The success of the enemy in World War II in the use of the fifth column as a military weapon is well known to all. By means of sedition and subversive activity, coupled with sabotage of defense installations, supposedly powerful armies were so softened and thrown into confusion that they suffered comparatively easy and stunning defeat. When we entered the war, however, our countermeasures crushed the fifth column, and we were remarkably successful in controlling subversive activities and preventing sabotage.

In considering this important field of our preparedness program, we should remember that the fifth column will not await a formal declaration of war any more than military attack does now, and our preparedness program must provide for the control of sabotage and subversive activities in peace as well as in war. Even now agents of foreign countries are engaged in such activities in an effort to undermine the American way of life and our time-tested system of democratic government. It is vital to preparedness that we recognize that there can be no divided loyalty in this country, that the hyphenated American is no American at all, and that regardless of creed, racial strain, or national ancestry, our people must face the future on the basis of a common and exclusive American nationality. No man can be a loyal and patriotic American unless he is an American and nothing else.

As Theodore Roosevelt once said:

"We must not stand merely for America first. We must stand for America first and last; and for no other nation second—except as we stand for fair play for all nations."

No fifth column can breed with success among a people who believe in Stephen Decatur's immortal words:

"My country. In her intercourse with foreign nations may she always be right; but right or wrong, my country."

That belief guided those who participated in the birth and early days of this Nation; it must guide today those to whose charge the future of the Nation has been committed.

In conclusion, let me remind you that twice in our lifetime we have seen our state of unpreparedness threaten the very existence of our way of life. Broad oceans, strong allies already engaging the common enemy, and a kind Providence have given us time to prepare to meet the evil forces which have threatened us.

The initial attack of a future aggressor nation undoubtedly will be thrown against our United States, which has provided the decisive force in the world's two great conflicts.

Our cause is the cause of peace, and the common sense and patriotism of the American people are our most effective weapons in the struggle to underwrite the peace.

Our generation is now responsible for the safety of the United States in a troubled and turbulent world, and for the discharge of our country's proper obligation to exert power and strength for the cause of establishing peace.

It is a responsibility and opportunity which challenges our best thought and effort, and I am confident that we as a Nation will meet the challenge.

Situation Regarding H. R. 3054, H. R. 4038, and H. R. 3432

EXTENSION OF REMARKS
OF
HON. WALTER G. ANDREWS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. ANDREWS of New York. Mr. Speaker, I should like to explain to the House that due to the pressure of other legislation in the closing days of this session, it has been unfortunately impossible for the Armed Services Committee to give consideration to the following bills: H. R. 3054, to establish the Women's Army Corps in the Regular Army; H. R. 4038, to authorize the enlistment and appointment of women in the Regular Navy and Regular Marine Corps; and H. R. 3432, to make certain changes in the organization of the Navy Department in the Office of the Chief of Naval Operations.

I wish to state that the necessity for prompt action on these bills is clearly recognized, even though the effects of inaction would not be felt until 6 months after the legal termination of the Second World War. It is my belief that prompt consideration will be given these measures at the next session of the Congress and that a large majority of the Armed Services Committee will express approval thereof.

Hon. Karl Stefan, of Nebraska, Has Made an Outstanding Record in the Eightieth Congress

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. REES. Mr. Speaker, under unanimous consent granted me by this House, I am submitting a very fine editorial that recently appeared in the Lincoln (Nebr.) State Journal concerning our esteemed colleague, the Honorable KARL STEFAN.

I think the membership of the House recognize the ability, the integrity, and the industry of the Honorable KARL STEFAN. It is good to observe the splendid recognition he has received in his own State as indicated by the editorial that reads as follows:

A CHAT WITH THE EDITOR

They aren't exactly what you'd call light summer reading. Certainly they don't look inviting—those big, drab, cardboard-covered volumes that issued from the Government Printing Office in an endless stream to record the hearings of congressional committees. I had always dutifully tossed them, unopened, on a shelf, thinking they'd come in handy some day, then forwarded them, unopened, to the wastebasket along with buckets of dust when the shelf got full.

HENS IN THE DRAWING ROOM

This as always I did the other day when a pile of the volumes came in. Then I opened one out of curiosity. It was better than a detective story, and more complete than an encyclopedia. It was the record of the hearings of the House Subcommittee on Appropriations on the State Department appropriation bill. There isn't a subject or a place under the sun that doesn't find mention somewhere in the book. There's a learned discussion of fishing in the south Pacific, all the dope on UNRRA, something on the cost of living in Tihwa, Chile, an argument over who was responsible for the production of Life With Father in Rome. Literature, hoof-and-mouth disease, aviation, law, history, sex, and the servant problem in Ethiopia all find their place in this tome.

In this particular committee the particular star is the chairman, Nebraska's Representative, KARL STEFAN. That fellow, who has been around a lot, seems to know a little something about everything and a lot about some things, mostly where and how the taxpayer's dollar is spent. There isn't one single item or one possible place to save money that escapes his eagle eye, and the public can be glad they have a man like him around.

The hearings reveal Mr. STEFAN to be world-minded, fair-minded, always ready to acknowledge a necessary expenditure when the facts are shown to justify it, down to the last cent, but persistent and remarkably well-informed. He wants to know who pays for garbage removal at the United States Embassy in London, and he finds out. And if he thinks the British should pay for it, a State Department official goes out and phones the British, then comes back and tells Mr. STEFAN they think they can save a few thousands bucks on that point. He wants to know how much a coffee table cost in Shanghai, and who paid what and why for a motorboat at Istanbul.

Here is a sample of the proceedings, with STEFAN interrogating a State Department official:

"Mr. STEFAN. What did you do with that building in Austria, that Mr. Messersmith bought? It was not being maintained properly; it was in terrible shape in 1939—run down. I complained about it then and nothing was done about it.

"Mr. LARKIN. We had a contract let for repair of that building, and then Hitler came into Austria.

"Mr. STEFAN. Hitler could not have done half as much damage to that building as was done by the caretaker, at the time I looked at it. There were some beautiful gold-framed mirrors down in the basement, and there were chickens running over them and running over everything and the property was just being destroyed. What did you do with that? Did you dispose of it?

"Mr. LARKIN. No, we have not disposed of it yet. * * *

"Mr. STEFAN. When were you there, at what time?

"Mr. LARKIN. I was there shortly after Hitler got there * * * If he got there March 15, I got there about March 31.

"Mr. STEFAN. If you got there March 31, I was there about 5 months later * * * Those things were lying in the drawing room, with chickens running all over them. The caretaker was using the drawing room as his hennery.

"Mr. LARKIN. I did not know about that."

If this were an isolated case you could understand that Mr. STEFAN just managed to maneuver the discussion onto a place he had happened to visit. But time and again the record brings out that he knows more about details from Shanghai to London to Washington than the person in charge. One State Department man was justifying extra pay for Foreign Service at undesirable posts, and used Stuttgart as an example. STEFAN tripped him up, because he knew all about where the consul was living in Stuttgart, how many servants he had and what the house looked like.

* * * * *

As I said, I just got through reading up on the State Department. Now I've got five more on the desk, and I think I'll have to go through them all, the Judiciary, the Justice Department, the Commerce Department, the hearings on the Griswold mission to Greece. Just to see if there's something that man STEFAN doesn't know something about.

RAY MCCONNELL, Jr.

Humanity Demands That the Crime of Genocide Be Outlawed

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday July 26, 1947

Mr. SABATH. Mr. Speaker, the Social and Economic Council of the United Nations is now considering one of the most important issues. It is the draft convention on the crime of genocide, meaning the willful and planned destruction of minorities through killings, mutilations, sterilizations. Also included in the definition of this crime are atrocities against religion and culture, such as destruction of churches, libraries, removal of spiritual leaders, and so forth. The draft convention aims to protect both the physical and spiritual life of human groups. The highest possible protection is to be given to such groups and their destruction is defined as an international crime, like piracy, trade in slaves, or trade in women. Piracy as an international crime has become obsolete, and the real pirates are to be found now not on the high seas, but on the continents.

The American delegation took a leading part in adopting a resolution at the last Assembly of the United Nations, outlawing genocide. President Truman in his message to Congress—see letter of the President in transmitting his report to Congress, New York Times, February 5, 1947—considers the concept of genocide of the greatest importance. Professor Jessup, the American delegate in the United Nations Committee on Codification of International Law, stated that the definition of genocide through an international treaty signifies an important advance in international law. This attitude of American statesmen is in line with the traditional American policy of moral and humanitarian solidarity, and of assistance to the victims of persecutions and indignities inflicted upon innocent peoples by tyrannic governments. Theodore Roosevelt once even denounced the trade treaty with Czarist Russia in protest against pogroms. As a matter of fact, the United States has always paid the tremendous cost of the crime of genocide, because we have had to take care of the victims. Because of these considerations, it is hoped that the American delegation at the Social and Economic Council will do everything to accelerate

the adoption of the draft convention at the next Assembly. No delay on the excuse of cumbersome procedures should be admitted by the Social and Economic Council.

The prevention of crimes, like the prevention of fire, does not allow delay unless we are indifferent to these disasters.

In that connection, Mr. Speaker, I am inserting in the RECORD an editorial from the Washington Post of July 16, 1947, on the same subject.

TREATY ON GENOCIDE

In conformity with a mandate given it by the General Assembly of the United Nations at its last session, the UN secretariat, with the help of expert counselors, has prepared a draft convention outlawing genocide as an international crime. The draft has now been sent to the 55 member nations for scrutiny and comment and is to be brought up for discussion by the Economic and Social Council when it convenes on Saturday. It should be ready for action by the Assembly when that body has its next meeting in September. The time is short, yet not too short, we think, for settlement of a matter on which there has already been unanimous agreement in principle.

Genocide has been defined by Prof. Raphael Lemkin, who coined the term, as an organized and systematic effort to exterminate a human group as an entity. Prior to its last adjournment, the Assembly acted unanimously to condemn genocide as a crime under international law. But to make this condemnation effective, it is now necessary for each member nation to enact the legislation necessary for prevention and punishment of the crime and to ratify a treaty as to methods of dealing with it. The draft convention would pledge all its signers "to prevent all acts of genocide and to punish all persons guilty of such acts, wherever they may occur." This would mean that an organized and systematic attack upon an ethnic group, such as Hitler's programs of extermination in and out of Germany, would be a violation of international law punishable by any nation which could lay hands on those responsible. The lessons of the past should have made the need for such an international statute self-evident. It would do no more than give the sanction of the United Nations to elementary standards of human decency. We hope that the General Assembly will choose to make this the first order of business when it convenes and translate what is universally accepted morality into international law.

A Danger and a Remedy

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. O'HARA. Mr. Speaker, in 1914, for the first time in our national history, an agency was created primarily for the purpose of preventing violations of the antitrust laws. This agency, the Federal Trade Commission, was designated to enforce certain provisions of the Sherman and Clayton Acts and to prevent, through the issuance of orders to cease and desist, unfair methods of competition. The basic statute, the Federal Trade Commission Act, represented a complete departure from our traditional methods of law administration.

Underlying this legislation was the belief that the basic theory of the antitrust laws could be made workable only if a method were devised to extinguish incipient restraints of trade, as well as to eliminate those already established. The theory was that prevention would be more effective than cure. To arm the Federal Trade Commission with the broadest possible powers, to discourage monopoly, and to eliminate restraints upon interstate commerce, authorization for prevention of unfair methods of competition was couched in the most general terms. Thus the Commission was empowered to strike at practices which might otherwise not be preventable under the more rigid terms of the Sherman Act and the Clayton Act. Over the years, by the administrative policy of the Commission, by judicial interpretation, and by the passage of the Wheeler-Lea Act in 1938, the Federal Trade Commission has increasingly digressed from its originally intended function and has become more and more the arbiter of advertising and trade practices which frequently have little or no relation to monopolistic practices or to restraints upon commerce.

The procedure established by the original act for furtherance of the Commission's antitrust duties remains essentially unchanged. This procedure, even more than the other innovations wrought by the act, represented an experiment in our jurisprudence. It empowers the Commission to investigate suspected violations of its act, to make charges, to prosecute and to adjudicate the charges and to issue orders immune from effective review by the courts.

This procedure has been well described by the circuit court of appeals for the second circuit—*John Bone* v. *Federal Trade Commission* (299 Fed. 468, 471):

> The Trade Commission * * * is called upon simultaneously to enact the roles of complainant, jury, judge, and counsel.

This combination of functions imposes upon the Commission a responsibility that taxes the capacity of human nature. Experience has demonstrated that in the administration of its act the human frailty of the Commission has predominated.

The act provides that "whenever the Commission shall have reason to believe" that the law is being violated, it shall issue and serve its complaint, "if it shall appear to the Commission that a proceeding by it in respect thereof would be to the interest of the public." This requires, to a material extent, a prejudging of the charges which the Commission later prosecutes and must adjudicate.

When hearings are held to avail the respondent an opportunity to show cause why an order to cease and desist from the alleged violation should not be entered, the Commission designates one of its trial examiners to preside over the hearings and appoints one of its trial attorneys to represent it in the proceeding.

The proceedings are often protracted and expensive. The hearings are frequently held at widely scattered points throughout the country—wherever the witnesses may be found—requiring extended travel by the Commission's staff and the respondent's representatives. Frequently years are consumed before the cases are terminated. The Philippine Mahogany case, for example—*Indiana Quartered Oak Co.* v. *Federal Trade Commission* (26 Fed. (2) 340)—was in litigation for 22 years before being finally concluded.

It is significant that the Commissioners make their decisions without any first-hand knowledge of the case. The testimony is taken down stenographically and submitted as a written record. Neither the Commission nor any Commissioner sees or hears a single witness.

The Commissioners do not even read the whole record of the testimony. A member of the Commission, testifying before a subcommittee of the House Committee on Interstate and Foreign Commerce on H. R. 2390, Seventy-ninth Congress (record of hearings, pp. 406 and 417), stated that it is physically and mentally impossible for the Commissioners to read all of the records. He cited the record in one case of 50,000 pages as an example of their length. Representatives of the Commission testified in these same hearings, that in making decisions the Commission depends on the report of its trial examiner, briefs of counsel, oral argument of counsel, and the advice of three legal assistants—record of hearings, pages 406, 416, and 417.

The adjudication is made on an appraisal of the weight and sufficiency of the evidence which is solely within the discretion of the Commission. The Commission may decide its cases by the preponderance of the evidence, but it is not required to do so by the act. It simply provides (sec. 5 (b)) that—

> If upon such hearing * * * the Commission shall be of the opinion that the method of competition or the act or practice in question is prohibited * * * it shall * * * issue and cause to be served * * * an order * * * to cease and desist.

By contrast, in civil cases tried by the courts, the preponderance rule is the minimum. In criminal cases guilt must be established beyond a reasonable doubt.

In *Harriett Hubbard Ayer, Inc.* v. *Federal Trade Commission* (15 Fed. (2d) 274) it was held that the Commission's findings could not be disturbed if supported by any evidence.

More recently other cases have held that the Commission's findings are not subject to review if supported by substantial evidence. But no court has required that they be supported by a preponderance of the evidence.

The need for corrective legislation is emphasized by the narrowness of review of Commission proceedings by the appellate courts. In an increasing number of cases the courts are declaring their impotence to review the findings of fact.

The courts further hold that they are bound by the Commission's judgment as to the quality and sufficiency of the evidence. Such evidence may consist of biased testimony—*Segal* v. *Federal Trade Commission* (142 Fed. (2d) 255)); incompetent evidence—*Bene* v. *Federal Trade Commission* (299 Fed. 468); and

the testimony of selected experts—*E. Griffith Hughes, Inc.* v. *Federal Trade Commission* (77 Fed. (2d) 886). In the Segal case the court observed that a part of the testimony was "obviously biased" and said:

> Even so, if the Commission wished to rely upon such testimony, we may not intervene, whatever might be our own indisposition to accept what he said.

The courts refuse on appeal to weigh the evidence. They hold that they are bound by the Commission's findings, if supported by evidence, despite the fact that the weight may be to the contrary. Thus, they need read only the Commission's side of the case and if there is evidence to support the findings, the record to the contrary may be ignored.

The considerations for the O'Hara bill, H. R. 3871, are the principles outlined by Chief Justice D. Lawrence Groner of the Circuit Court of Appeals for the District of Columbia in a letter to the Attorney General—report of the Committee on Administrative Procedure, Seventy-ninth Congress, page 248:

> The correct decision of this question is one of immense importance. It should, in my opinion, be considered by Congress in the light of the real and true purposes which the founders of our Government sought to achieve for themselves and their posterity. These were free action, free enterprise, free competition. They believed that equal justice between man and man and between citizen and state was one of the impartial rewards which encouraged to efforts that produced great and lasting results. Therefore, they made no provision for exemptions from legal duty. What they did provide for was that there should be no oppression, no exaction by tyranny, no spoilation of private right by public authority, and that there should be a fair, honest, effective government to maintain the things which were thought to be the prerogatives of every individual man.

The Commission is primarily a regulatory agency and yet it adjudicates issues of fact between the Government and the citizen as a judicial tribunal. It is the combination of the prosecuting and adjudicating functions that the bill seeks to correct.

The bill, H. R. 3871, preserves in the Commission authority to investigate and prosecute violations of its act but it requires that such cases be prosecuted in the United States district court in the district where the respondent resides or maintains his or its principal place of business. This procedure will continue to draw on the specialized experience of the Federal Trade Commission. The Commission will still determine whether there has been an apparent violation of its act, make the necessary investigation and, by its attorneys, prosecute the case. But the cases will be tried in the courts by the accepted judicial process and respondents will be assured of a trial by a tribunal traditionally impartial in the administration of justice.

The bill provides that the Rules of Civil Procedure for the District Courts shall govern such proceedings. This will assure uniformity in procedure and will make available to both parties the procedural advantages of the rules. Under the guidance of the courts, cases which now take years to dispose of may be terminated at their inception by motion or negotiation.

The members of the Commission are not experts in the adjudication of factual issues. They are precluded by their act from attaining the measure of impartiality associated with judicial procedure. The cumbersome procedure under which they must operate precludes them from attaining the full measure of first-hand familiarity which should be associated with judicial procedure. It is the courts that are the experts. Historically, the trial of issues of fact has been within their province. For generations they have tried cases of fraud, deceit, and unfair competition. They are preeminently qualified to adjudicate the issues of violation of the Federal Trade Commission Act.

The O'Hara bill gives both the Government and the individual a "day in court"—a fundamental which has been so encroached upon by bureaucratic practices that it threatens basic constitutional privileges and has an insidious destructive effect upon American concepts of government.

Plaque-Unveiling Ceremonies Commemorating the Centenary of the Republic of Liberia

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. KARSTEN of Missouri. Mr. Speaker, under leave granted me to extend my remarks I include the following messages and addresses delivered in connection with the plaque-unveiling ceremonies commemorating the centenary of the Republic of Liberia held on the steps of the United States Capitol Saturday, July 26, 1947:

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The ceremony being held today to commemorate the one hundredth anniversary of the establishment of the Republic of Liberia is still another testimony of American friendship for the people of the nation which had its birth in the building that forms the background for this celebration. Americans are proud of the fact that the Capitol of our Nation was the scene of the ceremony which laid the foundation of the Republic of Liberia. We are proud, also, of the progress that Liberia has made since 1847 and of the contribution that the United States has made toward that progress.

Having all but completely conquered the jungle wilderness in which they established their new nation, the people of Liberia now have set themselves to the task of developing their resources and extending the political, social, and economic benefits of democracy in Liberia's hinterland regions. It is our hope and expectation that the coming years will see the progress of the past 100 years continued and accelerated. We are certain that the friendship which is symbolized by the clasped hands on the plaque to be unveiled here today will continue to grow and that the United States and Liberia will march together during the next century in the same cooperation and mutual trust which have distinguished their association during the century just passed.

Very sincerely yours,

HARRY S. TRUMAN.

STATEMENT BY PRESIDENT WILLIAM V. S. TUBMAN, REPUBLIC OF LIBERIA, WEST AFRICA

Today Liberia commemorates her centenary with pride and grateful recognition and acknowledgment of the countless blessings bestowed upon the Government and people by Almighty God whose sustaining and all-protecting might has assisted her in maintaining her national existence amidst terrible odds and vicissitudes.

On this signal occasion Liberia proclaims and reaffirms her deep sense of gratitude to the forebears who framed, adopted, and gave the democratic constitution which insures to all within her borders the natural inherent and inalienable rights vouchsafed by it. Throughout the century Liberia has learned to believe that the independence of nations, as of individuals, is essential and indispensable to security, world peace, and prosperity. She recognizes her international obligation, acknowledges and esteems the bonds of mutual friendship and reciprocal cordiality which exist between the Government and people of the United States of America, on the one hand, and the Government and people of Liberia on the other.

Liberia is grateful for the sympathetic considerations which throughout her national history she has enjoyed at the hands of her great friend, the United States of America, her friends and neighbors, Great Britain and the Republic of France, as well as all the other nations with whom she in common has taken up arms in defense of democracy in the last two Great Wars.

We, the Government and people of Liberia, are pleased at this time cordially to welcome the governments and peoples of friendly states who have so generously responded to our invitation to come and participate with us in the celebration of our centenary. Today Liberia rededicates herself to the furtherance of the friendly relations and cooperation, which have so happily existed between members of the United Nations and herself. She pledges to uphold and implement the lofty principles of human rights, enunciated by the Atlantic Charter and elaborated in the great Charter of peace upon which the United Nations Organization is founded.

ADDRESS BY THE HONORABLE C. D. B. KING, ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY OF LIBERIA TO THE UNITED STATES

Mr. Justice, Mr. Cochairman, ladies and gentlemen, I thank you and this grand committee, from the very depths of my heart, for this flattering and most gracious tribute of respect and honor you are this afternoon paying to my country, the Republic of Liberia, in connection with the celebration of her one hundredth anniversary as an independent African state.

This event, together with the most historic spot on which it occurs, I regard as a fine, delicate compliment paid to Liberia by the American people as a whole for which the Government and people of Liberia are most appreciative and thankful.

The news of this occasion, when it reaches my fellow countrymen at home, as well as abroad, will, I am sure, enthrill them with much joy and pardonable pride.

Mr. Justice Jackson, it has indeed been a high honor and great privilege accorded me to listen to the very illuminating historical address just delivered by you, showing how closely intervowen has Liberia's history been with that of the United States of America. The fact that such highly distinguished American citizens as yourself, the Honorable Congressman William L. Dawson, Counselor Perry W. Howard, and Publisher Frank L. Stanley are active participants in these ceremonies this afternoon is sufficiently convincing to the people of Liberia that the peoples

of the United States, irrespective of race or color, are keenly and sympathetically interested in Liberia, and are watching with a rightful pride her continued progress, prosperity, and welfare.

For and on behalf of our much beloved and highly respected President, His Excellency William V. S. Tubman, I now officially receive this bronze plaque—unique, interpretive, and beautiful, which I shall immediately forward to its high destination.

With the significant symbolism of "Hands Across the Sea" appearing on the plaque, I regard as being also indicative of the union of hearts of our two peoples. Liberia can now with great confidence enter upon her second century of national life urged by those most inspiring words of her national anthem which read as follows:

"All Hail Liberia! Hail!
This glorious land of liberty shall long be ours.
Tho' new her name, green be her fame,
And mighty be her powers.
In joy and gladness, with our hearts united,
We'll shout the freedom of a race benited.
Long live Liberia, happy land,
A home of glorious liberty by God's command."

ADDRESS OF EARL PARKER HANSON, AUTHOR AND TROPICAL EXPLORER, FORMER CHIEF OF UNITED STATES FOREIGN ECONOMIC ADMINISTRATION MISSION TO LIBERIA

The one hundredth anniversary of Liberia's birth as an independent nation is an event that must be regarded with respect and admiration. Not only were the country's founders inexperienced in matters of statesmanship and government, but circumstances were against them. No nation can thrive in isolation, and Liberia, whose commercial products had to be sold in competition with those of neighboring colonial lands, was truly isolated, economically and politically, for almost the entire century of its existence. Under such circumstances the maintenance of the country's independence throughout the same hundred years that saw almost all the rest of Africa carved up into colonies emerges as one of the truly-great feats in the history of modern diplomacy.

Today a profound change is taking place, with a corresponding change in United States policy toward Liberia. Although that country had several times in the past century asked us for technical help toward its modernization and development, we didn't comply with the request until 1944. Then we sent over an economic mission that I was privileged to direct until 1946 and that is now continuing under the able leadership of Oscar Meier. At the same time we sent Liberia a health mission and built a modern seaport at Monrovia, as well as started a number of other activities that are of basic importance. Today we and Liberia are working together toward that country's development, with the help of the United States and for the mutual benefit of both countries.

With that help, whose greatest single significance is the promise of substantial markets for such Liberian products as iron ore, tropical timbers, palm oils and fibers, cocoa, coffee, Kola nuts, and other items from the nation's almost limitless store of undeveloped raw materials, to be sold to us in return for our goods, the Negro republic has begun to forge ahead. To American business it means not only a new foreign market but also many chances for investment that exist even now, for business ventures that range all the way from lumbering through general trade to small manufacturing and the establishment of hotels and motion picture theaters.

However—and I say this as a private individual whose professional record entitles him to a valid opinion—there also exists a fine opportunity for us as a nation to make a sound investment in the form of an international loan. The time is near when our current activities in Liberia should be implemented by such a loan, which would not only start the Republic's second century with well-accelerated development but would also almost certainly pay large dollar returns, both directly and in a number of indirect ways.

In talking of Liberia's development we must never think that it is we Americans who are doing the job. The responsibility has been assumed, and the main job is being done, by the autonomous Republic of Liberia, which has merely requested governmental and private help, as many another country has done in the past. And the most dramatic and important aspects of the job are seen in the activities of President William V. S. Tubman since his inauguration in 1944. He has put through an income-tax law to help pay for development and has given the vote to his country's women. He has sent dozens of Liberian students to American universities and has devoted much energy to fostering better education in his own country. Of greatest basic importance, however, is his program of hinterland reform. I have personally seen him right many of the wrongs that have been practiced on the aborigines for a hundred years. I have seen him take steps toward the provision of health and educational facilities for those aborigines, and give them the vote and representation in the legislature. I have also heard him several times announce his determination to eradicate Liberia's time-honored differences between the ruling Americo-Liberians and their African colonial subjects.

With such steps he has gone far toward the redress of ancient wrongs, and the voluntary abolition of one of Africa's colonial regimes. Even more important to us Americans from a business point of view is the fact that he has also gone far toward the creation of a homogeneous body of 1,500,000 Liberian citizens, who will be able to produce many more goods and purchase many more of our products in return, than could a small ruling class of 15,000 who keep 100 times that many men and women in colonial subjugation.

ADDRESS BY DR. CHARLES S. JOHNSON, SOCIOLOGIST AND PRESIDENT-ELECT OF FISK UNIVERSITY, NASHVILLE, TENN., DELIVERED FROM LONDON, ENGLAND

It was 17 years ago that I paused briefly here in London, on the way to Geneva, and thence to Liberia as the American member of an International Commission of the League of Nations. As the mission moved into the stream of Liberia's history it foreshadowed, I am now convinced, a new relationship of this free nation in an Africa of colonies, to the world outside its troubled borders. No young and isolated and underdeveloped country in Africa, whether dependent or free, could in this century escape the insistent currents of world economics and politics, or lag for long too far behind in its standards and practices if it was to survive and keep its independence.

Few people in the world who know Liberia's struggles and its failures know as well its painful history. Indeed, few people who know America's history after 462 years, know as well the bitter struggle and the dark unpromising days of the English colonizers before the end of the first hundred years. America was rich and fertile, consuming in its vastness, but a lush wilderness to bring under control. Africa was harsh and inhospitable, breathing strange and uncontrollable fevers, an alien homeland for men who had never known before the fullness of freedom.

The founding of Liberia was a wave of a current vastly larger than the colonization movement itself. It was founded just as the back of the slave traffic was broken by an aroused world conscience—as both a protest against and protection for the domestic slavery that remained after the traffic had ceased. The founders were not men of learning, skill, and experience in statecraft, but men who had been slaves. The wonder is, not that they have developed no vast wealth or armies or industries, or flowered in one century a great civilization, but that they have survived at all.

These men who, with bitter valiance went forth to this unpromising land, were not just restless people, or fallen children of opulence seeking new scenes to repair their fortunes, or balked political theorists, or victims of religious persecution. They were people who by virtue of their status were convinced that they could never rise at home—untutored minds in which stirred no bright light of history or precedent to inspire them; whose only philosophy had been distilled from physical and moral adversity; whose prospects were as dark and appalling as the memory of their past. What they did with little help has made a strange and, at times, a cloudy history. There is something almost fantastic about the spectacle of a group of twelve or fifteen thousand American-Liberians, concentrated in six small towns on the coast, trying to control an area of 43,000 square miles and a little known or understood native population of 1,500,000. European colonists have controlled larger areas and more people with greater ease, but they have had always behind them the strong arm of a secure and determined mother country. The Liberians had no mother country—they were themselves creatures of transition, shut off from the native culture, and, with brutal irony, cast in the role of rulers of their fathers whom they had never known—but they somehow survived.

In 1930 the country was in trouble. It had not been able to reconcile the republican constitution drawn up by a well-wishing Harvard professor with the grim reality of a native society in the long and confused first stages of the western-style civilization. The political structure was faulty and lent itself to the abuses, both of ignorance and design. It was in debt. The very first loan at fantastic discount and interest rates began a vicious circle of debts that plagued the Nation over most of its lifetime. It could not build schools or develop its markets, or safeguard its health, or cure its poverty, even by following the pattern of native exploitation familiar to the age of rampant imperialism in the late nineteenth century. It was easy to see the grotesqueries of this uneven structure called a state and the pitiful ineffectiveness of the country's leaders in dealing with its problems. In the failure to develop agriculture and trade, in the desperate efforts to adjust to the adverse tides of culture and economics, they were for a while the prime examples, in a skeptical world, of the inability of their race to support a free state. And yet, against a world of terrors, Liberia has survived. It has survived the terror of the superior strength of acquisitive nations, the superior vitality of its aboriginal population, the hovering shadow of tropic death, and the ironic fate of starvation in a land of potential plenty. With growing strength it moves into its hundredth year as a sovereign state.

In this decade of the century, Liberia is coming of age, and in the discovery of itself and in the development of its physical and human resources, it is commanding the respect and admiration of the world.

Relief for Europe

EXTENSION OF REMARKS

OF

HON. PRESTON E. PEDEN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. PEDEN. Mr. Speaker, much has been heard about the so-called Marshall plan, and during the past 2 months

every newspaper and magazine has been filled with comment pro and con on this program of relief for Europe. Much has been said about it; yet, no one seems to know exactly what the Marshall plan encompasses.

From the sources of information available to me, it appears that on June 5, 1947, Secretary of State George C. Marshall, in a speech at Harvard University, outlined what has come to be called the Marshall plan for the economic rehabilitation of Europe. It was based on the premise that an economic approach to Europe's problems might succeed where political conferences had seemed to fail. As it was concerned with American aid to Europe, the plan suggested that piecemeal methods of aid would be of no avail and called on Europe to (1) draw up a balance sheet of European resources and needs, (2) work out a blueprint for self-help, and (3) submit to the United States a program under which American dollars could be used most effectively to help Europe help itself. European nations which accept the plan are to join in a program of economic cooperation: To pool their resources, to break down economic barriers, and to assess their need on a continent-wide basis. The United States will examine the submitted program in the light of its own resources, and then Congress will decide how much money we can supply and how best it can be given.

This, briefly, is the Marshall plan as I understand it.

The President of the United States has appointed a fact-finding committee to investigate and determine the resources of this country and the extent to which we can go in extending further aid, credits and grants to foreign countries. In September of this year, the European countries who are willing to cooperate, are to submit their plan for self-help and their estimate of the required assistance from this country. As you know, Russia and her satellites have backed away from this plan and have refused to cooperate in any way. As you know, further, France, while willing to go along in obtaining American assistance, has refused to accede to the proposed reindustrialization of Germany, an essential part of the plan. These are two obstacles which may prove fatal to the success of any such undertaking. Only time will give us the answer to that question.

While my understanding of Secretary of State Marshall's approach to the European problem may not be complete, I should like to take this opportunity to make some comment upon the general proposition of further aid and assistance to foreign countries.

In the first place, before Congress will be willing to appropriate American money for any such purpose, it will want to know these factors: First. How much it is going to cost. Second. How the money will be spent and if this country will have any supervision over its expenditure. Third. That the money will be used for the actual rehabilitation of these countries and not in endless spending for mere relief. Fourth. That there will be a reasonable probability of success, producing some relief from the threatened spread of communism and Russian aggression. After all, this is the real, pragmatic objective of any such program, the lessening of the hold which communism is obtaining over the weakened European nations.

Russia, apparently, is actively opposing this proposed plan and has advanced many arguments against participation in the program. The mere fact, however, that Russia is opposed to this program, is not enough, in my mind, to justify its adoption by the United States. There must be stronger and more satisfying reasons why we should undertake this course of action, than simply the Russian opposition to it.

Let us examine further the general proposition of aid to Europe. What will be the result in this country of additional loans, grants and credits to the nations of Europe? What impact will these make upon our domestic economy?

There is no question but that the United States has benefited, at least superficially, from foreign aid already given. There is no question but that our high volume of exports is the result, in a large part, of credits already extended England and other foreign countries. On the other hand, there is no question but that this high volume of exports has cut down the amount of goods available to our own people. Supply has not come anywhere near meeting the demands of our own domestic markets, at least in manufactured products. This has resulted in the continuance of high prices and a real scarcity of goods here at home. Yet, at the same time, it has permitted the United States to build up outlets abroad for our products. It has kept prices high; yet, by the same token, has kept unemployment at a minimum and has served to keep wages and incomes at a high level.

There is no question but that the overseas shipment of wheat and other food products has prevented a surplus from accumulating in the United States, and thus, has kept the price at an unprecedented high.

It is a sword that cuts both ways. Without financial help to the foreign countries, which permits them to trade with this Nation, we would not be able to dispose of over-abundant crops; the price would drop and certainly unemployment and retrogression would result. But, to extend further credits and grants to foreign countries is going to cost us in two ways: We are helping to bring on inflation in prices here, and, at the same time, we are building up our national debt at a time when we should be reducing it.

It all boils down to this. We are giving the other countries money with which to buy our own products. We are creating markets abroad for our goods, by first giving the purchasers the money with which to buy them. Try to open a grocery store and run it on this basis. Business will be good, and certainly there will be employment for your clerks, but how long will you stay in business?

It is all right to talk about priming the pump, but it appears to me that, to be successful in pump priming, the aim should be to get more out than is put in. To me, it appears that the so-called New Deal is being revived, but this time on a world-wide basis.

Mr. Speaker, for the reasons set out above, I do not believe that the granting of further credits and grants to foreign nations comes under the heading of "Good business."

There is another side to the question, however. Will this course of action proposed by the Secretary of State serve to promote world peace and keep this country out of war? Will such a plan stop Russia's imperialistic aggression? If so, be it an experiment, or call it by whatever name you will, then I would be inclined to go along with the idea.

If it can be shown that the Marshall plan, by stabilizing the economy of European countries, will serve as a long-range program to halt Russian encroachment, with the ultimate end of preventing a third war, then I am willing to back that plan.

I do know, however, that you cannot buy friendship. You cannot pay anyone to adopt a way of thinking. You cannot pay another people to adopt democracy. It is possible to assist a nation of freedom-loving people to acquire that freedom, but the desire for freedom and self-government must already be instilled in those people. They must be willing to fight and work to that end. If they are Communists at heart, however, all the money that we could pour into those countries would not stem the tide of communism there. Let us be sure of our facts before we undertake to provide further aid with American money.

If we are going to help other countries get on their feet and stabilize their economies let us not fool ourselves with the dream that this country will be financially better off. We will not be. Let us not blind ourselves by thinking that if we give foreign countries a blank check against our bank account they will immediately fall all over themselves in setting up democratic governments favorable to this country.

Mr. Speaker, I do not believe in isolationism. On the contrary, this country must play a leading role in world affairs. If Russia is our real enemy, then let us take steps, as we did in the case of Greece and Turkey, to stop her further encroachment into other countries. But if it calls for the spending of additional money abroad, then let us do it for the open and avowed purpose of trying to keep this country out of war.

In reaching our decision we will want to see the inventory prepared by President Truman's committee of the state of our own resources and compare this with the balance sheet of European resources and needs. We will want to weigh the cost against the benefits. Until such time as we are permitted to know more about the Marshall plan, and until the requirements of European nations are made known, I will reserve judgment.

Comprehensive and Adequate System of National Defense

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

UNION LEAGUE CLUB OF CHICAGO,
June 23, 1947.

Hon. RALPH E. CHURCH,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN CHURCH: I am transmitting in behalf of the club the report and recommendations recently adopted by the board of directors concerning the basic requirements for a comprehensive system of national defense.

We are sending copies of the report to each Member of the Illinois delegation to the Congress. We are recommending the report to their consideration as the viewpoint of a group of citizens whose condition of membership as now constituted is "absolute and unqualified loyalty to the Goverentment of the United States" and who are pledged to "defend and protect the integrity and perpetuity of this Nation."

As one of our valued members we believe that the report may have special interest for you. We would like to suggest that, if you could consistently do so, you have the report inserted as a document of patriotic interest in the CONGRESSIONAL RECORD.

Thanking you for your consideration and with best personal wishes, I am

Sincerely,

FRANK C. RATHJE,
President.

REPORT AND RECOMMENDATIONS OF THE UNION LEAGUE CLUB OF CHICAGO CONCERNING BASIC REQUIREMENTS FOR A COMPREHENSIVE AND ADEQUATE SYSTEM OF NATIONAL DEFENSE

(Formulated by the club's public affairs committee and its committee on national defense and adopted by action of the club's board of directors June 18, 1947)

INTRODUCTION

The purpose of this report is to present information that will be helpful to civilian citizens in obtaining an over-all view of the problem of national security and the basic requirements for a comprehensive and adequate system of national defense.

The elements of our national security at this time are:

I. The United Nations Organization.
II. The elements of national defense.
1. The armed forces.
2. Sound unification of the armed forces.
3. Adequate plan for training of the youth.
4. Industrial mobilization for war emergency.
III. The merchant marine.
IV. Research and development.
V. Civilian defense.
VI. Hemisphere defenses.
VII. Atomic bomb.

I. THE UNITED NATIONS ORGANIZATION

The United Nations, as the most vital element in the program of fostering international cooperation and world solidarity, should be encouraged and supported.

President Roosevelt, Prime Minister Churchill and Marshal Stalin agreed at their Yalta meeting in February 1945: "That a conference of the United Nations should be called—to prepare the Charter—along the lines proposed in the informal conversations at Dumbarton Oaks."

This Charter was prepared and approved by the United Nations at the San Francisco Conference of 1945 and includes the following purposes:

(1) Maintaining International Peace by settling disputes.

(2) Developing friendly relations among nations.

(3) Achieving international cooperation in solving economic, social, and other problems.

(4) Serving as a center in which nations can work toward these common goals.

The United Nations Organization consists of:

1. The General Assembly

The General Assembly is the policy-making or supervisory body, consisting of all member nations, at present 55. The General Assembly lays down over-all policies of world cooperation; discusses any question brought before it; elects the members of certain United Nations agencies—it cannot pass binding laws; it meets once a year.

2. The Security Council

The Security Council consists of 11 members—five permanent members (United States, Great Britain, China, Russia, France, and six temporary members—2 years; Egypt, Mexico, Netherlands, 1947; Australia, Brazil, Poland, 1948). The Security Council is charged with the responsibility of maintaining international peace and security—its acts are binding on member nations; it is the United Nations enforcement agency; it can, if necessary, impose diplomatic or economic sanctions, or invoke armed enforcement; it remains in continuous session; the presidency is rotated monthly.

Since it is the enforcement body of the United Nations, it is the duty of the Security Council to consider and to debate major political problems and to decide them.

Each nation represented on the council has 1 vote, or a total of 11. Procedural matters are decided by an affirmative vote of any 7 members. Political disputes and matters, not considered as procedural, require the affirmative vote of the five permanent members (United States, Great Britain, Russia, China, France), and at least two others. This is the much discussed veto power of the Big Five.

Russia has invoked the veto powers, and, to some extent, has nullified the idealistic purposes of the United Nations. Its delegate has absented himself from Council proceedings, thereby freezing the work of the council and making a decision impossible.

The future of the council rests with the interpretation of the use of the veto power, which will be discussed at the next meeting of the General Assembly. It has, as an organization, withstood some of the onslaughts of power politics and continues to stand as an international forum where problems of state can be fully discussed between nations.

3. The Economic and Social Council

The Economic and Social Council is an advisory body consisting of 18 members.*

4. The International Court of Justice

The International Court of Justice consists of 15 judges, each drawn from a different country, but they do not represent their own states. The present court is from the following counties: 9-year term—Brazil, Chile, El Salvador, France, Great Britain; 6-year term—Belgium, Mexico, Norway, Russia, United States; 3-year term—Canada, China, Egypt, Poland, Yugoslavia. The court has jurisdiction only over matters on which both parties agree to appear.

*Colombia, Greece, Lebanon, Ukraine, United States, Yugoslavia until 1947; Cuba, Czechoslovakia, India, Norway, Russia, Great Britain until 1948; Belgium, Canada, Chile, China, France, Peru until 1949.

5. The Military Staff

The Military Staff Committee assists and advises the Security Council on military matters and will have strategic direction, if the occasion arises, of international armed force. It consists of military representatives of the United States, Russia, Great Britain, China, and France.

6. The Atomic Commission

The Atomic Energy Commission is charged with the duty of making specific proposals for the international control of atomic energy. Its membership consists of the representatives of all countries belonging to the Security Council, plus Canada, which is a permanent member of the Commission.

7. The Secretariat

The Secretariat is the Administrative Office of the United Nations, Mr. Trygve Lie, of Norway, is the present Secretary General, assisted by approximately 2,500 employees.

Early optimism for the future of the United Nations now confronts a future which presents a long pull on rough roads leading in all directions.

II. THE NATIONAL SECURITY

While hopefully awaiting the establishment of the guaranties of world peace by the United Nations, it will be the part of wisdom for the Nation to maintain an adequate system of national defense which will both assure its security at home and its influence abroad.

Fundamental elements of the national defense

1. The armed forces, land, sea, and air, properly organized, manned, equipped, trained, supplied, and provided with the bases necessary to deployment and operation under our world strategy. The armed forces must be paralleled by a protective system of civilian defense, federally organized for immediate activation, and closely integrated with the armed forces.

2. A sound unification of the armed forces, land, sea, and air, each on a parity basis.

3. An adequate plan for training of the youth that they may be ready always to answer, immediately and efficiently, the call of military crisis.

4. Industrial mobilization for war emergency, with Federal control of war supply agencies under supply mobilization plans kept up to date.

These are the four points of support upon which rest our ability to apply promptly and efficiently the power of the Nation's military and industrial resources.

1. The Armed Forces in Our Military Policy

As our doctrine is to carry war, when unavoidable, to our enemy, our armed forces must therefore be primarily of expeditionary character, provided with proper locomotion and supply systems capable of immediate activation.

Our armed forces must be supported by strategic bases located with references to areas of possible future conflict and important trade routes.

The requirements for the ground-sea-air team efficiency steadily increase. Balances may shift within and between its members, but the increased tempo of war and new weapons have increased the necessity of balanced and trained armed forces in a state of team readiness capable of retaining control of or seizing strategic land, air, and sea spaces, especially those which are sources of attack.

2. Unification of the Armed Forces

The Congress now has under consideration various proposals for unifying the armed forces. The decision as to the degree of unification must of necessity be left to the judgment of the Congress and the executive department. The experience of World War II clearly indicated, however, the desirability of coordinated direction of the armed forces.

Council of Common Defense: Planning and execution of measures for the operation of armed forces are not alone sufficient to meet total warfare. We must be prepared to apply our total economy promptly to an all-out war effort.

To this end there must be a National Security Agency, above the level of the armed forces, to integrate military and foreign policy and intelligence, with plans for complete mobilization of our industrial, scientific, and manpower resources. This National Security Agency complements and completes a comprehensive security program.

3. Universal Military Training

A sound plan for adequate national defense should provide for a reservoir of men properly trained as individual soldiers, specialists, and members of units to make possible rapid mobilization of the armed forces in an emergency.

The specific plan to be adopted must of necessity be determined by the Congress and the executive department after giving due consideration to the factors of purposes to be accomplished, cost, and the relative importance of training in the entire defense program.

It is clear, however, that a comprehensive training program is the most practical way, short of an indefinite extension of Selective Service to meet the peacetime and initial mobilization requirements of the Nation's armed forces.

4. Industrial Mobilization for National Defense

The Nation's power to avoid or delay war, and its success in case of war, are directly dependent on the proper utilization of its industrial capacity. If plans for this utilization are not made and constantly kept up-to-date, confusion will follow in time of crisis.

A flexible federally controlled plan is essential to organize, coordinate, prepare and, in war, to direct the human and material elements of our industrial capacity.

Important requirements for successful industrial mobilization are:

(1) Continued government direction and subsidy of research, supplemented by educational orders to industry.

(2) Continued survey of industry for the purpose of production and procurement planning which would lead to the best and most speedy utilization of industry and labor.

(3) The setting up of plans and procedures for those Government agencies which would be necessary in time of war to coordinate all industrial activities.

(4) Continued survey of civilian personnel requirements necessary to implement all war plans.

(5) Study of decentralization of industrial plants with reference to strategic location, protection, and labor markets.

Upon the Nation's capacity for producing the material requirements for our armed forces and civilian economy in time of war will depend the ultimate security of the Nation.

Continued Government direction and subsidy of research sufficient to maintain United States preeminence is essential. Plans for rapid application of total industrial power, in case of war, by Federal control of war-supply agencies under industrial war-mobilization plans must be kept up to date.

III. THE MERCHANT MARINE

The rapid increase in its global interests and reponsibilities requires that the United States should give immediate attention to the organization and development of its merchant marine as a vital auxiliary of its national defense. Whether engaged in foreign or domestic commerce, this fundamental service should be so organized and operated that it could be, in the event of a national emergency, promptly and efficiently converted from its normal peacetime status to its vital role of auxiliary of the armed forces.

Modern war demands unity of national action to be carried out under full and complete plans prepared in peacetimes and providing the means to their successful execution. Under such plans, provision should be made to provide an adequate supply of trained personnel by insuring conditions aboard ship of such a character as to attract a high type of personnel to make a career of the merchant marine service.

Provision should also be made that officers and crews of merchant ships become members of the United States Naval Reserve and receive periodic training to familiarize them with their duties and obligations in the event that a national emergency requires the merchant marine to be integrated with the armed forces.

Sound discipline in the merchant marine in time of peace is necessary to prompt and efficient conversion to duty in time of war. Provision, therefore, should be made for insuring such discipline by a thorough screening of maritime personnel and by establishing adequate disciplinary regulation.

IV. RESEARCH AND DEVELOPMENT

The national defense requires that in peacetime the armed forces vigorously conduct research and development of new weapons, equipment, techniques, and supplies. This should include the development of countermeasures for use in the defense of the Nation against possible enemy secret weapons. This research and development should be conducted to insure the maintenance of the high standard and superiority of our weapons and equipment; to guarantee the availability of proven types, superior in all respects to those of other nations, and to maintain constantly a leading position in the creation and fabrication of all items for ground, air, and sea supremacy.

In the execution of the existing research and development program, close collaboration between the civilian and military authorities interested now exists and will undoubtedly increase in efficiency for the solution of the problems within their scope.

V. CIVILIAN DEFENSE

The Protective Division

The next possible bid for world dominance will certainly begin by the effort to eliminate the Nation which, in the past 30 years, has defeated two such bids, and it is equally certain that the initial assaults will be by air aimed at the industrial vitals of this Nation.

Air operations of the future will, in a few hours, extend to any region of this planet; therefore there should be at all times a homogeneous system of preparation to meet such attacks against our centers of industry, and to provide for immediate counter measures against fifth-column activities, sabotage subversion, strikes, and civil unrest which can disrupt mobilization and seriously interfere with the war effort. For these reasons it is evident that the Protective Division of Civilian Defense should be an integral part of the national defense, and under the high command of the Commander in Chief, the President of the United States, should be administered by the Secretary of the National Defense.

Whether on the battlefield between the armed forces or in attack upon the civilian community, war is a national function and should be organized and directed nationally as a single effort, integrating the armed services and the Protective Division of Civilian Defense.

The Protective Division of Civilian Defense, under the high command of the Commander in Chief, the President, should function under a national system of military area and proclamation, and under directives from the defense commands and area commands; these directives, when approved by the Secretary of the National Defense, to be transmitted through the regional office of civilian defense for execution by the corresponding civilian agencies of the State under the high direction of the governor.

This integration of armed forces and Civilian Protective Division should have its source in the office of the Secretary of the National Defense and should be supplemented by a section of the General Staff, composed of officers of the Protective Division of the Civilian Defense, and reporting to the authority designated by the Secretary of the National Defense.

This organization throws little, if any, extra work upon the Office of National Defense while providing for the prompt and efficient cooperation of the Civilian Defense Corps with the armed forces in unified and directed war effort particularly essential to this element of war.

War Services Division

The War Services Division of Civilian Defense, which is concerned with war problems other than protection, should be administered by the State War Council under the advisory direction of the Office of Civilian Defense.

VI. HEMISPHERE DEFENSES

Much has been said about the defense of the Western Hemisphere as an integrated military unit—a basic idea which was first enunciated by President Monroe and supported by Great Britain in 1823.

Progress and development of weapons, aircraft, and atomic power have made it imperative that people of the American continents realistically unite for the defense of their rights and the maintenance of peace. Accordingly, two specific major proposals have been made:

Various proposals are now under consideration to provide for interchange of defense information and personnel, strengthening of defenses, standardization of equipment, and closer working relationships between the nations of the American continents. All such efforts should be encouraged and supported as vital aids to greater hemispheric solidarity.

Great importance must be placed on the values of distance to soften initial blows against us and provide for counteraction with allies distant from our shores. This hemispheric solidarity of military policy and action is developing to the satisfaction of the nations concerned.

VII. ATOMIC BOMB

The development of new weapons, particularly the atomic bomb, will continue to be reflected in our future plans. It is estimated that within the next year or so atomic warfare, guided missiles, biological warfare, and extended capabilities of air power will bring about changes in the composition and equipment of our armed forces, as well as in our strategy. Scientific development will accelerate the tempo of future war and will tend to make it truly total.

The secret of the atomic bomb should be kept by us until satisfactory guarantees are established by the United Nations for adequate international inspection and control.

CONCLUSION

This report has described briefly:

(1) The organization of the United Nations, and

(2) The outline of the measures which the authorities of this Nation, charged with its security, are recommending in view of the general situation of the world today and in retrospect of the records of the past.

From these voices high in authority and in experience comes the admonition that, at this time, our security at home and our influence abroad depend directly upon the Nation's power, maintained in readiness for immediate and efficient application to the crisis of war.

This admonition has come down to use from the first President of this Nation and his advisers.

It is probable that all our wars since the Revolution would have been avoided had we applied the maxim of the military ages recommended to us by George Washington in time of peace prepare for war. Certainly the cost in blood and treasure would have been minimized in any of our unavoidable wars.

Address of Associate Justice Robert H. Jackson

EXTENSION OF REMARKS
OF
HON. JOHN J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Robert H. Jackson, Associate Justice, Supreme Court of the United States, delivered at plaque-unveiling ceremonies sponsored by the National Committee for the American Celebration of the One Hundredth Anniversary of Liberia, at the foot of the John Marshall statue, on the west front of the Capitol of the United States, in Washington, D. C., July 26, 1947. Mr. Justice Jackson is an official descendant of Judge Bushrod Washington, early Supreme Court Justice and first president of the American Colonization Society—fostering organization of the colony of Liberia.

Mr. Minister and friends of the Republic of Liberia, a century ago today the Republic of Liberia declared itself an independent nation. Its history has been interwoven closely with that of the United States. Its colonization period also had a unique connection with the Supreme Court of the United States. It would not be an exaggeration to say that the Liberian colony was cradled by the Court.

The acquisition of the territory was promoted and its settlement was stimulated and supervised by an almost forgotten organization known as the American Colonization Society. The first national president of this association was Mr. Justice Bushrod Washington, nephew of George Washington, but a man with claims to distinction other than this kinship. Chief Justice Marshall, in the shadow of whose statue we are assembled, also was active in the organization and was president of the Virginia branch as well as head of the Richmond local chapter. Elias B. Caldwell, clerk of the Supreme Court, was one of the founders of the society and its first secretary-treasurer. Many of the early meetings were held in the Supreme Court chambers, located at that time in the Capitol. But this remarkable society reached beyond Court circles. Men of such diverse philosophy as Daniel Webster and Gen. Andrew Jackson are found uniting in its activities. After holding the presidency of the society for 13 years, Mr. Justice Washington was succeeded by Charles Carroll of Carrollton, and then by James Madison, and he in turn was followed by Henry Clay. Francis Scott Key was a director, and while many names prominent in its work have faded from popular recollection, the roster of officers was a Who's Who of leading Americans of the early nineteenth century.

Many different reasons have led to the foundation of different new nations. Liberia is the only one that occurs to me as having been founded to ease a troubled national conscience. It is an outgrowth of the most deplorable chapter in American history—one which still leaves an ugly residue of misunderstanding between races and, to some extent, between sections of our country. But long before slavery became an issue between the North and the South, the African slave trade had alined the many more humane peoples of both sections against the relatively small minority of both sections who profiited by it. Colonial efforts by Virginia and others to stop the traffic were vetoed by the King. Jefferson's original draft of the Declaration of Independence contained a hot denunciation of the traffic in slaves and the King's use of his veto "suppressing every legislative attempt to prohibit, or to restrain, this execrable commerce." Jefferson recorded that our northern brethren, who had been pretty considerable carriers of slaves, united with South Carolina and Georgia in deleting that clause. It was this same combination which wrote into the Federal Constitution a legalization of the importation of slaves for 20 years against the fiery denunciation by George Mason of Virginia of this infernal traffic.

Notwithstanding this entrenched legal position of slavery, its evils stirred the conscience of many men in the South as well as in the North. A mass meeting in nearby Fairfax County had declared "our most earnest wish to see an entire stop forever put to such a wicked, cruel, and unnatural trade." In 1778, after its independence, Virginia promptly had prohibited further importation of slaves, and after the establishment of the Union it ceded to the Federal Government that great empire known as the Northwest Territory, and Mr. Jefferson led the fight to exclude slavery from it.

The consequence of this recognition of the injustice of slavery led many legal owners of slaves, by will or deed, to emancipate them. But it soon appeared that a technical freedom may fall far short of a realized freedom. The freedmen were without homes or land, or means to acquire them, without stock or tools or the credit to buy them, without capacity to get necessities of life which even a harsh master had found it in his interest to provide. The pitiful lot of these freed slaves stirred such men as those I have named to found and maintain the American Colonization Society. It first sought to resettle them in some of the American free States but found the inhabitants inhospitable. At last it decided upon Liberia. Congress appropriated $100,000 for the purpose in 1819. President Monroe zealously put the fund to work, in recognition of which the capital of the little colony took the name Monrovia. In 1853 Virginia appropriated $30,000 per year for 5 years for transportation and sustenance of freed Negoes who desired to emigrate.

While the society's accomplishments fell far short of the vision of its founders, the Liberian Republic of today bears witness to its substantial success. Of course, it was not without its critics. Some slaveholders feared that any agitation of the conscience might endanger the institution of slavery, while extreme abolitionists did not want to mitigate its evils lest the institution be made more acceptable and permanent. But we may say that Liberia represents an effort by men of noble intention to mitigate the cruelty and injustice of a system of human bondage they were not strong enough to destroy.

The way of the Liberian refugee was not easy. Climate, wild beast, hostile native, and piratical white men made life hazardous and difficult. But the freed men overcame these obstacles in one of the heroic episodes of history. In 1847 this people was sufficiently secure to declare itself the independent Republic of Liberia with a Virginia-born President, Joseph Jenkins Roberts. It marked its debut into the society of nations with a simple appeal, unsurpassed in its dignity when read in the light of the history of the Liberian people. It asked of the nations "that they will regard us with the sympathy and friendly consideration to which the peculiarities of our condition entitle us, and extend to us that comity which marks the friendly intercourse of civilized and independent communities."

We must acknowledge with humiliation that while this fair and modest appeal was answered with recognition by many great countries, including England and France, it was left unheeded for nearly 15 years by the United States. But at that time the slavery issue had been made a sectional issue, a result for which neither section can be acquitted. The people unhappily were preoccupied with the preliminary phases of the great but deplorable struggle between the North and South. However, in 1861 President Lincoln said to Congress, "If any good reason exists why we should persevere longer in withholding our recognition of the independence and sovereignty of Haiti and Liberia, I am unable to discern it." Recognition soon followed.

Liberia, although a small country, has lent her support to efforts to organize, in the interests of peace, the international community of which she thus became an independent and sovereign member. She became a charter member of the United Nations and was a member of the League of Nations before it. In two world wars Liberia has taken a place on the side of the United States and her contributions to victory have been far from negligible. Situated where the West African coast turns abruptly eastward, she occupies a strategic location as that part of Africa nearest to the American hemisphere. In June 1943 President Roosevelt, returning from the conference at Casablanca, visited Liberia and was the guest of its Government. This dramatized the growing American awareness of the important part Liberia is destined to play as the whole African continent looms larger in the world scheme of things. Steadily increasing production and expanding trade, possession of vital resources, and rapidly improving service facilities assure her future economic position. From now on we may expect the lot of her people to be less severe.

In setting up their new government a century ago the Liberian people took as a model the Constitution of the United States. I cannot but think that the fact that these early migrants should have chosen American institutions to transplant in their new environment, despite the fact that they were virtually refugees from America, is a great tribute to their generosity and insight.

But if our constitutional system of liberty under law does at times afford an inadequate and imperfect protection to the individual and the minority, it cannot be denied that it today comes nearer to that goal than any other. It differentiates us sharply and favorably from those systems which are founded in the philosophy that all individual rights are submerged in the will of the state and that no minority has the right to oppose the government. The dignity of the individual, the right of the people to be governed by a system and administration of their choice, the inalienable right to life, liberty, and the pursuit of happiness is the confession of political faith in which the people of both of our countries put their trust. The road to the truly ideal society is uphill and stretches beyond our sight. But we will travel it together.

Against this historical background it is fitting that a justice of the Supreme Court participate in this anniversary to unveil a sculpture symbolic of the relations between our two countries. In the artists' concept hands extending from the African and North American Continents are clasped across the sea. In this friendly grasp we will make and share progress in the arts and sciences of civilization, in commerce and manufacture, in gov-

ernment, and enlightened social organization—in all those things which make life beautiful and worthy. I now disclose to you the sculpture whose creator has put into enduring bronze sentiments which I can only put in fleeting words.

Helping Nature To Change Environment

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement entitled "Helping Nature To Change Environment," made by J. Russell Smith, professor of economic geography at Columbia University, at the recent valley authority conference held in Washington.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I am sure you are not personally economic idiots, but I think anyone who listened to most of this program will have to admit that the United States in the management of resources is slightly economically idiotic.

I think we are in this mess because not more than about 1 percent of the graduates of American colleges have had any geography, which were the things they got most of at their mother's knee.

I think we need to develop a new concept of crime. That is the crime against the future.

I often thought of the statement that is accredited to a Member of the American Congress in the past; he explained one day, "I am tired of keeping up this posterity; what have they ever done for us?"

Now geography is one of the branches of the study of nature, and there are some certain things about the laws of nature that we are prone to forget.

Nature accepts no alibis. The laws of nature are enforced, even on the Army engineers.

I have thought over and over again, in the last few days, how they got that way. What makes the Army engineer's head work like it does?

I think his past is some explanation. He was fixed up in a beautiful uniform when he was young, and, of course, we all know what a uniform does to the girls.

Then he goes to West Point, and he obeys orders and he comes out an officer and he gives orders. He is obeyed. The lieutenant talks to the private, and the private has to step around, and so on clear up the line.

By the time he has a row of stars on his costume he doesn't know the difference between one of his orders and a fact, so we have this appalling situation with regard to throwing money down the stream.

Our job is to find out what we want to do and, as far as we can, let nature help. You can cooperate with nature, and you can make it cooperate with you, or so much the worse for you and the rest of us.

I want to talk a little bit about three valleys which have something to do with this problem that we have been talking about here, and if we may have the lights off I should like to show a few slides which will give some facts about which I wish to make some remarks.

(Slide.)

That is a picture in the heart of California, not far from Los Angeles, close to the Pacific coast.

Those hills are water-borne, unconsolidated material, no rocks in them, and they have been put to lima beans year after year, left there, exposed to the weather and rain and you see what the farmer has had to do to keep from the development, really, of a canyon, as this soft soil was moved.

When I say canyons, I submit this as evidence

(New slide.)

That valley is half a mile wide, or a little more, and not very many miles long. Some 40 or 50 years ago that was perfectly flat all the way across as it is on the right side of the picture. When the rain came the water slowly oozed along the surface and along the end of the valley and got out.

The farmer thought he would like to pay a neighbor $3 to make two furrows right down the middle of it. The water ran down the furrows. It starts a canyon.

(New slide.)

Please notice the barn and the truck up at the left. That is a near view of the upper part of that gully. This will go along until the barn probably falls in. This material has no rocks in it and when the rain makes it wet it goes down in chunks of 100 tons or more.

A little farther upstream the county was spending $5,000 to make the necessary supports for a road that had previously gone very satisfactorily across the valley.

At the lower end they were spending thousands of dollars to make a great dam of earth, and under it, a cement outlet, and at this end of the outlet, a vertical cement water entrance, and as the thing filled up, it raised the entrance higher and higher, hoping to partly refill this gully, or canyon, which was destroying the valley so rapidly. It cost $3 to make and thousands to partly cure.

(New slide.)

The large part of the Missouri Basin is great plains pasture land. It, too, can erode, and we have had enormous soil destruction, because we have overpastured, and broken nature's balance.

The real import of what I have to say today about geography and nature's law, is the fact that the surface of the earth as we find it, has been brought into some kind of a balance by nature: Balance of vegetation against erosion; a balance of vegetation against gravity. When man destroys the balance, the result is often very far reaching.

On one side of this picture you see a field with a lot of grass left on it, with enough to hold the earth, and on the left you see one where the earth is shining out there.

(New slide.)

Here you see the balled-up land and gully beginning, as the waters have a swifter chance to get the earth.

(New slide.)

There is in the Rocky Mountain country peculiar topographic forms. A valley 5, 10, and 15 miles wide, many miles long, has no stream in it. The valley itself is filled up with the wash from the mountains, often to great depth, soft material, water borne. It is rich. Before the white man got there, in many of these wide open valleys the grass was knee high or head high. In fact, one of the troubles of the earlier explorers was they would be head and ears covered over in tall grass.

In nature, when it comes to rain, the grass just falls down ahead of the water, and this valley, miles long, miles wide, may have much water running out of it. We break the grass carpet.

Please note the size of the man. You will see how the dirt has fallen in in great chunks.

Now the soil-conservation people have told me in the area of Arizona and New Mexico to just let this alone. In most cases, vegetation will quickly come back and hold it.

(New slide.)

This is the same scene some years later. It was practically bound once again by the binding of grass, but it requires care. You cannot go out and grab and grab and grab.

(New slide.)

Those roots are of the 8-foot-tall grass. They are roots.

(New slide.)

Here is a view of one of those upland valleys that had no stream until we came along and destroyed the vegetation.

Now look: Once the cutting starts, it develops a vertical front and the water turns into a waterfall that cuts under and then develops branches.

(New slide.)

Now the little point for all those interested in this thing is, What becomes of this stuff that is cut out of these upland accumulations of soft material, these upland gullies and these corn fields?

Look at the beautiful river before you. There is the upper Rio Grande today, photographed in January by myself.

It was taken looking downstream from the bridge at Albuquerque. The river has filled up the channel completely, and to prevent floods the people have built up the banks. You see at the right a bank, topped by wire fencing to assist the water in getting away, and a wide stretch of sand.

I turned around and took the picture upstream, and you will see a little forest. The water winds, between floods, back and forth. It must make a longer stream, deposits more rapidly, making a forest in the middle of the stream and further blocking it.

(New slide.)

A photograph from the bank of the river. You see the automobile standing on the dike. Notice how high the dike is above the land to the left.

At the center is an artificial ditch dug for drainage. This combination of the building of the river, the building of the dikes, adds further to the building of the river and the dikes. It breaks up the alkali and thousands of acres in the upper region today has passed out of cultivation because it was waterlogged and the river could no longer drain it.

First the uplands were ruined by erosion. Second, the valley was ruined by the deposit of the trash that the erosion brought on. Can you beat it? Am I not justified in saying that we are, as a Nation, in our policy of land and resources, economic idiots?

Now valley No. 3: I had the pleasure of traveling around some years ago on a field mission with M. E. Muskrake, who had been for a number of years chief of the United States Department of Agriculture's division for extermination of pernicious animals. All the people who hunted mountain lions and coyotes were subject to M. E. Muskrake. He was an applied naturalist. Such a man of course, must know animals.

He told me of an experience of buying a piece of land just below a national forest in Arizona. It was near the forest and it would be a good chance to see the animals. He observed a hole in the bank where a pair of beavers had their habitation. The beavers built a dam. Presently they had a house and had a family.

Vegetation was rather scarce around there, but there was a small growth of willow, also aspen. The willow tree is beaver candy. It is the first choice he eats if he has his free choice. Aspen was the ham sandwich, or less. He wondered what those beavers would do with the first little patch of willow. He expected them to destroy it the first winter.

Would you believe it, those beavers did not touch that willow the first year or the second

year, but ran up the stream. It grew big. They went up the hillside farther and ate aspen. About the third year they began to eat a little willow, but they never exterminated that willow. They conserved it. It seems to me that in the battle to the death for the country, between the beavers and ourselves, the wrong party got possession of it if you are thinking about the welfare of the continent.

Really, as human affairs go, this situation is appallingly new. While we pat ourselves on the chest until it resounds, telling ourselves how smart we are, the thing that impresses me is how dumb we are. Men had horses, if you please, from three or four thousand B. C. until about A. D. 900 before they ever learned enough to make a horse collar and hitch him up. They did not even have a stirrup when Trajan conquered Thracia, about A. D. 70.

We think the Yankees are smart. I used to. They went west with the concept of acquiring land. They went with a certain concept of a barn. You have all seen them. They were put on a hillside sloping south. You dig down, put the animals in the basin, drive on the other side and pitch in the hay. The Yankees went out in Illinois in perfectly flat country, built themselves a barn with a door 8 feet up, put a driveway up to it, got a load of hay and brought it in. It took them two generations to fit a barn to the piece of flat land. That does not amount to much, except to demonstrate human stupidity.

But when it came to transplanting something from Europe, then came the tragedy. We brought over the concept of plowing the land and planting it. In Europe they had plowed land and planted it to wheat, barley, rye, and oats, grasses all, covering the ground entirely. They got here and found corn, presently cotton, and tobacco, three crops. Two of them are major land users. They are the three major land users. All of them are planted in rows; the plants are far apart, requiring cultivation between the rows. So every time the corn is cultivated and every time the cotton is cultivated and every time the tobacco is cultivated, topsoil is loosened ready to be removed by running water.

There is the new thing, row crops and tillage. And a new thing, another new thing, the thunder storm. You read about London fog and London mists, but London has about 23 inches of rain a year. An Englishman puts on his thick woolens and he does not mind it, that is all he needs. He would get wet through here in mighty quick time at the rate of sometimes 5 inches in an hour.

Every inch is 123 tons of water to the acre. Down it goes. Our corn fields, our cotton fields, our tobacco fields get it. So we get astounding figures of destruction that Mr. Hugh Bennett has made for our consideration, for our alarm, and, if we have any common sense, for our motivation.

The thing I wish to leave with you is that we need to recognize the fact that nature has left things in balance and when we destroy it we destroy it at our peril. And the next thing is the gravity of the situation.

A share of our soil resources that are going is enough to make you ask the question, Will the United States be but a flash in the pan of history? The answer is "Yes", if we keep on destroying resources for a few centuries, one or two, as rapidly as we have destroyed them during the time that we here have been alive.

The gravity of the situation and the urgency of the situation are the things that I would leave with you as background for this question of Shall we let all kinds of hodgepodge continue to waste money on our river valleys and not take care of them, or shall we put them under common sense?

Washington Letter

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. SHAFER. Mr. Speaker, a lot of Congressmen are going to spend some time on official business this summer, in spite of the fact that they could loaf and fish. They are the ones who will make inspection trips, hold hearings, or conduct surveys in August and September so that when Congress reassembles next January, all the information needed will be on hand for the guidance of the legislators.

There has been some criticism of the number of overseas investigations that will be made, but when the amount of money that Congress may save because of these trips is compared to the small amount that will be spent, such criticism evaporates.

Investigating our foreign policies on the spot, where these policies actually are being carried out, may help convince some Congressmen of the futility of attempting to buy good will with American dollars. It likely will prove to others the inefficiencies of our Department of State. It may show others that much of the screened information brought into the United States by foreign spokesmen is nothing but sheer propaganda.

A number of subcommittees of the House of Representatives and of the Senate will make these trips. Do not let anybody tell you that they are useless trips. They will help the Congressman by increasing his personal knowledge and grasp of conditions, and they will help Congress as a whole because many Members of Congress will be better informed as to the facts in the issues of foreign policy that come up next year.

Just before they left for home, Congressmen were presented with a perfect picture of how the executive branch of the Federal Government has worked to cause higher prices, while blaming the Republicans for not doing something to lower prices.

Congressmen read on the market pages of their newspapers that the price of wheat climbed one day as much as 4 cents a bushel, because the Government was offering increases of 15 and 20 cents per hundredweight in its flour buying for export.

Bakers and other businessmen know that such increases in wheat and flour mean eventual increases in the price of bread every American housewife must purchase at the grocery stores. To get wheat and flour, in competition with Uncle Sam, private millers and manufacturers have to pay higher and higher prices.

That is a prime example of how Uncle Sam, through the executive branch of the Government and its overseas spend-lend policies, forces you and me to pay more for the things we have to buy to live.

The bureaucrats are buying frantically, although there is the greatest amount of wheat on the Plains in the memory of living man. It seems incredible that the Government would use the people's own tax money to ruin the consumer's dollar, but that is what has happened, and is happening.

Another sample of how the present administration is encouraging inflation on one hand, while pretending to fight it on the other, is furnished the people by what happened between the coalmine operators and John L. Lewis.

By obtaining huge wage increases for his workers, Lewis, in effect, has challenged every other labor leader in the United States to press for higher wages in the coming months, particularly next spring.

Of course, the new wage increase upped the price of mining coal considerably.

President Truman said nothing against allowing such a wage increase, but he did call on the coal companies and industry generally not to raise prices just because their costs had gone up. Engaging in his usual economic double-talk, he asked industry to lose money while waiting to see if productivity increases would not make up for the gains in wages.

Industry could not wait—and we are in for higher prices.

Only Complex Imports Now Can Save United States in Next War

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. SHORT. Mr. Speaker, how long will it take the American people to learn?

The success in modern war depends more upon efficient weapons that it does upon the number of men. Those of us who have been branded as "isolationists," though we have seen much more of the world than our accusers, know that it is not mass armies but scientific research and technological development that will bring victory in this atomic age.

Under leave heretofore granted to extend my remarks, I submit the following article by Jim Lucas, which appeared in the Washington Daily News of July 26, 1947. It will definitely prove to the most Doubting Thomas that we cannct destroy the enemy unless we have something with which to destroy him.

ONLY COMPLEX IMPORTS NOW CAN SAVE UNITED STATES IN NEXT WAR

(By Jim G. Lucas)

Today the United States could not support a major war by itself.

World Wars I and II blasted the illusion that we are self-sufficient. Pearl Harbor found us critically short in basic war materials, but Army and Navy planners hope never again will we be caught in that position.

The Interior Department, after a 5-year study, says the foundation of our industrial economy is assured for many decades. We

are, it reports, "not confronted with a scarcity of raw materials which could threaten the basic security of our steel industry."

The Army-Navy Munitions Board has found we must depend on foreign sources for all our antimony, asbestos, chrome, columbite, corundum, industrial diamonds, emetine, graphite, hyoscine, jewel bearings, kyanite, monozite, nickel, opium, pepper, metals of the platinum group, pyrethrum, quartz, quebracho, quinidine, quinine, rubber, talc, shellac, tantaline, tin, and zircon. We import 95 percent of our mica. We ge 90 percent of our beryl, bauxite, iodine, metallurgical manganese from foreign sources. We buy 80 percent of our bismuth, cadmium, and rutile.

Moreover, W. John Kenney, Assistant Secretary of Navy and a member of the Munitions Board, says 73 percent of our imports are necessities. If 10 percent fails to get through, it ties up our economy.

For manganese and tin, for example, we must go to South and West Africa and India. The Munitions Board committed itself to buy large quantities of manganese last year. It hopes soon to build our reserve to minimum strength. Fourteen pounds of manganese go into every ton of steel. In all, 40 commodities, produced in 57 countries, go into American steel.

Chrome for steel is another example. The Munitions Board is buying all it can. But Russia already has a reserve of 15,000,000,000 tons.

We are critically short of rubber. On Pearl Harbor day we had 500,000 tons. Today we have 180,000 tons. Representative DEWEY SHORT, Republican, of Missouri, on July 19 warned the Board: "It is high time to get busy and buy more rubber." But War Secretary Kenneth C. Royall says international trade agreements are a barrier.

Our petroleum reserves are shrinking. President Truman has asked a special commission to investigate. Civilian demands are higher than before the war. The Navy's explorations in Alaska so far have brought no more than a promise. W are critically short of manila fiber.

In all, there are 67 raw materials on the Board's first priority list; 24 have second priority. All are essential to national security.

Finally, we must plan against the day materials now adequate will be exhausted. At our present rate of withdrawals against proved reserves, copper will be used up in 19 years, even if we get half our supply abroad. Lead will be exhausted in 10 years; zinc in 20 years. Vanadium supplies will disappear by 1953.

The Board's job is to buy enough scarce materials to insure our productive capacity. It gives itself 6 years. As supplies are bought they are stored in Army and Navy warehouses.

Secretary Royall says the best guaranty of peace is the knowledge by other nations that our warehouses are full of the things which enable us to produce even more war goods than we produced in World War II—and produce them quickly.

Twentieth Century Congress—Specific Steps for Improving Legislation

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. KEFAUVER. Mr. Speaker, Walter P. Armstrong of the Memphis, Tenn., bar, and former president of the American Bar Association, is one of the most thorough and thoughtful students of American history. Throughout the years he has spoken and written extensively on the American Congress and particularly the ways and means of strengthening our Federal legislature. Under leave to extend my remarks, I include an article by Mr. Armstrong which appears in the July edition of the American Bar Association Journal. Mr. Armstrong's analysis of the functioning of the La Follette-Monroney Act and of the steps necessary to further modernize Congress is entitled to thorough consideration and thoughtful study.

A TWENTIETH-CENTURY CONGRESS: SPECIFIC STEPS FOR IMPROVING LEGISLATION: A REVIEW

(By Walter P. Armstrong)

The co-authors of this significant June volume are ESTES KEFAUVER, Member of Congress from the Chattanooga, Tenn., district, and Jack Levin, a capable and experienced governmental consultant. Internal evidence suggests that Dr. Levin acted in an editorial capacity. The opinions expressed are those which Mr. KEFAUVER has consistently advocated during the 8 years he has been in Congress. The practical knowledge of the physical needs of the legislative body and the political realism shown could hardly have been acquired without personal experience. In discussing the legislative-executive relationship, the book speaks from a point of view exclusively that of the Congress.

This study was published some 4 months after the effective date of the La Follette-Monroney Act[1] and takes into account the limited experience under that statute. While appreciating the progress made under this act, the authors point out that the resolution creating the joint committee tied its hands by forbidding consideration of "certain basic matters that go to the heart of any thorough repairing of ancient congressional machinery. Equally important, due to the wide divergencies of viewpoint existing among the members of the joint committee, only a part of the worth-while suggestions that were made found a way into their report to Congress. Finally, even the recommendations of this diluted report were whittled down drastically by the political compromises that were essential if any reorganization bill was to pass at all. Consequently, the real job still remains" (p. ix). This is in accord with other views. Robert Heller[2] "estimates that the act carried reorganization only halfway toward the necessary goal," while Representative MONRONEY has been quoted as declaring that there has been "backsliding from the act roughly at about 20 percent."[3] Dr. George B. Galloway, staff director of the Joint Committee on Reorganization is quoted as saying that "if reorganization stops here, some of the changes may do more harm than good" (p. 221).

PRACTICAL SUGGESTIONS FOR MECHANICAL IMPROVEMENTS

Where do we go from here? This is the question which Mr. KEFAUVER and Dr. Levin pose for themselves. Among the practical suggestions: Voting by electricity, estimated to save 24.3 legislative days each session; better telephone service; loudspeakers which will carry the floor proceedings to the office of each Member. The desirability of the first two of these proposals is not fairly debatable. It is doubtful whether it is desirable to take the chance of decreasing the already tenuous attendance by enabling the Members to follow the proceedings over loudspeakers. There are other methods, with fewer disadvantages, of conserving the time of the Members.

It was no doubt Mr. KEFAUVER who realized the importance of solving the problem of how a Congressman who desires reelection can serve as Washington Representative of his constituents without sacrificing so much time as to disable himself from being an efficient Member of Congress. He concretizes the present situation by describing his activities on a typical day. The tabulation lists, during a 15-hour day, 8 tasks for constituents, 11 as Member of Congress, 5 under both heads and 3 personal matters. The ideal solution of this problem would be a stringent act prohibiting a Member of Congress from appearing in any capacity on behalf of any constituent. Mr. KEFAUVER'S suggestion is that each Representative be given an administrative assistant who will act as "chore boy" for constituents. This limited relief the La Follette-Monroney Act did accord to Senators but denied to Members of the Lower House.

MAKING THE OFFICE MORE ATTRACTIVE TO MEN OF HIGH CALIBER

Mr. KEFAUVER and Dr. Levin are concerned not only with increasing the potential efficiency of Members of the type of those who constitute the present, and have made up the membership of the past, Congresses, but with enlarging the caliber of those who will successfully seek election in the future. How can Congress be made more attractive to men whose character and capacity would make them desirable Members? There are two suggestions: Adequate pay, including better retirement provisions, and longer terms. The La Follette-Monroney Act increased the pay to $12,500 a year with commensurate retirement benefits. The authors do not definitely commit themselves, but apparently they deem this still insufficient. They endorse President Truman's suggestion that the salary should be nearer $25,000 a year. The term they recommend is one of 4 years. Few men who have the qualifications that should be possessed by a Member of Congress earn in private enterprise a less amount or have less security than this.[4]

CHANGES WHICH WOULD REQUIRE A CONSTITUTIONAL AMENDMENT

The lengthening of terms would, of course, require a constitutional amendment. It is, however, within the scope of an objective which is better qualified Congressmen and a more efficient Congress. This is true also of another proposal that can be effectuated only by amendment—the granting of local autonomy to the District of Columbia. While justice to the residents of the District is sufficient reason for such an amendment, it would result in considerably lightening the

---

[1] Legislative Reorganization Act of 1946, ch. 753; Public Law 601, 79th Cong., 2d sess. Cf. The Legislative Reorganization Act of 1946, by Charles W. Shull, Temple Law Quarterly, January 1947; vol. XX, No. 23, p. 375.

[2] Author of Strengthening the Congress, National Planning Association, Washington, 1945. Cf. review by Armstrong, 31 A. B. A. J. 188; April 1945.

[3] The quotations are from Congress Is Far From Reorganization by Philip S. Broughton, New York Times Magazine, May 18, 1945. The "backsliding referred to by Mr. MONRONEY is the violation of the spirit of act limiting the number of committees by creating special committees and dividing standing committees into subcommittees.

[4] The disparity continues, notwithstanding the fact that the present income-tax law has so greatly reduced the net reward offered by private enterprise. Perhaps a balance can be struck which will make the financial return from public office comparable with that of private business.

burden of an overworked Congress by salvaging 13 legislative days.

A chapter is devoted to the only other amendment suggested—permitting the ratification of treaties by a majority of each House. Sound and familiar arguments are advanced—the Senate's alleged unsatisfactory record on treaties, the necessity of implementation by the lower House, the increasing use of Executive agreements, "closing a gap in democracy." As important as this subject is, it is beyond the frame of the author's real design—"modernizing what is still inadequate congressional machinery."

This is the only departure from a symmetrical plan which consists in the main of projecting and supplementing the La Follette-Monroney Act. As great an advance as that act is, it is not satisfactory even in the way in which it deals with the subjects which it covers. Even the Tort Claims Act contains so many exceptions and limitations that Congress may still be required to handle many claims.[5]

THE LEGISLATIVE REORGANIZATION ACT HAS NOT ATTAINED ITS GOAL

It was by reducing and paralleling the committees of the House and Senate that the proponents of the Reorganization Act hoped to accomplish the greatest reform. There has been improvement, but the goal is far from attained either in theory or practice. It was a major accomplishment of the Reorganization Act to reduce Senate committees from 33 to 15 and House committees from 48 to 19. Moreover, some of the Senate and House committees are matched so as to have identical functions. Mr. KEFAUVER and Dr. Levin endorse the proposal of Dr. George B. Galloway [6] for 13 committees in each House, with identic functions. They do not suggest, however, how the evil of subcommittees [7] and special committees is to be eliminated. Riders to appropriation bills are prohibited by the Reorganization Act; they should not be permitted to be attached to any bill. The act provides that the House taxing and spending committees shall meet jointly at the beginning of each session and prepare a legislative budget fixing the maximum amount to be appropriated. But these well-intentioned provisions are of little value because there are no means of enforcing them. The only effective way that receipts and expenditures can be balanced is to vest the money-raising and spending powers in one committee (p. 119).

PRESENT METHODS OF SELECTING COMMITTEE CHAIRMEN AND MEMBERS HAVE DEFECTS

At present the Democratic Members of the Ways and Means Committee of the House, selected by the Democratic caucus, constitute the Democratic Committee on Committees and a second caucus ratifies their assignments. On the Republican side the delegation from each State that has one or more Republican Representatives selects one member of the Republican Committee on Committees. That Member has as many votes as there are Republican Representatives from his State. Mr. KEFAUVER, a Democrat, prefers the Republican method.

Seniority, it is argued, should be ignored in selecting committee chairmen and ranking members. Instead, by secret ballot, majority members should elect a chairman and minority members the ranking member.

To use the expression of the author, the chairman should be the servant, not the czar, of the committee. The Reorganization Act makes it the duty of committee chairmen to report promptly to the floor bills approved by a committee. There is, however, no easy method of enforcement. Committee action would be made effective by automatically assigning to the calendar of the Senate and House bills unanimously reported and by discharging from a committee and placing on the calendar bills for which this request is made by one-third of the membership of any committee.

METHODS OF INCREASING PARTY RESPONSIBILITY AS TO LEGISLATION

The authors are concerned over the lack of party responsibility in Congress. The Democratic caucus is an ineffective method of determining or enforcing party policy. One of its rules provides that members are not bound upon questions involving a construction of the Constitution or upon which members have made contrary pledges to constituents or received contrary instructions from the nominating authority. Partly because of this rule, but largely because of the heterogenous composition of the party, Democratic caucuses have almost ceased to be held and there is almost a complete lack of party responsibility. This rule, it is suggested, should be abrogated and the authority of the caucus revived.

An even better way of fixing party responsibility, it is insisted, is to provide for majority and minority joint policy committees. The majority policy committee (National Legislative Policy Committee) would consist of the Vice President or President pro tempore of the Senate, the majority leaders and their whips, and the 13 committee chairmen from each House. The minority policy committee would consist of the opposite numbers to the members of the majority committee. The function of these committees, which would be entirely independent of the Executive, would be to prepare a legislative program, draft needed legislation, and to scrutinize the execution of this legislation.[8]

Congress and all committees should be adequately staffed. The staffing suggested seems to be such as would enable Congress not only to initiate, draft,[9] and thoroughly consider legislation, but such as would equip it for supervising to a large extent the executive department.[10]

The only proposal looking to better legislative-executive coordination is based on the belief that there would be less friction if Congress had a better understanding of the conduct of the executive department and could exercise more informed supervision. This would be effectuated by each executive department and major agency maintaining an office on Capitol Hill with a top-flight representative in charge. Day-to-day liaison would be maintained with the chairmen of appropriate Senate and House committees. Monthly these department and agency representatives would report to a joint meeting of the Senate and House committees charged with the duty of legislation in their fields. At least every 2 weeks there would be a question-and-answer period of not more than 2 hours in each House. Members of the Cabinet and heads of agencies would be invited to attend and, under proper safeguards, asked to answer questions concerning their departments. Thus Congress would be kept fully informed as to executive activities.[11]

---

[5] For a discussion of the Tort Claims Act, see Tort Claims Against Government: Municipal, State, and Federal Liability, by Edwin Borchard; and Federal Tort Claims Act: Comments and Questions for Practicing Lawyers, by Harold G. Aron, 33 A. B. A. J. 221 and 226; March 1947.

[6] See Congress at the Crossroads, by George B. Gallaway (Thomas Y. Crowell Co.; New York, 1946).

[7] In the New York Times of April 14, 1947, is a list of 146 subcommittees. See also United States Code Congressional Service, 1947, Advance Sheet 4 (p. 23 et seq.).

[8] The Reorganization Act as introduced provides for policy committees limited in scope. This provision, while approved by the Senate, was stricken out. The Senate, however, was given a policy committee for the first 6 months of 1947. There has been no extension.

[9] In the past the House at least has, because of inadequate staffing, been almost forced at times to rely upon outside aid in drafting and considering legislation. It is sometimes difficult to determine whether this help is coming from interested lobbyists or expert, public-minded, altruistic organizations. Mr. KEFAUVER gives the American Bar Association full credit for having rendered significant public service in the latter capacity. (P. 183.)

[10] The rules of agencies would "be tentative until the appropriate congressional committee has examined them." (P. 151.) If there was no objection within a time fixed the rules would become effective. The basis of this is that here is a partial delegation of legislative power which should remain subject to the veto of the legislative. The act authorizing the promulgation of the Rules of Civil Procedure contained a similar provision. Act of June 19, 1934, ch. 651, secs. 1, 2 (48 Stat. 1064); U. S. C., title 28, secs. 723b, 723c.

A logical development would be Morris Ernst's suggestion: "It seems to me that in every case where the court has split on a matter of important interpretations as to what Congress meant in a statute, some committee of the Congress should promptly meet to decide whether the legislators meant what the majority wrote or what the minority thought." Review of The Nine Young Men (by Wesley McCune), New York Times book review section, June 8, 1947. If the executive department is to be supervised, why not the judicial?

[11] Although there have been many similar proposals, in recent years Mr. KEFAUVER has been the chief advocate of the question-and-answer period. Cf. The Kefauver resolution, by Armstrong, 30 A. B. A. J. 326; June 1944. Mr. KEFAUVER'S resolution contemplates separate question-and-answer periods for the House and Senate. Perhaps time could be saved by a joint arrangement.

NOTE.—The book referred to is A Twentieth Century Congress, by ESTES KEFAUVER and Jack Levin, New York: Duell, Sloan & Pearce. June 1947, $3. Pages xiv, 236.

Mrs. Martha Ellen Truman

EXTENSION OF REMARKS
OF
HON. ORVILLE ZIMMERMAN
OF MISSOURI
IN THE HOUSL OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. ZIMMERMAN. Mr. Speaker, the hearts of thousands of Americans are bowed down with grief today over the passing of the dear mother of our beloved President.

The relationship between President Truman and his mother was not only tender and beautiful but expressive of a supreme love and devotion of a son for his mother and of a mother for her son. The Truman family and the strong ties that have bound and held it together are typical of the true spirit of America that has made us great and strong.

Martha Ellen Truman, a typical Missouri mother, has made a great contribution to our Nation, and the words of Mr. Horace C. Carlisle touching the life of this great mother and her son, our Presi-

dent, are indeed appropriate, and I insert them herewith with the leave granted me to extend my remarks in the RECORD:

MRS. MARTHA ELLEN TRUMAN

While President Truman, like Lincoln, another
Great President, owes his success
To his most remarkable, lovable mother,
That strengthened his life, for the stress
That, out in the unfolding future, awaited
Him, he's called today to lament
The passing of her whose devout, consecrated
Life largely made him President.

The duties that weighed upon him could not smother
The great love that he in his heart,
When he became President, felt for his mother—
And, since Death has torn them apart,
He, true to her teachings, in humble submission
Still, as her obedient son,
In perfect accord with the fam'ly tradition,
Prays, "Not my will, but Thine be done."

His love for his father, wife, sister, or brother,
However sweet, is diff'rent from
The love that he had for his wonderful mother,
The Queen in their old-fashioned home,
Which was as divine, to him, as it was human,
From whose pure enviroment went
The hard-working, straightforward Harry S. Truman,
The Nation's renowned President.

—*Horace C. Carlisle.*

Foreign Policy

EXTENSION OF REMARKS
OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, July 25, 1947

Mr. McMAHON. Mr. President, I ask unanimous consent that there be printed in the final Appendix of the RECORD an address I shall deliver on foreign policy on Sunday night next.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT'S AHEAD

(Address delivered by Senator BRIEN MCMAHON, Democrat, Connecticut, at the commencement exercises, Fordham University, New York City, July 27, 1947)

As you probably know, a considerable part of a Senator's home work these days is done on trains and planes. It may surprise you to learn that, far from complaining about the large volume of travel their job requires, most Congressmen actually look forward to their trips in and out of Washington—especially when it's out.

The reason for it is not that we are necessarily restless souls or frustrated Gullivers. We look forward to our trips because they provide the best assurance of solitary confinement or splendor—call it what you will—obtainable anywhere. When you lock yourself up in your train bedroom or settle back in your plane seat, you know you are not going to be called suddenly to the floor of the Senate for a roll-call vote; you are not going to be buttonholed by long lines of constituents who want to impress upon you this thing or that—as is their right and their duty; you are not going to be afflicted with Bell's disease—that is, violent twitching every time a telephone rings—although this happy feature of trains will rapidly vanish now that the telephone has taken to wheels, thus effecting the final triumph of voice over matter, to say nothing of time and space.

I mention this preference of mine for long train or plane trips because it was on one such trip recently that I did the homework for this commencement talk. I brought along with me the newspaper clippings of a half-dozen other recent commencement addresses. Subconsciously, I suppose I was doing a little window shopping in ideas; rationally, I was anxious to see whether there was anything of least common denominator by way of a message that the well-addressed graduate of 1947 is hearing this year. Such a denominator was not difficult to find; actually, there was a consistent pattern. That pattern told of the sharply defined emergence of two worlds, and of the continuing and increasing challenge for the American people.

As I looked out from my plane window—we were skimming along on the top of a dimensionless flooring of clouds—I wondered how long it would be before commencement speakers would again enjoy the luxury of what you might call the Sunday school period of graduation ceremonies: the period when speakers could give you an inspirational pat on the back as you went out to conquer the business world, when their principal message told of the value of thrift, modest living, and the importance of fine books.

Not that the world is in any less need today of those commendable qualities in university graduates or anyone else. But the big concern is what sort of world we are going to have in which we can exercise those virtues, or indeed, whether we are going to have any world at all.

In thinking about this as I settled back in my sky chair, it occurred to me that it might be interesting to imagine what might have been said to graduating classes at various key periods of history. Your mind wanders back over those periods and we can go back all the way to early Greece. You wonder what you would have said if you had been invited to address the undergraduates who studied at the academy under Plato. You wonder what you would have said if the invitation to speak came several centuries later from Cicero's New Academy at a critical point in the history of Rome; or if it came from the University of Paris in the twelfth century; or, much later, from Thomas Jefferson on behalf of the University of Virginia.

And as you think back over these periods and dwell upon them you are surprised to see that though the human family has been confronted with a fabulous variety of problems over the years, there has been an underlying and basic unity of the major and fundamental issues. Libraries of books have been written about those issues, and yet it is not difficult to compress into a single phrase the essence of those books and those issues.

For that phrase also represents the highest and most essential good of mankind—highest and most essential, yes, but until now, unattained. The phrase is "peace with justice." Those words make no particular impact upon the ear; they have lost the vitality and urgency of a fresh image. And yet, cliche or otherwise, those are the only words that properly sum up the human struggle. And the words must be inseparable. Peace by itself and of itself is not the ultimate goal. Peace by itself, Professor Whitehead reminded us, can be anesthesia. Peace by itself can be stifling, parched, sterile. It can be totalitarian and antihuman. Had Nazi Germany won the war the world today would be at peace under the iron heel. No one would want peace at that price.

The American people today are not merely seeking peace. They are seeking peace with justice. They are reasonable and they are mature, and they understand the nature of war in general and an atomic war in particular. They know that the cost of such a war would be reckoned in tens of millions of American lives. They know that adequate preparation to fight such a war inevitably requires decentralization of our industry, relocation of large portions of our population and loss of personal freedom—measures such as this democracy has never before known.

They know—and do not have to be frightened in order to be convinced—that if we assume that other nations cannot in the future manufacture atomic weapons for themselves without any help from us, we are building our security out of straws. And they know—with a deep and instinctive wisdom—that the only defense against atomic or bacteriological attack—or worse—is not some ingenious new superradar or magic interceptor, but peace. Peace, and peace alone, provides the only worth-while defense against attack.

And yet, peace would not be enough. The peace must carry the substance of justice if it is to be valued. Peace has meaning only if there is also the atmosphere in which freemen can breathe and grow—in which it is possible to create ideals and attempt to achieve them; in which it is possible to pursue the mission of prograss. And the word which most precisely expresses all these values is justice.

How, then, do we go about avoiding war, yet assuring ourselves that justice will not be sacrificed in the process? There is no absolute answer, of course, except the regeneration of the heart of man and much as we can wish and pray for that blessed eventuality to occur within the required time, we would do well to settle for something less than absolute answers, given the present imperfect state of man and the institutions in which man lives and through which he operates. What we must see is not sure-fire solutions—for there may be none available at the moment—but something that gives us at least a reasonable chance of promoting both our security and the national welfare.

At the moment we would be deluding ourselves were we to say that the present world drift, if it continues, holds that reasonable chance. In the last 2 years we have seen tragedy developing before our eyes; two great nations on which the peace of the world depends have been unable to find an equivalent for the tie that bound them together when they faced a common danger. The American people—and I am sure the Russian people hoped in August 1945 that the common hope for security would have been enough, but that common hope has been overshadowed—indeed, all but blotted out by a growing and ominous antagonism. Within the last month we have seen not only the deepening but the hardening of an actual rift. The most hopeful and promising slogan of only 2 years ago, "One World," has now become plural.

This fact strikes us with horror and surprise. And yet what happened in the last 2 years could have been predicted. The mushrooming hostility, the moves and countermoves, the ominous deterioration in the health of the family of nations—all of these were foreseeable given the framework within which they were to take place. Nor does one have to be a prophet especially to foresee the consequences of a further deterioration within the next few years—or even the next few months. We have only to construct a rough graph plot in the present rate of disintegration to see where we will come out in the period just ahead.

In saying that the progressive crumbling of the peace during the last 2 years was largely predictable, we are not attempting to invoke a retrospective wisdom after the event. We were faced at the end of the war with a basic historical challenge—a challenge that has been echoing all through history. Where that challenge was met, people were able to enjoy the blessings of security. Where the challenge was ignored nations and occasionally civilizations had to pay the ultimate penalty—death or decay. The challenge is not complicated, though it is far from easy to meet. It is this: establishing the rules of the game for nations, with adequate machinery to see that they are enforced. With high hope we took the lead in formulating the UN charter in San Francisco. We hoped then that we had set up an organization which could succeed in maintaining the peace of the world. It is true that the veto provision was discussed with some pessimism by the far-seeing—but all hope of limiting its use by the great powers was put aside by what seemed to be a most persuasive and pragmatic argument which ran like this: "You couldn't get a treaty through the United States Senate that didn't give this country absolute veto power. Russia is even more insistent on her veto right and anyway if any of the big nations didn't have the right to veto a proposed action by the Security Council, it wouldn't make a practical difference because war would result anyway."

And so, the Charter was ratified in July 1945. And then in Hiroshima on August 6, an event occurred which basically changed the relationships of all states, yes, all human institutions. Some of my friends have bemoaned the fact that the Assembly in San Francisco did not know of the existence of atomic bombs and that if it had, we would have had a more effective United Nations Charter. That thought is based on the rational belief that a demonstration of a power sufficient to destroy nations would be so compelling that all men would immediately go about making sure that that force should never be used destructively. But alas, five atomic bombs were detonated after the San Francisco meeting—one, the test bomb at Alamagordo; two in Japan; and two more for test purposes before the designated representatives of the powers at Bikini; and today we are not—as I see it—one bit closer to agreement on atomic control than we were a year ago. Please note that we understood that no right of veto could exist in an atomic control treaty. The Russians on the other hand have tenaciously held to the veto.

Over 13 months have gone by since our distinguished delegate opened the conference, declaring that we were facing a contest between the quick and the dead. It would seem to be obvious that up to this point that contest does not augur well for the quick.

And while this most distressing lack of progress is being reported from the United Nations Control Commission, we are witnessing Europe trembling in the balance. Another winter without plan or direction will result in Europe's complete disintegration. We now are fully aware that the death of order and a free society brings to the burial rites as gladsome heirs the Communist associates of Moscow who are ever ready to participate in the spreading of Russia's influence and power.

It is of the essence of our chance for safety that America should not afford the luxury of drifting. It is not how we wish things to be that must dictate our policy but rather the facts, the objective truth. Reality must be served if we are to survive.

Mr. Baruch said the other day that we were engaged in a cold war with Soviet Russia. An apt and descriptive term indeed. But I say in all seriousness that if ways and means are not found and devised to stop that cold war, hot war will come and the world will end in cold ashes.

What course shall America pursue to avoid that catastrophe at home and abroad? At home we must prove that the Western world in general and the United States in particular is not headed for the economic collapse predicted by the Russians. We must demonstrate that capitalism will not continue to sacrifice its long-term welfare for short-term profits. We must use our every resource to prevent unemployment and depression because Russia believes that she will have no trouble in organizing the world including ourselves if we go in the slough of a deep depression. We must reconcile ourselves to the sacrifices that will be necessary to keep America strong.

We must do our level best to guarantee the civil rights of all our citizens. We must guarantee the right of free competition without which enterprisers cannot remain free.

We must see to it that there is a just division of the burden of taxation. We must see to it that these who bore the heat of the battle for our survival are not forgotten. We must, in short, demonstrate to the world that here in this land of ours we shall have a people well-fed, well-clothed, and well-housed.

But essential as all this is, by itself, it will not insure peace with justice. We shall have to go beyond our frontiers. We shall have, for a time, to become our less unfortunate brother's keeper.

Even now our prayers are with the statesmen of western Europe who are attempting with might and main to draw up and agree on a common course of action that will lift Europe from her back and set her on the road to vigorous life in a free society. Sooner or later, something may have to be done for Asia. We shall soon know whether Europe's statesmen are equal to the task foreseen in the Marshall plan.

But in fixing the terms of our help, our statesmen will bear a heavy burden of responsibility. I realize that it is especially unpopular just now to talk of tying political strings to our material help. Yet as I see it, we must do just that.

After the last election, it was fashionable to declare that our foreign and domestic policies were to be kept in separate lobes of the brain. The right hand of domestic policy was to act in full independence of the left hand of international policy. Utter nonsense, of course. It cannot be done.

Just such utter nonsense is the belief that we can or should endorse a plan for the economic integration and recovery even of western Europe without carefully appraising the political consequence of that integration.

I argue that we are, by way of speaking, on the horns of a dilemma.

On the one hand, if we succeed in setting Europe on its feet and so make her more productive she will—in the absence of agreement to the contrary—ship her finished products to the East in return for food and gold from Russia. Those factory products will inevitably hasten the equipment of Russia with weapons of mass destruction including the atomic bomb.

Given a continued adherence to her past course, only one result can be anticipated—more aggression. The historic Marxian theory that security for communism in any one nation—for instance, now in Russia—can be assured only by a world won for communism is now apparently Russian policy. Where it leads we know only too well.

The other horn of the dilemma is even sharper. If we do not assist western Europe to pull herself together, we will abandon her to the tender mercies of the masters of the Kremlin. We shall expose ourselves to the threat which we gave over 300 billions of dollars and 300,000 infinitely more precious human lives to prevent—that threat is the domination of Eurasia by a totalitarian power. Quick then would be the marshaling of the machinery and know-how for atomic-bomb factories whose product might be rained down upon us if we did not submit. Since we should not submit, atomic war would follow.

How can we escape this disastrous choice? My suggestion is as follows:

We have called for an economic inventory of Europe. We are busy making our own to ascertain how much we can do. Russia has turned her back on the whole business. Let us once again demonstrate the type of leadership the world has come to expect from America—the moral one. Not only the American people but the overwhelming majority of the peoples of the world would respond to an appeal at this time by the United States—an appeal to conscience and intelligence. Let us ask for a moratorium on world tension. Let us follow up Secretary Marshall's proposal for a European inventory of economic needs with a proposal for a world inventory of security needs. Let the United States propose through the United Nations that all countries be invited to state their security requirements. Let us ask each nation what it considers, from the vantage point of its own security, to be the requirements of a workable peace.

Such lists might be many and various. But surely they would contain certain things in common—reasonable access to economic supplies, freedom from political or economical interference from outside, a measure of international trade, some advance toward internationally recognized civil liberties—in short, the substitution of a live and growing international law for the present rule of force in anarchy.

It is to be hoped that the "security inventories," when totaled up, would show general agreement on the great principle that world peace cannot be created and maintained without adequate machinery to enforce peace. It is to be hoped that all nations will gladly accept something that goes beyond the demonstrably inadequate mechanism which is all they have now.

In this way the burning question of peace with justice can be put fully and openly to Russia. In this way we can bolster our own position before the bar of world public opinion, especially in the critical far-eastern area where our motives are most in doubt. A statement by the United States of our own "security inventory" given to the United Nations should create the atmosphere in which an American appeal for world peace and for adequate machinery would not fall on deaf ears.

This should be done in the next few weeks so that this proposal, this inventory, may be reported to the United Nations General Assembly when it meets this fall, and there discussed and debated thoroughly before a decision is reached.

But if—despite all our efforts to emphasize the good will in which our proposals for common security are made—Russia still refuses, then there may be no choice but to go ahead without Russia. Then we might have to proceed in a strengthened UN with as many other countries as are willing to come along with us. The door for future membership can be kept open. It should be the happy duty of the UN to prove in its day-to-day operations that its preponderant power constitutes no threat to countries outside and that the benefits of participation will become dramatically apparent.

Let us hope that there is yet time to reverse the present perilous drift. Let us hope that there is yet time to prove that the human race is worth God's great gift of life.

Total Use of Section 32 Funds

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following table shows where and how over a billion dollars has been spent from 1936 to 1946:

Use of section 32 funds, 1936–46

Cotton:	
Direct distribution	$47,831,090
Exportation	69,384,310
Diversion	17,974,354
Stamp plan	18,789,279
Total	153,979,033
Dairy products:	
Direct distribution	89,971,691
Exportation	145,134
Diversion	8,795,799
Stamp plan	26,188,453
Total	125,101,077
Poultry products:	
Direct distribution	38,130,382
Stamp plan	43,568,415
Total	81,698,797
Fruit:	
Direct distribution	104,691,431
Exportation	118,517
Diversion	2,476,917
Stamp plan	37,501,926
Total	144,788,791
Grain products:	
Direct distribution	68,872,621
Exportation	62,157,578
Diversion	8,034
Stamp plan	49,563,670
Total	180,601,903
Meat and meat products:	
Direct distribution	28,259,762
Exportation	141,620
Stamp plan	43,103,000
Total	71,504,382
Nuts:	
Direct distribution	1,380,036
Exportation	2,799,793
Diversion	21,014,585
Total	25,194,414
Vegetables:	
Direct distribution	49,469,194
Exportation	1,200,000
Diversion	8,284,926
Stamp plan	61,931,030
Total	120,885,150
Tobacco:	
Exportation	3,881
Diversion	9,932,505
Total	9,936,386
Miscellaneous:	
Direct distribution	$20,374,904
Diversion	1,724,525
Stamp plan	99,000
Total	22,198,429
School milk and lunch program	120,900,562
Grand total	1,056,788,924

Source: Compiled from table received from Production and Marketing Administration of the U. S. Department of Agriculture, June 11, 1947.

The information obtained from the United States Department of Agriculture shows:

First. That a total of over $153,000,000 has been spent on cotton. It also shows that 10 companies in the United States received a total subsidy of over $4,500,000 on cotton used for insulating purposes and that one company was subsidized over $1,046,000 for cotton for insulating purposes. This experiment for new uses appears to have outgrown an experiment and has become a racket.

Second. That there were eight companies in the United States; that 18,071,000 pounds of cotton have been used for cotton batts; and, that one company in Missouri has had a subsidy of $333,000 of the total $722,900 of the section 32 funds used for this purpose.

Third. That the funds used to distribute dairy products included $94,000 to distribute milk in Washington, D. C. when the people of Washington, D. C. had twice the national per capita income.

Fourth. That $62,000,000 was used for exporting wheat and corn—both soil-depleting crops.

Fifth. That about as much of the funds were used for vegetable distribution as for the distribution of dairy products.

Sixth. That over $9,000,000 of these funds were used to grind up tobacco and subsidize the sale for fertilizer; to subsidize the tobacco insecticide industry and to pay export subsidy on tobacco.

Seventh. That one-eighth of the total funds were expended for the school-lunch and school-milk program.

A billion dollars is a very, very large amount of money to be turned over to any public official—elected or not elected. The present Secretary of Agriculture found this legislation in the statutes when he became Secretary, so I am not critical of him. The distribution of these funds is faulty, to say the least. Embargoes were placed on wheat and cotton imports. Section 32 funds were obtained by setting aside 30 percent of the custom receipts. These funds, as you can see, are or have been used to oversubsidize soil-depleting crops like wheat and cotton, and then we must listen to the talk about soil conservation. Do you think we should set aside thirty to forty-five millions as section 32 funds derived from custom receipts on wool imports and use these funds to export a competing product?

We must remember that in 1939, the seventh year of the more abundant life, that basically agriculture in the United States was in just as serious a position as in 1932. We had 5-plus-cent hogs, 54-cent wheat, and 8-plus-cent cotton.

The need of a long-range agricultural program is just as apparent as it was 20 years ago. The Steagall amendment afforded the farmers of America more assurance of equal consideration with other groups of our society than any legislative act. The late Congressman Steagall, Congressmen Gore, Wolcott, Brown of Georgia, and Crawford, who fostered this legislation in the Banking and Currency Committee and on the floor of the House, made a great contribution to American agriculture which was not based on special-privilege legislation for a small part of American agriculture.

The Displaced Persons Problem

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting statement on the displaced persons problem, by Marvin Kiemme, former UNRRA official.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I have just returned from Europe after serving more than 2 years with UNRRA in looking after displaced persons. Most of this time was spent in the British zone of Germany but I made a number of trips into the United States, French, and Russian zones as well. For almost a year and a half of this time I served as forestry and agricultural adviser to the zone director and the last 6 months I served as the zone employment officer.

While serving in these positions I was able to cover a great deal of territory. I visited hundreds of camps or assembly centers occupied by the displaced persons. Serving in these positions, I was more or less in charge of thousands of them during working hours. I therefore had the opportunity to make a thorough appraisal of them as potential citizens of this country.

In the course of my duties, I became especially attracted toward the "Balts," Estonians, Latvians, and Lithuanians. These people came from the three little Baltic ex-republics that have now been taken over by Russia. Their only crime was that they had actively opposed communism in their home countries. Therefore, when the Russians moved in they moved out just ahead of them. Nearly every "Balt" that you talk with will tell you that certain of his relatives were killed by the Russians and that others were loaded onto railway cars and sent east. Very few of them have ever been heard from. Except for the few that managed to get into Sweden, there was no other place for them to go but into Germany. In Germany they have been ever since. The Germans promptly conscripted them for hard labor and forced some of the younger ones into the armed forces or labor corps.

If our Government is serious in wanting to settle and develop Alaska, here is an opportunity that shouldn't be passed up. These people would make the finest kind of settlers up there. Generally speaking, they left their countries in family units so that the men would have their wives right with them. The men are skilled craftsmen and could build their homes from logs or whipsawn lumber. Not only that, but they could make all of their furniture as well as practically everything else needed to equip a pioneer home. The women are excellent homemakers. They know how to make all kinds of clothing from raw materials as well as to preserve and prepare foods under pioneer conditions. Both the men and the women are clean in their living habits, intelligent and have an educational standard comparable with any in Europe. Even during their DP days they are managing somehow to keep this up pretty well.

The climate of the Baltic states is quite similar to that of Alaska so that here again they would fit in well. It would be my idea that where areas were selected in Alaska to settle as many as a dozen or more families in one place that the odd numbered homesteads be allotted to the "Balts" and that the even numbers be allotted to Americans—preferably ex-servicemen. This would prevent the developing of "little Estonias" and "little Latvias" and at the same time it would enable the adjacent American settlers to take advantage of the pioneering skills of these people. As an "ex-GI" of not only one war but of two, I would rather have, as an Alaskan homesteader a few of these Baltic farmers as instructors than any number of county agricultural agents or technical literature. On the other hand, these people could learn a lot from their American neighbors.

The great majority of these Baltic people are skilled agricultural and forestry workers. Even the business and professional workers among them are skilled in this type of work, for most city people in those countries also own a farm. Using an axe or a cross-cut saw comes natural for them. Therefore, during the period when they were not needed on their farms they could be working in the lumber camps or pulp mills. There are also a considerable number of fishermen and merchant seamen among them.

I have felt for several years that Alaska should be developed from a national defense standpoint, as well as for other reasons. If we don't settle and make proper use of this valuable territory some other country may decide to do it for us. We should remember that this is the only part of the old Czarist Empire that has not been recovered by the Soviets.

The same goes for western Canada, although perhaps not to so great an extent. While this is Canada's business, I know that many Canadians feel that all this territory paralleling the Alaskan Highway and on the coast should be settled without unnecessary delay. I believe that this whole Northwest Territory—western Canada and Alaska—could be settled as a joint operation and a good share of the cost of the operation charged up to national defense. I understand that the Alaskan Highway was constructed under the supervision of the United States-Canadian Joint National Defense Board and that this Board is still functioning more or less actively. It occurs to me that this matter of settlement should be brought to their attention. Of course, for this proposed program to succeed, it would have to have the blessing as well as active support of the State, War, and Interior Departments as well as the Territorial government of Alaska.

Alaska is not the only place, though, in the United States where these Baltic people would fit in. They would do very well in certain northern sections of the continental United States, such as in northern New England, around the upper Great Lakes, and in the Pacific Northwest. Many of our young Americans in these areas, as well as others, are leaving the farms and going to the cities. It is partly because the land is marginal, partly because farm life seems isolated to them after 3 or 4 years in the Army or Navy, and partly because their young wives don't like farm life. A lot of our marginal farmland is becoming unproductive or is being abandoned for this reason. As time goes on the matter promises to get worse and not better. On the other hand, these Baltic people have agriculture in their blood. They are not the kind that like life in a big city. They are the kind of immigrants that this country needs to take in if our rural economy is not to suffer in certain States. By admitting these people, no housing problem is created, for they promptly build new houses—pioneer style or else repair old farmhouses which they are to occupy.

The number of Balts in the three zones of Germany, as of June 1, 1947, are as follows:

Nationality	British zone	United States zone	French zone	Total
Latvians	43,711	41,782	2,416	87,909
Lithuanians	21,518	27,656	2,602	51,176
Estonians	11,909	13,453	801	26,163
Total	77,138	82,291	5,819	165,248

Also scattered throughout Austria and Italy are an additional 2,500 "Balts."

Britain has already started to solve the DP problem as far as her zone is concerned. Her program calls for the sending of from 60,000 to 100,000 able-bodied workers from the British occupied zones of Germany and Austria over to Britain to augment her labor shortage. She now has about 350,000 German prisoners of war but they are to be returned to their homes by the end of September. To a certain extent the DP's are to replace these German workers. Britain has specified that these DP workers coming to Britain be one of the three Baltic nationalities or Ukranian. For the present time at least they have specifically stated that they do not want Poles. One of the reasons that they will not take Poles is that it would interfere with repatriation, which is still going on, and another is that they have several thousand Polish soldiers which they have not yet been able to digest. Later on, after repatriation is over, they may take a few selected Poles and they may also take a few selected Yugoslavs. No plans have been made for taking Jews, but I understand that eventually some of those who have blood relatives in Britain may be permitted to go over.

Within the three zones of western Germany there are also in addition to the Balts approximately 190,000 Poles, 140,000 Jews, 15,000 Yugoslavs, and a few thousand miscellaneous. The Yugoslavs, generally known as King Peter Yugoslavs, are afraid to go home as long as Tito is in control of their Government. Large numbers of the Poles are going home every day. The Polish Government, even though it is reported to be pro-Communist, is so anxious to have every Pole return home that it has promised a general amnesty to all but "war criminals." Quite a few of the officer class type are afraid to take the chance but there seems to be no reason why the average workingman shouldn't return home. Few of the Poles have expressed a desire to go to the United States. The Polish miners are being welcomed to France and Belgium but these are also being strongly urged to return to their home country.

Of the 140,000 Jews in Germany, over 90 percent have expressed a preference for Palestine. The United States is generally second or third choice. Of these people I understand that about 30,000 were in Germany at the time war ended and that the remainder came in after it was over. The majority, I believe, came from Poland, but all of the countries to the east of Germany are represented—including Soviet Russia. At the time that I was in Berlin last July I was told by the director of the UNRRA transient camp there that they were coming in from the east at the rate of over 1,000 a day and that almost without exception they were headed for Palestine.

It is my opinion that, except for blood relatives, we should go slow in admitting Jewish people from Europe into this country until the Palestine question has been settled. If the immigration laws permitted it and finances were arranged, no doubt large numbers of them would come to this country just to get out of Europe but they would still want to go to Palestine. And they will continue to want to go to Palestine as long as there is the faintest hope of their getting there. Last year the joint United States British Commission recommended that Palestine be opened up to the extent of taking 100,000 of these people. At this time a committee composed of members of the smaller countries of the United Nations is making a study of the problem. Certainly there is reason to expect some favorable action within the near future. After it is known what number can be accommodated in Palestine then, in my opinion, the United States should agree to take its proportionate share of the remainder.

To sort of sum up my statement, it seems to me that the United States should, as far as possible, select its immigrants on the basis of what it needs and not on what wants to come into the country. Before the First World War we took in great numbers of agricultural workers. These people almost without exception, were molded into good American citizens within the following generation or two. Following the First World War we took mostly urban workers and very few farmers. While there were many fine people among them, there were also more troublemakers. Considerable numbers of them went on relief during the thirties while less of those on farms drew relief than did their American neighbors. Some of the so-called intelligensia that we took in have not been much of an asset either. Most of this type have very definite ideas of their own and even though they may be neither pro-Fascist nor pro-Communist, they are still alien to our way of thought.

The peasant type of immigrant is, in my opinion, the best settler that can be brought into this country. And even these should be selected very carefully. In addition to the forestry and agricultural workers which this country definitely needs, there may be a few other trades or crafts that have shortages. One of these may be our merchant marine because the average American likes to keep his feet on the ground. Another exception I would make is war orphans or "unaccompanied" children. However, there ars not nearly as many of those as we have been led to believe. Nearly all of those countries over there want their children returned home and are actually fighting to prove nationality.

Many of the countries of the world are now taking, or are planning to take, a limited number of these displaced people. If the United States does not do anything, even though we have made large contributions for their care in the form of food and money, it may appear to the world that we are not interested in solving the world's problem—and this is definitely a problem.

American Democracy

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. BLATNIK. Mr. Speaker, a successful democracy is based upon an intelligent and informed citizenry; public enlightenment in turn requires a free and responsible press which reports the facts regarding public affairs, and gives expression to the thoughts and aspirations of the people.

One of the newspapers in my district which serves the community with great credit is the Floodwood Forum at Floodwood, Minn. The July 24, 1947, issue of the Floodwood Forum carried an editorial entitled "We Must Make Democracy Work," which is thought-provoking and indicates the grass-roots sentiments of the people regarding our democratic form of government.

Under leave to extend my remarks, I include this editorial in the Appendix of the RECORD:

WE MUST MAKE DEMOCRACY WORK

Democracy is an ever changing, developing form of government. It is not static in its original concept and it must not become static if it is to continue.

The recent anniversary of the signing of the Declaration of Independence stirred thoughts of the predicted impending doom to democracy. The shaping up of a conflict in Europe impels this writer to reflect on the possible basis for another world conflict. Rationally one cannot conceive that any nation in the world would see any benefit from starting another world war. The memory of the last one must be too fresh in the minds of all.

But surely there must be some underlying cause if a conflict is to start. We are still too close to World War II to correctly analyze all of its causes. One thing stands clearly in our minds, however. The last war was caused by the spread of dictatorships—to the point where these would-be world rulers stepped on the toes of too many other nations. Whatever justifications there might have been of overcrowded countries, lack of resources, lack of trade outlets, these lost their importance in minds of the democratic nations when it became evident that here were rulers of governments who intended to win their cause through force. Here were ruthless leaders who placed the state above the individual and made barbarians of men whether or not they willed it.

Now again, there are many people who think that the Soviet Union is bent on the same course which started for the Axis nations in Manchuko, Ethiopia and Spain.

If we are to head off such an assault, if it is coming, wouldn't it be a good idea for us to learn some lessons from the past? We allowed the Axis nations to take over because of our own weaknesses. Not a weakness of force of arms alone, but a weakness in our efforts to demonstrate by our conduct as a nation that democracy was a better way of life than dictatorship. There are still a lot of people in this country, including a host of ex-servicemen who think that a smarter domestic and foreign policy during the 30's might have prevented the war we have just fought. If we have another Pearl Harbor, we may not have the opportunity to look back over our errors in past policy, because there might not be so many people around to tell about what happened during the forties.

HOW FAR HAVE WE COME?

The concept of democracy began with the first advocates of the dignity of the individual. This was the kind of ideal of individual salvation preached by early Christianity. This had laid the foundation for the next step when our forefathers wrote a Constitution for the United States of America. There they emphasized the importance of individual liberty and removal of restrictions against holding property. Prior to that time the individual did not hold property. The feudal landlord held the title and the people lived on his land subject to his whims.

The big victory in the Federal Constitution was the privilege of holding land as an individual.

Political democracy has moved on from the time when one had to own property in order to be allowed to vote. Until very recently it permitted only the male adult to vote.

Following the Civil War we removed the white restrictions from the voting privilege although we have still not made this legal sanction a reality in all our States. In spite of our imperfections we have been slowly removing the restrictions originally placed on the full development of political democracy. We have changed our Constitution by adding to it. We have changed our national concepts. The important thing is that we have changed and it is not disloyal to say that the changes are needed. The fact that the changes were made is proof of the intent of the American people that from that time to time, revisions in our Government must be made if democracy is to continue to grow and develop.

ECONOMIC DEMOCRACY IS THE NEXT STEP

We have achieved the recoginition of the dignity of the individual, we have made great strides in extending political democracy and the next stage in the extension of democracy under the American tradition is the development of economic democracy. This is possible under the framework of the United States Constitution. We have heard of the need for freedom from want, freedom from fear. What we need in order to achieve those ends is freedom from the rapidly growing control of our Government by the big monopolies.

Lewis Corey says, "Monopoly is a private oligarchy that constitutes an authoritarian economic government incompatible with economic freedom and democracy. It is not free enterprise but a destruction of free enterprise as economic freedom. It restricts production, creates economic unbalance through its policy of low production with high prices for higher profits (and) is the basic force that generates recurrent depression. Monopoly, moreover, wields a political influence in national and international affairs that stands athwart liberal social progress. Experience is ample that neither regulation nor control of monopoly works. Its power must be broken. It can be broken only by converting monopoly corporations into public enterprises as new type TVA's."

We agree with Mr. Corey. To those who ask where such a policy might end we suggest that a good test can be applied to guide our actions. Whenever any corporation becomes more powerful than the Government then it is time for the people's government to take over the ownership of such corporation. Corporations are, by law, creatures of the Government. If the Government in a democracy is by, of, and for the people, then there is every legal and moral right for the people to take over that which they have created.

WHAT'S THE POINT?

We think that our foreign policy is being unduly influenced by large monopolies who are not concerned about the possibility of a few million people being killed off to protect and extend trade rights and privileges over the world. They have become so powerful that unless we, the people, step in, these monopoly monsters will not only assist in killing off a lot of other people but they will, by their own greed, kill off themselves.

In domestic and foreign affairs these monsters are getting ready to move in. There are rumblings against the people's power system developed under the REA. There are those who wish to kill off Production Credit, Farm Home Administration, the Agricultural Adjustment Administration, and other public corporations set up to protect people from fear and want.

We think the public had better wake up to the giants whose fingers already have a firm grasp on our economic throats. We believe that monopoly corporations must be converted into TVA type public corporations to set up in the United States a socialist mixed economy of public enterprise, free private enterprise, and cooperative enterprise.

This is at least one way which might prevent us from getting into a war of obliteration from which few civilized people will survive.

More Valuable Than Dollars

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "More Valuable Than Dollars" from the Washington Star, of July 26, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE VALUABLE THAN DOLLARS

Twenty-two countries have signified their readiness to undertake the program outlined in the Fulbright Act—approved last year—and we shall soon be exchanging surplus bulldozers, tractors, barbed wire, and jeeps for an education abroad of selected American students.

The President's appointment a few days ago of the 10-member Board of Foreign Scholarships will give practical effect to this novel experiment in improvement of international relations. Under terms of the Fulbright Act, foreign nations may pay for surplus war material overseas—up to a limit for each nation of $20,000,000, spread over 20 years—by scholarships to Americans, including expenses of travel and residence abroad. They may also spend the money in sending students here, so long as there is room for them in American colleges, without displacing our own people, and so long as none of the money is spent in dollar exchange. The Board just appointed by the President is expected to meet in Washington in the next few months and set up the machinery for selection of the students. Thus far the State Department has received some 12,000 applications from American students, of which 5,000 are from veterans.

Even with the limitations imposed by law, the State Department estimates that sale of surplus property thus far is sufficient to warrant an expenditure of some $137,000,000 in this form of education. The program, therefore, is expected to continue for many years

to come. It permits the purchase of surplus goods, with foreign currency, that otherwise might have been impossible. But the value to result from the transactions, in terms of such intangibles as education and understanding between peoples, is hard to estimate. We followed, with beneficial results, something of the same idea in collecting the Boxer indemnity of $25,000,000 from China. The major portion of that money was collected in the form of scholarships, paid by China, for educating Chinese in the United States, and the result was to send back to China thousands of young men who had learned our language and something of our people and who undoubtedly exerted a profound influence on Chinese sentiment toward America.

At a time when we are so conscious of the aftermath of the war's bitterness and strife, the launching of this undertaking offers some hope in development of genuine friendship, supported by a solid foundation.

World-Wide Influence of TVA

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have inserted in the RECORD a pertinent statement made by Mrs. Elizabeth U. Craib, Social and Economic Planning Council of South Africa, at the recent Valley Authority Conference held in Washington. The statement is entitled "World-Wide Influence of TVA."

I have received an estimate from the Printing Office that the printing of this address will cost $159.75.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mrs. CRAIB. Mr. Chairman and ladies and gentlemen, it has been announced to you that I should speak to you on the world-wide influence of TVA.

South Africa is a very remote country, far away from the important parts of the world. We have to travel a long distance to see the work of other countries or to discuss in person our common problems. It would, therefore, be presumptuous for me to talk for the rest of the world, but I imagine South Africa is like many other new, undeveloped countries, and, therefore, if I talk to you about why South Africa is interested in TVA, what I say may have some general application.

South Africa has been presented with an opportunity and a challenge in regional planning, which, I believe, is almost unique. A year ago last April a gold strike of great value was made in the northern Orange Free State. Subsequent systematic investigation has shown that the field is both large and rich, that it may almost rival the Witwatersrand at Johannesburg which supplies a third of the world's total current gold output.

The challenge is obvious, for the area in which gold has been found is to all intents and purposes empty. There is one town of a couple of hundred persons, and the remainder consists of farms varying in size from 2,000 to 50,000 acres, usually larger rather than smaller, on each one of which is a white family and a few natives.

Into that region in the next few years will be poured for mining purposes only perhaps as many as 40,000 or 50,000 white miners and 300,000 native miners.

The opportunity is unique, because I believe it to be rare that any country has had such a clean slate on which to work, in the region with a healthy and invigorating climate.

Gold mining is the keystone of South Africa's present prosperity, making the greatest contribution to the national income and subsidizing, by way of the heavy taxation on it, many of the activities of agriculture and industry.

The Social and Economic Planning Council had been advising the Government for some time that there was overcentralization of many public activities which, in conjunction with the departmentalization common to all central governments was resulting in uncoordinated and often actually conflicting public expenditures.

Furthermore, the purely functional approach of public agencies on different levels, and of private enterprise, prevented the integration in the development of resources which alone could develop the potentialities of any given region to the greatest pitch. In a report on regional and town planning, the Council had urged the Government to study the advantages of the regional approach to planning problems, and to consider the possibilities of the public corporation exemplified by the TVA as an administrative solution of regional planning.

Particularly in the stretches of country reserved for native (Bantu) occupation, where the intense pressure of the population on the land, and gross overstocking of animals could be relieved only through industrialization, did the Council urge the advantages of the public corporation to supply electricity, water, transport, well laid out factory premises on the lines of the British trading estates, and the housing necessary for the workers.

It is doubtful whether any action in regional planning would have been taken or seriously considered within a measurable time had not the problems created by the discovery of the new gold fields suddenly awakened the Government and the public to the probably chaotic conditions which would attend such rapid development were no control in the public interest to be exercised.

The words "regional planning" and "TVA" suddenly became fashionable, but it was to be noted that each person interpreted the terms with very little relation to the philosophic conception behind the idea of regionalism, or the terms of the statute on which TVA was based.

For instance, certain Government departments sang the praises of regional planning in their work, meaning simply an expansion of their activities, without relation to the other activities possible within any specific area, many dams instead of few dams, but dams still devoted to irrigation only of multiple purposes.

Many people abroad think the chief work of the TVA is irrigation. I heard certain spokesmen of the gold-mining industry state flatly that they were interested in regional planning but that the terms to them meant the supply of services for the gold mines as cheaply as possible, that they were suspicious of any attempt at diversification of industry in the area because it would make everything more expensive for the mines. This was a point on which the council had to take issue, as the sole dependence of the South African economy on gold is the most immediately dangerous factor in the national life.

The council pointed out furthermore, that the gold mines were paying in high taxes now the price of having developed the Witwatersrand, the greatest urban concentration in the Union, with no interests but their own in mind.

Various high officials, including the Minister of Economic Development and the Prime Minister, Field Marshal Smuts, stated in public that regional planning must be undertaken in the area, and the TVA appeared to be a model on which a workable solution could be based. The planning council was asked for its comments.

The council was of the opinion that, before any decision could be arrived at as to the nature of the organziation proper to guide the development of the area, the specific problems which must be met and the functions which it would have to perform should be analyzed. The most important of the problems were seen to be:

1. The rapid influx of a large mining population.

2. The advisability of attempting for the first time in the gold-mining industry to house as many native mine workers as possible under conditions of family instead of compound life, thus building up a stable and prosperous law-abiding native population.

3. The crying need for the diversification of industry so that when, as is beginning to happen on the Witwatersrand, the gold in certain mines is exhausted, the houses, shops, public buildings, roads, and other services need not be abandoned, so that the familiar ghost towns of the gold, silver, and lead mines in this country should not be repeated.

4. The lack of adequate water supplies, due in great part to climatic conditions, but in some degree to improper land use.

The magnitude of this latter problem throughout the whole of southern Africa cannot be exaggerated. With some of the richest deposits of precious minerals in the world, with inexhaustible reserves of iron and coal, and an abundance of many other base minerals such as chrome, manganese, and asbestos, it is entirely possible that the lack of water may put rigid and narrow bounds on the otherwise possible expansion of the country's economy and population.

It is only the chance that the Vaal River adjoins the new gold fields that entitles me to address this conference on valley authorities.

Most other regions in southern Africa will have to be defined in terms other than catchment areas. The Vaal River is the only river of any considerable size in South Africa, and on it depends the whole complex of Johannesburg, the Witwatersrand towns, and Pretoria.

The normal population growth of these towns will demand the entire existing capacity of the river by 1975, the Rand Water Board estimates. Where, then, can we get water for the new urban concentration about the new gold fields on the other side of the river, but still in the same catchment area?

The council has constantly urged that the most drastic conservation measures should be mandatory on the whole watershed of the Vaal River, and that every drop of water should be used to the best possible advantage, many times over as possible.

Water is so important a factor that the council maintains that the logical area for planning purposes for the new gold fields should be the catchment area of the river, a larger area than that over which gold has, or probably will be, found.

Thus the planning council defined the specific objectives which the regional planning authority should be designed to promote, as follows:

(a) To explore and promote the utilization of the natural resources of the area, including precious and base minerals;

(b) To promote the balance and diversification of industry, especially by the establishment of industrial estates;

(c) To promote the conservation of water and its equitable distribution among competing demands;

(d) To plan, promote and regulate proper land use, and to assist in the improvement of land use in agriculture and forestry;

(e) To promote and regulate the development and integration of all branches of the transport system;

(f) To promote the generation and distribution of electricity for mining, industrial, transport, rural and domestic purposes;

(g) To assist in the adjustment of a primarily rural area to the impact of rapid urbanization by the planning and establishment of towns;

(h) To explore the building up of a permanent native labor force, housed under conditions of family life and with the facilities for social and economic well-being, and for industrial training; and

(i) To promote the establishment of education and library facilities necessary for the well-being of the people of the area.

To achieve these objects the authority should have power to acquire land, either by agreement or expropriation, to hold it in perpetuity, to construct towns and industrial estate, and to prescribe land use.

It will thus be seen that the specific nature of the tasks which the South African authority must perform are very different from those of the TVA with its primarily flood control, navigation and generating activities, although the broad objectives of each should be similar, a higher standard of living and a richer life for the people of the region; as great a contribution as possible to the national wealth by the region.

The work of overseas regional development authorities was studied where material was available. These included the Chilean Development Corporation, the several functional development corporations of the Belgian Congo, which are of great interest and value, Lord Lugard's plan for Nigeria, the British Town and Country Planning Acts, the New Towns Act, and various industrial distribution acts and reports; the distinguished research work done by the National Resources Planning Board, with the regional planning commissions which it set up; and, of course, the TVA.

Many suggestions were made in various quarters as to the most suitable body to perform the regional planning functions. Perhaps the most vociferously urged of these was that the provincial administrations should be endowed with regional planning powers. Of this the Planning Council repeatedly and publicly disapproved. South Africa was created in 1910 by the union of our political entities, the Colony of the Cape of Good Hope, the Orange Free State, the old Transvaal Republic, and the Crown Colony of Natal.

But in the Act of Union all powers and functions were reserved for the central government except a specific few, those of control over roads, schools, hospitals, and the supervision of local authorities.

Thus the most of the activities which a regional authority would be concerned with, notably transport and electricity development, soil and water conservation, agriculture and forestry, the control and diversification of industry, native development and labor relations are outside the experience or organization of any of the provincial administrations.

This is in marked contrast to the political set-up of the United States. The planning council objected on other grounds, as well; first that the Provinces are financially incapable of performing their existing functions satisfactorily, to such an extent that their abolition has frequently been under discussion, and secondly that their boundaries, political in origin, bear no relation to the natural regional units.

This is particularly true in the case of the Vaal River Valley, where the river bisects and is the spine of a natural region, but is the boundary between the Transvaal and the Orange Free State.

Another proposition was that a specific existing Government department should be given the powers necessary for the development of the region. The two most often claiming the right were the Irrigation Department and the Department of Mines. An examination of the functions which must be performed by the authority as defined by the council demonstrates beyond a shadow of doubt how ill equipped to undertake real regional development, both by technical training and outlook, such departments are.

If a new department of the central government were to be created for the purposes of nation-wide planning, as has sometimes been proposed, all the advantages of the grass roots approach, of integration and coordination within the region would, it is my belief, be lost. The substantive program of the authority must be formulated, executed, and the responsibility of all but the broad outlines of policy must rest fairly and squarely within the region.

A board representative of the varied interests of the region and advisory in function is advocated in many potent quarters. The council has considered this suggestion carefully, and has studied among other examples the constitution and achievements of the New England and Pacific Northwest Planning Commissions here, and the West Midland Group on Postwar Reconstruction and Planning in England.

Although minor beneficial results have been achieved, particularly by the officially sponsored West Midland Group, the record of these advisory bodies without statutory powers is disappointingly negative. Furthermore, the council has consistently maintained that a body made up of representatives or areas and interests is per se unsuited to the type of task which must be performed by the authority. It holds this view for the following reasons:

1. Representatives of existing bodies, whether departments of state, lesser authorities, or business interests, are prone to defend their own established interest against any invasion, even at the expense of public interest.

2. Representatives may seek to insure that the authority's powers are used only in their own interest; if they are unable to insure this, they may prefer to render the authority ineffectual.

3. Even if representatives of existing bodies wish to act in the public interest at possible sacrifice to their own, they may not possess the special abilities and knowledge needed for assessing the long-term consequences of policy decisions, or for the carrying out of their tasks.

Of all the possible types of organization which were studied, it was felt that that of the public corporation as exemplified in the TVA was the most congenial to the political atmosphere of South Africa and the best conceived to undertake the specific work that must be done.

Some of the aspects of the statutory position and organization of the TVA which I believe to be particularly valuable to democratic countries seeking solutions to problems of regional development are these.

The very fact that the TVA was established by a national statute, that the basic principles on which it was to operate, and the defined objectives toward which it was to work were debated and agreed to by Congress is fundamental to the maintenance of the democratic principles.

With the creation of other public corporations, here and abroad, it is a sign that the constructive thought and know-how found in the most successful examples of private enterprise are at last being applied to the processes of Government.

One reason I am so deeply committed to this business of regional planning and regional organization is that it seems to me to be a method by which democracy can be made to work, by which the increasing functions which have to be publicly undertaken can be performed without the creation of a larger, more centralized and therefore more inefficient bureaucracy.

But the semi-independent status of the TVA, its considerable control over the expenditure of its funds, seems to me to be almost equally important. I can see only increasing hesitancy in decision and action, frustration, and consequential inefficiency if an organization trying to perform a business task in a businesslike way were to be held up or thwarted in every action by the supervision of an unwieldy bureaucracy.

I believe that great flexibility in the expenditure of operating funds is essential to the satisfactory conduct of any big business, although congressional approval for major new capital expenditures is clearly a necessary control in a genuine democracy.

For this reason, also, the corporate form, that on which most big businesses are operated, and which carries with it the responsibility by which it, as an entity, can sue or be sued, is more desirable than that of a governmental department.

It is my personal view that the technological, social and economic developments of our day leave a gap which must be filled, if democracy is to survive, between the organization by which the Government performed chiefly defensive and regulatory functions and that which is covered in the pursuit of private profit.

The public or semipublic corporation seems to me peculiarly well fitted to fill this hiatus, especially where construction and operation for multiple purposes in the long term public interest are required.

The right to hire and fire, to advance on merit and not seniority, are vital to the efficiency of the organization, and the fact that the TVA operates outside the control of the public service commission is, I believe, of vital importance.

The TVA's system of appointment and promotion is of great interest. The provisions in the act which make it a serious offense to fill appointments in any political interest, are, alas, as necessary in South Africa as America, and should be enforced as rigidly.

The attachment of the authority to the President's office seems to me of the greatest significance and based on the soundest principles. I have repeatedly asked what is going to happen when there are several regional authorities functioning in this country, and I have never had a satisfactory reply.

It is my earnest belief that, since the chief functions of regional planning is coordination, it can be achieved only on the site, at the grass roots, or by the chief coordinating officer of the Government, in America the President, in South Africa the Prime Minister. The type of organization he will need to help him, whether an advistory board or a strengthened Cabinet secretariat or some other device, must be decided before long in both our countries.

I have neglected heretofore to talk about the over-all planning functions of the TVA. This is because, magnificent as the achievements of the Authority are in raising the standard of living through cheap electricity in the vaalley, it seems curious to a foreigner that the planning of land use and the fullest employment of the region's natural and human resources should have to be pursued so indirectly.

The chance existence of the nitrate plant at Muscle Shoals, the happy accident of phosphate deposits in the valley, seem to be the tenuous threads on which one of the most vital and unarguably justified activities of the Authority hangs.

Beyond research and demonstration no active steps may be taken to promote the diversification of industry. The work even of the State planning boards is confined to physical objectives.

Broader social and economic issues must be met only incidentally. Sections 22 and 23 of the act seem to have crept in almost by

accident, and their implementation has been maintained at a minimum.

This is a point which is widely misunderstood abroad. I do not think that South Africa has the pathological aversion to planning which seems to be a factor in American life. We have read von Heyek and von Mises too, but if you live within the British Commonwealth today you are perhaps more ready than Americans to face the fact that "the conscious application of intelligence to the task of creating appropriate means to attain defined ends, as a group of Americans has defined planning, alone makes the sacrifices of today justifiable in the interests of tomorrow.

Furthermore, in the problem of the social and economic relationship between the 2,250,000 white people, the 300,000 Indians, and the 7,500,000 natives, many of whom are still completely primitive, only public spirited and long-term planning can provide adjustment by evolutionary means.

I hope South Africa will follow the inspiring theory of treating all the activities in a region as a seamless web, which has been voiced by the TVA, but I hope also, that we will be able to implement the principle somewhat more widely.

The extent to which local institutions have been used by the TVA and their general strengthening rather than undermining should receive wide recognition, although different local conditions should doubtless modify some of the TVA's practices when applied elsewhere.

A point which the planning council particularly wished me to study was the system of memoranda of agreement between the TVA and other bodies, both public and private. This is a device of great significance and wide applicability in regional planning practice. A clear understanding of it would, I believe, remove a good deal of opposition by those interests which fear that they may be ridden over, rough shod, and without the right of consultation.

I cannot leave the subject of the debt other countries owe the TVA without mentioning two things which struck me with the utmost force in my recent visit there, and which cannot be created by statute. One is the high quality of the men who staff the Authority who, in the early days, developed the form of the organization and set the spirit of the approach to the work.

Any other country which could equal America in this matter would indeed be fortunate. The other point is the sense of cooperation and coordination between the different staffs and staff members which is the most essential task of regional planning.

The resolution of conflicting interests without appeal to the higher officers of the Authority can be achieved only when the workers in one field understand and respect the aims and methods of men in contiguous fields. That feeling which I sensed among the staff of enthusiasm for, and willingness to cooperate in all the activities of the Authority was perhaps the strongest impression which I carried away from my visit.

Thank you.

American Democracy Endangered by Religious and Racial Bias

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the senior Senator from West Virginia [Mr. KILGORE] before the fourteenth anniversary dinner of the Nonsectarian Anti-Nazi League, at New York, N. Y., on April 1, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN DEMOCRACY ENDANGERED BY RELIGIOUS AND RACIAL BIAS

Mr. Chairman, distinguished guests, ladies, and gentlemen, I have the very great privilege tonight of expressing to you, at his personal request, the congratulations of President Truman, and his deep regret that he cannot be at your fourteeenth anniversary, and also his wish that you may continue the good work that you have been carrying on in the same spirit in which you have done it in the past.

On behalf of myself, I also appreciate the opportunity of addressing a group of this kind. All too often we address groups that represent a particular segment; but this is a nonsectarian group, in which the Protestant, the Catholic, the Jewish, and all other religious and racial lines are laid aside, while all unite in seeking one ultimate aim—an aim which is in fact the purpose of the Constitution of the United States of America—true Democracy, as described by Thomas Jefferson, by Andrew Jackson, by Abraham Lincoln, by Woodrow Wilson, and by Franklin D. Roosevelt, and as now exemplified by Harry S. Truman, the present President.

So it is a great pleasure to be here on your fourteenth birthday and say you are a most lusty 14-year-old child.

You know, the world had grown weary of crises. We have them daily. May I also say they are sometimes pumped up by the press to get headlines. And we get tired and we get worn out with listening to this headline crisis and that headline crisis and this thing and that thing.

But underneath all of it, we have to admit that there is an underlying crisis that we all face, and that is the problem of continuing the freedom of the individual in these United States to do as he would do, so long as it does not infringe upon the same rights of another individual.

That is what I wanted to talk to you about.

"I AM MY BROTHER'S KEEPER"

The golden chapters of history have been written by men of courage and vision, men who had the nerve, the courage, and the ability to fare forth in pursuit of a real ideal, an ideal of good for all, not merely good for a few, and an ideal of "I am my brother's keeper," not "I am my brother's exploiter."

That, my friends, is the secret of Nazism: "I am my brother's exploiter." That is the one thing we should watch for, and that is the one thing that makes life worth living for the individual who has a true regard for the happiness of himself, his children, his grandchildren, and his great grandchildren, because "As ye do unto our own generation, somebody else is going to do unto succeeding generations."

If we build up a situation in which this generation, our children, our grandchildren, and our greatgrandchildren carry these hatreds, then still others yet unborn are going to pay for it.

That is why an organization seeking to work out a true equality of opportunity, doing away with intolerance—and I don't like the word "intolerance," because the word "tolerance" presumes intolerance—is so necessary. Let us do away with intolerance, and let us have, as we have in the motto on the Supreme Court building, "Equality under the Law" and equal rights.

You know, there have been periods in history when the fight has seemed almost hopeless. It has looked as if it could never be carried through. We have gone from ism to ism. We have had feudalism, imperialism, fascism, nazism, communism, this ism and that ism; but if we could get down to true equality, we could get away from all the isms.

FREEDOM MUST BE ETERNALLY GUARDED

However, in the record of history the achievement of this equality has often looked almost impossible, all because of some one small group from time to time trying to exploit others—many others.

We here tonight owe our freedom to those people who proved, through their untiring efforts, that freedom is obtainable and is maintainable. But we must also never forget that one statement, that eternal vigilance is the price of freedom.

We are entirely too prone to say that we have our freedom, and that nobody can take it away—it is ours.

I am going to diverge a moment: You know, sometimes I get disgusted at hearing people who get up and yammer about "free enterprise," and try to fool the people when what they really mean is freedom to exploit somebody else's business—and sometimes you get Nazism into business just the same as we get it in political life in this world.

Free enterprise should have one additional word added onto it: Competitive free enterprise; and our citizenship should be a competitive one.

As I said, we are entirely too prone to take our freedom for granted. We are entirely too prone to think that once a law is placed on the statute books it is everlasting, not realizing that somebody may come in and by a very slight amendment change that law.

Despite the fact that we have fought two terrible wars, many people appear unwilling to make the day-by-day sacrifices necessary to keep freedom alive, that freedom which, in this last war, 15,000,000 people fought for, and for which we in this country will be paying the cost in money for generations yet to come.

Our veterans, in addition, will be paying the cost in blood and in being crippled. Yet, once the enemy surrenders, we take the attitude that the war is over; that all our troubles are ended. "Let's go ahead, let's do just as we please, and let's take advantage of our neighbors."

Sometimes I feel like Marquis Childs in a recent column, when he said, "You know I feel like I do in a moving-picture show sometimes, when I say to myself, 'Well, this is where I'd better go out. This is where I came in'."

VIGILANCE AGAINST HATEMONGERS

He said, "The present time reminds me so much of 1920. The attitude of the people is so much like that of 1920, when we started laying the foundations for the next war, which we say was nazism, but it was the same old ism, the same thing that has been inherent in all this."

I call it greed for power, greed for the right to exploit others, and its symbol is hatred, the preaching of hatred to take people's minds away from the important items they should be considering.

We need only look back on the Civil War in this country, the War Between the States, and realize the sorrows of that war and of the reconstruction period, which were worse than the war itself.

We thought that World War I was over when the armistice was signed and we gleefully went about our business and forgot the business of our neighbors—our neighbors across the sea, may I say—our neighbors, the underprivileged, those who had suffered most in the war.

You cannot live on an island of plenty in a sea of starvation and live satisfactorily. The sharks are going to come up on the land. You must realize that—we must fight down the efforts of all those who would profit by the suffering of others.

So those are the things that we must remember—the things that we must realize: First and always, that what we call nazism has its foundation in the preaching of hatred and in picking out the largest small group you can pick out to preach that hatred against to take the attention of the people away from the main issue, which is the desire of a handful to exploit the rest of the Natio.1 or the rest of the world. That, my friends, is nazism.

There are movements that would destroy liberty in this country—we remember the Ku Klux Klan, we remember the Columbians, which your league exposed, we remember their teachings and their preaching of hatred, their fattening upon and making money from the preaching of hatred—and it is highly necessary that some broad organization such as yours take over the duty in this country of ours, to show to our people the true course which means taking care as to the rights of all people by all other people, the interdependence of one group upon another, the interdependence of one individual upon another, of one family upon another, of one community upon another, of one State upon another, and of all Nations one upon another.

If we would hope to have a world-wide peace, that is what we want and that is what we must do.

Today we are in another post-war period—a period which offers far greater problems than those posed following World War I.

We have another opportunity to build world peace.

We have another opportunity to prove that the world can live in honesty, dignity and peace.

Are we going to make world peace a reality—or are we going to follow the treacherous path we followed after World War I?

That is a paramount question today.

Some say that 1947 parallels 1920 and I must admit that there are many similarities between those two periods!

Even though the United Nations is in its infancy—and it faces the toughest problem ever confronted by mankind—the cynics and skeptics say it is failing.

They say it is failing before it has had an honest chance to prove its worth to world civilization.

Democracy itself is being attacked by innumerable hate mongers—feeding the fires of ignorance and bigotry.

THE KKK AGAIN?

I am confident that all of you, some time or other, have seen these hate sheets that are endeavoring to erect barriers between all groups of people.

Within the last few days I have received a wastebasketfull of leaflets and pamphlets attacking Jews and Catholics * * * Negroes and Italians.

No racial or religious group escape this vilification—all put out under the heading of democracy. What a mockery!

Another group of these peddlers of hatred and bigotry would have you believe that democracy is an evil plot against mankind.

A recent publication stated—and I quote:

"Of all the lies that corrupt American thinking, weaken the Constitution, and threaten to destroy this Government of law protecting human rights, the most insidiously corrupting and destructive is the approving use of the word 'democracy.'"

Why is democracy attacked?

You and I know the reason. It lies in evil, corrupt minds opposed to the belief in the freedom of mankind.

The so-called man on horseback knows that he can never achieve his greedy motives by appealing to reason and understanding.

He can succeed only when we are oppressed and weary.

Remember the days after World War I?

The days of the fiery cross—the white-cloaked night riders—known as the Ku Klux Klan.

The klan fed the flames of hatred, bigotry, and greed—in an effort to supplant democracy with totalitarianism.

Fortunately, men of courage and vision fought the klan, and after one of the saddest chapters in the history of this Nation, sanity and reason replaced ignorance and hatred in the Nation's mind.

MEN ON HORSEBACK

The end of World War II has brought another wave of hatred. The so-called men on horseback, who went underground during the war, are back at their old stands peddling racial and religious intolerance.

Every possible disguise is being used to camouflage their true purpose—for they realize that they can never succeed if the people understand their true motives.

We defeated Hitler and Il Duce in Europe—but their American counterparts are still carrying on their evil plans in various sections of our Nation.

Fortunately there are many brave, patriotic Americans, like those here tonight, who are not afraid to expose these would-be Hitlers.

The thing we face right now—let us get it down firmly imbedded in our minds—is the danger of exploitation which will spread from one group to another. Oh, it sounds awfully nice: The exploitation of prices, for instance, can be a part of it. Why must we go from war to inflation—to depression—to war—to inflation—to depression—to war?

Isn't it also a fact that in an ensuing deflation, when the people become desperate, the road is very easy for the preachers of hatred? Hatred of the Jew; hatred of the Negro; hatred of the Catholic. I can remember hatred being preached against all three of these, and I am not quite as old as my scarcity of hair would indicate. I can remember the days of the APA, and some of you good Irishmen in here can remember the fight of the Molly Maguires.

AN EXAMPLE FOR THE WORLD

I have seen anti-Semitism at work; I have seen the klans; I have watched the Columbians; and all of them have but one purpose—profit at the expense of a minority group. In this country there should never be a minority group. We must, we can, and we shall, if we hope to be successful, be one Nation indivisible, with liberty and justice for all.

By living democracy here at home we will be living proof to the rest of the world that democracy offers every human being, irrespective of his race or religion, an opportunity to live in dignity, in honesty, and in peace.

Statement of Congressman Gordon L. McDonough and Part of the Testimony Before House Labor and Education Committee Urging Approval of H. R. 4193

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. McDONOUGH. Mr. Speaker, on Friday, July 25, I appeared before the House Labor and Education Committee urging the adoption of H. R. 4193 which is an amendment to section 304 of title III of the (Taft-Hartley) Labor Management Labor Relations Act of 1947 Due to the shortness of time before recessing for this session, it was impossible to give complete consideration to my amendment, but it was agreed that further hearings on H. R. 4193 would be among the first order of business of the Labor and Education Committee at the beginning of the second session of the Eightieth Congress.

My amendment seeks to remove the restrictions of the civil liberties of labor unions which I think are curtailed in section 304, title III, of the Taft-Hartley bill, and I trust that the Members of the House will give serious consideration to H. R. 4193 during the next session of the Eightieth Congress. The following is the statement I made and part of the testimony before the committee:

Mr. McCONNELL. Mr. McDONOUGH, you have a statement to make, I understand.

STATEMENT OF THE HONORABLE GORDON L. McDONOUGH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Mr. McDONOUGH. Mr. Chairman and gentlemen, I appreciate the limitation we are operating under, insofar as time today and for the balance of the week is concerned.

I do appreciate the opportunity of reviewing briefly the two amendments that I have introduced to the labor-management relations bill of 1947, and my purpose in introducing them.

I am impressed with the fact that as the bill is now written, there are two sections—one section especially, that may be questionable insofar as civil liberties of union members are concerned.

I am referring to the section of the bill that denies union membership and the unions from using any of their funds for political purposes, or expressing their preference or opposition for a political candidate.

I realize the committee, at the time it considered that section, was thinking of the Corrupt Practice Act, and the comparison of labor unions to corporations.

In my opinion, however, I do not believe that there is a fair and equitable comparison between labor unions and corporations, insofar as the intention of this committee is concerned.

The intention on the part of the committee was to say, in effect, since corporations, as such, are not permitted under the law to contribute to political campaigns, in order to equalize both sides of the picture, we will then deny the right of labor unions to contribute to political campaigns.

The reason, in my opinion, that they are not comparative, is that a corporation is a corporate body. I do not think they should contribute to campaigns.

But an individual member of a corporation is in far better position to express his views and preference for or opposition to a political candidate than an individual member of the union, and it has become so customary in this country for unions to determine and endorse political candidates that it seems to be the only manner in which they can express themselves.

So, I have proposed to amend section 304, title III, of the bill so that it will permit labor organizations to use the dues of their membership to publicize and circulate their preference for or opposition to candidates for political office, provided that the majority of the membership of the labor organization agrees to such expenditures, and a certification of such agreement is filed with the National Labor Relations Board at least once each calendar year.

It will be a violation to use membership dues, and there is a penalty provided if an organization uses membership dues, without this procedure.

The same penalty remains in the bill as was in your original bill.

* * * * *

I would say my intention in this amendment—and if it is not clear, it should be corrected so as to make it clear—is that each individual union, each local, as a matter of fact, in each city and town, should determine whether they should use their union dues in expressing their preference or opposition to political candidates.

I am not looking at it from the point of view of the over-all picture, that the national convention could determine the policy.

My desire is to give the labor union, the local, the right to determine, by majority vote of that labor union, locally.

* * * * *

I think we are denying a certain part of civil liberties to the individual union member in the locality where the international or national union has not expressed itself on a candidate.

The bill at the present time denies him that right.

Mr. BUCK. Would your objective be met by some sort of a measure which would permit labor-union periodicals, which periodicals are wholly owned and regularly published by a labor union, to express their opinion on a candidate?

Mr. MCDONOUGH. No; I wouldn't think it would; because I think there are other things they are entitled to do and should be privileged to do besides expressing themselves in periodicals.

I noticed a news release recently by Senator TAFT, who expressed his views along the same lines as you have, of regularly circulated newspaper, operated by a labor union. That is a limitation.

Personally, I think the individual member of a local union should be given a free hand to express himself for and against candidates for public office.

Mr. MCCONNELL. A corporation at the present time is not permitted to issue bulletins advocating candidates, is it?

Mr. MCDONOUGH. No; that is correct.

Mr. MCCONNELL. Isn't there a somewhat comparable situation there, when you deal with the corporate entities of both of them?

Mr. MCDONOUGH. No; I do not think so.

Mr. MCCONNELL. Whether the union or the corporation?

Mr. MCDONOUGH. I do not think so.

I would like to make a statement on that, Mr. McConnell, to the effect that the corporate body of a corporation is made up of individuals who are in position, financially and otherwise, and with their influence in a community, are in far better position to contribute their own funds to a political candidate than a labor-union member is, because the labor-union member customarily spends all the money he earns for the purpose of taking care of his family, and has no sum of money set aside, nor has he the influence in the community that a corporation member has, a director, or officer of a corporation. So there is not a fair comparison there, in my opinion.

Mr. KERSTEN. Would you not agree that a union, as such, cannot be compared with a corporation so far as its general function is concerned, and that all restrictions placed on corporations are not applicable to unions for the reason that a union is a group of men banded together for the purpose of protecting their working conditions, whereas a corporation is a separate legal entity, a separate person, in the legal concept, a separate person from the stockholder, a separate person from the members of the corporation, ordinarily engaged in the making of a profit for that separate person, that legal entity, the corporation.

Mr. BUCK. Will the gentleman yield there?

Mr. KERSTEN. I have not finished.

So that when you are dealing with a corporation, you have got to recognize that fact.

Wouldn't you say that this is true?

Mr. MCDONOUGH. That is correct.

I definitely agree, and I would elaborate a little more on that point by saying that the stock in trade of a union member is his ingenuity, the product of his brain or brawn.

The stock in trade of a corporation, by comparison, is services and goods.

They cannot be compared, in my opinion, an an equal basis, because, on the one hand, a corporation cannot operate without the ability of the laboring man——

Mr. KERSTEN. Can you imagine any individual getting out a flier against a political candidate on his own?

Mr. MCDONOUGH. Yes; I can imagine it, but I can see how limited it might be and how ineffective it might be.

Mr. BUCK. I want to go back to the point of the corporation.

You said a labor union is a group of men banded together for a common purpose.

What is a corporation but a group of stockholders banded together for a similar purpose, which is its own gain. They are risking their capital, they are providing the tools without which the labor union could not function.

Mr. MCDONOUGH. I will say this, Mr. BUCK: I think a corporation which risks its money is in a position to lose more readily and easily than the laboring man is in a position to lose his stock in trade if the corporation fails.

If the corporation fails, then the corporation members become members of unions, per se, and have to go out and sweat, but if the corporation is successful when the stockholders are receiving a profit on their investment, then the situation becomes incomparable, for the reason that the only stock in trade the union man who is making that contribution has is his ability to do the job at the machine or in the field, or wherever he is doing it, and that is the unlimited amount of energy he has until he becomes too old to perform.

The Marshall Plan

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include a broadcast by Howard K. Smith, chief of the Columbia Broadcasting System foreign news staff:

ANNOUNCER. CBS News now presents Howard K. Smith from Rome. Mr. Smith, chief of Columbia's European news staff, brings to his reporting an analysis of the news, the experience gained in many years as a foreign correspondent. We take you now to Rome, Italy, and Howard K. Smith.

Mr. SMITH. The Marshall plan talks which opened in Paris yesterday, mark a wath'stead in history of capital importance. For 2½ millennium, ever since the Greek Fleet under Themistocles, defeated the Persians in the Bay of Salamis, the initiative in history has been held almost without interruption by just those nations represented at the Paris conference. In 2,500 years predominance has passed from land to land, from Greece to Rome. From Italy to Spain, France, Germany, and Britain. But whatever specific country it was, it has been uninterruptedly the tiny peninsula of western Europe and its Mediterranean * * * that has been the fountain of world influence, wealth, and power. The exploiter and civilizer of the rest of humanity.

History can record few great changes that have taken place with such breath-taking abruptness as the descent from dominance of western Europe It's been just this sudden. In 1939 at the outbreak of war the great powers, the nations that is who held the major initiative in shaping international events, were Germany, Britain, France, and Italy, all west European nations. With some juxtaposition of individual countries, it was the same power pattern that has directed world events for over a thousand years.

Today, 2 years after the war, with less than a decade separating now from then, the pattern has changed drastically. For the first time since Xerxes it's fair to say not one west European nation can be called a top ranking power. Britain today undeniably possesses the influences rating of a second-rate nation. France is a third-rate power. Italy a fourth-rate power with an economic influence barely equal to that of Switzerland. Germany has ceased virtually even to count.

There is something pathetic about the state of western Europe after so many years of rulership. All the nations I've mentioned have once, and some of them now, ruled great empires. Between them, the giants of Europe's west have at one time or another directly determined the fate of more than half the earth. Today their empires are in varying stages of disintegration. They themselves have become as abjectly dependent on an outside power as their * * * colonies were once dependent upon them.

The Paris Conference is a conference of direct crisis. This tiny, highly industrialized, overpopulated, undercultivated half of a peninsula was heading for a winter of the deepest peacetime crisis it has known yet. The alacrity with which the western European statesmen sprang at the invitation to the conference is a measure of how completely the mighty have ceased to be rulers and how profoundly they have begun dependence on America for survival. A measure of how swiftly the locus of world decision has shifted.

The reverse side of the same historic milestone is the drastically changed position of the United States. There was a time a very short while ago when we could have a little stock-market break and no one outside America was affected except a few foreign speculators in wheat futures. A Nation-wide strike was essentially an American episode and Europe paid only the most casual attention. The passing moods of Washington interested mainly local lobbyists and Washington correspondents. Americans themselves, I think, have not yet realized how completely that situation has altered. I think you have to be over here to see it. A coal strike in Pennsylvania now becomes the main event of the year in Italy. Factories close, unemployment is swelled. The removal of price controls in Washington, the kind of event we are accustomed to viewing as strictly our own affair, can rock the whole economy of a European country. As it has largely done in Britain. A nod of disapproval from an American emissary can bring down governments as it has done this summer in both France and Italy. A nod of approval from a State Department emissary can launch a nation over here on a full-scale civil war as it has done in Greece.

The changed situation is highly flattering to us. But looked at through the eyes of realism, it's an essentially unhealthy situation. It's bad for Europe and it's also bad for us. The completeness of western Europe's dependence upon America, has been breeding in highly influential circles in Europe, the philosophy that America "owes us a living." Last week in Athens, I talked to Greece's leading industrialist. He complained bitterly about the state of things in Greece. When I asked him what he and the

Greeks were doing about it, he shrugged his shoulders and said: "You've taken over the responsibility, you've got to do something. We can do nothing."

The Greek Government itself has been the outstanding example of that spreading philosophy. It governs without plan or policy. It refuses to tax its wealthy supporters and lives on generous American funds. It knows, or at least it believes, that America is above all things, violently anti-Communist. So it attaches the name of communism to every untoward event that happens in the country to keep America frightened and benevolent. A week ago today I was in Athens working on this same Sunday broadcast. Across the street from my hotel window the British press headquarters caught fire. I went across the street and found out that an oil burner in a British canteen on the bottom floor of the building had burst and caught the walls of the building on fire. In the dusty, dry heat of Athens the fire spread to several floors before it was put out. This week the Government in Athens arrested 50,000 Athenians, doing away with the last opposition to it in Athens. The pretext that it offered the world was that the fire was Communist sabotage, the beginning of a Communist uprising and an effort to seize Athens. Now, as an eye witness and upon the best authority in the building that was burned, I know that the fire was a perfectly legitimate accident. Yet, this week, in a press conference in America, Greek Foreign Minister Tsaldaris, and in a simultaneous press conference in Athens, Gen. Napoleon Zarvots used that incident to inspire fears of imminent Communist occupation in Athens and to assure that the funds would continue to flow.

Western Europe's complete dependence upon us is breeding other ills as well. An outstanding one is the effort to flatter and win the financial favor of America by applying American solutions to European problems they do not fit. Uncontrolled, free, private enterprise is all right in America's intact highly productive economy. In Europe's crippled skeletonized economy, government control almost to the point of outright socialism, has become radically urgent. Yet outside Britain controls have not been applied anywhere in western Europe. Free enterprise has been installed. Rationing, the fair distribution of consumer's goods, that is, has virtually ceased to function. Prices have been allowed to soar The result has been economic chaos, inflation, inevitable labor troubles and a sharpening division into political extremes all over the countries.

The effort to please America and get loans has had a mighty and unsalutary effect on west European politics, just as it has on economics. The two most important domestic-political events in European countries this summer have been the maneuvering of the left wing parties out of coalition governments in France and in Italy. In both cases it was clear that it was done to please America and to get dollar loans. But the two countries could hardly have paid a higher political price for their favor. At a time when production is the greatest problem in Europe, the parties representing the workmen, the basic producers, were virtually disenfranchised from government. At a time when internal political unity was an urgent condition to recovery, the Communists were relieved of any restraining responsibility and given control of a mass acquisition that amounts to about 40 percent of the people in each country.

A year ago, France had attained within 98 percent of her prewar productivity. And today, with inflation uncontrolled, with no rationing, paralyzed by Communist-led strikes, France is limping at around 50 percent of prewar productivity. And is in a state of chronic crisis.

In Italy the strike wave is still a cloud approaching from the horizon. But indications this week from talks in the Government here, are that the French pattern may well be duplicated here.

If western Europe has taken awkwardly to her new dependence, America has found the sudden shift of world responsibility no less difficult, it seems from here. We seem still to be groping for a constructive foreign policy. The first year after the war our policy was aimless. We poured our money and influence on what turned out to be a bottomless pit in the palm of UNRRA. The second year, our policy has been frankly reactionary, supporting exclusively the right wing in European countries where the population is evenly divided between left and right, fostering disunity. Now all of a sudden has come the Marshall plan. About the first act of real statesmanship since the war. The growing image of Uncle Sam, the man with the bottomless pockets, has been largely dissolved by Secretary Marshall's speech from Harvard, for the most. Europe has been told that America will help and continue to help more than ever before if first Europe helps itself. Far from being reactionary, the plan encourages and even insists that Europe plan her economy. Lest it be thought that American imperialism is at work, America is not even present at the conference on the Marshall plan in Paris.

Unlike the post-UNRRA aid program and the Truman doctrine aid program to Greece and Turkey, American assistance has been offered to both the East and West in Europe. And though the talks in Paris are only 2 days of age now, the mere idea has had a tonic effect all over western Europe. Here in Italy this week the effect has been almost visible. The inflationary Italian lira stopped soaring and has settled healthily for the first time in a long time. On the stock market the speculative stocks that people bought in because they had no confidence in Italian currency, have suffered a severe break. And capital is once more being invested in the construction industry. This is the first time that Italy has been invited as an equal to an international conference since the war. And Italians have seemed to hold their heads visibly higher this week. Perhaps the best sign of the effect has been the activity of the Italian Communist Party. In a breach with the line of Moscow, the Italian Communists this week declared themselves in favor of Italy's participation in the talks. They did so, it's obvious, to hold onto their voting strength. The direction of popular opinion in Europe is indubitably toward the Marshall plan. All that now remains to be seen is whether Congress is up to the level of Secretary Marshall's wisdom and Europe's new enthusiastic hope.

This is Howard K. Smith speaking from Rome, now back to CBS in New York.

ANNOUNCER. You have been listening to the chief of Columbia's European news staff in a report and analysis of the news.

Budget Reductions, Phony and Genuine

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. GORE. Mr. Speaker, I have made a final tabulation and now wish to post the scoreboard on the once vaunted Republican economy drive.

Undoubtedly, every member will recall with what utter disregard for the realities of governmental fiscal requirements, both domestic and foreign, with what reckless abandon and impatient determination the Republicans in the House or Representatives voted and, by formal record action, passed a resolution to cut the conservative budget presented by President Truman by $6,000,000,000.

It was with no avail that some level-headed Democrats attempted to caution the Republican's headlong surge into unreality. It was with no avail that we told them that the $6,000,000,000 figure was merely plucked out of the air by their leadership to serve as an excuse to pass an unsound and unfair tax-reduction bill. Nothing would daunt them in their determination—not then, not in resolution stage. Nor would the Senate be deterred from plucking from the air another, though a different, figure upon which to resolve.

The Senate Republicans resolved to cut four and one-half billion and they insisted that they were right—down to the last cent. And being right, they would not concede a cent for the sake of compromise with their old guard fraternity brothers in the lower House. Nor would the Thomas Aquinases of the House concede that their mental slide rule might have made some slight miscalculations, and that the figure $5,999,000,000 might be nearer right.

OLD GUARD DOES NOTHING

An impasse. The story was upon every front page. What a beautiful war of words ensued. How the battle raged. And the taxpayers were supposed to be edified and inspired by the brilliant discussion and permanently attached to the Republican banner by the electrifying spectacle of one group of old guarders determinedly blocking the other on how much they were going to save the fellow who foots the bill.

It was my privilege to serve as one of those conferees—and I really mean it was a privilege—a privilege to see a real-life farce. When we met in conference it was apparent that the only agreement possible was the one which the Republicans had reached among themselves to disagree indefinitely. It was a good show, though, and I enjoyed seeing the performers go through the act.

BACK TO MIDDLE AGES

Those Aristotelian logicians of the Middle Ages who spent endless hours debating whether there was a genus homo and how many angels could stand on the point of a needle would have felt delightfully at home in that comic wrangle.

Surely the Congress that approved the Legislative Reorganization Act did not believe that the legislative budget provisions of that act, one of the forward real steps and pillar stones of reorganization, would produce nothing but dialectics of this sort. The country was led to expect that a joint committee of sane and practical Congressmen who were specialists on budget and tax matters would meet and study the President's budget.

Out of this investigation and study would come a legislative budget realistically tailored to the needs and income of the Nation. The people were led to believe that this would be something more than a New Year's resolution. They expected, I think, that it would

serve as a sound guide for the making of appropriations and the amounts of revenue necessary to be raised. But, alas, the farce continued until the Congress adjourned and the legislative budget died in the pigeonhole, and I doubt if the Republicans succeeded in fooling anybody but themselves.

SLEIGHT-OF-HAND

In order to save their face, the Republican leadership resorted to many kinds of sleight-of-hand bookkeeping. For instance, they claimed to have made a vast and courageous reduction of Government expenses by cutting the appropriation which the President estimated would be necessary to make prompt payment of tax refunds. But somehow the chairman of the Treasury-Post Office subcommittee, the gentleman from New Jersey, the Honorable GORDON CANFIELD, got mixed up on the signals because during debate on the bill on March 10 the gentleman from New Jersey said:

> We do not intend to leave the impression that this $800,000,000 reduction will save a single dollar for the taxpayers. The Government will still have to pay out whatever taxes are paid unnecessarily.

If this provision has any effect, it will serve to prolong the time when the Government will have to pay 6-percent interest on overpayment. Therefore, its only effect, if any, will be to increase Government expenditure. It will probably not even have this effect, however, since a deficiency will undoubtedly be passed in order to make prompt tax refunds.

Substitution of contract authorization in bills instead of actual appropriations proved to be a favorite resort of the Republicans. But how does this reduce ultimate expenditure? How does this save any money? If contract authorization means anything, it means authority to commit the government to financial obligations.

PHONY CUTS IN THE LEAD

So, a lot of phony claims to economy have been made. In fact, the phony budget cut claims of the Republicans, in which there is not one dollar of real reduction in ultimate government expenditure, exceed their genuine reduction.

They claim a reduction in appropriations of $2,775,715,106, but from this must be subtracted the phony claims amounting to $1,508,053,800 in order to arrive at the genuine reductions. The genuine reductions in the President's budget amount to $1,267,661,306.

This reveals the fact, no doubt surprising to the people who last year fell for irresponsible promises, that this Congress has reduced the President's budget by a smaller amount than the Democratic Congress last year. Last year the Congress reduced the President's budget by $1,582,000,000.

What is more, the reduction is larger now than it will be at any time between now and June 30, 1948. The process of reducing the reduction will get under way by passage of deficiency bills early next year.

FOUR TIMES 1935 FUNDS

I have kept the fiscal score so far, and I expect to keep the tally until all deficiencies are in and the fiscal year ends June 30, 1948. At that time, I shall be surprised if the Republicans do very much better than to live within the President's budget.

The fact that the Republican Congress, with all the gnashing of teeth, appropriated four times as much as was appropriated for all purposes in 1935 does not necessarily indicate that the Republican Congress is profligate. It does serve, however, to show how ludicrous and irresponsible were their campaign promises of 1946, and how futile and abortive has been the attempt to take America back to a prewar basis. America fought and won a great war, and we cannot laugh off the necessity of paying the interest on the public debt, meeting our obligations to the veterans, providing for the national defense and other essential services of Government—and the Republican Congress now knows that the American people will not stand for such.

To show the true facts about appropriations I have prepared a table, itemizing appropriations by appropriation bills. I have listed phony budget-cut claims, including contract authorization which has been given over and above the contract authorization requested in the budget:

The facts about budget cuts, itemized by appropriation bills

AGRICULTURE	
Claimed reductions	$192,094,782
Genuine reduction	192,094,782
INTERIOR	
Claimed reductions	$101,547,561
Reduction in contract authorization below budget	849,500
Genuine reduction	102,397,061

SECOND SUPPLEMENTAL	
Claimed reductions	$135,590,360
Phony cuts:	
Change of budgetary period for FBI budget	1,240,000
Inner-agency transfer in Post Office Department budget and liberalization of Antideficiency Act	66,515,000
Genuine reductions	67,835,360
Total genuine reductions	1,267,661,306

FALSE FRONT CLAIMS

Mr. Speaker, in desperation the distinguished gentleman from New York [Mr. TABER], chairman of the House Appropriations Committee, has attempted to take credit for additional revenue which the gentleman and his various subcommittees have "learned" might come into the Treasury although Congress has done nothing to bring about such additional revenue. For instance, the Independent Offices Subcommittee "learned" that certain UNRRA funds would probably not be fully used, so this, too, was promptly listed as a saving. Both phony and facade are appropriate to describe such claims of economy.

Again, Mr. Speaker, I want to offer my congratulations to my astute Republican friends, the leaders of their party, on the admirable skill they have shown in keeping so far away from the goal they set for themselves. Not to have come near it once in so many trials shows the most splendid talents for missing the boat.

Radio Address of Howard K. Smith

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include a broadcast by Howard K. Smith, chief of Columbia's European news staff.

Mr. Smith replaced Mr. Ed Murrow, formerly chief of Columbia Broadcasting System foreign correspondents. I have listened to Mr. Smith's broadcasts for a year and have been greatly impressed with his very rare ability to report facts without coloration or bias. What Mr. Smith has to say of Greece and Europe at this time is of greatest interest.

The address follows:

Next week this country, Greece, will become the first laboratory of the Truman Doctrine. The Griswold Commission, appointed by President Truman to administer America's grant to Greece, will arrive in Athens next Sunday, a week from today, and start work. The setting for the grand opening of the laboratory is not auspicious. In fact, for this first experiment in a new foreign policy we could scarcely have chosen a tougher subject than Greece or a more hectic period than now, this summer, and autumn

There's one agreement among observers here, that the postwar crisis of this country is coming to a dangerous head within the next few months. Greece's domestic economy is dropping into its deepest depression since the war. A sharp spring frost and a searing summer drought have decimated the country's meager crops. Civil war, still spreading over this tortured land, prohibits harvest in the bread basket area of the country, the northern plains of Thessaly and Salonika. The war itself has now reached a point where both sides, the right-wing government and the Communist rebels in the mountains, agree that a decision must be forced soon. The Government's military campaign against the rebels has been a failure. Trying to tear the guerrillas out of the mountains, a qualified British observer told me, has been as futile as trying to cut water with a knife. Government troops are said to be growing weary and there are many signs of disaffection.

This week there was a rebellion in the Government's air force on the Island of Crete. Sixty-three of the Government's airmen deserted to the rebel bands in the mountains. A Royalist newspaper here in Athens reported this week that a far-flung Communist organization has been discovered inside the Greek army, with branches in every unit. The Communist rebels have motives just as urgent for wanting an early decision. The failure of the Marshall plan talks in Paris, they add, may intensify American-Russian animosity here at their most troubled point of contact.

The Griswold commission, once established here, may urge the Greek Government on to sharper assaults on the Reds and supply American military weapons for the campaign. There's alarm in all circles of Greek politics. The former Liberal Prime Minister, Mr. Sophoulis, told me this week that he foresaw the danger of a general Balkan war, with the great power intervention, in the coming period of tension, unless something is done. The Right Wing Greek Government fears that the rebels may foment risings in the two big cities of the country, here in Athens and in Salonika, up north. Police this week have carried out mass raids in both places. The biggest raid was here in the Athens port of Piraeus, where 1,200 police combed through 700 houses in search of potential rebels. The night of the raid, this sprawling city was bathed in cold, white moonlight, and I went up on the Acropolis, sight-seeing. The contrast was bitter. Standing in the shadows of the stately Parthenon, the symbol and the architectural embodiment of the principle of moderation in all things that guided ancient Athens, and looking down from there upon the almost palpable fear, excess, and hate that pervade the millions of the city. Moderation is gone from Greece. The Nation is slashed into two extremes who refuse any contact with one another, save violence and brutality. The millions of innocents caught in the flood tide of opposing extremes are at the end of their material and moral resources. They entertain one lone hope—that the American Commission, arriving here next week, may be able to save them.

Solutions to the Greek problem are not ready at hand, but the Commission will see at least developments or a diagnosis of Greece's sickness from the plane, coming in. Centuries of deforestation have left this peninsula a mountainous desert of bald, naked rock, eroded gravel-covered slopes, and narrow, bone-dry valleys. For miles and miles you see nothing growing in the eroded valleys but a kind of wiry sagebrush. Occasionally you see a few scrubby patches of corn or wheat. But the corn is skimpy and seldom reaches up as high as your hip and the wheat is just about as bad.

Greece is a tiny country—not half the size of an average American State. Eighty percent of its surface is barren rock. Only 15 percent of the area is cultivatable. And she must feed and employ a population of 7,000,000, three times the population of the average American State. Experts say that Greece could adequately feed and employ with her economy and soil only three or four millions of her seven millions. Thus, about half the people of Greece are supernumerary. They could be done without. They cannot find useful occupations or normal livelihood. The land, unable to feed them, this farm population is flooding the cities in search of jobs and living. Athens, a century ago a village of a few thousand inhabitants, is today a congested city of a million and a half. Because there are not enough productive jobs to go around, the city millions seek unproductive jobs—the black market. They become parasitical middle men, adding nothing to the wealth of the nation but inserting themselves in the distributor process and taking their tribute of profit from it.

At this point, struggle for sheer material survival has made politics here Latin American in character. For the most part it's a mercenary kind of feudalism. People have voted not for parties, for platforms for the common welfare, but for personalities, leaders of accredited groups whose main function is not to carry out a program but to award their followers with contracts and jobs when in power. Every change of government brings a new influx of people with nothing to do and the Government jobs. Since the war, Greece has had 10 governments and the civil service is swollen to bursting with incompetent clerks. The civil service has a vested interest in Greece remaining backward. For example, they maintain a medieval system of customs barriers at the entrance to every town and province. A businessman told me that to take a cargo of gypsum a short distance through Greece, he'd have to pay a local customs on it 14 times, a total tax amounting to almost 100 percent of the cargo's value. If the stupid system were abolished, tens of thousands of useless collectors and bookkeepers would become unemployed—and there are no other jobs for them.

The reservoir of useless people is enormous and still growing. Every year some 40,000 young Greek boys come of age and need jobs. Five years of war and 2 years of peace have cast a quarter of a million of them afloat. The dump of discontented youth is doubtless a big source of material both for the Communist legions in the mountains and the Fascist Black Police brigades of the right wing government. The origins of the extremist ideologies that attract them are not hard to discover. In a population suffering from such a bitter complication for survival, those who have, hold on and try to increase their holdings with a dogged bitterness. Fascism, cruel terror leagues, like the X organization here in Greece, become their normal weapon. Those who have not are just as mutually attracted to communism, the philosophy of the impoverished, the hope of the hopeless.

Add another factor to this picture and the diagnosis of Greece and its sickness is complete. It is the geographical position of Greece. In a sharply divided world, Greece is located on the frontier between two worlds and at the most sensitive point. She blocks Russia's road to the Mediterranean. For the West, she is a bastion for our control of the Mediterranean and its highly strategic positions. As a result, foreign intervention has gravely aggravated the internal divisions of the country. There is no doubt now that the Russian satellite countries to the north are giving comfort and weapons to the left extremists, even training them to fight.

There is likewise no doubt that the present right extremist government is essentially a foreign creation, a British creation. In fear of the Communists, Britain sanctioned and encouraged flooding the high army commands with reactionary Royalist officers. She actively organized the police force, consisting essentially of Greeks from Hitler's brutal security brigades. It is the observation of the vast majority of observers that I've talked to here that these two forces created by foreign powers, the Greek Army and police, carried out the elections in the countryside in a reign of terror and put the present Royalist Government in power. Today the stock of Russians and British is low in this tortured land.

I've talked to businessmen and statesmen, workmen and peasants, and invariably they have wished a plague on both houses. Disappointment in the English have forced the sentiments of easily 60 to 70 percent of the Greek people to the center, a qualified observer estimated to me. A free election in the near future, he said, would undoubtedly bring a majority for moderate, efficient government. It's a situation which cannot last long. The strains and tensions of the coming months will force all Greeks to take sides. The opportunity for unification and pacification of the land is, indeed, temporary, of very short duration.

About the only power which can put this period to constructive use is America. For economic reasons Britain has yielded dominance to us. Among Greeks America alone is considered as having clean hands. That seemed to work only through UNRRA, which, despite the present Government's maladministration of our supplies here, did save millions of Greek lives. The Griswold commission, when it arrives here, can count on the affection and support of the overwhelming majority of the people. Whether that can be said again in 6 months depends on the Commission's answers to Greece's problems.

It is perhaps impolite for a correspondent to condemn a government that grants him freedom to report, but the attitude here has become too serious for honesty to be considered. The present Greek Government is, without exception, the worst I have seen at work anywhere. It has perverted UNRRA supplies to the benefit of private profiteers. It has steadfastly refused to grant an effective amnesty to the rebels in the mountains. The

cruelty of its Nazi-trained police has forced honest peasants into the mountains to fight beside the Communists out of sheer self-defense. The Government has done nothing visible to reconstruct or pacify the country. It seems to believe that it needs no constructive policy. When the trough of foreign funds out of which it fattens its followers runs low it seems to believe all it has to do is to shout "Communists" a couple of times, and President Truman will refill the trough.

Whatever the solution of the enormous Greek problem is, it is next to impossible for an American observer to see how the job can even be begun through the channels of the present Government of Greece.

Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. MERLIN HULL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. HULL. Mr. Speaker, it is to be regretted by all that another Congress is about to adjourn, probably for a period of 5 months, without having given just and proper consideration and taken appropriate action upon the important matter of assistance for the aged people of our Nation. Other great problems such as are involved in housing for our war veterans and for others also are left among the unfinished business of the House. But some consideration has been given to that subject, even though the accomplishment is small in definite results.

For a dozen years and more there has been a growing and insistent demand for congressional action which would provide a Federal program for old-age assistance for the millions of aged people who served their country in peacetime and in wartime. Petitions bearing the signatures of millions of good citzens have poured in upon Congress during all the years, and even in the closing hours of this Congress they continue to come, each expressing the hopes and prayers of their signers that action may be brought about now, without waiting months longer before another session shall be able to take up consideration. So far as Congress is concerned, a deaf ear has been turned toward all such entreaties.

The Townsend bill came to Congress a dozen years ago. Back of it were the thousands of clubs which formed the basis of the national organization which presented the measure. Except for short hearings held from time to time before the Ways and Means Committee, no opportunity has been given the supporters of the bill to bring the bill before the House for action. No other movement, with the backing of so many millions of people, has come before Congress and the people of the country since the first attempt to obtain the soldiers' bonus for the veterans of the First World War. That, too, was scoffed at, defeated, and ignored for years before the bonus was finally voted for and passed.

During the years, the Townsend bill, modified and improved from time to time, has waited consideration by the Ways and Means Committee. When petitions have been laid on the Clerk's desk, under the rules of the House, to discharge the committee from further consideration, they have been freely signed by the Representatives, always, however, lacking a sufficient number of signatures to force action. On one such petition there were lacking less than a dozen signatures to bring about the desired result. Late in the present session another petition was signed by 80 or more Members, but too late for obtaining the usual number.

One reason commonly assigned for failure of action in previous Congresses was the opposition of the administration in power and its control of all committees. The Democrats lost that control when this Congress came in. Now we have a Ways and Means Committee with a Republican majority, and dominated by the Republicans. There were thousands of advocates of a proper Federal program for old-age relief over the country who looked forward to that change of party control with hope and expectation. But as Congress prepares to close its sessions, that hope has turned to discouragement, as have similar expectations in years gone by.

While the Second World War was on, all our people, young and old, devoted their time and energies to bringing victory to our cause. The burdens entailed in winning the war were shared freely by all. Millions of old people well beyond their ordinary retirement age, labored assiduously in the common cause of our Nation. Now that peace has come again, they ask that their own cause shall be heard and that there shall be action thereon.

Since VJ-day, our Government has poured out billions of dollars of the funds of our taxpayers for the relief and rehabilitation of war-torn countries abroad. So liberal have been the expenditures abroad that they bring the belated criticism of wanton waste and extravagance in the administration of our appropriations. The total of expenditures in the past 2 years are variously estimated at from $14,000,000,000 to $16,000,000,000.

This Congress has followed up by appropriating $1,400,000,000 for foreign countries, and seven hundred and twenty-five million more for relief of the people in the lands occupied by our troops. The end of it all is not yet in sight, as plans are being formulated for further grants and gifts which are proposed to some $25,000,000,000 or more.

It is not to be wondered that our good people of advanced years and also younger folks are disturbed over the failure to act upon a proper measure for old-age assistance. It is not a sufficient answer to say that minor amendments to the social security law are proposed. Those amendments make no general provision for a Federal program.

The one thing presented which stands out in the situation is that change of partisan control of the Ways and Means Committee has brought neither consolation nor encouragement to the cause of the old people. Their program is not partisan, and it should not be, but its eventual success must depend upon the response of those who are elected to serve all the people in this as well as in all other important policies.

When Congress meets again the cause of the old folks will be present. It will be all the stronger because of the defeats and discouragements suffered. No great cause, backed by the people and for the people, can be more than temporarily set back by those who fail to recognize its significance until they are compelled to by public sentiment.

Congress Session Made Above Normal Record

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I present for the RECORD an article by Arthur Krock which appeared in the New York Times, Sunday, July 27, 1947, entitled "Congress Session Made Above Normal Record":

CONGRESS SESSION MADE ABOVE NORMAL RECORD—MUCH WAS ACCOMPLISHED ALTHOUGH ITS DOMESTIC PLANS WERE DISRUPTED BY RUSSIA'S BREAKS WITH THE WEST—EARLY 1948 MOVES A HANDICAP

(By Arthur Krock)

WASHINGTON, July 26.—The first session of the Eightieth Congress, expiring wearily as this is written, has made history beyond the normal record of a national legislature controlled by the party in opposition to the administration, and has lived through a great deal more.

It will be remembered perhaps as much for the fact that its domestic plans were disrupted by the final proof that Soviet Russia would not cooperate with the western powers as for its unusual legislative record. This was made unusual by the passage over the President's veto of the first laws to correct union labor excesses in 14 years and by the measure that unifies the Army and the Navy. But it must be left to speculation what this legislative record would have been if Soviet conduct abroad had not prompted the President in March to launch suddenly "the Truman doctrine," and if on the same foundation "the Marshall Plan" for the reconstruction of Europe had not turned up one morning in June like Aladdin's Palace.

However, it is not speculation to say that the Republican majority's bills to reduce income taxes would otherwise have become law, whether or not Mr. Truman vetoed them; that the bitter struggle over validating the State Department's Voice of America radio program would have been a far lesser controversy; and that the effort to authorize the admission this year of a number of displaced persons abroad would have been considered in a more sympathetic atmosphere, being free of the whisper of war. And as for the other great issues of the session between the administration and Congress—universal military service and the continuation of the New Deal social-benefit program—the probability is that these would have fared no better if Soviet Russia had followed the international policy President Roosevelt hoped it would.

EFFECT OF 1948 POLITICS

The record of this session, with particular emphasis on the large sums appropriated for the application of the Truman doctrine to

Greece and Turkey and for relief abroad, was unusual also in that it was made despite an early blight of 1948 Presidential politics. This always begins to appear at the Capitol in the year before the national elections. But the grave implications of foreign policy that materialized in March, and the President's definite alinement with left-wing groups after a period of indecision, intensified and advanced the effects of the plague.

The President's choice of the political combination he will seek to form was made plain when, after offering no assistance to Congress in its search for effective union-labor curbs, and openly opposing income-tax reduction, he vetoed both these items of major legislation. He had, it is true, twice asked Congress to enact the remaining New Deal social-benefit proposals in his two state-of-the-Union messages. But Mr. Truman never pressed these, and, for replacements of appointees of the last administration, he turned more and more to conservatives.

PRESIDENTIAL POSITION

Therefore, until he took his stand on this legislation in company with the left-wing affiliates of the Democratic Party, nominated Francis Biddle (whose aggressive New Dealism the Congress majority finds objectionable) to an important United Nations post, and designated to the new National Labor Relations Board former Senator Abe Murdock, of Utah (who was an unswerving foe of union correctives when in Congress), many believed the President would select a position only slightly left of center.

But after this misapprehension was made clear and Mr. Truman disapproved legislation supported both on passage and over his veto by a large number of Democrats in Congress, the electoral battle of 1948 arrived in full force and well ahead of time. The struggle, amounting to a near-filibuster, of the administration Democrats in Congress to prevent a vote on the Republican proposal to widen the area of inquiry into the primary frauds in the Fifth Missouri District, bedeviled the closing hours of a session that had become wholly political.

The significance of this conflict is that the Kansas City political machine which engineered the frauds, lists the President in its membership and put and promoted him in public life. And Attorney General Tom Clark, whose Federal inquiry into the frauds was at issue, is considered by some Republicans in Congress to be as much a political agent of Mr. Truman as his Postmaster General, the Democratic national chairman, Robert E. Hannegan.

DIVIDED CONTROL

The last hours of the session also were spent in a frantic effort to pass the appropriation bills essential to the conduct of the Government. So dilatory was action on these that stop-gap measures had to be provided to continue Federal operation at the end of the fiscal year of 1946–47 on June 30. Part blame for this sluggishness can be attributed to these facts: the divided political control of the administration and Congress, which assured a long conflict over the items in the executive budget; the uncertainty over what the new foreign policies would cost; and the disregard by the Republicans of the provision that an agreement should be made during the session on a ceiling for Federal expenditures.

But blame can also be traced to the flaws revealed in the plan by which Congress reorganized itself at the last session. When this was passed it was hailed as the first businesslike instrument Congress ever devised for its operations. The sharp reduction in standing committees, it was prophesied, would save time for Congress and executives alike and speed up the disposal of legislation.

INCREASED DUTIES

The reverse proved true. The reduced number of committees created hundreds of subcommittees which found work for themselves when there was none. One consequence of this was that members of the Cabinet and other high administrators were summoned to the Capitol to give the same testimony more often and to more legislative groups than in the past. Another was that Senators were assigned to so many subcommittees and were chairmen of so many that both committee work and floor attendance suffered. How office work also was done is a mystery, though somewhat solved by the allowance of assistants for Senate chairmen and certain House Members.

While there was much acrimony in Washington during the session for the reasons stated above, one touch toward the end of what looked like nature made Capitol and White House nearer kin. This was the appearance of the President in his old Senate seat and a friendly oratorical exchange between him and the Republican presiding officer, Senator ARTHUR H. VANDENBERG. It was only a show, planned and executed by Leslie L. Biffle, secretary to the Senate minority. But it neutralized some of the political acidity for awhile, anyhow.

The Ohio

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have included in the RECORD a statement by an eminent authority on river basin development, at the Valley Authority Conference held in Washington on July 17 and 18. The statement, The Ohio, is by Louis Bromfield, well-known author and farmer.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In introducing myself, I might say I am a Democrat in politics, that I am a violent opponent to the centralization of anything in Washington; I believe in State rights; and am a decentralizer and I do not believe that the valley authority idea has anything whatever to do with centralization in Washington or any abrogation of State rights.

It seems to me the whole valley authority idea is simply a simple, common-sense method of establishing these things.

I am also a member of the Ohio State Conservation Commission, and adviser to the Muskingum flood-control district, and a dirt farmer.

I will talk to you starting at the headwaters of the stream, which is a tributary of the Ohio River and consequently the Mississippi.

We own 1,000 acres of a cooperative farm. When we came to that farm, most of the land was abandoned, tax delinquent, and eroded. We came there and in a heavy rain, we lost off the farm within 12 hours 90 percent of the water.

We have just been through a flood as great as that of the great flood of 1913, which was the greatest disaster which ever visited the Ohio, and in our region the same amount of water fell.

We can say honestly that on that same thousand acres, we did not lose during the course of the flood, and the subsequent cloudburst which followed intermittently for 3 weeks, we did not lose one ounce of top soil off that farm, and that even during the flood water, up to a point where the ground became so saturated it would take no more, we kept about 80 percent of the downfall where it fell. That farm lies on the edge of Pleasant Hill Dam, which is one of the 14 in the Muskingum flood-control district.

These dams came about, not through the wisdom of the War Department, the Army engineers, nor through their experience or education, it came about through the pressing demand of the people within that valley to protect themselves from the periodic floods, of which 1913 was the most destructive.

Eventually the Army engineers came in and built the dams. Even today there are Army engineers who do not approve of them, despite the fact that in these recent floods, there was not one penny damage in the whole of the Muskingum Valley, caused by flood waters.

The motivation behind the installation of these dams came from the people. The Army engineers built the dams, and have remained uncooperative to their development further for the benefit of the people of Ohio.

These dams were a denial of their whole philosophy, tested over 75 years, at a cost of some billions of dollars, their whole philosophy of levees and dredging.

These were essentially headwater dams, on one of the chief tributaries of the Ohio River. The dams cost $14,000,000 to construct and in this 1 year, they more than twice paid for their value, but mark this point: They were not constructed at the mouth of the Ohio River or at the mouth of the Missouri or at the mouth of the Mississippi. They were distinctly headwaters dams. There is no dam on the Muskingum River itself. They are on the tributaries of the Muskingum River.

Then mark the second point. In the construction of these dams and in general the philosophy of the Army Engineers, there is no consideration whatever of the conditions upstream, and what causes floods and what causes siltation. We have in those dams a very notable example of what happens: These headwaters dams are very effective because they impound all these flood waters and keep them from flowing into the Ohio and Mississippi at time of crisis, but at least two or three of those dams are not going to be good for many years longer because of a siltation problem.

In our own country, 8 miles apart, we have two dams. One is Pleasant Hill and one Mifiin Lake. Mifiin Lake is fed by streams which come out of a flat country where the farmer thinks he has no erosion, but the headwaters of the Mifiin Dam have already silted up in the period of 8 or 9 years from 10 to 15 acres at the top of the dam.

Farmers upstream are reluctant to practice soil conservation, and only when you show them their top soil at Mifiin Dam, does it occur to them that they are losing soil.

Curiously enough the other dam is set out in hill country, and it has no siltation problem whatever, and the reason is a combination of two curious facts. One is that, fortunately, in that area, some hundreds of farms have become abandoned through bad agriculture and erosion, and neither has taken over. In our country hardwood forests spring up overnight, and there are now wild, weedy expanses of land, and are largely being reforested.

From those lands, those abandoned farms, come no water and no silt.

Fortunately the farms remaining in that area in operation, three-quarters of them have gone over to proper soil conservation, forestry, and proper land methods.

The result is that Clear Fork remains clear fork and while Black Fork still is a muddy stream and may be useless 30 or 40 years from

now, while the other one may be serving for all time.

The problem was not only up-farm streams but it ran into the country behind the dam.

Those 14 dams saved this year many millions of dollars for people on that watershed.

Those of us who farmed on the edges of those reservoirs lost perhaps a total of $25,000 in crops, which is a gamble we take, because we have given easements on those areas bordering the lake. We lose perhaps a total of $25,000.

However, if those dams had not been there, those headwaters dams, if they were not there, that vast amount of water would have been dumped into the Ohio and the Mississippi at the very moment of crisis of the recent floods, and who can doubt that then you would have had hundreds of millions of dollars more damage further down the Ohio and the Mississippi.

This whole project, it seems to me, is an investment of moneys.

I want to bring up that point in a second, investment rather than spending of money.

Tennessee River, also a tributary of the Ohio, is controlled by TVA. Not one drop of floodwater came out of that area into the Ohio, to contribute to the Ohio floods, into the Ohio and Mississippi.

The Ohio River Valley embraces several states. To manage it properly, it must be an over-all project.

Immediately you come into all kinds of difficulties if you attempt it, either on the basis of private enterprise, cooperation among States or otherwise.

I am familiar with the Ohio Valley Improvement Association, with the Mississippi Valley Association and various other associations.

I have worked with them, I know their members, I sometimes speak to them, and I approve thoroughly of their objectives. But I also say, I think in the end, their objectives are either wrong or will never be accomplished, because there is not the means, the machinery or the possibility of accomplishing them.

If we get into the question of cooperation of States, loosely joined together, to solve a valley proposition, watershed proposition, you run into all kinds of practical difficulties at once. Among them is the political one. We know what would happen without ever trying it out. We know all the political patronage, all the boondoggling and the rest which goes with our ordinary so-called pork-barrel bill.

We have had the shameful spectacle of politics fighting the TVA. All of those things would be inevitable. A loose aggregation of States working together is not a possible basis for the solution.

Beyond that, there is the question of the difference in any combination of States, the difference in points of view and so on, and we have that sharply brought out in the Ohio Valley.

In that valley, the rich State of Ohio, with its wonderful balance of industry and agriculture, and its great string of industrial cities, Toledo, Youngstown, Cleveland, Dayton, Cincinnati; they go on forever, that rich State lays across from two States, West Virginia and Kentucky, whose populations and revenues are a mere fraction of those of the State of Ohio.

Yet, a great deal of the floodwater comes out of those States. Now, if it is to be left to the State, I do not believe either Kentucky or West Virginia, for financial reasons if for nothing else, would ever be able to solve adequately their problem.

Ohio has done it pretty well, up to a point. We have the Miami flood control district and the Muskingum Dam flood control district which are two chief rivers feeding into the Ohio. Both of them have a series of check dams and very fortunately the upper watersheds feeding those dams are being controlled. We are making progress with better forestry and proper soil conservation. It is possible that those check dams will continue to be serviceable without siltation for a great many years to come.

Again, but a beginning only has been made on the Allegheny River, and on the Monongahela, which join at Pittsburgh, to form the great Ohio.

One of your earlier speakers touched on an interesting topic, and that is the low waters and high waters which have developed in our American rivers, in which we have used land cut-offs, and generally mismanaged our whole landscape. If you follow the history of the Ohio River in that you find an interesting record.

Going back to 1800 and from then on, you will find that in the Ohio, they had floods, certainly. We have floods today in our own river valley, but because we handle things right in our own little valley the damage this year was almost nothing.

They have floods, but nothing approaching the great floods which have gradually risen in the Ohio, Mississippi, and elsewhere, from other rivers, in volume and destruction.

As you took off trees from the State of Ohio, you plowed up the land and you left it bare, you developed gullies, it is perfectly apparently what happened.

When the trees were there at least 90 percent of the rainfall, even in flood conditions was absorbed in the land. Then you turned Ohio, roughly, except for 14 percent of forest, into a pavement. The water ran off the pavement. That has fixed our water stage in Ohio, which has dropped 40 feet in recent years, which can be a disaster to a rich industrial State. It is one of our greatest problems.

There are towns in Ohio today not having enough money to bring in even a factory nor even enough water to bring in one more family.

In a rich, well-watered State, we have counties where the farmers are buying tanks of water 8 months of the year and hauling them in at $35 a tank to water their livestock, and that is what has happened to Ohio, through mismanagement of the land.

The water which should have been feeding our wells long ago, has gone down the Mississippi and into the Gulf of Mexico, taking with it millions and billions of tons of top soil, to contribute to that delta which has grown 80 miles out into the Mississippi in the last 100 years.

The whole thing begins up in the cow pasture and not at the mouth of the Mississippi.

It is perfectly apparent how futile, and it should evidence to everyone, I think, that all that happens at the Mississippi, at the lower mouth, is you build a bigger delta constantly, and you raise the level of the Mississippi higher and higher, despite dredging all the time, above the surrounding lands. This can go on and on, of course, until you reach the point of absurdity where the river dikes and all falls down onto the land outside.

Most of you are familiar with the raging and wild Missouri River, beside which our Ohio River and the Ohio itself is a well-conducted stream. Many of you who know that, who have seen the billions of tons of silt, sand, and gravel churning around, can see on the face of it, it seems to me, the very absurdity of building great dams to check either the waters or to control the siltation of that stream half way down, and from there to the mouth.

It is simply an impossibility. The problem can be demonstrated from simply taking a map made of sand or papier mâché and pour water over it and see what happens. It isn't a very complicated thing, but our Army engineers have never seen the simple application of the proper methods to handle floods and water.

It goes all the way from our cow pasture at the headwaters, right down to the mouth of the Mississippi and into the Gulf of Mexico.

Overspecialization, it seems to me, is the greatest curse of our American education and our civilization. That business of, as Sir Albert Howard puts it, learning more and more consistently about less and less. Our Army engineers can build a fine dam. Nobody quarrels with that, but unfortunately I am afraid the education and information of both of them never goes beyond that dam itself.

They have had a chance over 75 years, and the expenditure of hundreds and hundreds of millions of dollars, to prove their thesis, if it had any soundness, the thesis of dredging and levees. It has solved nothing. We have worse results this year than we have had for almost a generation, with floods, showing the futility of dredging and levees.

If you had the watershed controls, you would have a steady flow in the Ohio River the year around, instead of having to build dams and locks to take care of the low water in summer.

The editor of the Pilots Magazine of the Mississippi River who came from the Allegheny told me a few moments ago that he was brought up as a boy on the Allegheny River and he remembered well that the steamboats came up the Allegheny River past his grandfather's farm.

Today, from June 15 to December 1, it is very difficult to get a row boat up that stretch of the headwater of the Ohio, and the reason is that the waters that should have kept that stream going during the summer, that should have been impounded in the earth itself and fed through springs, the water in that channel, all that went down the Mississippi River last winter into the Gulf of Mexico, because floods in the Ohio, causing the expenditure of hundreds of millions of dollars, to deal with low water in the summer in Ohio.

I can see no argument against a comprehensive treatment of the flood control system, beginning in the cow-pastures and extending all the way to the mouth of the Mississippi River. I do not think the War Department, or the engineers, can be entrusted to do it. They have had their chance. There the efforts of the Army engineers have been largely futile. They show a rather stubborn inclination to yield a point.

In the case of our own Muskingum Valley flood control, they have not been cooperative. The State has had to develop its own forest preserves around those. They have had to develop the recreation areas which are priceless to a great industrial State like our own, with an industrial population of three million or four million people, living in great cities.

We have had to do all of that on our own. There have been great wastes, great inefficiency, great expenditure of taxpayer's money needlessly because that area was not developed as it should have been as a single area with all things considered when those headwater dams were built.

As I said, I don't think the Valley Improvement Association can do much above making propaganda. In our own Ohio Valley Improvement Association, and in most places, they have not been able to get together and find a solution for the comparatively simple problem of river pollution.

They talk, they have good ideals, but they haven't the machinery, nor the money, nor the power to solve these problems.

I pointed out to you what I thought about State cooperation. I think what I said is arguable. We know what would happen, both on the economic side in providing the funds and in the intense political mess we would get into.

Therefore, it becomes, it seems to me, the valley authority pattern again, and those calling it socialistic are talking nonsense.

I do not think anybody is less inclined toward more socialism than I myself am. It is simply a sensible means of cooperation on

an independent basis, solving what is perhaps our very greatest problem in this country.

It is essentially the investment of money.

It seems that in all this question of spending Government money, there is always the yardstick which measures what is good and what is bad. We spend a great deal of Government money, really, spending it, by throwing it out the window, and accomplishing nothing.

That is what I call spending. That essentially has been the whole program. Dikes, levees, and dredging. Every year making a fortune to private contractors and giving the engineers millions of dollars to play around with and accomplish very little.

A valley authority, as worked out in the TVA, is the greatest possible investment of the taxpayer's money.

It pays back in 1,000,000 ways for every dollar expended. It pays back in the end, 8 or 10 or 20 dollars in the long run. Those things are investments which bring returns.

The old business of dredging and levees is simply pouring money down a rat hole. I may say that the President's proposal of yesterday goes certainly under the head of spending. It is just important in that it is pouring money, millions of dollars of the taxpayer's money, down the rat hole from which there is no return and out of which there is no solution.

In closing, from the Washington Post I read, "The President's message asked $177,000,000 for general flood-control projects, $15,000,000 for the lower Mississippi and its tributaries, and $10,000,000 for maintenance and improvements of existing river and harbor work on the Mississippi."

We know how effective those are. Between Sioux City, Iowa, and St. Louis, the work includes levees, reservoirs, bank stabilization, and drainage and dredging.

We are just back where we started 75 or 80 years ago, only every year it costs us a little more.

I stand here in the absolute belief that some of us will live to see the day when every major watershed in the United States will be managed as a valley authority, because, fundamentally, it is the only sensible economic, investing way to solve this which is one of our great problems.

I know it can be done from our 1,000-acre farm, through the valley control at the Muskingum, down the Ohio River and finally to the mouth of the Mississippi.

There is no use beginning at the bottom of rivers. You begin at the top.

Thank you very much.

Bills Reported From Committee on Veterans' Affairs, House of Representatives

---

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, during the first session of the Eightieth Congress the Committee on Veterans' Affairs reported favorably on 30 bills, 1 House joint resolution, and 1 House concurrent resolution. Of this number of bills reported, 6 are now public law, 5 passed both the House and Senate and are now awaiting action of the President, and 3 passed the House.

The 32 bills and resolutions, with the date reported and a brief explanation of each, follows:

H. R. 246, February 26: Raises the ceilings on wages and subsistence allowances payable to veterans undergoing on-the-job training as follows: $250 monthly for single veteran (now $175), $325 for veteran with one dependent (now $200), $350 for veteran with two or more dependents (now $200). Adds 2 years to the customary training period.

H. R. 969, May 9: Spanish-American War pensions. (See H. R. 3961, reported June 25.)

H. R. 1327, February 5: Extends for an additional 5-year period the privilege of renewing 5-year level-premium term United States Government life-insurance policies. Passed House March 13. Passed Senate April 7. Approved April 15. Public Law No. 34.

H. R. 1353, January 29: Extends time limit to January 1, 1948, for reinstatement of national service life insurance (level-premium term) on comparative health basis, to provide for automatic conversion to ordinary life plan for total disability at end of term, and to provide for original application on any permanent plan. Passed House January 29. Passed Senate February 17. Approved February 21. Public Law No. 5.

H. R. 1844, March 27: Permits Administrator of Veterans' Affairs to grant easements in lands belonging to the United States under his supervision and control. Passed House April 10. Passed Senate May 22. Approved May 31. Public Law No. 83.

H. R. 2181, April 30: Includes by statutes institutional on-farm training among types of training afforded World War II veterans under title II of the Servicemen's Readjustment Act and to set up certain standards relative thereto. Passed House May 12. Passed Senate July 25, 1947.

H. R. 2368, March 27: Authorizes an increase in appropriation for revolving fund from $1,500,000 to $3,000,000 for purpose of making advancements by the Veterans' Administration not to exceed $100 in any case to disabled veterans of World War II undertaking vocational training. Passed House May 12. Passed Senate June 16. Approved June 25. Public Law No. 115.

H. R. 3060, April 15: To extend for 1 year (until June 30, 1948) certain provisions of section 100 of the Servicemen's Readjustment Act, as amended, relating to authority of the Administrator of Veterans' Affairs to enter into leases for periods not exceeding 5 years. Companion bill, S. 1135, was passed by the Senate May 22. Passed House June 5. Public Law No. 94.

H. R. 3308, May 20: Increases the minimum monthly allowance payable for subsistence allowance in case of vocational rehabilitation of World War II veterans disabled to 30 percent service-connected disability to the following sums: Without dependents, $115 (now $105), with one dependent $135 (now $115), plus the following amount for additional dependents: $20 (now $10) for one child, and $15 (now $7) for each additional child, and $15 (now $15) for a dependent parent. Passed the House July 26. Passed the Senate July 26.

H. R. 3516, May 20: Spanish-American War Veterans. (See H. R. 3961, reported June 25).

H. R. 3546, July 19: Permits recognition of officers and enlisted men retired from the military and naval forces of the United States as representatives of certain exservice organizations in the presentation of claims to the Veterans' Administration. Passed House July 23. Passed Senate July 25.

H. R. 3583, June 2: Automobiles for disabled veterans. (See H. R. 4007, reported July 2).

H. R. 3623, June 24: Provides that no person who is a member of the Communist Party, in sympathy with its general aims, or who owes allegiance to the government of the Union of Soviet Socialist Republics or any government subservient thereto, shall be eligible for any benefits under any laws or regulations administered by the Veterans' Administration, and provides for certain procedures, forms, and penalties to carry out the purpose of the act.

H. R. 3739, July 16: Authorizes the acquisition by the Veterans' Administration of certain land in Harrison County, W. Va., as a site for the proposed Veterans' Administration facility at Clarksburg, W. Va.; to lease the portion of such land not presently needed for the facility to the city of Clarksburg under certain conditions; to grant the State of West Virginia right-of-way for a public highway across the tract of land, with agreement that the State of West Virginia bear not to exceed 35 percent of cost of construction. Passed House July 17. Passed Senate July 23.

H. R. 3748, July 24: Increases service-connected death rates of compensation for widows, children, and dependent parents of Spanish-American War, World War I and II veterans to: Widow, no child, $75 per month; widow with one child, $115, with $20 each additional child; no widow, but one child, $50 with $20 for each additional child (total to be equally divided); dependent mother or father, $75; dependent mother and father, $40 each. The bill also included 1,200 peacetime veterans whose death was due to extra hazardous service.

H. R. 1335, July 24: Increases compensation rates for disability incurred in peacetime service to 80 percent of rates payable for similar disability incurred during wartime service.

H. R. 3016, July 24: Authorizes Administrator of Veterans' Affairs to furnish stenographic assistance for the use of paid full-time representatives of veterans' organizations that have received Federal charter and have been assigned office space in the Veterans' Administration.

H. R. 3565, July 24: Authorizes the Administrator of Veterans' Affairs to subsidize by loans the construction of not exceeding 200,000 multiple-dwelling units for rental to World War II veterans at low and medium cost pursuant to certain prescribed standards and specifications.

H. R. 3814, July 15: Authorizes $5,000,000 for acquisition and establishment of a hospital for Negro veterans at the birthplace of Booker T. Washington in Franklin County, Va.

H. R. 3888, June 20: Subsistence allowances for veterans attending schools. (See H. R. 4212, reported July 23.)

H. R. 3889, July 8: Establishes by statute a presumption of service-connection for certain enumerated chronic and tropical diseases which are manifest within 1 year from discharge from active service or within the incubation period of such tropical diseases. Passed the House July 21.

H. R. 3961, June 25: Provides increase of 20 percent in rates of service pension for veterans of the Spanish-American War and Civil War and their dependents. Passed House June 30. Passed Senate July 11.

H. R. 4007, July 2: Authorizes the Administrator of Veterans' Affairs to pay not to exceed $1,600 on purchase price of an automobile for any war veteran entitled to compensation for loss or permanent loss of use of one or both feet or one or both hands or permanent impairment of vision of both eyes of certain prescribed status. (S. 1391, similar bill, but providing for only World War II veterans, passed Senate July 23.)

H. R. 4055, July 3: Provides increase of 20 percent in rates of service pension for veterans of Indian wars and their dependents. Passed House July 26.

H. R. 4160, July 24: Amends the National Service Life Insurance Act of 1940 to provide for extending the time 1 year in which a veteran or the beneficiary may make application for waiver of insurance premiums retroactive based upon total disability. It also provides that such waiver may be made

retroactive to October 8, 1940. Prohibits the lapse of an insurance policy in cases where there is sufficient money due the veteran by reason of waiver of premiums for total disability to keep the insurance in force.

H. R. 4212, July 23: Increases subsistence allowances for World War II veterans pursuing institutional training to $75 per month, if without a dependent, or $105 per month if he has one dependent, or $120 per month if he has more than one dependent. (An identical bill, S. 1394, passed Senate July 19.)

H. R. 4242, July 21: Increases income limitations governing the granting of pensions to veterans and death-pension benefits to widows and children of veterans as follows: Unmarried person, $1,800 (now $1,000); married person or any person with a dependent, $3,000 (now $2,500).

H. R. 4243, July 19: Provides for a disability rating of 100 percent for arrested tuberculosis for the first 2 years of arrest, then 50 percent for 5 years, with a minimum rating thereafter of 40 percent for those whose tubercular conditions were diagnosed as far advanced, and 30 percent for those diagnosed as moderately advanced or less.

H. R. 4244, July 24: Authorizes assistance to wheel-chair veterans in acquiring specially adapted housing which they require by reason of the nature of their service-connected disabilities.

H. R. 4309, July 23: Provides for loans for the purchase or construction of homes, farms, farm equipment, etc., up to $12,000 on any one farm, with interest rate of 3 percent and provides for repayment of loan not more than 40 years from making of the loan.

H. J. Res. 196, May 19: Authorizes the Administrator of Veterans' Affairs to continue for 1 year offices in the territory of the Republic of the Philippines. Senate joint resolution passed House in lieu June 2, with amendment. Senate concurred with House amendment June 9. Approved June 14. Public Law No. 91.

H. Con. Res. 54: To use Schick General Hospital, Clinton, Iowa, for the care of veterans, particularly convalescent or domiciliary cases. Passed House July 23.

A Summary of the Operation of the Reorganization Act

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. MONRONEY. Mr. Speaker, after 7 months' experience with the Reorganization Act, Congress has rung up a 50–50 score on performance in its first session under the new rules, a close study reveals.

Several marked improvements to congressional machinery have been carried out, others partially accomplished, and still many other important provisions virtually ignored.

Most of the failures of the act, criticized by various writers and Members of Congress, have been failures to put into effect the provisions of the act rather than proving its reforms unworkable.

Although the act was passed on August 2, 1946, it did not become operative until Congress convened in January of this year. Then Congress faced not only the problems of placing reorganization into effect, but it was under new management in both Houses as well. The new Republican majority accepted the act in toto and it then became the job of dozens of Members, committee chairmen, staff members, and others to carry out the many changes provided for in the bill.

COMMITTEES CONSOLIDATED

Only one of the three principal objectives was carried out in full. That was the realinement of the sprawling, overlapping, and duplicating committee structure of both Houses which, like Topsy, had "just growed" for more than 100 years. The standing committees were reduced from 48 to 19 in the House, and from 33 to 15 in the Senate. Despite the creation of numerous subcommittees, this phase of reorganization marks a major achievement.

The second principal objective, that of furnishing Congress with skilled technical service of its own through improved staffing and research facilities, was only partially successful in the first 7 months of operation. Difficulties were encountered in assembling qualified staff members, learning to use them effectively, and in allowing unqualified personnel to hold the professional staff jobs. Experience through trial and error should improve this situation.

The third objective, considered by many to be one of the most important, strengthening of Congress in handling the vast fiscal powers of the Federal purse, was virtually ignored and unused.

My own individual summary of the act would reveal this score:

WORKING

First. Realinement of committees.

Second. Reduction of jurisdictional conflicts.

Third. Reduction of special committees.

Fourth. Improvement of committee procedures.

Fifth. Limitation on conference committees.

Sixth. Separation of committee offices.

Seventh. Improvement of Legislative Reference Service.

Eighth. Improvement of Legislative Drafting Service.

Ninth. Reduction of private bills.

Tenth. Improvement of CONGRESSIONAL RECORD.

Eleventh. Increase in Members' pay and addition of retirement provisions.

Twelfth. Registration of lobbyists.

Thirteenth. Congressional adjournment.

Fourteenth. Miscellaneous improvements.

PARTLY WORKING

First. Legislative surveillance of departments.

Second. Improvement in committee staffing.

Third. Restrictions on legislation on appropriation bills.

Fourth. Reporting of appropriation bills.

Fifth. Open hearings of committees. Exception: House Appropriations.

Sixth. Investigations by standing legislative committees.

NOT WORKING

First. Legislative budget.

Second. Expenditure analyses by Comptroller General. No funds appropriated.

Third. Study by Comptroller General of obsolete restrictions on bills.

Fourth. Establishment of standardized show-case accounting for departmental expenditures.

Fifth. House Appropriations Committee hearings closed.

Sixth. Studies for reduction of permanent appropriations.

Seventh. Adequate staffing of Appropriations Committees.

Eighth. Transfer of District of Columbia to home rule. Recommended in report but not included in act.

Ninth. Establishment of too many subcommittees.

Tenth. Drastic restrictions on deficiency appropriations. Recommended in report but not included in act.

NO STALEMATE

Despite dire predictions that the party division between the Executive and the Congress would result in a stalemate, the first session of this Congress passed more than twice the number of bills passed by either the House or Senate during the first session of the Seventy-ninth Congress. A total of 1,790 bills was passed this year as compared with 857 passed by the first session of the Seventy-ninth Congress. At least some of this accelerated action was due to better committee organization.

From the first the realinement of the committee structure of the two Houses was considered the keystone of reorganization. The importance of committee consideration of bills has grown to give the standing committees the importance of "little Congresses." Eighty to 90 percent of the legislative consideration of bills takes place within these little Congresses.

COMMITTEE IMPROVEMENTS

The new committee structure was purely functional and aimed at centralizing in one major committee all of the governmental activities along that general line. Instead of seven minor committees handling a part of the public works program, one Committee on Public Works now handles it. Instead of three committees dealing with veterans' problems, the work was concentrated in one major Veterans' Affairs Committee. The Military Affairs Committee and the Naval Affairs Committee of both Houses were merged into a Committee on Armed Services. Much jurisdictional disagreement, duplicating legislation, and overlapping was eliminated by the new alinement.

Despite the overgrowth of subcommittees within the new streamlined committee structure, the work of all the subcommittees is in one general governmental activity. Instead of a House Member serving on four or five widely divergent committees, and a Senator serving on seven or eight, House Members concentrate on one general line for specialization, and Senators on only two. Membership even on several subcommittees does not give the Member a confusing array of unrelated activities.

WORK LOAD DIVIDED

Contrary to the opinion of critics who have marked the committee consolidation as a failure, in most instances the subcommittees have merely divided up the committee work for convenient study. The House Foreign Affairs Committee, for example, lists 11 subcommittees. Actually they are only divisions for a more complete study of world area problems. The Armed Services Committee of the House lists 11 subcommittees, but all are for functional studies of problems of all the armed services along such lines as aviation, medicine, supply, and so forth.

Critics who fear failure of the new committee structure have expressed anxiety lest these subcommittees again become standing committees. Instead, there is a strong likelihood that in the next few sessions many subcommittees found to be unnecessary will be dropped and the trend will be toward operation by full committee membership.

However, even with the increase in the number of subcommittees, there are 31 fewer committees of all types operating now than in the Seventy-ninth Congress.

TEMPORARY STATUS

The subcommittees will not have immortality because the perquisites of subchairmen do not compare with those of a full committee chairmanship. These subcommittees do not furnish, for the most part, separate committee rooms and offices, have no added secretarial staff, nor is the subcommittee chairmanship held in comparable prestige.

While not completely successful in channeling all investigations and special studies to the standing legislative committees, the act has greatly reduced stripping them of their rightful jurisdiction. Despite a clear break-through of the spirit of the act against circumventing standing committees, two special committees in each House were set up. However, two others based on membership on standing committees were established, but these largely recognized the jurisdiction of the standing committees and provided for joint consideration. Actually, the so-called special or select committees were reduced from 12 in the Seventy-ninth Congress to 4. With the change of party control in both the House and Senate, without reorganization there would in all probability have been well over 20 special committees during this session.

Special committees have no power to legislate, and their studies are limited to publicity, investigation, and a final report. Their work must then be referred to a standing committee for duplicate hearings and legislative action of corrective nature, if any is indicated. Thus the reduction of special committees eliminated widespread duplication of committee work.

PROCEDURAL GAINS

Other committee changes included many procedural improvements, such as requiring a quorum to actually be present in committee—and not by proxy—before reporting bills; preparation of witnesses' statements prior to hearings; limitation on conference committees to prevent the writing of entirely new bills under their special privilege to compromise differences between the two Houses; the separation of the committee staff, work, files, and records from the chairman's activities connected with his particular congressional district. Both are now operated separately.

Vast improvement of informational and legal service to the Congress was provided by expansion of the Legislative Reference Service of the Library of Congress and by improvement of the Legislative Drafting Service. Refusal, however, of the Appropriations Committee to provide the funds authorized for further expansion of the Reference Service will curtail its service.

PRIVATE BILLS REDUCED

While the act did not completely eliminate the consideration of all private bills, it greatly reduced the number in the two most numerous categories. All tort claim bills for private relief, originating after January 1, 1945, were prohibited and the Federal courts authorized to handle them. Congress is still struggling with the backlog of older claims, however. Private bridge bills also were banned, as were private bills for correction of individual military records. Departmental consideration was provided for these.

Registration of lobbyists provided much public information on activities to influence legislation. More than 800 registered the first session. The final value of this provision is yet to be determined, but many believe that data secured may prove useful to the Congress and the public as well in the future.

The definite adjournment date, fixed in the bill as the end of July, enabled Congress to schedule its work load more uniformly with the result that Congress went out of session on the date fixed. Claims by various critics that the adjournment date was responsible for leaving important legislation on the calendars unfinished is not justified. Congress could have expedited these measures if the leadership were determined to consider them. If desired, the adjournment could have been postponed by the introduction of a simple resolution at the close of the session.

MANY MINOR GAINS

Other improvements include such minor items as integration of the school for the pages with the regular District of Columbia school system which resulted in a standardized course of study and elimination of tuition fees paid by the boys for their schooling. Various physical improvements to the Capitol, dining rooms, and office buildings were started in a few instances, but most of them had to be held up because of shortages of materials and high building costs.

PARTIALLY SUCCESSFUL

To provide better understanding and teamwork between the elected Representatives in Congress and the agency heads, the act provided for legislative surveillance. It directed that the standing committees having jurisdiction exercise "continuous watchfulness over the execution of the laws" it passed. Because of the work load and problems connected with the change of party control, little of this section was accomplished. These regular report sessions for questioning and discussing with agency heads by the regular committees were intended to prevent misunderstandings or errors of congressional intent from becoming major rows between the legislative and executive branches.

The establishment of Majority and Minority Policy Committees in each House, aimed to implement better working relations between the two branches, was cut out of the bill in the House. The Senate, however, did provide itself with policy committees and used them during this session.

The vital problem of furnishing Congress with its own staff of experts to relieve it of the necessity of relying on Government agencies, pressure groups, or business associations for much of the statistics, data, and factual information on which to base legislation, was only partly successful.

STAFFING 50 PERCENT GOOD

It is generally agreed that about 50 percent of the committee professional staffs qualify by experience and education. In many cases clerical personnel or others have been upgraded to these positions as committee experts.

Most of the committees, however, have been careful in selection and many have not permanently filled these career posts. Still others have restricted the pay far below the maximum allowed. One reason for partial failure was the lack of immediately available qualified personnel for these posts. Undoubtedly a training period will be required before the staffing is fully effective. Furthermore, Congress, which has had to shift for itself for this type of research and data, has not yet learned to rely on or work with professional staffs.

LEGISLATION ON APPROPRIATION BILLS

Some progress was made in reducing legislation on appropriation bills. Amendments in the nature of expenditure limitations are often added. Many are actually legislative in their intent. Legislation of this type was not eliminated, but the increasing trend in this direction was reduced.

The requirement providing that all appropriation bills be reported to the House three calendar days before their consideration was permitted, was observed on most bills, but violated in the closing days of the session. This restriction was to permit the full membership to be informed on the money items in the bill and to make the full hearings available for study 3 days before the bill was considered.

OPEN HEARING RULE

All committees, with the exception of the House Appropriations Committee and its subcommittees, held open hearings. Despite the clear intent of the act, all hearings remained closed, executive sessions. The Senate Appropriations Committees, however, observed the act, as did all other standing committees of the Congress.

The most conspicuous failure of reorganization was the failure to carry out,

and in most instances even to try, the sections provided to improve the handling of the vast fiscal problems of a $35,000,000,000 Government.

No money can be spent that is not appropriated by Congress, and full responsibility for final determination on governmental expenses is theirs. For years the obsolete methods, inadequate staffs, uncertain and hodgepodge accounting systems have been severely criticized by students of Congress. The fiscal control of the largest enterprise in the world as handled by Congress cannot compare with the careful, modern budgetary methods used by even the smallest chain-store organization.

OTHER FISCAL FAILURES

To correct some of the most apparent deficiencies in the historic system of appropriating, the Reorganization Act recommended many reforms designed to tighten and improve fiscal control. Very few were put into force. Despite this lack of use of the act, it was blamed by many critics within and without Congress for the delay in appropriation bills. Since practically none of the reforms was even tried, this criticism was patently unfounded.

The provision for the legislative budget was an outstanding failure, largely because of lack of advance staff work prior to the convening of Congress in January. To make this valuable provision effective, a skilled, expert staff should confer often with the agency budget officers while their needs are being formulated and follow through with careful observation until the sums are fixed in the President's budget. With this advance staff work, the legislative budget would become more than a pious hope as it was characterized on the floor of the House.

NEED IS VITAL

No evidence was presented that the country did not need to adopt an over-all fiscal policy at the start of each Congress, carefully estimating the total expenditures for the year to be made by the Congress, and determining as nearly as possible the anticipated income. Despite this, both Houses missed their estimates of expenditures in the legislative budget so far that the resolution adopting it was allowed to die in conference and no final action was taken.

If the legislative-budget provision is allowed to go by the boards, then one of the principal gains of reorganization will have been lost. The Congress can make it work properly and effectively if it so desires. The sole objective is to chart a financial course for the year and to follow it as closely as possible rather than continue the present practice of unrelated action by spending and taxing committees, with the total expenditures still in doubt until the last appropriation bill is passed.

NO EXPENDITURE ANALYSIS

Other failures to use machinery provided by the act include the elimination of the expenditure analyses by the Comptroller General. Funds asked for this purpose were not provided by the Congress. This provision was designed to "enable Congress to determine whether public funds have been economically and efficiently administered and expended." While some informal reports on extravagance and waste are now supplied Congress by the Comptroller General, it is only an incidental by-product of the Office's work in checking the legality of expenditures.

Another provision was designed to eliminate useless and obsolete restrictions which might have been placed on appropriation bills in previous years and which still required the services of many workers to fulfill the requirements of the restrictions, although they had outlived any usefulness. Start of this study was made by the Comptroller General, but it will not be completed until at least next year.

"SHOW-CASE" ACCOUNTING IGNORED

Nothing has been done to establish show-case accounting of their expense items by Government agencies. The act provided that appropriation committees develop a standard appropriation classification schedule which will clearly define in concise and uniform accounts the subtotals of appropriations asked for by agencies. Hearings were to contain this brief, standardized break-down of agency expense items. The use of such clearly understandable and standard expense break-down summaries would reduce much of the lengthy statements and testimony in appropriation hearings.

Failure to hold open hearings on appropriations in the House, in disregard of the law, prevents the House Members from knowing anything about the items in the bills until the day they are reported to the House. Many times important action affecting a Member's home district is considered by appropriation committees without his being permitted to hear the testimony for or against the measure.

The act also authorized the appropriations committees to study the laws governing permanent appropriations with a view of determining whether any of that type of recurring items could be eliminated, or should be subjected to annual review. Nothing has been done to put this into force.

REDUCE DEFICIENCIES

Another provision of the report, but not of the bill, was designed to reduce the evils of large deficiency appropriations which year to year are handled by the deficiency subcommittees. It was recommended that these be greatly reduced by the appropriation committee, insisting that agencies live within their regular appropriation, except in case of extreme emergency. The session this year did nothing to reduce this tendency to come back for deficiency allocations.

Failure of the Appropriations Committee of the House to vote itself adequate staff members for the gigantic job of going through the $35,000,000,000 budget with a fine-tooth comb marked another departure from the reorganization plan. Although a special investigating staff was set up and performed well during the session, only five of its members were on a full-time basis, and most of the others were laid off during the recess of Congress.

Few regular, full-time clerks and auditors were added to the regular staff. The total number of committee employees who could be classified as experts is 10. The remaining regular committee and subcommittee employees are clerk-stenographers.

STAFFING NOT ADEQUATE

The report on reorganization and the original act recommended that adequate, year-round staffing by auditors, investigators, and experts for each of the subcommittees be paid for in the same range as other committee experts. At the insistence of the Appropriations Committee, a change was made and they were authorized to employ whatever staffing they considered necessary in the belief that they would add professional personnel to gain a complete understanding of every item in every appropriation request. By working through the recess period with budget officers of the agencies, then following the appropriation request through the budget office of the President, much economy would be effected by knowing where reductions could be made and pointing them out to the committee.

Failure to employ a full-time staff of experts on economy was explained by claiming that they were using as many as they feel are necessary. Results obtained by the special investigation force employed on a part-time basis, with only five full-time employees, has already pointed up the fact that a small amount of money spent for staffing to get additional information on Government expenditures can result in big savings.

TWO BILLION PER CLERK

But on the basis of only 15 employees for the full House Appropriations Committee considering a $35,000,000,000 budget, each employee would be responsible for a work load in excess of $2,000,000,000. Additional experts paid on a full-time basis should be provided for each of the 12 subcommittees of the House Appropriations Committee. To employ few is penny-wise and pound-foolish.

Other failures of the act, as stated above, include the establishment of too many subcommittees under the new committee structure. Where the work load is not great enough to require subcommittee division, the excess subcommittees should be eliminated in the next session by full committee action. Many very important committees of the House, such as Ways and Means and Banking and Currency, which have heavy legislative loads operate only by full committee sessions.

Many of the committees eliminated by committee streamlining have reappeared as subcommittees. As the lack of need for maintaining them as subcommittees becomes apparent to the Congress, many, if not most of them, can be eliminated.

DISTRICT WORK LOAD RETAINED

Transfer of the government of the District of Columbia to home rule, as recommended by the original reorganization report, would eliminate 12 subcommittees and save the Congress much time now spent as the city council for Washington. Action to transfer this extraneous work has again been delayed by the Congress.

The unused sections of the act, and those which have been only partly used, should either be put into full effect or repealed in the second session of the Eightieth Congress. To leave this legislation on the books, and to ignore it, will prevent further effort at strengthening the legislative branch of Government.

REFORM IS CONTINUING PROCESS

Even the strongest proponents of reorganization have never claimed the act to be perfect or all inclusive of needed reforms. Undoubtedly, the strengthening and improvement of Congress is a continuing job and the Reorganization Act should be changed and improved whenever possible. But a retreat from or abandonment of those reforms already voted will further delay the strengthening of the legislative branch.

Several needed changes of minor nature already have shown up, such as the overloading of the work of the Judiciary Committees of both the House and the Senate. Other minor changes are needed to make the Regulation of Lobbying Act more effective, and to further restrict private legislation.

Various other reforms, such as modification of the seniority rule, limitation of the filibuster, abolishing the veto power of the Rules Committee of the House over legislation from other standing committees, and creation of a question and answer period for Cabinet members before Congress, prohibited from consideration in the resolution creating the Special Joint Reorganization Committee, are still being strongly urged by many advocates of a stronger Congress.

Summary of the Work of the Senate Committee on Public Lands, Eightieth Congress, First Session

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement with reference to the work of the Committee on Public Lands.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WORK OF THE SENATE PUBLIC LANDS COMMITTEE

When the present Senate Committee on Public Lands was created by the Congressional Reorganization Act of 1946, it represented a consolidation of five former standing committees of the Senate—the Committees on Indian Affairs, Irrigation and Reclamation, Mines and Mining, Public Lands, and Territories and Insular Affairs. One or two of these committees had been comparatively inactive during several preceding sessions of Congress. The rest, however, had been handling a large volume of legislation.

Soon after the Consolidated Committee on Public Lands was organized early this year, it became apparent that the volume of business on these various subjects under its jurisdiction was at least as great as before, if not greater. The proof of this statement lies in the fact that no less than 230 separate bills received formal consideration during the session. These bills could be naturally subdivided along the lines of the former separate committees and it was therefore decided to divide the full committee up into subcommittees with the names of the five former committees. Careful consideration to all these proposals would not have been possible by any other means.

In February, the committee appointed an investigative subcommittee known as the National Resources Economic Subcommittee to make a full and complete study of the economic features relating to minerals, fuels, forestry, and our other resources. A subcommittee was also appointed in March to investigate the Centralia, Ill., mine disaster.

The following brief tabulation will give an idea of the volume of work handled by the Public Lands Committee and its subcommittees:

Committee	Number of bills considered [1]	Number of sessions	Number of witnesses
Full committee	189	33	35
SUBCOMMITTEES			
Indian Affairs	148	35	91
Irrigation and Reclamation	14	47	145
Mines and Mining	15	14	40
Public Lands	36	12	16
Territories and Insular Affairs	16	14	27
Centralia Mine Disaster	1	11	35
National Resources Economic Subcommittee (special)		28	79
Total	419	194	468

[1] Includes nominations, resolutions, etc.

Portrayal of Senator Tobey's Efforts in Behalf of the People of Our Nation

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. AIKEN. Mr. President, in the July 19 issue of the Pittsburgh Courier there appeared a feature article by P. L. Prattis about our colleague, Senator CHARLES W. TOBEY, of New Hampshire. I read this with great interest, and because it constitutes a portrayal of Senator TOBEY's efforts in behalf of the people of our Nation, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITAL CONFETTI

(By P. L. Prattis)

American Negroes should be interested in the men in public life, white or black, who fight for principle. Very often, as you sit in the gallery of the House and Senate Chambers, you are saddened by what you see and hear. You observe votes and actions against the people's interest, which means your interest. You sense insincerity and hypocrisy. You become cynical.

Before you, day after day, are the leaders of the Republic, playing a game with the Nation's fate with the welfare of the people at stake. You wonder how it can be so, that so many of them can serve special interests, and ignore you.

But since there is nothing you can do about it, or almost nothing, you cease worrying. You know your fate is in their hands.

However, when a strong and honest man comes along, one who always seems to rise and speak and protest when the interest of the whole people is involved, you must sit up and take notice. You are alerted if for no other reason than to see how well right does

when pitted against wrong as a going concern.

Several times during the course of the present session of the Eightieth Congress, it has been the privilege and pleasure of the writer to hear and see one of the great defenders of the interests of the people in the United States Senate. His fights are usually losing ones, but he carries on undaunted and respect for him grows, although fellow members of the Senate, serving special interests, vote him down.

This Senator is CHARLES W. TOBEY, New Hampshire. He is a Republican, a Baptist, and a Mason. Sixty-seven years old, he has a long political career, as a member of the lower and upper houses of the New Hampshire Legislature (where he served as speaker of the house and president of the senate), as Governor of New Hampshire, as a Member of Congress from the Second New Hampshire District and as a Member of the United States Senate since 1939.

Mr. TOBEY is a conscientous public servant. I believe this about him without knowing or caring about his record on FEPC, antilynching or anti-poll-tax bills. He is a strong, honest man regardless of the side he is on.

An important sidelight into the character of the man is discovered in the burdens which he has carried this year. Several times, he has left a sick wife, whom he dearly loves and who needs him, to return to Washington to attend to the business of the people. At great personal sacrifice, he has put the interest of the people above his own.

You will doubtless recall that Senator TOBEY furnished the principal opposition to the appointment of Edwin Pauley, California oilman and former treasurer of the Democratic National Committee, as Under Secretary of the Navy.

Pauley had played marbles with California oil interests which had worked to grab the oil in the tidal basins off the California coasts. They wanted to snatch these oil reserves from the Federal Government—which means the people. TOBEY objected. Pauley didn't get in.

Early in this session of Congress Senator TOBEY spoke long, earnestly, and futilely against a continuation of the Small Businessmen's Committee and the Senate War Investigating Committee (the old Truman committee). In the interest of economy and efficiency, the Seventy-ninth Congress had passed a Reorganization Act, calling for a streamlining of the congressional committee process.

The number of committees in both Houses was sharply reduced. Yet the first thing the Republicans wanted to do (and did do) in this Congress was to break the new law. But TOBEY bravely declaimed upon their error and has had frequent occasion since to remind them of their dereliction.

Senator TOBEY'S most significant fight in the public interest was made against the so-called Bulwinkle bill, S. 110. This was a bill in behalf of the railroads, which would allow them to set rates largely as they please without interference from the courts. Being colored, the chances are that you don't figure legislation involving railroad rates affect your welfare at all.

But it does, because if the railroads are permitted to raise their rates as they please, the price of the commodities you have to buy will go up.

Furthermore, if the railroads are allowed to get together, as a group, and push through the various State legislatures and the National Congress any legislation they desire, there'll be, as there probably is, a great, big railroad monopoly which will drive competitors and small businessmen to the rocks. Senator TOBEY knows all that, and he told it to the Members of the Senate—those few who would sit and listen to him.

In effect, Senator TOBEY charges that the railroads spend millions and millions of dollars to influence legislation through stooge individuals and organizations so that the public won't know they are doing it. As an example, Senator TOBEY called the attention of Senator TAFT in Ohio to the following:

"Senators Wheeler and Truman gave some examples of the skill of the railroads in indoctrinating even America's school children with railroad propaganda. They did this through educational organizations.

"I will mention one which was developed by big railroads through a foundation in Ohio. In 4 years that foundation got the railroad propaganda to a quarter of a million school pupils 865 separate times—an average of once every school day for 4 years to 250,000 school children.

"This railroad-supported foundation had a four-word name, and one of those words was 'transportation.' That word stuck out so conspicuously, said this railroad stooge, that it might make the boys and girls in the grammar schools, and, at any rate, the bright young people in the colleges, smell railroads somewhere in this educational foundation. So the stooge organization reported to the railroads that it had changed the label to 'social engineering fund.' "

Mr. TOBEY brought out clearly and at great length the fact that the railroads cleverly contrive to put to work for them various types of existing organizations, including chambers of commerce of States and cities, and taxpayers leagues. The average citizen, after being indoctrinated by a clever railroad stooge, doesn't know when he's speaking his own thoughts.

Senator AIKEN called the attention of Senator TOBEY to the fact that the railroads spent $180,000,000 for memberships in stooge organizations. Senator TOBEY mentioned the disesteem in which the railroads hold committees of Congress and their hearings, quoting the Railroad Association to the effect that such hearings "are largely matters of 'seenery.' "

"Effective work can only be done through personal interviews with Congressmen by men having influence over them." The Railroad Association is talking about the men you elect to serve you.

It would pay you to read Senator TOBEY'S entire speech. Write to him for it, Senate Office Building. It was delivered June 10.

This speech will give you hope. It will encourage you to believe that in spite of all the hocus-pocus, there are men, strong, aggressive, unafraid men in the Congress who are more interested in serving God and their fellow man than in being subservient to special interests. Senator TOBEY is one of these.

The Federal Judiciary

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD a statement made by me with reference to the Federal judiciary and with special reference to the case of Judge William Clark.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REMARKS OF HON. STYLES BRIDGES, OF NEW HAMPSHIRE, WITH REFERENCE TO THE FEDERAL JUDICIARY AND WITH SPECIAL REFERENCE TO THE CASE OF JUDGE WILLIAM CLARK

Mr. BRIDGES. Mr. President, early in this the Eightieth session of Congress the Federal judicial appointments in the courts of the United States during the past 14 years were reviewed and the lopsided discrepancy between the Republican and Democratic appointees was pointed out in public statements issued by the Republican majority in Congress. The dangers of such a situation were outlined and plans were made to correct what all, regardless of party affiliation, consider a dangerous tendency. The same public statement indicated that appointments to the judiciary in the future would be made on the basis of the appointment of one Republican for each Democrat named.

We are now approaching the close of the Eightieth session of Congress and a review of the record indicates that we have done nothing to correct the situation but have further increased the number of judicial appointments held by appointees from one party, in that of 16 vacancies filled there have been 14 Democrats and 2 Republican appointees. Our interest in this situation is founded on our interest in the well being and strength of our country and not on a partisan political reasoning.

The judiciary of our country is the guardian of our freedom. It has been characterized in its decisions in the past by a disregard for political expediency as well as a disregard by its judges of previous political affiliations. That independence in the past has been maintained by following the fundamental principle of checks and balances which the founders of our system of Government laid down in the Constitution by balancing appointments to the judiciary between the political parties.

This Congress has taken legislative notice of the soundness of such a policy in its previous statement on judicial appointments as well as by insisting on a balancing of partisan affiliations in many measures enacted during this session. (Example, Public Law 162.)

The case of Judge William Clark illustrates very well the results of the practice of making judicial appointments solely as a reward for political services by the party in power. It also indicates the dangers of such a policy.

Judge Clark was first appointed to the Federal bench in 1925 as Federal district judge in New Jersey. He continued in that capacity until 1938, when he was elevated to the Third Circuit Court of Appeals of the United States by President Roosevelt, in which capacity he served until March 24, 1942, when, at the age of 51, and at President Roosevelt's suggestion, he took leave of absence from the bench to enter military service as a soldier. Judge Clark offered to resign from the bench to enter the military service, but it was President Roosevelt's personal suggestion that he take leave of absence instead. In entering the military service Judge Clark left behind him judicial services rendered with distinction.

Subsequent to March 24, 1942, certain questions of law were raised relative to the leave of absence, and doubt was expressed by the Attorney General of the United States of the legality of such a leave of absence; that, however, is a matter of law for the courts to determine.

Judge Clark served in the Army until August 1945. He served in Australia, England, Europe, and Africa. He was wounded during the campaigns in Africa.

In August of 1945 Judge Clark, on receiving his honorable discharge from the Army,

applied for reassignment to the Federal bench. He considered his leave of absence at an end and, in addition to that, he was entitled to reinstatement under the Selective Service Act. He was not reinstated, and all efforts to obtain reinstatement until the present time have been without success. The death of President Roosevelt in April of 1945 further complicated his picture.

In voting for the Selective Service Act I voted also, and with deep conviction, for that provision guaranteeing reemployment rights to those who left their employment to serve in the armed forces of our country. That provision was not intended to be a mere idle gesture on the part of Congress but a helpful guaranty to the men who entered the service of their country that their work would be available to them when their military service was completed. That provision applied as well to Government employees as to servicemen who were employed in private business and industry. In my opinion, that provision should also apply to a judge of the United States courts who, upon recommendation of the President of the United States, took a leave of absence to serve in the Army rather than resign his position on the bench to enter the Army. The case of Judge Clark involves more than a mere legal question. It involves the spirit of the Selective Service Act and it involves a moral duty on the part of our Government to one who has served his country well both on the bench and in the military service.

During the period August 1945 until the present time numerous judicial appointments have been made. In this session of Congress alone 16 vacancies in the various Federal courts have been filled, yet Judge Clark has not been offered an assignment, nor has his name been mentioned for one. Various other Federal judges who accepted assignments outside their courts during the war have been returned to their old offices or to new and better ones. The only distinction between these men and Judge Clark seems to be his previous party affiliations, for his services to his Government, both as a soldier and a judge, were rendered with distinction.

Final approval of Federal judicial appointments rests with the Senate alone. We have noted what we termed a dangerous tendency in the form of lack of balance in our judicial appointments. We have stated publicly our disapproval of the present unbalance of Federal judicial appointments, yet our record in this session is 14 to 2, even in the face of an example such as that of the case of Judge Clark.

Coordination of Agricultural Agencies

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. REED. Mr. President, I ask permission to insert in the Appendix of the RECORD a statement concerning S. 1621, providing for the coordination of certain agricultural agencies.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. REED. Mr. President, recently the junior Senator from Tennessee [Mr. STEWART] joined with me in introducing in the Senate S. 1621, the so-called Agricultural Coordination Act of 1947, which is identical to H. R. 4150, introduced in the House by Congressman COOLEY, of North Carolina, and H. R. 4151, introduced by Congressman HILL, of Colorado. I am particularly pleased that this important legislation has bipartisan sponsorship, by both Republicans and Democrats, in the Senate and House. The conservation of our soils is not a partisan question but is a matter of great concern, not only to farmers in every section of the Nation, but to the welfare of the Nation as a whole.

My primary purpose in introducing this bill is to secure greater results in agricultural conservation with the money expended for such work. The Senate Appropriations Subcommittee on Agricultural Appropriations, of which I am a member, investigated rather extensively the administration of various agricultural conservation programs and activities that are carried on by various agencies of the Department of Agriculture in the respective States. We found a great deal of duplication of activities and services, which resulted in excessive expenditures.

Earlier, I made my own personal investigation of this situation. This study convinced me that we are not getting sufficient results in the field of conservation in relation to the total amount of money being expended from all sources in this field, and that constructive, effective action is needed to correct this situation.

The House Appropriations Subcommittee on Agricultural Appropriations also went into this matter very extensively and reached similar conclusions. Both committees, in their reports, called attention to this duplication and overlapping, and strongly recommended that Congress enact appropriate legislation at an early date to correct this situation and bring about proper coordination of agricultural agencies.

I quote the following excerpts from the report of the House Appropriations Committee on this matter:

"It was at this point that the committee engaged in a long and earnest discussion concerning the duplication of many field activities of the Department and hoped to contrive a policy or a vehicle whereby these functions might be consolidated. The general limitations on an appropriation bill, however, stood in the way and the committee respectfully suggests to the Legislative Committee on Agriculture for the House of Representatives that this matter deserves immediate attention.

"At the present time the Extension Service has on its rolls 10,419 persons consisting of State supervisors, specialists, county agents, home demonstration agents, boys' club agents, clerks and assistants, virtually all of whom operate at the field level and maintain close contact with farmers in disseminating the research fruits and the recommended practices of the Department.

"At the same time the Soil Conservation Service in its field operation maintains 7 regional offices with 860 persons, 50 State offices with 419 persons, 550 district offices with 1,000 persons, and 2,268 work-unit offices with 9,350 persons.

"To this large field operation there must be added the Farmers Home Administration with a total of 8,100 persons operating at area, district, and county levels. It appears reasonably clear that there is both administrative and functional duplication in the field, between these agencies and immediate steps should be taken to develop programs at county levels under unified management whereby substantial additional economies might be effected. The Extension Service was, therefore, left intact without a reduction.

"The report already points out in connection with the item for Extension Service that the large field forces for extension service, the Soil Conservation Service and the Farmers Home Administration, all of whom are engaged in related activities, might well be consolidated in the interest of economy. This is a matter which should have immediate attention by the legislative Committee on Agriculture because the suggested consolidation would be fruitful of greater efficiency and economy." I also wish to quote the following statement from the report of the Senate Appropriations Subcommittee on the agricultural appropriation bill:

"The committee sustains the House action in approving $38,000,000 for the Soil Conservation Service, which is a reduction of $5,437,000 from the budget estimate. This action is taken because the committee feels that the service has expanded rapidly and that much remains to be gained in effective field operation. The apparent duplication of services to farmers should be correlated into a more unified plan of action in the field on a basis that will give due consideration to all aspects of a progressive agriculture developed in the interest of all of society."

The proposed Agricultural Coordination Act of 1947 seeks to correct the duplication and overlapping of agencies and programs in the field of agricultural conservation, to reduce the costs of these programs, and to decentralize their administration so that each State and county can adapt these programs to the needs and conditions in their respective States and counties. In other words, the bill seeks to meet the maximum results in agricultural conservation at the minimum expense.

I do not claim that it is a perfect bill, by any means, and I am sure none of my colleagues would make such a claim. Much study and effort have gone into the preparation of this bill. The advice and suggestions of some of the best qualified people in this field have been obtained. We recognized, of course, that it would not be possible to secure legislative action on this measure in the short period remaining of the last session of Congress, but we wished to get the matter before the Congress and the country in order that it might have the fullest possible study and consideration, with a view to getting the legislative action in the next session of Congress.

I believe this bill represents a constructive and workable approach to the solution of this problem and that, if enacted, and properly administered, would achieve greater results in conservation among a greater number of farmers at a very substantial saving in the costs of operation and administration.

I want to make very clear that there is no intent in this legislation to cripple or weaken in any way the agricultural conservation programs. On the contrary, the basic purpose of this bill is to accomplish greater results in conservation. The fact is, we are not moving fast enough in getting this job done in view of the enormity of the task confronting us.

In this connection, I wish to point out that the amalgamation of the Soil Conservation Service with the Agricultural Extension Service in Washington and in the States is not intended to impair in any manner the services or effectiveness of the work heretofore carried on by these agencies. On the contrary, I believe the amalgamation of these agencies, as provided in the bill, will achieve much greater results among a much larger number of farmers at less cost and will avoid duplication, overlapping, and conflicts in the conservation activities of these agencies.

The identity of the Soil Conservation Service at the Federal level and within each State will be maintained as a division of the Federal and State extension services, but the amalgamation of these agencies will make

possible the extension of more effective services both to local soil conservation districts and to individual farmers. Nothing in this bill will affect the set-up or functioning of local soil conservation districts which are organized under State soil districts acts.

On the contrary, the bill would give these agencies more autonomy in planning and carrying out their programs. It would also give more voice in determining the type of educational and technical services and the planning of conservation programs to be carried out in the respective States.

I am of the firm opinion that it is vitally important to enact legislation in the very near future along these lines to bring about the proper coordination of agricultural agencies. We cannot continue to appropriate such enormous sums of money for salaries, travel, and expenses of duplicating personnel and activities, both in Washington and in the field. Furthermore, it has been my observation that farmers do not want a multiplicity of Federal agencies running out to individual farmers advising them of how to plan their farming operations—and at times giving conflicting recommendations and advice. If we are to preserve the essential constructive features of these programs, we must straighten out this situation and bring about effective coordination.

Reorganization of Railroads

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. REED. Mr. President, on behalf of the senior Senator from Pennsylvania [Mr. MYERS] and myself, I ask permission to insert in the Appendix of the RECORD a statement prepared by Senator MYERS, Congressman REED of Illinois, and Congressman HOBBS of Alabama, and myself, concerning legislation regarding the reorganization of railroads.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON PENDING RAILROAD REORGANIZATION LEGISLATION

In view of the widespread interest, both in Congress and throughout the country, in pending legislation to prevent further unnecessary and unwarranted forfeiture or impairment of over $2,000,000,000 par value of investments in railroads now in reorganization, a statement of the present status of this legislation appears timely.

That such legislation was not enacted into law during the session of Congress just ended is regrettable. That it failed of enactment during the recent session was due partly to the time required for its careful preparation before it was introduced. Similar legislation (S. 1253) was passed in the second session of the Seventy-ninth Congress by a vote of 2½ to 1 in the House and without a dissenting vote in the Senate. While that measure was pocket-vetoed by the President, his memorandum of disapproval clearly disclosed that he favored the objectives sought and approved the broad principles upon which that measure was based. He expressed his belief that the Eightieth Congress could pass an improved bill which would meet his stated objections and more effectively accomplish its purposes.

In a joint statement issued April 28 of this year, we said:

"On February 3, 1947, Senator REED, acting for Senator MYERS, of Pennsylvania, and Representatives HOBBS and REED had a most agreeable conference with President Truman. It was agreed that the President would instruct his assistants to confer with the Members of Congress and lend any aid they desired in preparing new legislation which would meet the objections that the President had directed at the previous bill. The bill introduced today by Representative REED of Illinois (H. R. 3237) is the result of several months' intensive study by the proponents in both Houses of Congress and their assistants and of the legislative assistants of the President. Senators REED and MYERS will offer amendments to Senate bill 249 which will revise that bill in a manner to make it substantially identical with the bill introduced by Representative REED of Illinois."

The objections of the President to S. 1253 were appropriately met in the new bill, H. R. 3237, introduced April 28.

That measure was promptly set down for hearing before the Subcommittee on Bankruptcy and Reorganization of the Committee on the Judiciary, and extensive hearings were held on May 12, 13, 14, 15, 16, and 19. (The printed record of such hearings comprises 307 pages.)

On May 8 Senators REED and MYERS issued a subcommittee print of their proposed amendments to S. 249 which would make that bill substantially the same as H. R. 3237. Hearings on S 249 and those amendments were commenced on the very day hearings on H. R. 3237 were concluded (May 19), and continued on May 21, 23, 27, 28, and 29, and June 4, 5, and 6. (The printed record of these hearings comprises 596 pages.)

On June 25 the subcommittee of the House Committee on the Judiciary, favorably reported a clean bill (H. R. 3930).

On July 3 the Senate Committee on Interstate and Foreign Commerce favorably reported S. 249 with amendments that made that bill substantially identical with H. R. 3930.

On July 15, after considering H. R. 3980 at several executive sessions, the Committee on the Judiciary reported the bill favorably. An application for a rule was then made to the Rules Committee. Hearings thereon were held by that committee on July 18 and 21. On the latter date (but 5 days prior to the scheduled adjournment of the session) the Rules Committee voted not to grant a rule at that session. A reconsideration of this vote on July 25 was blocked on a point of order, on the ground that the committee had theretofore agreed not to vote out a rule at that session.

As with many other bills before Congress in the recent session, the pressure of pending appropriation bills and other urgent legislation made it impossible to obtain a vote on these railroad measures during the closing days of the session. That this legislation will be promptly considered when Congress reconvenes is regarded as certain.

Particularly in view of the fact that governmental agencies themselves are largely responsible for the drastic character of pending reorganizations, which led to extensive litigation and delay, we are confident that the Congress will favorably consider these remedial measures. They are intended to remedy policies initially put into effect by one of Congress' own agencies, the Interstate Commerce Commission. In general, the courts have declined to give full judicial review to the plans and policies of the Commission, stating that only Congress can so direct or otherwise grant relief. We believe Congress will act again upon this suggestion, as it did last year in the passage of S. 1253.

While the desirability of concluding pending reorganizations and returning the properties to private management is fully recognized, it is of vastly greater public importance that justice be done and that investments in our railroads be not needlessly destroyed or seriously impaired merely for haste.

In fact, haste at this juncture will cause a very great deal indeed to be uselessly sacrificed. The properties of the various railroads are being operated with reasonable efficiency, although not with all the esprit de corps of private management. But the public interest in any event is being fully protected as to service.

Where the public interest is not being protected is in the attempted consummation of reorganization plans which wipe out, unnecessarily and unjustly, wide segments of capital, and disrupt others. The result is that a great deal of potential capital which might be devoted to public use in our railroad systems is being scared away. This is one of the great hidden sacrifices inherent in these plans, and one of the compelling reasons in the public interest why these plans should be arrested. Delay of this kind is constructive, desirable and will promote the public welfare.

It is a matter of common knowledge, demonstrated by the evidence produced at the hearings before committees of both Houses, that the principal railroads affected by these bills are doing as well in many respects, and better in some, than a great many other railroads. The obvious injustice and inequity of rushing the innocent security holders of these railroads to the guillotine, so to speak, before Congress has an opportunity (in a few months) of passing on measures to review and correct the policies under which those holders were condemned by governmental fiat, will surely be recognized.

The enactment of this legislation will not cast aside the work done thus far in those reorganizations, but rather will enable a fair and equitable capital structure to be built upon the foundation of the records already made in those proceedings, supplemented by unassailable proof of the subsequent vast improvement in the financial affairs and demonstrated earning power of those carriers.

It is most earnestly hoped by the sponsors of this legislation in both Houses of Congress that the courts of the United States and the Interstate Commerce Commission will take no further steps toward the effectuation or consummation of pending plans of reorganization that may place such plans beyond the reach of congressional remedy, but will instead cooperate with the Congress and the President in retaining custody of such properties until this pending legislation can be considered and voted on shortly after Congress reconvenes.

CLYDE M. REED.
FRANCIS J. MYERS.
SAM HOBBS.
CHAUNCEY W. REED.

WASHINGTON, D. C., *August 1, 1947.*

Statement by Hon. J. W. Fulbright, of Arkansas

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the edition of the RECORD after the

adjournment a statement which I am preparing.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

COMMENTS ON CONGRESS—A BRIEF REVIEW OF THE FIRST SESSION OF THE EIGHTIETH CONGRESS

It is still too soon after the event to be very positive about the merits or demerits of the work of the Eightieth Congress in its first session. With a Republican-controlled Legislature and a Democratic Executive, and a national election next year, it was inevitable that there should have been a considerable amount of quarreling and political bickering. This division of power in the Government is not particularly dangerous in our domestic affairs, but it may prove to be a great handicap in our relations with other nations. In dealing with a dictatorship like Russia, our governmental machinery tends to arrive at decisions and to get into action too slowly to be effective.

Among the measures of national importance dealt with by the Congress, the most noteworthy were the tax, labor, and portal-to-portal-pay bills, the armed services unification, legislation to extend veterans' benefits, the Greek-Turkish aid bill, and the various appropriation bills which caused so much partisan controversy.

SIGNIFICANT LEGISLATION OVERLOOKED

In addition to the bills that were acted upon, it is significant that the Republican leaders refused to submit for action the Federal aid-to-education bill, the housing bill, or bills dealing with health. These bills which were favored by most of the Democratic minority were among the few major bills presented which were designed to extend opportunities to a greater number of American people.

The few remaining wartime controls over our economy, such as sugar rationing and installment buying, were abolished and rent control was greatly modified.

From time to time as these measures were being considered, I explained my views about them at greater length than I can in this statement. I opposed the tax bill primarily because I think we should pay something on the national debt while business is good. Eighty million Americans own Government bonds and I think they are entitled to the assurance that a payment on the debt will give them. All our banks and insurance companies own these bonds and their solvency depends upon a continued confidence in the credit of the Government.

Furthermore, if we are to have a tax bill, it should be a better one than that proposed by the Republican leadership. The next tax bill must eliminate the discrimination that now exists against non-community-property States, such as Arkansas, and it should give larger exemptions so that low and medium incomes will benefit more than they would have under the bill that was defeated. In February I introduced a bill to remove the discrimination against Arkansas taxpayers, and I intend to pursue this fight until the objective is achieved.

BENEFITS FOR ARKANSAS

The most encouraging news for Arkansas from these various bills was the appropriations for agriculture and flood control. After a prolonged battle the Senate increased the funds for payments to farmers under the conservation program from one hundred and fifty million to approximately two hundred and sixty-six million. In addition, the Senate prevailed upon the House to restore to reasonable levels the appropriations for Rural Electrification, the Forest Service, and the school-lunch program.

For flood control the Senate was able to increase the appropriations for projects in Arkansas from the $5,768,000 allowed by the House to $16,035,000 finally agreed upon in conference. This will enable all the important approved projects to be continued. Except for the two and one-half million for the Red River project, which is only partially in Arkansas, all the money will be spent to control the floods on Arkansas rivers. In addition, Arkansas will share in the $50,000,000 appropriation for flood-control work on the lower Mississippi.

The other bills, such as the armed forces unification bill and the labor bill, affect all States alike, and, on the whole, were supported by both parties. The veterans' bills passed unanimously. The most important bill that was left out is the Federal-aid-to-eduation bill. This is especially important to Arkansas, as anyone familiar with the lack of qualified teachers can easily see.

REDUCTIONS IN EXPENDITURES

The Congress was able to reduce the appropriations under the President's budget by something less than $2,000,000,000. The exact amount will be difficult to determine until the deficiency appropriation bills are finally acted upon. In view of the uncertain conditions in the world, it is scarcely wise to decrease substantially our armed forces. The appropriations for the armed services, veterans, and the public debt approximate twenty-two billion, so that the margin from which reductions may be made is rather small. Nevertheless, reductions were made in appropriations for the Departments of State, Interior, Commerce, and Agriculture, and the Department of Labor was reduced to a skeleton. By constant pressure, I am sure further economies can be made, but until the world becomes more peaceful and the Communists less belligerent we are going to continue to have very heavy expenditures for national defense.

The Greek-Turkish aid bill received strong bipartisan support. This program, it is believed, is only a part of a broader plan now identified with Secretary Marshall's suggestion. Our relations with foreign nations are still the source of the greatest danger to our country. Our country is producing at a very high rate, employment is the highest in history, and profits are the greatest in history. We have, in fact, too much inflation, and there will be a readjustment. We can, however, make this readjustment without too much harm, provided we can prevent the further deterioration of foreign conditions and can help start the world back to work and toward peace. We have much to lose by war, and, therefore, it is to our best interest to spend some time, thought, and money to prevent another war. The American enterprise system, our standard of living, and perhaps even our entire Christian civilization can survive and develop only if we are able to prevent another major war. This is still the most difficult problem facing us.

An Analysis of the Phony Cuts in the President's Budget by the Republican Congress

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an analysis by me of the phony cuts in the President's budget by the Republican Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, last year we passed the Congressional Reorganization Act, designed to streamline the operations of Congress. One of the most interesting of all of the provisions of the Reorganization Act was section 138, which, for the first time in history, created a legislative budget. It directs the Appropriations Committees of both Houses, the Committee on Ways and Means of the House of Representatives, and the Committee on Finance in the Senate, to meet at the beginning of each session and report a legislative budget for the ensuing fiscal year, including the estimated over-all Federal receipts and expenditures for that year. This report is to be made by February 15.

We are now at the end of the first session of the Eightieth Congress. No report has been forthcoming from the committee on the legislative budget, although that report is now 5½ months overdue. I think we can begin to give up hope that we shall ever see a report from that committee, in spite of the very clear mandate of section 138 of the Reorganization Act.

Many people who have been watching the functioning of Congress, and who are interested in getting the operation of our Federal Government on the most businesslike basis possible, cheered the inclusion of section 138 in the Reorganization Act. Here at last, they thought, was a sensible proposal. Congress, they hoped, for the first time in history, is going to sit down at the beginning of a session and work out how much money is to be taken in, how much money is going to be spent and how much money is to be applied to the national debt. In this way, it was felt, instead of taxing and spending on a helter-skelter, hit-or-miss basis, the Federal Government would do what sensible families and businesses in America, do, namely, find out how much they are going to take in and then try to live within that budget.

The first year that Congress was supposed to do that, we approach the very end of the session without having taken any action at all.

In a burst of enthusiasm, generated by their victory at the polls last November, the Republicans in the House of Representatives looked at the President's budget and said, "We can cut that by $6,000,000,000."

The Senate, a little more modest perhaps, said, "We can cut that budget by $4,500,000,000."

On this disagreement between the two Houses of Congress, conferees were appointed to resolve the difference. My understanding is that the conferees met once several months ago and that was the end of it. They have not met since. They do not intend to meet. They do not propose to take seriously the provisions of section 138 of the act. Of course, no one can compel Congress to do anything which it does not choose to do. No citizens' committee can go into court and obtain a writ of mandamus, commanding Congress to take action. We are under no compulsion except the compulsion which we ourselves feel out of the abundance of our respect for the Constitution and the statutes which have been enacted. But, in this Congress, we apparently can take the positive command of a statute very lightly. If the requirement of a statute does not please us, apparently we can shrug it aside and behave as though it does not exist.

As an individual Member of the Senate, I have no control at all over the actions of the conference committee, which is supposed to reconcile the differences between the House of Representatives and the Senate on this matter. However, I am at a loss to understand what I shall say to my constituents who ask, "Why did not Congress conform to the provisions of the Reorganization Act and give

us a legislative budget?" I am afraid I shall have to answer that since the Republicans took control of the Congress the President's budget became a political football, and in the course of kicking that football around the Republicans have stubbed their toes.

Of course, this is not the only money matter which has become involved in the political game. We have seen two tax-reduction bills pass the Senate which had a certain political color about them.

Now, of course, if you are a householder or a businessman and you ignore making a budget out of carelessness, or because you are so rich you do not need to worry about a budget, you spend what you think you have to and hope everything will come out all right. That is about what has happened with respect to the legislative-budget provision. Without having a legislative budget, we proceeded to appropriate what Congress felt was necessary to appropriate to run the Federal Government. But in the course of these appropriations we played a little game designed to befuddle and confuse the American people. It became clear to even the most economy-minded of the majority in Congress that the President's budget had been submitted by an economy-minded President; that the President and the Bureau of the Budget had done a very workmanlike job of squeezing the water out of the various estimates submitted by the departments of the Government. In fact, the President is as economy minded as anyone, while at the same time keeping in mind the absolute necessity for maintaining the essential services of the Federal Government. When this realization dawned on the majority of the Congress, and particularly the Appropriations Committee of the House, they began frantically working to reduce that budget to create the impression that they were saving money where there was no money to be saved. I have gone into the matter in some detail, because I think the Senate and the country ought to know just exactly what has been done. I regard it as the height of folly to try to fool the people about the size of our expenditures. This is a very important topic and should not be made the victim of political considerations.

My calculations of the phony reductions in the budget estimates for the appropriations for the fiscal year 1948 comes to the staggering total of $1,279,789,154, on the basis of phony items, as follows:

1. Bureau of Internal Revenue	$803,200,000
2. Public Health Service	50,100,000
3. Atomic Energy Commission	75,000,000
4. Veterans' Administration: Pensions and compensations	50,000,000
5. Veterans' Administration: Hospital and domiciliary facilities	30,300,000
6. Philippine War Damage Commission	20,000,000
7. Public Roads Administration: Elimination of grade crossings and Federal-aid postwar highways	36,288,854
8. Government Printing Office: Working capital and congressional printing and binding	10,380,000
9. Supplemental Appropriation Act: Four items	136,765,300
10. Second Supplemental Appropriation Act	67,755,000
Total	1,279,789,154

The largest item on this list and the one that is easiest to understand is the reduction in the estimate for tax refunds. Let us see what happened in connection with that matter. In recent years, we have been in the habit of making an indefinite appropriation for refunds of internal-revenue collections, customs refunds, and draw-backs, and other moneys which the Treasury has to repay because they collected more money that was due the Government. The Treasury has been authorized in the past to spend money in whatever amount was needed to repay to taxpayers and other claimants against the Treasury for amounts which exceeded the amounts of their obligations to pay. When the President submitted his budget this year, he again requested an indefinite appropriation for these items, but he estimated the amount that would be needed to make payments under the existing laws.

This year, however, we departed from the practice of making an indefinite appropriation and made the appropriation specific. Treasury estimated that it would need $2,031,000,000 to make refunds of internal-revenue collections. The House Appropriations Committee in its wisdom, however, decided that the Treasury could get along with $800,000,000 less than that amount. The House Committee on Appropriations said that the $1,231,000,000 appropriated "is the committee's best estimate as to what these refunds may amount to." Apparently the committee has ways of estimating what tax refunds will be made, which are superior to the methods employed by the Treasury Department where experts have spent their careers making these estimates. There is no allegation in the report that the Treasury has a bad record in making these estimates, nor any suggestion as to the kind of crystal ball which was used by the House Appropriations Committee in substituting the judgment of its members for the judgment of the Treasury. The report goes on to say that "manifestly improved public education and information concerning the procedure and method of filing income-tax returns, coupled with the expectation of several million less taxpayers filing as a result of prospective changes in the tax laws, it is felt that the reduced figure would more nearly approximate the amount required for these rebates than the Bureau's estimate therefor."

Of course, the prospective changes in the tax laws have not materialized at this session.

In a creditably candid statement, the chairman of the subcommittee handling the Treasury appropriation bill, Representative CANFIELD, said:

"We do not intend to leave the impression that this $800,000,000 reduction will save a single dollar for the taxpayers. The Government will still have to pay out whatever taxes are paid unnecessarily. We do feel, however, that it is sound business and in the interest of responsible Government financing that the estimate should be as nearly correct as possible. We believe our figure is the more nearly correct and should be used in budgetary computation."

I leave it to the Members of the Senate who have had experience with the work of appropriations committees, high as my regard is for them and their experts, to say whether the Treasury, which is occupied 365 days in the year with the collection and refund of taxes, is in a better position to say what we shall have to pay back in refunds than is the House Appropriations Committee. But, apart from that judgment, I think that Representative CANFIELD, the chairman of the subcommittee, said everything that there is to say about this reduction in the President's budget when he said:

"We do not intend to leave the impression that this $800,000,000 reduction will save a single dollar for the taxpayers. The Government will still have to pay out whatever taxes are paid unnecessarily."

On this basis, the Republican majority is claiming a reduction of close to $1,000,000,000 out of the President's budget.

Let us turn to some of the other items they have saved.

The Hospital and Construction Act, approved August 13, 1946, provides for allotment by the Public Health Service to the States for the fiscal years 1947-51 for hospital construction. That act authorized an appropriation of $75,000,000 for each fiscal year, and provides that where the amount authorized has not been appropriated then the authorization of the previous year shall be carried over into the next year. No appropriation was made for construction for the fiscal year 1947, so that the maximum authorized for the fiscal year 1948 was $150,000,000, consisting of $75,000,000 for 1947 and $75,000,000 for 1948. The budget of the President recommended that $50,965,000 be appropriated. The Labor-Federal Security appropriation act makes no appropriation at all for construction. It does provide $865,000 for administrative expenses. But again the chairman of the subcommittee in the House has obligingly explained why there is no real reduction here in the President's budget. He said:

"We have never intended, nor have we tried to show that there was any cut."

The Hospital and Construction Act provides that the Federal Government will match with $1 every $2 put up by the State governments for hospital construction. Representative KEEFE explained that under the appropriation made, the Congress is saying to the States, "If you go out and raise the money to meet the dollars we have raised, or will raise, you can go ahead with your program and the Federal Government will match it as a contractual obligation. If the States raise $150,000,000, we will put up $175,000,000." (This amount is, of course, in excess of the amount recommended by the President.) Representative KEEFE went on to say:

"My Democratic friends know that this is the truth, as well as anything. We do not claim there was any cut in this budget, as a result of that action, but we do claim we are carrying out the will of Congress with respect thereto. Do not let anybody kid you on this floor that we have made a lot of phony cuts."

When we turn to the appropriation for the Atomic Energy Commission, we find an alleged saving of $75,000,000, which is a nice substantial sum—if it had actually been saved. The House voted to appropriate $175,000,000 instead of $250,000,000 contained in the budget estimate. In its report, the House Appropriations Committee complained that it was unable to get detailed justifications in the estimates for the Atomic Energy Commission appropriation, so it gave the Commission $175,000,000 and invited it to come back in the early part of the next session for whatever else the Commission needed. Here again we find out of the mouths of the Appropriations Committee what the truth is. The Appropriations Committee report says:

"The purpose of the committee in withholding funds for a portion of the last half of the fiscal year is to defer final action on all requirements for the fiscal year until information in some detail is available on which it can act * * * the amount in the bill will provide adequate funds for all purposes for a period beyond the first half of the next fiscal year, and until the committee and the Congress have had an opportunity to secure tangible facts on which to pass a final recommendation as to total needs for the full fiscal year."

In other words, the Appropriations Committee said to the Atomic Energy Commission, "We are making a half-year appropriation for you. Come back early next year and we will give you the rest of it." How this can be regarded as a saving in the President's budget, I am at a loss to understand. But this does not deter the Republican majority from claiming that in connection with this appropriation they have saved the taxpayers $75,000,000.

Another item in the same bill, which is the independent offices appropriation bill, involves an alleged saving of $50,000,000 in connection with pensions and compensations paid by the Veterans' Administration. The President estimates that the Veterans' Administration would need $2,221,915,000. The House voted to appropriate $2,171,915,000, which is a reduction of $50,000,000. This move was very much like the phony saving of $800,000,000 in tax refunds. The Appropriations Committee questioned General Bradley as to the amount that would be needed to pay pensions and compensations of veterans. The committee got him to agree that the figure in the budget for this amount was an estimate. Since it was an estimate, the committee undertook to do its own estimating and figured that $50,000,000 would be as good a figure as any other. Representative WIGGLESWORTH, who was chairman of the subcommittee, explained to the Members of the House:

"It is a matter of mathematics and whenever the pensions are actually payable the money will be forthcoming."

Everyone knows that this is so. No Member of the Congress is going to renege on the payments of pensions to veterans. Here, again, the Appropriations Committee was prepared to play the guessing game for the sake of pretending to save as much money as possible. They guessed $50,000,000 off of this item.

Then there is another item in the same appropriation which is supposed to save $30,300,000, which is the amount recommended for the construction of new veterans' hospitals. Instead of appropriating the money for these new hospitals, the Veterans' Administration contract authorization was increased from $257,950,000 to $338,250,000. The committee explained in its report that in eliminating the $30,300,000 "the committee is able to report definitely that the program has not been retarded or delayed in any respect. The committee has been assured by representatives of the Veterans' Administration that sufficient cash is now on hand and available to meet all business needs until at least the latter part of the fiscal year 1948, at which time additional funds can be provided if there is a demand and need for them."

In other words, the construction was authorized and an invitation was issued to the Veterans' Administration to come back for whatever money might be needed during fiscal 1948 to carry on the hospital program. By this kind of maneuver the committee is trying to claim a saving of over $30,000,000.

The next item is the $20,000,000 saved on the appropriations for the Philippine War Damage Commission. In the Seventy-ninth Congress, we established the Philippine War Damage Commission to pay for the war damage in the Philippines. The President estimated for that purpose we should need $90,000,000 in the fiscal year 1948. The House cut this to $70,000,000. They explained the reason for this in the report. They say that the program has been slow getting under way and in all probability a number of considerably smaller claims will be actually handled and ready for payment during fiscal 1948 than was estimated when the budget was prepared. They then go on to say, candidly:

"It is not the intention of the committee to withhold funds for the settlement of these claims, but it is believed that the amount provided will be sufficient to meet all payments due during the next fiscal year."

Here again they are saying, "Well, we will give you most of what you think you will need. If it turns out you need more, come back and we will appropriate the money." This is in line with the other actions of the committee, which I have just discussed.

There remain several more interesting items of saving. The first is the appropriation for the Public Roads Administration. In the President's budget, there was an estimate of $5,000,000 for the elimination of grade crossings and $279,000,000 for Federal aid for postwar highways. The House made no appropriation for the elimination of grade crossings and cut the Federal aid to postwar highways appropriation to $247,711,146, making a total reduction in the estimate of $36,288,854. The Appropriations Committee recommended the reduction on the theory that the State highway programs were proceeding more slowly than had been anticipated, and that the Federal Government would not have to put up as much money as was contemplated to match the money put up by the States. But here again, the committee is up against the provisions of the law. When and if the States put up money for postwar highways, the Federal Government has to come forward and meet the amounts put up by the States in the proportion required by law. The Appropriations Committee has a different estimate as to what will be needed under that program. It is, however, very unsound to claim this amount as a saving.

The next item is also a very interesting one. It is contained in the legislative appropriation bill and involves the Government Printing Office, it being the estimate for working capital and congressional printing and binding. The President's estimate submitted for that item was $20,000,000. The act slices this amount in half, to $10,000,000. The report of the House Appropriations Committee said that the Public Printer had volunteered a reduction of $5,000,000 and the committee had added another $5,000,000 reduction on the estimate of the reduced volume of printing. But, again, the majority in Congress are pursuing the will-o'-the wisp. Whatever the Government Printing Office requires as working capital and for congressional printing and binding will have to be spent, whether it be $20,000,000 or $10,000,000. You cannot save money by hoping to save money, and that is the theory of most of the cuts which have been claimed so far.

The phony reductions in the Supplemental Appropriation Act come to $136,765,300 made up of reductions in appropriations for the Federal Mediation and Conciliation Service, the National Labor Relations Board, the Treasury Department and the War Department-Civil Functions.

With respect to the Federal Mediation and Conciliation Service, the President requested $2,650,000. The appropriation was for only $1,410,000, an ostensible reduction of $1,240,000. But the House report and the act itself make it perfectly clear that the entire $1,240,000 may be obligated prior to February 15, 1948. In other words, the entire amount appropriated is to last only until February 15, 1948. Obviously, a further appropriation will be required to carry through the work of the service from February 15, 1948, to June 30, 1948. This is an open invitation to the government agency involved to come back for the remainder of the amount in the budget.

Exactly the same situation prevails with respect to the appropriation for the National Labor Relations Board. The President requested $4,025,300. This appropriation was reduced to $1,000,000, with an ostensible saving of $3,025,300. The House report and the act itself permit the obligation of the entire amount prior to February 1, 1948. This simply means again an appropriation is being made on a part-year basis. The 5 months from February to June 1948, inclusive, will have to be taken care of somehow and the agency is plainly invited to come back for a deficiency appropriation.

The Treasury Department appropriation in the Supplemental Appropriation Act was cut in half from the President's budget estimate of $15,000,000 to $7,500,000 an ostensible cut of $7,500,000. The appropriation was designed to cover refunds under the Renegotiation Act. The House committee has arbitrarily decided that the Treasury estimates for this item were too high and cut them in half. As in the case of the refunds due under the tax laws, all of this money will have to be paid back to those who are entitled to refunds under the Renegotiation Act. There is no saving of money here. Whatever has to be paid back will be paid back.

The largest phony reduction in the Supplemental Appropriation Act is the one involving civil functions of the War Department. The President asked for $725,000,000 for government and relief in occupied areas. That appropriation was reduced to $600,000,000, making an ostensible saving of $125,000,000. The fact of the matter is that the President's figure was an estimate for operations on a 15-month basis. The appropriation is only for the fiscal year 1948, which is a difference of 4 months. The $125,000,000, which is saved is going to have to be spent.

When we turn to the Second Supplemental Appropriation Act, we find that the President requested $8,740,000 for use by the Federal Bureau of Investigation in connection with the Government's loyalty program. This appropriation was reduced by $1,240,000. The President's estimate was for a 13-month period. The appropriation only covers the remaining part of the fiscal year 1948, which is a little over 11 months.

The second item in the Second Supplemental Appropriation Act is in anticipation of an unexpectedly large volume of mail for use by the Post Office Department. The estimate called for $163,720,100. Of this amount of claimed reduction, $66,515,000 is phony. It is plain that whatever the Post Office Department needs to operate will be appropriated, whether it be $163,000,000 or $200,000,000 or $100,000,000. No one supposes for a moment that the Post Office Department would shut down for the lack of an appropriation.

The Public Printer is going to get every dollar he needs as working capital. His work will go on. The Treasury is going to pay back every dollar of refund that is required. The Federal Government will match the moneys put up by the States in connection with the various grants-in-aid programs. The Philippine War Damage Commission will pay out every dollar they find to be owing under the act. There is not one dollar of truthful reduction in any of the appropriations which I have discussed. They come to the staggering total of $1,379,789,154.

The kinds of reductions I have been talking about are claimed reductions in appropriations, but this is not all that the majority party has been claiming in its desperate effort to come somewhere near the goals which they set for themselves at the beginning of the session. They have begun to claim as savings additional unanticipated revenue of the Government. For example, they are claiming that they have saved $505,000,000 because of the sale of certain ships. How you can save money by getting additional income from the sale of ships I do not know. That is certainly not a saving. It merely means the Government is getting more money in revenue, but it does not mean that anything has been saved in the way of expenditures. The $505,000,000 is supposed to come from additional sales and charter of ships. Maybe we will get that much more money than we thought. I hope we do. But that is money which comes into the Treasury without any action on the part of the Appropriations Committees, money which was not produced by the Appropriations Committees, which may or may not come unexpectedly into the Treasury. On this theory they might as well claim as a reduction in expenditures the income from delinquent taxpayers over and above what had been estimated.

In addition to this claim, some members of the majority are claiming a reduction of $642,000,000 as a result of the Treasury cancellation of Commodity Credit Corporation notes to the tune of $642,000,000. This is a very interesting item. When the Commodity

Credit Corporation was set up it was given a certain amount of money by the Treasury and the Treasury took the notes of the Corporation in exchange for the money loaned. The Commodity Credit Corporation proceeded to do business and suffered a very substantial loss in its operation, not through poor management certainly, but because under the Government's program it paid very substantial amounts as subsidies to the producers of various food commodities under the Government's inflation-control program. The money went for such commodities as butter and milk.

In his budget for 1948, among other things, the President recommended that the Commodity Credit Corporation be made whole, that the depletion in its capital be made up. The depletion was in the neighborhood of $642,000,000. The Appropriations Committee of the House under the impression that this was an amount that was going to be spent in the fiscal year 1948, hit upon the idea of having the Treasury cancel the Commodity Credit Corporation notes in the fiscal year 1947 instead of the fiscal year 1948, so as to appear to save that much money. Here, of course, they stumbled over their own feet. The cancellation of the notes of the Commodity Credit Corporation is a bookkeeping transaction. The money represented by the $642,000,000 was spent in prior years. All that was involved here was a credit of $642,000,000 to the Commodity Credit Corporation, and a debit to the account of the Treasury in exactly the same amount, so that the net result of the transaction was zero. One pocket of the Government—the Commodity Credit Corporation—was enriched by $642,000,000 at the expense of another pocket of the Government, namely, the Treasury Department. But little details of this character do not seem to bother the Appropriations Committee. On the theory that they can claim $642,000,000, they told the Treasury Department to cancel the Commodity Credit Corporation notes in fiscal 1947.

These are not, by any means, all of the claims made by the majority of their so-called savings. They are claiming the savings, as shown on the last page of the report for the independent offices appropriation bill, reductions in original budget estimates and revised estimates (which are the reductions by the President in his own estimates), and increases in revenue. This really takes in the whole field. It does not take into account increases in the President's budget which have been forced on the country, such as the $400,000,000 aid to Greece and Turkey, and other expenditures during this fiscal year which could not have been anticipated. Just how well the Republican majority has been able to reduce expenditures is something no one can say until the last day of June 1948, when fiscal 1948 will have closed. It will be interesting then to see what the actual results are.

I desire to condemn in a most vigorous way the slipshod and carefree methods that have been used by the Republican-controlled Congress in vain atttempts to reduce the President's budget. In my 12 years of experience in the Congress, I have never seen a party bearing great responsibiities of power in a free government use such unfair and irresponsible methods, in order to attain a political objective. I boldly assert that such tactics are not in keeping with, and are far beneath, the dignity and the integrity of this deliberative body. I deplore the juggling of figures as a means of fooling the American people. In the end, they shall know the truth.

A Republican alibi which I wish to puncture with an 8-inch shell is found in the repeated assertions of the majority that their failure to reduce the expenditures according to the Republican schedule was because the Democratic Party and the agencies of the executive branch of the Government refused to cooperate with them. This position is tenuous and wholly indefensible. We have seen Republican Members of the Senate interested in reclamation, irrigation, flood control, and the general agricultural program, fight desperately alongside of Democrats to restore appropriations reduced by the House of Representatives. They conveniently forgot their economy pledge.

This fallacious argument is further subject to a bit or deflation. The American people must remember that in the Eightieth Congress, the Republicans have had the majority of votes in the House of Representatives and in the United States Senate. The Republicans have had the power to make any reduction of expenditures they believed to be wise. They could cut expenditures based upon facts or upon arbitrary whim and caprice, but regardless of what course they pursued the people will remember always that they had the power to do what they say they could not do.

The American people will also judge the actions of the majority in this Congress by the high standards our citizens have always demanded of those with whom they do business. Let a businessman indulge in questionable practices, and he will soon find his customers leaving him to deal with a more responsible competitor. Let a business concern juggle its figures and employ phony bookkeeping transactions to make its profits appear more attractive or its assets more valuable, and the American public will soon withdraw its support through investments. The American people's inherent sense of sound, above-the-board business practices, and their refusal to tolerate violation of those practices, are largely responsible for the solid foundation on which American business rests today.

We may be sure that the people of this country want and demand that their own business concern—the government of their country—be operated on the same honest, straightforward standards they require of others. And when the final figures on the fiscal gymnastics of the majority in this session of Congress are analyzed, the stockholders in the United States Government, who are the citizens of this Republic, will experience a feeling of shock and outrage because of what they will consider the violation of their business code of honor.

For their information, I am placing in the RECORD now a table of figures which show plainly the failure of Republican bookkeeping and Republican promise-keeping:

The true story of appropriations for the fiscal year 1948

	Amount submitted in President's budget	Amount appropriated	Amount claimed as reduction of President's budget	Amount of "phony" reduction (no actual saving to taxpayers)	Actual reduction after deducting "phony" reduction
Treasury, Post Office	$4,099,123,500	$3,216,509,450	$882,614,050	$803,200,000	$79,414,050
Labor, Federal Security	1,779,184,039	1,674,158,631	105,025,408	50.100,000	54,925,408
State, Justice, Commerce, Judiciary	698,788,588	551,175,932	147,612,656		147,612,656
Navy	3,513,000,300	3,268,766,100	244,234,200		244,234,200
Legislative	76,153,077	55,294,435	20,858,642	10,380,000	10,478,642
Interior	296,135,420	194,587,859	101,547,561		101,547,561
District of Columbia	95,793,160	95,504,737	288,423		288,423
Military	5,716,791,500	5,482,529,633	234,261,867		234,261,867
War—civil functions	619,727,100	502,123,912	117,603,188		117,603,188
Independent offices	8,500,497,759	8,188,822,927	311,674,832	211,588,854	100,085,978
Agriculture (annual and permanent)	963,571,318	735,044,908	228,526,410		228,526,410
Government corporations	50,137,500	35,040,000	15,097,500		15,097,500
Government corporations, supplemental	35,500,000	35,500,000			
Supplemental Appropriation Act	1,925,683,823	1,658,802,197	266,881,626	136,765,300	130,116,326
Second Supplemental Appropriation Act	220,870,100	106,695,100	114,175,000	67,755,000	46,420,000
Permanent appropriation (less agriculture)	5,791,400,136	5,791,400,136			
Total	34,382,357,320	31,591,955,957	2,790,401,363	1,279,789,154	1,510,612,209

Legislative Record of the First Session, Eightieth Congress

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. BARKLEY. Mr. President, it is customary in the closing days of Congress to insert in the CONGRESSIONAL RECORD a brief summary of what has happened during that Congress.

The real yardstick of the achievements of this Congress is not entirely that of the things done but of what things it has left undone.

I, therefore, request that to cover the entire record the following digest of happenings in the Eightieth Congress be inserted in the CONGRESSIONAL RECORD as part of my remarks.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

FOREIGN AFFAIRS

The Eightieth Congress, under Republican leadership, has been one fraught with interparty strife, yet at the same time with overriding tones of international crises, of world shattering events and decisions.

The foreign policy of the United States was given direction by President Truman in a series of important messages to the Congress beginning with the foreign affairs section of his state of the Union message.

In these he mapped a program of cooperation with other countries for the rehabilitation of the war-torn nations of Europe and Asia; and for relief to the peoples of those areas suffering from starvation and the lack of machines and economic ability to help themselves out of their misery.

Specifically in a special message on February 21 the President asked for $350,000,000 "to assist in completing the great task of bringing relief from the ravages of the war to the people of the liberated countries."

Then on March 12, President Truman appeared before the Congress in person and stated that the foreign policy and national security of the country were involved in a particularly grave situation.

He laid bare before the Congress the danger to the Greek and Turkish Governments, pointing out that their very existence was periled by forces outside their borders.

The serious economic and industrial state of Greece caused by her very great sacrifices during World War II and the threat to Turkey athwart the Dardanelles were emphasized by President Truman. He stated:

"The very existence of the Greek state is today threatened by the terrorist activities of several thousand armed men, led by Communists, who defy the government's authority at a number of points, particularly along the northern boundaries."

Of the national integrity of Turkey he said:

"That integrity is essential to the preservation of order in the Middle East."

He added gravely that in this fateful hour, "the effect will be far reaching to the West as well as to the East."

He asked the Congress to appropriate $400,000,000 for the period ending June 30, 1948. Permission was asked for American civil and military personnel to be detailed at the request of these nations to supervise reconstruction and assist in the gigantic job.

On February 24 he urged that the Congress authorize the United States to become a member of the International Refugee Organization, to take the leadership among nations toward solving the tragic problem of displaced persons.

This was implemented on July 7, by a special message to the Congress urging legislation to make it possible for a substantial number of displaced persons to enter our own country as emigrants.

DOMESTIC PROGRAM

The President's program of constructive action to promote peace and economic recovery abroad was paralleled by a domestic program to continue our strength and prosperity at home. In his state of the Union message and subsequent communications to the Congress, the President emphasized the need to continue high production, high employment, and fair prices.

In the state of the Union message the President called for:

1. Promotion of greater harmony between labor and management.

2. Restriction of monopoly and unfair business practices; assistance to small business; and the promotion of the free competitive system of private enterprise.

3. Continuation of an aggressive program of home construction.

4. The balancing of the budget in the next fiscal year, and the achieving of a substantial surplus to be applied to the reduction of the public debt.

5. Protection of a fair level of return to farmers in postwar agriculture.

6. A law to provide adequate medical care to all who need it—not as charity but on the basis of payments made by the beneficiaries of the program.

7. The establishment of a well-integrated Department of Welfare.

8. The development of the great river systems of America to contribute to the increase of the national wealth.

9. The establishment of a single Department of National Defense.

These policies were followed up by the President's first Economic Report sent to the Congress on January 8. This embodied five major short-range recommendations for immediate Government action:

1. The continuance of existing taxes upon business and individual incomes.

2. The reduction of the public debt as promptly as Treasury surplus funds became available.

3. The continuance of rent control and the enactment of a comprehensive-housing program.

4. The raising of minimum-wage rates and the extension of coverage.

5. Increases in social-security benefits in view of the higher cost of living.

The President in his budget message estimated expenditures under existing proposed legislation at $37,500,000,000 and revenues at $37,700,000,000, leaving a slight surplus. He recommended that the Congress continue war excise-tax rates. He also recommended the Congress increase postal rates to wipe out the postal deficit.

The President recommended the present income-tax law be retained to reduce the national debt as quickly as possible without curtailing necessary Federal operations.

The Eightieth Congress was off to a slow start. During the first 3 months, little was done toward either studying or enacting legislation to implement President Truman's program. As a result, there were frequent conflicts in the legislative programs undertaken by the Republican leadership of the House and Senate.

The work of the session has been complicated by the many election promises made by the Republicans which soon came home to roost. The Republican leadership was faced with the problem of how to reconcile economy promises to eastern financiers and assurances of continued aid to midwestern farmers. Then, there were delicate questions of legislative precedence to be settled.

Further complicating the problem were the needs of the Republican Party for the 1948 campaign. Legislative programs in the light of these campaign requisites had to be carefully chosen to provide maximum exploitation.

LEGISLATIVE ACTION ON FOREIGN POLICY

The foreign relief bill, designed to take up where UNRRA left off, was strenuously opposed by some Members of Congress who felt that the United States was giving too much in moneys to an exhausted Europe. The Senate voted the $350,000,000; the House sought first to cut the sum to $200,000,000, finally agreed to the original figure.

The Greek-Turkish aid bill drew fire from isolationists backed by Communist-dominated propaganda groups. Some liberals joined in the opposition because of their feelings that the problem belonged to the United Nations. After bitter debate, the Senate passed the bill 67 to 23, and 2 weeks later the House approved it 287 to 107.

In addition the Export-Import Bank was extended to June 30, 1953, and the Mundt foreign information bill was passed by the House.

Congress approved United States membership in the International Refugee Organization.

Bills to permit admission of 400,000 displaced persons were pigeonholed in the respective House and Senate committees.

Despite the bipartisan passage in both Houses of Congress of the Greek-Turkish aid bill, appropriations for the bill were held up in the House Appropriations Committee until late in the session when the flare-up of guerrilla warfare in Greece prompted action.

LEGISLATIVE ACTION ON DOMESTIC POLICY

On the domestic front the record is not so clear. Here it is that partisan considerations by the Republican majority have overridden the major objective of benefit to the entire people of the United States. It is here that the record of what has been left undone leaves an indelible mark.

LABOR-MANAGEMENT HARMONY

The President outlined the steps that should be taken to promote harmony between labor and management. Instead, the Eightieth Congress gave him the punitive Taft-Hartley Labor Act which fails to meet the tests of a good labor bill.

RESTRICTION OF MONOPOLY—AID TO SMALL BUSINESS

The President called for the restriction of monopoly and unfair business practices. He urged assistance for small business and the promotion of the free competitive system of private enterprise.

The Eightieth Congress refused to do anything to curb monopoly—or to assist small business against the competition of monopolistic practice. On the other hand efforts were made by the Eightieth Congress to railroad bills through to benefit the large railroads and the big power companies by freeing them from Federal regulation that had ended the evils which grew up under Republican rule.

AGGRESSIVE HOUSING PROGRAM

Under the guise of continuing rent control the Eightieth Congress gave landlords the benefit of a "gun point" 15-percent "voluntary" rent increase. The same bill contained a joker provision which removed priority control on building materials for veterans' housing and gave the green light to all types of commercial construction at the expense of homes for veterans.

The President sought to place all Federal housing activities under one responsible head. This was rejected by the House.

The President asked for passage of the Taft-Ellender-Wagner housing bill which would:

(a) Provide public aid to localities for low-rent housing for low-income families;

(b) Encourage private investment in rental housing by Federal insurance;

(c) Grant a more adequate program of farm housing;

(d) Give aid to cities for clearance of slums and blighted areas;

(e) Perfect and supplement existing aids to home financing; and

(f) Supply a program of housing research to assist industry in progressively reducing cost of housing.

The Senate Banking and Currency Committee reported this bill out to the Senate on April 24. However the Republican leadership of the Senate never saw fit to bring it to a vote.

In the House a companion bill, H. R. 2523 (JAVITS) was bottled up in the House Banking and Currency Committee.

The President's request for a congressional investigation of the real-estate lobby has not been acted upon despite the fact that a resolution calling for such an investigation was introduced in the Senate.

BALANCE BUDGET AND REDUCE DEBT

The President called for a balanced budget and achieving of a substantial surplus to be applied to the reduction of the public debt. He opposed tax reduction until this was accomplished.

The Republicans made piece-meal disorganized cuts in the President's budget, curtailing Federal services essential to the national welfare. The Republican leadership sought to cut taxes without first knowing governmental expenditures for the fiscal year.

The pattern of the Republican-sponsored tax reduction bill was to do little for those who needed it the most and to give generous tax cuts to those in the upper income brackets.

Twice the Republican leadership wasted the valuable time of the Eightieth Congress trying to cram the tax-reduction measure down the public's throat. Each time, however, Congress wisely sustained the President's veto.

AGRICULTURE—FAIR RETURN TO FARMERS

The Republican controlled Eightieth Congress took no action to protect the farmer. Instead, it slashed appropriation requests for rural electrification, irrigation and reclamation, soil conservation, crop insurance, and other vital farm programs.

Although present laws give considerable stability to farm prices for 1947 and 1948, the President recommended that the stage for

permanent farm welfare be set before the guarantees expire.

The Congress did not even consider any long-range or permanent farm legislation.

The President, in his economic report, stated "The soil is one of the most valuable economic assets of the Nation. Most effective utilization and conservation of this resource should be an important aim of the agricultural program of the Government."

The Congress passed no affirmative legislation relative to soil conservation, rather reduced appropriations for operation of the soil conservation service by $5,000,000 and the appropriation for the conservation and use of agricultural land resources by $73,000,000.

The Congress also reduced the appropriation for the school-lunch program.

ADEQUATE MEDICAL CARE

The President asked for a law to provide adequate medical care for all of the Nation, not as charity but on a pay-as-you-go plan.

Senator TAFT sidetracked hearings on such a bill to give precedence to his own program for Federal health care on a charity basis only to those who would give a pauper's oath.

Neither bill has been reported out of the Senate Labor and Public Welfare Committee.

DEPARTMENT OF WELFARE

The President asked for the establishment of a well-integrated Department of Public Welfare. This bill was reported in the Senate but there was no further action on this important proposal.

DEVELOP RIVER SYSTEMS

The President called for the development of the great river systems of America to prevent the terrible wastage of floods and erosion, and at the same time to contribute to the increase of the national wealth. Although some appropriations were made to continue flood-control projects heretofore authorized, no action was taken by the Congress on the broader program of flood control and river development, as recommended in the President's state of the Union message and in his special message to Congress following the disastrous floods in the Middle West.

UNIFIED ARMED FORCES

After prolonged debate, the Eightieth Congress passed the bill requested by the President to set up a single Department of National Defense. However, Congress failed to act on the President's other major national defense proposal for universal military training.

MINIMUM WAGE

Proposals to raise the floor under wages from 40 cents to 65 cents per hour and to widen the coverage to protect additional millions of workers were bottled up in committee.

INCREASE IN SOCIAL-SECURITY BENEFITS

The President urged Congress to take steps to revise payments under the social-security system. He also urged that benefits under the old-age and survivor's insurance system be adjusted. These measures, the President stated, were necessary to alleviate real hardship which has been aggravated by increases in the cost of living.

MILITARY COOPERATION

No action was taken on legislation to authorize further cooperation with other American countries in military matters, including standardization of equipment, military organization, and training methods.

The all-important matter of Federal aid to States for educational standards was given very little consideration by the Republican Congress.

BUDGET

In a burst of enthusiasm, generated by their victory at the polls last November, the Republicans in the House of Representatives said they would reduce the President's budget by $6,000,000,000. The Republican Senate said they would reduce it by $4,500,000,000. Up to this time they have not been able to compose their differences.

Senator ROBERT A. TAFT, chairman of the Republican policy committee in the Senate, in a speech to the Ohio Republican State Committee delivered January 31, 1947, stated that the total reduction of expenses below the President's figures would be $3,000,000,000. (See New York Times, August 1, 1947, p. 8.)

Congressman JOHN TABER, chairman of the House Appropriations Committee, in a radio address over the National Broadcasting Co. network August 1, 1947, set the reduction at $4,400,000,000. (Delivered over NBC, 10:45 p. m., August 1, 1947.)

In fact, the reduction is approximately $1,000,000,000 and will probably be less when final reports are made. I submit the following statement on appropriations:

The true story of appropriations for the fiscal year 1948

	Amount submitted in President's budget	Amount appropriated	Amount claimed as reduction of President's budget	Amount of "phony" reduction (no actual saving to taxpayers)	Actual reduction after deducting "phony" reduction
Treasury, Post Office	$4,099,123,500	$3,216,509,450	$882,614,050	$803,200,000	$79,414,050
Labor, Federal Security	1,779,184,039	1,674,158,631	105,025,408	50,100,000	54,925,408
State, Justice, Commerce, Judiciary	698,788,588	551,175,932	147,612,656		147,612,656
Navy	2,513,000,300	3,268,766,100	244,234,200		244,234,200
Legislative	76,153,077	55,294,435	20,858,642	10,380,000	10,478,642
Interior	296,135,420	194,587,859	101,547,561		101,547,561
District of Columbia	95,793,160	95,504,737	288,423		288,423
Military	5,716,791,500	5,482,529,633	234,261,867		234,261,867
War—Civil functions	619,727,100	502,123,912	117,603,188		117,603,188
Independent offices	8,500,497,759	8,188,822,927	311,674,832	211,588,854	100,085,978
Agriculture (annual and permanent)	963,571,318	735,044,908	228,526,410		228,526,410
Government corporations	50,137,500	35,040,000	15,097,500		15,097,500
Supplemental	35,500,000	35,500,000			
Supplemental Appropriation Act	1,925,683,823	1,658,802,197	266,881,626	136,765,200	130,116,326
Second Supplemental Appropriation Act	220,870,100	106,695,100	114,175,000	67,755,000	46,420,000
Permanent appropriation (less agriculture)	5,791,400,136	5,791,400,136			
Total	34,382,357,320	31,591,955,957	2,790,401,363	1,279,789,154	1,510,612,209

The broad domestic issues show that the Eightieth Congress has painted a sorry picture of partisanship, of subservience to special interests, ignoring the needs of the mass of people.

The record of what was not done takes on increased importance viewed in this light. It shows a cruel philosophy of political selectivity which has carefully held up all legislative action affecting human-welfare programs to provide ammunition for next year's political campaigns. The bible of the ultraconservative Republicans, the New York Herald Tribune, recounts this cynical philosophy in its issue of July 21. There is described the entire plan to subvert the welfare of the people to partisan politics.

Statement Regarding Lack of Cooperation of Treasury Department in Removing Tax Obstacles

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. KNUTSON. Mr. Speaker, the following correspondence demonstrates the difficulty the Committee on Ways and Means is having in getting cooperation from the Treasury Department in its efforts to remove tax obstacles and tax deterrents. Some of these tax obstacles are created by Treasury decisions and rulings which continue the policies of Morgenthau. One of the most striking examples of this is Treasury Decision 5507 issued on April 12, 1946, relating to stock options granted by an employer to his employee. This Treasury decision requires the employee to report as ordinary income, at the time the option is exercised the difference between the option price and the fair market value of the stock on the date of purchase, even though the option was given to enable the employee to have a stake in the business. This defeats the purpose for which the option was given, as in many cases, the employee is compelled to sell the stock thus acquired to pay his individual income tax.

So many Members of Congress have been concerned about this stock-option problem and so many of them have spoken to me, and other members of our committee about it that I submit the entire exchange of correspondence between the chairman of the Committee on Ways and Means and the Treasury Department, as a matter of courtesy to them.

Under date of February 7, 1947, I wrote the Secretary of the Treasury as follows:

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 7, 1947.

Hon. JOHN W. SNYDER,
Secretary of the Treasury,
Washington, D. C.

MY DEAR MR. SECRETARY: I have had considerable complaint about Treasury Decision 5507, relating to stock options. The general complaint is that this Treasury decision is killing management incentive by requiring the employee to pay a tax at the time he acquires the stock through the exercise of the option instead of at the time the stock is sold. This defeats the very purpose for which the option was given; that is, to enable the employee to acquire an interest in the business, for, in many cases, the employee has to sell the stock to pay the tax.

I had this matter up with Mr. Stam of the joint congressional staff some time ago, and he informed me that under date of November 20, 1946, Under Secretary of the Treasury Gardner was advised of this situation. A copy of Mr. Stam's letter is enclosed.

Up to the present time, no action has been taken toward ameliorating the disastrous effect of this Treasury decision. I will appreciate it if you could have some one in the Department give immediate consideration to this problem, as it is highly important that

obstacles to management incentive should not be created through administrative interpretations of our tax laws.

Respectfully yours,

HAROLD KNUTSON.

[Enclosure]

NOVEMBER 20, 1946.

Hon. O. MAX GARDNER,
Under Secretary of the Treasury,
Treasury Department,
Washington, D. C.

DEAR GOVERNOR: Treasury Decision 5507, promulgated April 12, 1946, with respect to employees' stock options has been criticized on two grounds:

1. That it destroys management incentives.
2. That it prescribes a rule which is contrary to the law as construed by the courts.

It is contended that one very effective means of encouraging the employee to take an interest in the business of a corporation is to assist him in becoming a part owner through the acquisition of stocks. This is accomplished by the corporation giving to the employee an option to acquire stock in the company within a prescribed time at or below its fair market value. Treasury Decision 5507 in many instances makes it impossible for the employee to retain his stock in the company after he acquired it. When the employee is given an option to acquire stock in a company, he is compelled under the Treasury decision to report as ordinary income the difference between the option price and the fair market value of the stock on the date of purchase. Many employees are, therefore, compelled to sell the stock thus acquired to pay the individual income tax. This defeats the main purpose for which the option was given.

With respect to the second criticism, Treasury Decision 5507 appears to be an unwarranted extension of the Smith decision of the Supreme Court (*Smith* v. *Commissioner* (323 U. S. 369)). The Smith case was dealing with a situation on which it was admitted that the option to acquire stock in the corporation was granted as additional compensation. In that case the Supreme Court held that the employee received compensation in the difference between the fair market value of the stock and the option price for the year in which he exercised the option. However, there are many cases in which the courts have held that the granting of such an option is not additional compensation but a bargain purchase. In *Lamond* v. *Commissioner*, decided January 31, 1946, after the Smith case, the Tax Court specifically distinguished the Smith case from a situation where the right to purchase stock in the corporation was not given as compensation for services, but was given in order to enable the employee to have an interest in the business. Nevertheless the Treasury decision, in complete disregard of the decided cases on this point, treats the exercise of all such options as additional compensation.

In view of the complaints which have been directed at Treasury Decision 5507, and the fact that it will doubtless result in considerable litigation, would it be possible to have this whole policy reconsidered? It seems to me that it might be possible to adopt a rule which would not discourage employee ownership but which would at the same time adequately protect the Government revenues. One suggestion has been received which seems worthy of study. Under this suggestion the employee would not be required to pay an income tax for the year in which he exercised his option and acquired the stock. The employee would be regarded as having received income in the year in which he sold his stock and then only to the extent that a gain was realized from the sale of the stock. To the extent that a gain was realized that part of the gain which represents the difference between the option price and the fair market value of the stock at the time of its receipt could be regarded as ordinary income, and the balance treated as a capital gain. For example:

Assume an employee was granted an option to purchase stock within 2 years at $75. At the time the option was exercised, the fair market value of the stock was $100. The employee, after holding the stock for over 6 months, sold it for $125. The gain realized is $50, the difference between what the employee paid for the stock and the selling price. Of the amount of this gain, $25 would be regarded as ordinary income, and $25 as a capital gain. If the stock was sold for less than $75, the entire loss would be treated as a capital loss.

If such a plan is adopted, it is believed that consent agreements could be entered into, under which the corporation would agree to waive its right to a deduction for the granting of the option, and the employee would agree to this method of reporting the income. The Government, under such a plan, would gain revenue through the denial of any deduction to the corporation, which under Treasury Decision 5507 is now allowed in all cases. This plan might solve many of the present difficulties and render legislation unnecessary. Otherwise, it seems to me that the matter may have to be solved by legislation to avoid endless litigation.

Respectfully yours,

COLIN F. STAM,
Chief of Staff.

Under date of February 12, 1947, I received the following reply from the Treasury:

THE GENERAL COUNSEL
OF THE TREASURY,
Washington, February 12, 1947.

Hon. HAROLD KNUTSON,
Chairman, Committee on
Ways and Means,
House of Representatives,
Washington, D. C.

MY DEAR MR. KNUTSON: Secretary Snyder has asked me to acknowledge receipt of your letter of February 7, 1947, addressed to the present Treasury position with respect to stock options given to officers and employees of corporations, and to advise you that a more definitive reply is in process of preparation and that you may expect to hear from us somewhat in detail in the relatively near future.

Sincerely yours,

JOSEPH J. O'CONNELL, Jr.

Having received no further reply from the Treasury, I communicated with the Under Secretary of the Treasury by telephone on June 3, 1947, and as a result of that telephone conversation received the following communication:

TREASURY DEPARTMENT,
Washington, June 3, 1947.

Hon. HAROLD KNUTSON,
Chairman, Committee on
Ways and Means,
House of Representatives,
Washington, D. C.

MY DEAR MR. KNUTSON: Further reference is made to your letter of February 7, 1947, relating to stock options in which you state that the present rule "defeats the very purpose for which the option was given, that is, to enable the employee to acquire an interest in the business, for, in many cases, the employee has to sell the stock to pay the tax."

It is the view of this Department that Treasury Decision 5507 follows correctly the present law as interpreted by the Supreme Court, namely, that where an employee receives from the corporation which employs him an option to acquire stock and exercises such option, he realizes ordinary taxable income by way of compensation to the extent of the difference between the fair market value of the stock when it is received and the price paid therefor. Treasury Decision 5507 requires that income which is in the nature of compensation be so taxed irrespective of the means selected by the employer for the payment of such compensation. The treatment of stock options is consistent with the treatment of other income received in the form of property rather than cash.

If, however, the Congress desires to consider changes in the present law, alternative possibilities exist. In this connection, there is attached a memorandum which considers the proposal contained in Mr. Stam's letter and also indicates two other possible procedures.

Yours very truly,

A. L. M. WIGGINS,
Acting Secretary of the Treasury.

[Enclosure]

MEMORANDUM ON ALTERNATIVE METHODS FOR TREATING INCOME DERIVED FROM STOCK OPTIONS

The present rule relating to stock options under Treasury Decision 5507 provides that: (a) If any employee receives a stock option on or after February 26, 1945, from the employer to purchase stock in the employer corporation, and the employee exercises such option, he realizes taxable income by way of compensation on the date upon which he receives the stock to the extent of the difference between the fair market value when it is received and the price paid therefor, and (b) the employer is entitled to an appropriate deduction for compensation paid measured by the amount of compensation realized by the employee.

A revision of this rule has been suggested as follows: (a) No income would be realized by an employee in the year in which he exercises his option and acquires the stock; (b) if the stock is subsequently sold for more than the option price, income would be realized upon the sale, the portion of the proceeds equal to the difference between the option price and the fair market value of the stock at the time of the exercise being regarded as ordinary income, the balance as capital gain; (c) if the stock were sold for less than the option price, the entire loss would be treated as a capital loss; and (d) no deduction would be allowed to the corporation for compensation to the employee in respect to the transaction.

The following considerations with respect to the proposed revision may be noted:

1. The suggested rule would shift the year in which liability for tax on such income arises from the year of exercise of the option to the year in which the stock is sold. It would also change the measure of compensation from the difference between option price and value at time of exercise (present rule) to the difference between option price and value at time of exercise or sale price, whichever is lower.

2. The suggested revision appears to approach the problem as primarily a payment problem involving deferment of payment of tax until the stock is sold. This treatment would be different from the treatment of compensation by way of any other forms of property. In all other cases, compensation is realized and is taxable in the year in which the property is received and to the extent of the fair market value of such property. The present stock-option rule (T. D. 5507) is consistent with the treatment of other types of noncash compensation. The present rule is consistent also with all judicial opinion to the effect that compensation, to the extent that it results from a stock option, is realized in the year in which the option is exercised. Revision such as suggested would require legislative rather than administrative action, since it would (a) involve taxing income in a year other than the one now held to be the year of realization and (b) distinguish between compensation by way of stock options and compensation received by way of other types of property other than cash.

3. Unless specific provisions to prevent it is made, the suggested revision would permit

escape from tax in at least two types of cases: (a) where the option is exercised and the securities are transferred by gift, and (b) where the option is exercised and the securities are held until death. This problem could be overcome by providing that a taxable sale or exchange shall be deemed to occur when the securities are transferred by gift or when the optionee dies possessed of the securities.

4. The suggested revision would deny any deduction to the corporation. To provide for a deduction to the corporation under the suggested revision would present severe practical problems since the compensation would not be deemed to arise until the securities were sold and that might not be until many years after the exercise and after the employee has left the employer's firm.

Other alternative methods for treating income derived from stock options include the following:

A. Provide that income in the nature of compensation would be realized in the year of exercise of the option to the extent of the difference between fair market value at the time of exercise and the option price, but that the tax on such income would be postponed until sale or other disposition of the stock; any increase or decrease in value of the stock after exercise of the option would be a capital gain or loss realizable at the time of sale or other disposition of the stock. This plan would be similar to the one discussed above, and raises the same considerations and problems, except that it avoids departure from the present rule that the compensation is measured at the time of exercise of the option, and might make possible allowance of a deduction to the employer without the same administrative problems. It would meet the problem of payment of tax by deferring it until the time of sale.

B. Provide that income derived from the exercise of a stock option is to be treated as a capital gain or loss to the extent of the difference between the option price and fair market value at the time of sale or other disposition of the stock. This plan raises some of the considerations and problems discussed under the first plan. In addition, the entire amount of the income is treated as capital gain or loss making available the special limitations on recognition and rates applied to long-term capital gains and losses.

Under date of June 5, 1947, I replied to the Under Secretary's letter of June 3, 1947, as follows:

JUNE 5, 1947.

Hon. A. L. M. WIGGINS,
Acting Secretary of the Treasury,
Washington, D. C.

DEAR MR. WIGGINS: In response to my telephone conversation of June 3, 1947, I am in receipt of your letter of the same date. I regret to find that your letter of June 3, 1947, does not comply with my understanding of what you promised to submit to me.

You will recall that I wrote to you as early as February 7, 1947, in regard to this matter, pointing out that Treasury Decision 5507 was killing management incentive and that no action had been taken by the Treasury Department toward ameliorating the disastrous effect of this Treasury decision. Under date of February 12, 1947, you acknowledged receipt of my letter and advised me that "a more definite reply is in process of preparation and that you may expect to hear from us somewhat in detail in the relatively near future." This is now June 5, and the only answer which I have received is the unsatisfactory one of June 3, 1947, which was prompted by my telephone conversation of that date. I do not see how it will be possible for the Congress to cooperate with the Treasury if the Treasury does not furnish such information more promptly. The country is crying for relief from unjust Treasury regulations, and it is important that we determine now whether such relief can be granted without legislation.

If the Treasury is of the opinion that Treasury Decision 5507 follows correctly the present law as interpreted by the Supreme Court, I wish to be furnished with a copy of the opinion of your general counsel upon which that conclusion is based. If, as you indicated in your telephone conversation with me, you are also relying upon an opinion furnished you by Mr. Fred Morrison, an outside attorney, I feel that we are entitled to a copy of that opinion also.

Since I have received numerous complaints from outside attorneys that Treasury Decision 5507 is contrary to both statutory and decision law, and Mr. Stam, counsel for the Joint Committee on Internal Revenue Taxation, has also advised me to that effect, it is important that I receive these opinions at once so that we may determine whether they have any sound legal basis.

Hoping that you will give immediate personal consideration to this matter, I remain

Yours sincerely,

HAROLD KNUTSON.

Under date of June 23, 1947, I received the following communication from the Under Secretary of the Treasury:

TREASURY DEPARTMENT,
Washington, June 23, 1947.

Hon. HAROLD KNUTSON,
Chairman, Committee on Ways and Means, House of Representatives, New House Office Building, Washington, D. C.

MY DEAR MR. CHAIRMAN: Reference is made to your letter of June 5, 1947, relating to employee stock options.

I regret that in your opinion our letter to you of June 3, 1947, did not constitute a detailed reply to your inquiry with respect to Treasury Decision 5507. As indicated to you, it is the view of this Department that Treasury Decision 5507 follows correctly the present law as interpreted by the Supreme Court.

It is not the general procedure of this Department for the General Counsel to prepare a formal opinion with respect to each regulation promulgated, and accordingly, no such opinion had been prepared on Treasury Decision 5507. The policy reflected in that regulation is the result of conferences and extensive consideration of the statute, regulations, and Supreme Court and lower-court decisions. Of course, particular attention was paid to the Supreme Court's decision in *Commissioner* v. *Smith*, which is the only opinion of that court on employee stock options and which upholds the taxation as compensation of income realized upon the exercise of such option. The importance of the Smith case in the field of tax law on employee stock options was recently attested to by the Tax Court in its statement that the Smith case has rendered previous decisions on the subject obsolete. *Van Dusen* (8 T. C. No. 47). These previous cases date almost entirely since 1938. As you know, Treasury Decision 5507 reestablishes the rules with respect to employee stock options which were in effect from 1923 to 1939.

In our view Treasury Decision 5507 correctly interprets the applicable law. We find it difficult therefore to understand the basis upon which Mr. Stam advised you that Treasury Decision 5507 was contrary to both statutory and decision law.

Our job is to make administrative decisions based on the laws passed by Congress and it is naturally difficult in some cases to determine just what the application of the law should be. You indicate that Treasury Decision 5507 is "killing management incentive" and is having a "disastrous effect." Whether or not your conclusion can be supported, I think you will agree that an executive department should not attempt to construe a law to accomplish a social or economic objective, no matter how desirable such objective might be. It should stick to the law as it interprets it. If we should make a mistake in the application of a law in a particular tax matter, the taxpayer can secure a reversal of our position through the courts. If Treasury Decision 5507 is wrong, taxpayers have full recourse to the courts to have it reversed.

On account of your and my keen interest in this subject, I have secured informal legal opinions on Treasury Decision 5507 from competent tax attorneys outside the Government. They concur in the correctness of the position of the Treasury Department. In addition, I have before me a copy of a letter from the dean of one of the foremost law schools in America, who says, "I really do not see how it is possible to give a stock option to an executive which is not available to anyone else, without its being compensation."

Frankly, I am trying to find a legislative formula that would be helpful in utilizing stock options, but up to now I have not been successful. If you or Mr. Stam have any ideas on the legislative approach, I would be delighted to have them. However, I am convinced that the Treasury can take no other position under present laws than it has taken under Treasury Decision 5507.

Yours very truly,

A. L. M. WIGGINS,
Under Secretary of the Treasury.

Under date of July 14, 1947, I replied to the Under Secretary, as follows:

JULY 14, 1947.

Hon. A. L. M. WIGGINS,
Under Secretary of the Treasury,
Washington, D. C.

DEAR MR. WIGGINS: Your letter of June 23, 1947, is very disturbing to me, since it appears that you are being influenced in your decisions by erroneous legal advice. It is highly important, if we are to accomplish any real and fundamental results in tax reform that the Treasury discontinue its practice of making law by regulation. I realize, of course, that you were not with the Treasury when Treasury Decision 5507 was promulgated. However, it is a real disappointment to me that you are not taking any steps to correct this unfortunate administrative practice but are actually endorsing and ratifying it.

You state that the policy reflected in Treasury Decision 5507 was the result of conferences and extensive consideration of the statute, regulations, and Supreme Court and lower court decisions, but that your general counsel did not prepare any formal opinion with respect to this regulation. I believe it is most unfortunate that your general counsel did not prepare such an opinion in view of the disastrous effect of such a regulation upon our economy.

In tracing the policy behind Treasury Decision 5507, I think we should start with the regulation which was applied by the Supreme Court in the Smith case, the only opinion by that court on stock options, and which was decided on February 26, 1945. In that case Smith, an employee of the Western Cooperage Co. had received an option from that company to purchase shares of the Hawley Pulp & Paper Co., the management of which was taken over by Western pursuant to a plan of reorganization. Under Western's contract with Hawley, Western was to receive specified amounts of Hawley's capital stock as compensation for services rendered when the amount of Hawley's indebtedness had been reduced by a certain amount. The Tax Court found from the option itself, the resolution of Western's board of directors, and from petitioner's own testimony that Western gave the option to purchase as

compensation for services rendered in effecting the reorganization plan of Hawley.

The regulation before the court in that case was Treasury Regulation 101, article 22 (a)-1, which provided: "If property is transferred by an employer to an employee, for an amount substantially less than its fair market value, regardless of whether the transfer is in the guise of a sale or exchange, such * * * employee shall include in gross income the difference between the amount paid for the property and the amount of its fair market value to the extent that such difference is in the nature of (1) compensation for services rendered."

In the Government's brief before the Supreme Court in the Smith case, page 22, the following statement is made:

"The governing Treasury regulation providing that where property is transferred by an employer to an employee for an amount substantially less than its fair market value, the employee shall include the difference in his gross income to the extent that it is in the nature of compensation for services, express well settled principles, are of long standing, and must be deemed to have Congressional approval."

In the note to the Government brief, page 11, it was stated that the phrase "To the extent that such difference is in the nature of compensation for services rendered," which was not in the original regulation was added "to conform the regulation to the course of judicial decisions."

Furthermore, the Government in the same brief admitted that all gains flowing from the employer-employee relationship are not in the nature of compensation, stating "Conceivably such a bargain may occur where an employer can find no other buyer in a stagnant market, or even where the sole purpose is to insure the employee's unflagging loyalty by giving him a stake in the employers' business."

In its opinion the Supreme Court in the Smith case stated: "The regulation specifically includes in income properly 'transferred' by an employer to an employee, for an amount substantially less than its fair market value even though the transfer takes the form of a sale or exchange, to the extent that such employee receives compensation."

The opinion of the Court concluded as follows:

"The Tax Court thus found that the option was given to respondent as compensation for services, and implicitly that the compensation referred to was the excess in value of the shares of stock over the option price whenever the option was exercised. From these facts it concluded that the compensation was taxable as such by the provisions of the applicable revenue acts and regulations. We find no basis for disturbing its findings, and we conclude it correctly applied the law to the facts found."

From the foregoing it should be borne in mind that the Tax Court, the Supreme Court, and the Government's brief did not disapprove of Treasury regulation 101, article 22 (a) 1, but actually applied it to the facts in the Smith case.

After the decision in the Smith case, but before the issuance of Treasury Decision 5507, the Tax Court handed down its decision in the Lamond case. In that case, the facts disclosed that the taxpayer was given the option to purchase stock in the company "so he would have an interest in the business and a measure of control over his process of manufacturing the steel couplings." It should be noted, therefore, that this was one of the situations called to the attention of the Supreme Court by the Government's brief in the Smith case, where a bargain purchase did not result in the nature of compensation. The Tax Court, which as already pointed out, had decided the Smith case in favor of the Government, decided the Lamond case in favor of the taxpayer, stating:

"Whether the difference oetween the fair market value of the shares which petitioner purchased in 1941 and their cost (par value) constitutes taxable income to him, as the respondent has determined, depends upon whether his right to purchase the shares at a bargain price was given to him as compensation for his services. If it was the intention of the parties that that advantage was given to him as additional compensation then the respondent's determination is correct. See *Commissioner* v. *Smith* (324 U. S. 177 (45-1 U. S. T. C. 9187)); *Connolly's Estate* v. *Commissioner* (135 Fed. (2d) 64 (43-1 U. S. T. C. 9366)); *Mason* v. *Commissioner* (125 Fed. (2d) 540 (42-1 U. S. T. C. 9217)); *Crowell* v. *Commissioner* (62 Fed. (2d) 51 (3 U. S. T. C. 1005)). However, if petitioner's right to the bargain purchase of the shares was not acquired by him as additional compensation then the purchase of the shares did not result in realization of taxable income. *Delbert B. Geesman* (38 B. T. A. 253 (December 10,112); *Herbert H. Springford* (41 B. T. A. 1001 (December 11,083))

"The evidence is convincing in this case that the right to purchase the shares in question at par value was not given to petitioner as compensation for services to be rendered. Of course, it was not for services already rendered since the agreement was made at the time of the company's organization. At the time petitioner first acquired shares under the agreement and at the time the agreement was made their fair market value was not in excess of par value, which petitioner paid. The fact that the company prospered and that the shares later more than doubled in value in no way affected petitioner's rights to purchase them at the option price. We think that the respondent was in error in determining that the excess value of the shares which petitioner purchased in 1941 over their cost to him was compensation to be included in his gross income."

I am unable to understand why the Treasury, when it had the benefit of the Lamond decision prior to the issuance of Treasury Decision 5507, should completely disregard that case and treat the exercise of all options given to an employee by an employer as additional compensation. I am forced to conclude that those making such a decision were attempting to impose their own social or economic theory upon the country in complete disregard of statutory or decision law.

This conclusion is further supported by the statement made in your letter relative to the Van Dusen case. In your letter you state, and I quote: "The importance of the Smith case in the field of tax law on employee stock options was recently attested to by the Tax Court in its statement that the Smith case has rendered previous decisions on the subject obsolete (*Van Dusen* (8 T. C. No. 47)). These previous cases date almost entirely since 1938. As you know, Treasury Decision 5507 reestablishes the rules with respect to employee stock options which were in effect from 1923 to 1939."

The statement in your letter to the effect that the Tax Court in the Van Dusen case stated "that the Smith case has rendered previous decisions on the subject obsolete" is clearly erroneous. What the Tax Court actually said, and I quote: "Close analysis of the facts in the decided cases, together with their chronology with reference to *Commissioner* v. *Smith*, supra, will serve to distinguish or render obsolete as authority the cases relied on by petitioner."

This shows that the Tax Court did not regard all cases decided prior to the Smith case as obsolete, but recognized that some cases were distinguishable. A striking illustration of the distinguishing cases presented by the petitioner to which the court referred are those where the stock option is granted to give the employee a stake in the business, for example, the Geesman case

It should be borne in mind that the Tax Court in the Van Dusen case recognized in its opinion that there is no hard and fast rule applicable to the subject of stock options, the court stating, "Each case turns on its own facts."

Your letter states that Treasury Decision 5507 reestablished rules with respect to employee stock options which were in effect from 1923 to 1939. I again refer you to the statement in the Government's brief in the Smith case that the rules prior to 1939 were changed "to conform the regulation to the course of judicial decisions." In promulgating Treasury Decision 5507 and reestablishing the old rule, the Treasury is completely disregarding judicial decisions. Furthermore, it should be pointed out that even under the old rule there had to be a substantial difference between the fair market value and the option price. Even this part of your letter is erroneous, since the word "substantially," which was in the old regulation, is omitted from Treasury Decision 5507.

I note you state that the dean of a law school, whom you do not identify, states that "I really do not see how it is possible to give a stock option to an executive which is not available to anyone else, without its being compensation." This statement is interesting, but, of course, could not be relied upon to the extent it conflicts with existing court decisions.

How can the Treasury continue to support the validity of Treasury Decision 5507 in view of the decided cases? It is no answer to state that if the taxpayer believes the regulation to be erroneous he can test the matter out in litigation. What good purpose can it serve to force the taxpayer to litigate this question?

These decisions clearly show the Treasury could have taken the other view and liberalized the regulations to specifically cover cases where the option was given by the employer to enable the employee to have a stake in the business. Instead, Treasury Decision 5507 actually prevents this by forcing the employee to sell his stock acquired under the option to pay his tax.

I again request that Treasury Decision 5507 be reconsidered by the Treasury.

It should be both the concern of the Congress, as well as of the Treasury, to see that the regulations are in accord with statutory and decision law. In order that our staff may make a comprehensive investigation of the policy behind Treasury Decision 5507, I am submitting herewith a formal request for all preliminary memorandums and drafts considered in the preparation of Treasury Decision 5507.

Respectfully yours,

HAROLD KNUTSON,
Chairman.

[Enclosure]

REQUEST FOR DATA AND INFORMATION

CONGRESS OF THE UNITED STATES,
Washington, D. C., July 14, 1947.

THE JOINT COMMITTEE ON INTERNAL REVENUE TAXATION

To Hon. A. L. M. WIGGINS, *Under Secretary of the Treasury, Washington, D. C., Greeting:*

Section 5012 of the Internal Revenue Code provides as follows:

"Additional powers to obtain data

"(a) The Joint Committee on Internal Revenue Taxation or the chief of staff of such joint committee, upon approval of the chairman or vice chairman, is authorized to secure directly from the Bureau of Internal Revenue (including the assistant general counsel for the Bureau of Internal Revenue), or directly from any executive department, board, bureau, agency, independent establishment, or instrumentality of the Government, information, suggestions, data, estimates, and statistics, for the purpose of making investigations, reports, and studies relating to internal revenue taxation.

"(b) The Bureau of Internal Revenue (including the assistant general counsel for the Bureau of Internal Revenue), executive departments, boards, bureaus, agencies, independent establishments and instrumentalities are authorized and directed to furnish such information, suggestions, data, estimates, and statistics directly to the Joint Committee on Internal Revenue Taxation or to the chief of staff of such joint committee, upon request made pursuant to this section."

By virtue of the authority vested in me under the above-quoted section of law, I hereby request that the following information, suggestions, data, estimates, and statistics be furnished directly to me at room 1111, New House Office Building, within 2 days from the date of this request:

1. All preliminary or original drafts considered in the preparation of Treasury Decision 5507, including memoranda and opinions by the former chief counsel for the Bureau of Internal Revenue, and his assistant, Mr. Robert Schulman, and others of the chief counsel's office.

2. Informal opinion of Mr. Fred Morrison.

3. The letter of the dean of the law school upon which you seem to rely.

HAROLD KNUTSON,
Chairman.

Under date of July 16, 1947, the Under Secretary of the Treasury advised me as follows:

JULY 16, 1947.

Hon. HAROLD KNUTSON,
Chairman, Joint Committee on Internal Revenue Taxation, Washington, D. C.

MY DEAR MR. CHAIRMAN: I regret that it is impossible to comply with your request for certain data within the 48-hour limit set by your letter of July 14.

I find that the discussions that resulted in Treasury Decision 5507 went on over a period of many months and that most of the conferences were in the nature of discussions of which no minutes were kept.

I am having the files looked up in order to get together whatever material may have any bearing on the policy decision of the Treasury Department, and I will communicate with you just as promptly as possible after this material is assembled.

In the meantime, I can reply to items 2 and 3 of your request.

Informal opinion of Mr. Fred Morrison: This opinion was a personal matter at my request. It was given to me over the telephone, and I have no written communication from Mr. Morrison on the subject.

The letter of the dean of the Harvard Law School: This was a photostatic copy of a letter from Dean Erwin N. Griswold to a friend of his, and it is not an official document of the Treasury Department. However, I have secured the permission of Dean Griswold to furnish you a copy of his letter, which is enclosed.

I will reply to your letter and your request in item 1 as promptly as possible.

Yours sincerely,

A. L. M. WIGGINS,
Under Secretary of the Treasury.

[Enclosure]

LAW SCHOOL OF HARVARD UNIVERSITY,
OFFICE OF THE DEAN,
Cambridge, Mass., May 22, 1947.

PETER MILLER, Esq.,
New Haven, Conn.

DEAR MR. MILLER: I want to thank you for sending me a reprint of your note on Treasury Decision 5507.

I have read this with much interest, and am especially glad to have the reprint for my tax file.

Your discussion seems to me both sound and helpful. It is quite a fashion among taxpayers and their lawyers to be very sour about Treasury Decision 5507. I have not been able to get over the feeling that this is primarily a reflection of their disappointment at having a nice tax-avoidance scheme snatched out of their hands. I know that tax rates are high, and that is probably too bad. But as long as rates are high, they ought to be high for everyone. I have never seen any particular reason why the class of business managers should be the recipients of low tax rates which are not available to other persons.

My own thought has been that the old regulation, which made the test turn on the existence of compensation, was a little like repealing the law of gravity. I really do not see how it is possible to give a stock option to an executive which is not available to anyone else, without its being compensation. If that is really true, and I think it is, then there really can be no objection to Treasury Decision 5507.

Very truly yours,

ERWIN N. GRISWOLD,
Dean.

Under date of July 18, 1947, I again wrote to the Under Secretary, as follows:

JULY 18, 1947.

Hon. A. L. M. WIGGINS,
Under Secretary of the Treasury,
Washington, D. C.

DEAR MR. WIGGINS: I am in receipt of your letter of July 16, 1947, in which you state that you are having the files on Treasury Decision 5507 looked up, in order to get together whatever material may have any bearing on the policy of the Treasury Department in the promulgation of that Treasury decision, and that you will communicate with me just as promptly as possible after this material is assembled. I hope that you will give this matter your immediate attention, so I can receive this material early next week.

In the meantime, I would like to have, before the close of business on Monday, July 21, 1947, copies of the original drafts of regulations 5507 which were prepared in the office of the chief counsel for the Bureau of Internal Revenue and sent to the Treasury, together with any memorandum from Mr. Wenchel, chief counsel, or Mr. Schulman, his assistant, relating to this matter. I am sure that if you will contact the chief counsel's office, you can get this material promptly and it is important that I receive it before 5 o'clock, Monday, July 21.

I note from your statement that you have no written communication from Mr. Fred Morrison, relating to this matter. Of course, if you have no written communication from Mr. Morrison, you cannot furnish me with one, but both Senator MILLIKIN and myself, from our conversations with you, had the distinct impression that you had an exhaustive legal opinion from Mr. Morrison on this point. An off-the-cuff telephone conversation is certainly no legal basis for supporting Treasury Decision 5507.

I also note that you have no article from a law-school dean, but only a letter written by Dean Griswold, of the Harvard Law School, to Mr. Peter Miller, of New Haven, Conn. Dean Griswold, whom I understand was assistant to Mr. Randolph Paul when he was in the Treasury Department, states that "I really do not see how it is possible to give stock option to an executive which is not available to anyone else, without its being 'compensation.'" Others in the past have shared the same view and actually persuaded the Treasury to adopt a regulation to that effect prior to 1939. However, as pointed out by the Government in its brief in the Smith case, the Treasury was compelled to amend this regulation so that it would conform to judicial decisions. Obviously, Mr. Griswold is only expressing his own personal view of what he would like the law to be.

I am disturbed by the statement in Dean Griswold's letter to the effect that taxpayers and their lawyers are sour about Treasury Decision 5507 because "this is primarily a reflection of their disappointment at having a nice tax-avoidance scheme snatched out of their hands" and his statement that "I have never seen any particular reason why the class of business managers should be the recipients of low tax rates which are not available to other persons." This is the same view which I fear is shared by those in the Treasury who promulgated Treasury Decision 5507. It is certainly contrary to the views expressed both by you and by the Secretary that stock options should be encouraged as a form of management incentive.

Hoping that you will give this matter your prompt attention, I remain

Yours sincerely,

HAROLD KNUTSON.

Under date of July 21, 1947, the Under Secretary of the Treasury wrote to me as follows:

JULY 21, 1947.

Hon. HAROLD KNUTSON,
Chairman, Joint Committee on Internal Revenue Taxation,
New House Office Building,
Washington, D. C.

DEAR MR. KNUTSON: Agreeable with your request of July 18, I am enclosing photostatic copies of the original draft of regulation 5507, which was prepared in the office of the Chief Counsel of the Bureau of Internal Revenue and sent to the Treasury, together with a memorandum from Mr. Wenchel, Chief Counsel, relating to this matter; also IT 3795.

I am assured both by the office of the Chief Counsel of the Bureau of Internal Revenue and of the General Counsel of the Treasury Department that there was no preliminary draft of this Treasury decision prepared in either office.

For your information, I find that the decision on Treasury Decision 5507 was reached in the office of the Under Secretary of the Treasury, Mr. O. Max Gardner, on Friday, April 5, 1946, at which were present Under Secretary Gardner, General Counsel O'Connell, Commissioner Nunan, Chief Counsel of the Bureau of Internal Revenue Mr. Wenchel, and the Tax Legislative Counsel, Mr. Surrey. So far as I can learn, the decision on Treasury Decision 5507 was unanimous in this group.

As I have indicated to you before, I am convinced that Treasury Decision 5507 represents the legal application of the law, even though I think it desirable that there should be some change in the treatment of stock options. I am clearly convinced that this can be done properly only through legislative enactment. I will be glad to cooperate with you and your staff toward that objective.

I will be glad at any time to discuss the stock option problem with you further or your Chief of Staff or to have either of you discuss the matter with any of the men in the Treasury, including the Bureau of Internal Revenue or to arrange conferences with any group you may desire.

Sincerely yours,

A. L. M. WIGGINS,
Under Secretary of the Treasury.

[Enclosure]

TREASURY DEPARTMENT,
Washington, April 9, 1946.

In re employee stock options.

To Mr. GARDNER, Mr. O'CONNELL, Mr. NUNAN, Mr. SURREY:

Conformity with the conclusions reached in the conference held in Mr. Gardner's office on Friday, April 5, 1946, I have prepared and am submitting a proposed Treasury decision, regarding the income-tax consequences of employee stock options, amending section 29.22 (a)-1 of regulations 111, and a proposed I. T. setting forth the interpretations which will be made by the Bureau in its administration of the proposed Treasury decision.

The proposed Treasury decision amends the regulations to go back to the rule which was in effect prior to the Tax Court's decision in the Geeseman and other cases. That is, the proposed Treasury decision states in effect that anything which is given by an employer to an employee for less than fair market value is in the nature of compensation and taxable as such. However, as agreed at our conference, the proposed Treasury decision does not affect the exercise or transfer, at whatever date, of options to purchase stock which were granted to employees prior to February 26, 1945, the date of the Supreme Court decision in the John H. Smith case. As respects such options, as indicated in the proposed I. T., the Bureau will hold that the exercise or transfer of the options does not result in taxable income, provided there was no substantial spread at the time the option was granted and the option arrangement did not otherwise clearly result in compensation under the regulations as amended and interpreted after the Geeseman case, and prior to the application for certiorari in the John H. Smith case, and provided also that the employee to whom the option was given agrees to take as his basis for the stock only the actual price paid therefor, and the employer agrees to claim no deduction attributable to any aspect of the option arrangement.

In addition, the proposed I. T. sets out the manner and measure of taxability under the new Treasury decision as respects the exercise or transfer of options granted on or after February 26, 1945. In short, the I. T. holds that the employee realizes income by way of compensation, and the employer is entitled to a corresponding deduction, when the employee exercises the option or disposes of it for a fair and full consideration; and no tax consequence attaches to the mere receipt of the option.

J. P. W.

[Enclosure]

SECTION 22 (a). GROSS INCOME: GENERAL DEFINITION

(Sec. 29.22 (a)-1: What included in gross income. (Also sec. 23 (a), sec. 29.23 (a)-6; sec. 23 (e), sec. 29.23 (e)-1—1946-8-12295, I. T. 3795))

INTERNAL REVENUE CODE

Treatment for Federal income-tax purposes of the granting to an employee of an option to purchase stock of the employer corporation, or an affiliate of the employer corporation, and the subsequent exercise, transfer, or lapse of such an option.

Advice has been requested as to the income-tax consequences which attach to the granting to an employee of an option to purchase stock of the employer corporation, or of an affiliate of the employer corporation as set forth in section 141 (d) of the Internal Revenue Code, and the subsequent exercise, transfer, or lapse of such an option.

Section 22 (a) of the Internal Revenue Code includes in an employee's taxable income any economic or financial benefit conferred on him as compensation, whatever the form or mode by which it is effected. (*Commissioner* v. *Smith* ((1945) 324 U. S. 117); *Old Colony Trust Company* v. *Commissioner*, ((1929) 279 U. S. 716).)

Section 29.22 (a)-1 of regulations 111, as amended by Treasury Decision 5507, approved April 12, 1946, applies to options granted to employees on or after February 26, 1945, the date of the Supreme Court's decision in *Commissioner* v. *Smith*, supra, and provides in part as follows:

"If property is transferred by an employer to an employee for an amount less than its fair market value, regardless of whether the transfer is in the form of a sale or exchange, the difference between the amount paid for the property and the amount of its fair market value is in the nature of compensation and shall be included in the gross income of the employee. In computing the gain or loss from the subsequent sale of such property its basis shall be the amount paid for the property, increased by the amount of such difference included in gross income."

In view of the foregoing, if an employee receives an option on or after February 26, 1945, to purchase stock of the employer corporation, or of an affiliate of the employer corporation as set forth in section 141 (d) of the Internal Revenue Code, and the employee exercises such option, the employee realizes taxable income by way of compensation on the date upon which he receives the stock to the extent of the difference between the fair market value of the stock when it is received and the price paid therefor.

If the employee transfers such option for consideration in an arm's-length transaction, the employee realizes taxable income by way of compensation on the date he receives such consideration to the extent of the value of such consideration.

If the employee transfers such option in a transaction other than at arm's-length and the transferee thereafter exercises the option, the employee realizes taxable income by way of compensation on the date upon which the transferee receives the stock to the extent of the difference between the fair market value of the stock at that time and the price paid therefor less the value of any consideration previously received by the employee for the transfer of the option, which latter value is taxable when received by the employee.

No deduction is allowed to the employee by reason of the lapse of such option except to the extent of any consideration in money or property previously paid by the employee for the option and not recovered by him, such unrecovered consideration being deductible, pursuant to section 23 (e) of the Internal Revenue Code, in the year in which the option expires.

If such option is granted to the employee by the employer corporation, the amount of compensation realized by the employee under the foregoing principles is deductible by the employer corporation, in the year in which the employee realizes such compensation, to the extent set forth in section 23 (a) (1) of the Internal Revenue Code.

Treasury Decision 5507, supra, does not apply to the case of the exercise or transfer, at whatever date, of an option which was granted to an employee prior to February 26, 1945, to purchase stock of the employer corporation, or of an affiliate of the employer corporation as set forth in section 141 (d) of the Internal Revenue Code.

Accordingly, in view of the prior development of the regulations and interpretations relative to employee stock options (see T. D. 3435, (1923) II-1 C. D. 50; I. T. 3204, 1938-2 C. B. 126; T. D. 4879, 1939-1 C. B. 159), as respects an option granted to an employee prior to February 26, 1945, unless at the time such option was granted, there was a substantial difference between the fair market value of the stock and the option price therefor, or, within the purview of section 29.22 (a)-1 of Regulations 111 prior to the amendments made by Treasury Decision 5507, supra, the employee would otherwise clearly realize income by way of compensation through the exercise or transfer of the option, this office will hold that the exercise or transfer of such option, as the case may be, does not result in income to the employee by way of compensation under the principles enunciated in the preceding paragraphs, provided, however, that on or before July 1, 1946, the employee to whom such option is granted and any transferee thereof, and the employer corporation or any other taxpayer who granted such option to the employee, file in duplicate with the Commissioner of Internal Revenue at Washington, D. C., written consents (1) agreeing that the basis to the employee, and to any transferee of the option, for the stock acquired or to be acquired pursuant to the option shall be the actual price paid therefor and that no deduction shall at any time be claimed attributable to any aspect of the option arrangement, under section 23 (a) (1) or any other subsection of the Internal Revenue Code, by the employer corporation or the taxpayer who granted the option, and (2) indemnifying the Commissioner against the filing of a claim for credit or refund, or any other action by any taxpayer concerned, inconsistent with the consents filed.

For purposes of the preceding paragraph, in determining what constitutes a substantial difference between the fair market value of the stock and the option price in any particular case, consideration will be given, among other things, to the number of shares subject to the option, to the previous variations in fair market value of the stock, and to the type of business and history of the employer corporation and its affiliates.

JOSEPH D. NUNAN, Jr.,
Commissioner.

Approved: April 12, 1946.

JOSEPH J. O'CONNELL, Jr.,
Secretary of the Treasury.

[Enclosure]

(T. D. 5507)

TITLE 26, INTERNAL REVENUE—CHAPTER I, BUREAU OF INTERNAL REVENUE—SUBCHAPTER A, INCOME AND EXCESS-PROFITS TAXES

PART 29, INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1941

Regulations 111 amended—Property transferred for an amount less than its fair market value

TREASURY DEPARTMENT,
OFFICE OF COMMISSIONER
OF INTERNAL REVENUE,
Washington, D. C.

To Collectors of Internal Revenue and Others Concerned:

PARAGRAPH 1. Section 29.22 (a)-1 of regulations 111 (part 29, title 26, Code of Federal Regulations, Cum. Sup.) is amended by striking out the second paragraph and inserting in lieu thereof the following:

"If property is transferred by a corporation to a shareholder, for an amount less than its fair market value, regardless of whether the transfer is in the form of a sale or exchange, such shareholder shall include in gross income the difference between the amount paid for the property and the amount of its fair market value to the extent that such difference is in the nature of a distribution of earnings or profits taxable as a dividend. In computing the gain or loss from the subsequent sale of such property, its basis shall be the amount paid for the property, increased by the amount of such difference included in gross income. This paragraph does not apply, however, to the issuance by a corporation to its shareholders of the right to subscribe to its stock, as to which see article 22 (a)-8."

Closed.

W. E. B.

"If property is transferred by an employer to an employee for an amount less than its fair market value, regardless of whether the transfer is in the form of a sale or exchange, the difference between the amount paid for the property and the amount of its fair market value is in the nature of compensation and shall be included in the gross income of the employee. In computing the gain or loss from the subsequent sale of such property its basis shall be the amount paid for the property, increased by the amount of such difference included in gross income."

PAR. 2. In the case of property transferred by an employer to an employee pursuant to the exercise of an option granted to the employee before February 26, 1945, the provisions of these regulations prior to the amendment made by this Treasury decision shall apply.

(This Treasury decision is issued under the authority contained in sections 62 and 3791 of the Internal Revenue Code (53 Stat. 32, 467; 26 U. S. C. 62, 3791).)

JOSEPH D. NUNAN,
Commissioner of Internal Revenue.

Approved: April 12, 1946.

JOSEPH J. O'CONNELL, Jr.,
Acting Secretary of the Treasury.

Filed with the Federal Register, April 12, 1946, 11:42 a. m., Federal Register Series No. 2809.

Mr. Speaker, the material submitted by the Under Secretary in his letter of July 21, 1947, was of no assistance in determining the position of the chief counsel and the Commissioner of Internal Revenue in regard to this matter, since it was material submitted after the Treasury reached its decision on Treasury Decision 5507 and was prepared to carry out that decision.

The Under Secretary of the Treasury has agreed to permit the staff to examine the Bureau file to ascertain the views of the chief counsel and the Commissioner as to Treasury Decision 5507, and the staff is now making such an examination. However, I have not as yet received any communication from the Under Secretary of the Treasury in response to my letter of July 14, 1947, calling attention to the misstatements contained in his letter of June 23, 1947, and requesting that Treasury Decision 5507 be reconsidered and made to conform to law. In the meantime, the country is forced to suffer from this unsound administrative policy of interfering with management incentive.

So long as the soak-the-rich and social-reform policies of Morgenthau continue to dominate the views of the Treasury it is impossible for the committee to secure any real cooperation from that source.

If There Is Any Doubt That the German Cartel Conspirators Who Financed and Are Responsible for World War II Are Being Aided by Great Britain and Some of Our Own Financiers and Industrialists—These Facts Will Dispel All Doubts

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. SABATH. Mr. Speaker, if there be the slightest doubt in the mind of anyone that there is a sympathy of interests, a tie-up and secret collusion, between the British financial and industrialist lords and the German cartelists, Junkers, and militaristic officials, I most respectfully urge the reading of a recent release from the Society for the Prevention of World War III, Inc., an organization composed of Americans with patriotic devotion to the best interests of America, not only today but in the future.

After reading this straight-forward, hard-hitting statement, which names names and documents its case, no one can any longer fail to understand why, in the British zone of occupation of Germany, only 7 percent of the military potential for war has been dismantled, in spite of the Potsdam agreement.

It will make you wonder, too, if some of the officials of our own State Department have not been unduly influenced by the shrewd and conniving British diplomats who are cooperating with and aiding in the rebuilding of a strong German industry for the benefit of these dangerous cartelists.

READ HOW THE NAZI HITLER LEADERS ARE BEING REWARDED INSTEAD OF PUNISHED BY GREAT BRITAIN, AND PLACED IN THE MOST IMPORTANT POSITIONS IN THE REVIVING GERMAN CARTEL INDUSTRIES

The golden threads of avarice which held together the German, British, American, Dutch, Belgian, Spanish, and other great monopolies have not been broken by World War II. European and English financial interests still hold, one way or another, their own investments in the cartels, just as they still hold their large interests in the many American industrial securities.

Why are our own American industrialists and financiers so much interested, as Mr. Hoover urges, in the reestablishment of German industry? Why are the Du Ponts, International Telephone, Standard Oil, General Electric, and others so anxious to cooperate with German industry, and to win over the American military government—and indeed the American home Government—to a policy of industrial rehabilitation and prosperity for Germany?

WILL GERMANY BE GIVEN THE OPPORTUNITY TO PREPARE FOR A THIRD WORLD WAR?

Can it be that these great interests have forgotten nothing and learned nothing from the holocaust of three world wars; that their policy still is one of rule or ruin, in opposition to our Government's declared policy of establishing and maintaining world peace?

Are these vast economic aggregations, their absolute powers in the economic sphere limited only by the political restraints of our democratic form of government, determined once more to give the German cartels the opportunity of precipitating another terrible world war from which our civilization can never hope to recover?

And, Mr. Speaker, most important of all, are we so blind to the true interests of the American people that we shall permit that to happen?

I am now inserting the news release of which I have spoken, which names and describes the dangerous Nazis who still remain in positions of power in Germany, and tells what those positions are.

It warns of the dangers to the future of the world and of our own American security if they are allowed to remain in those positions. Mr. Speaker, what are we in the Congress of the United States going to do about this situation?

WHY DO NAZIS REMAIN IN CHARGE?

The new American directive on policy toward Germany and the forthcoming meeting of United States and British representatives in Washington to elaborate a final program for the rebuilding of Germany's economic power brought forth a sharp warning from C. Monteith Gilpin, secretary, the Society for the Prevention of World War III, on the continuation of notorious Nazis and former Hitler supporters in key positions in the German economy today.

Mr. Gilpin stated that these Nazis not only remain in strategic control of German industry but are also part of those elements seeking to preserve Germany's industrial war potential.

"It is they," Mr. Gilpin pointed out, "who are instrumental in the concoction of the myth that the perpetuation of German economic might is the most essential ingredient in any plan for the rehabilitation of Europe.

"It is they who have continually and deliberately defied, mismanaged and sabotaged the Allied program on economic disarmament, hoping that after they have made a mess of the program, the Allies would rush in and underwrite the revival of Germany's industrial war potential on the allegation that Potsdam was no longer workable."

Mr. Gilpin stated that the society has repeatedly asked the Government the following questions:

1. Why do we permit the continuation of these Nazis in key political and economic positions?

2. Why do we permit the Germans to sabotage the production of coal in the Ruhr which is now less than one-half of the prewar level production?

3. Why don't we help in the reconstruction of Europe by seeing to it that Germany's victims receive immediate delivery of the 1,557 plants earmarked for reparations, but of which only 6 complete ones have been transferred as of February 1947?

4. Why do we want to maintain Germany's economic mastery over Europe?

Mr. Gilpin stated that the society remains firmly opposed to any rise in German steel output above the amount agreed to by the Big Four, and to any measures or decisions regarding Germany which would threaten the security of Germany's neighbors and, to warn the American people of the dangers in Germany today, submits to the American public the following partial list of important Germans who are pro-Nazi and Pan-German and are sabotaging the Allied program for the elimination of Germany's war potential:

1. ALFRED HUGENBERG

Alfred Hugenberg was one of the most heavy contributors to the Nazi Party funds. He was a member of the first Hitler cabinet.

Since the defeat of Germany, he has been very active in the German steel cartel and especially active as chairman of the board of the Vereinigte Stahlwerke, the biggest steel combine in Europe and the second largest in the world. On December 4, 1946, when the British authorities were asked why they did not denazify and remove Hugenberg from the Vereinigte Stahlwerke, the British authorities answered: "It takes a vote of the shareholders of the company to remove him as board chairman." Hugenberg has not been removed, and has veen very active in the rehabilitation of the German steel industry in the Ruhr.

2. DR. ERNST POENSGEN

The spokesman for the German heavy industry, Vereinigte Stahlwerke and the coal industry has been for more than 30 years, Ernst Poensgen. He is now 77 years old. He was retired in 1943 under the express orders of Hitler in order to use his services in case of the defeat of Nazi Germany. For his outstanding services to the Nazi cause, he was decorated by Hitler personally with the title of Wehrwirtschaftsfuehrer—the highest decoration given to big Nazi tycoons. Ernst Poensgen founded the International Steel Cartel in 1926. In 1939, Ernst Poensgen, as spokesman for the German heavy industry, negotiated the famous Dusseldorf agreement with the representatives of the British heavy industries, Sir Percy Mills and Sir Andrew

Duncan, dividing the world into two spheres for German-British economic exploitation.

Sir Percy Mills was, until recently, the head of the economic division in the British zone.

Because of Poensgen's intimate tie-ups with British heavy industry, he was reappointed head of the Vereinigte Stahlwerke 5 months ago. Thus, today he is in a position to continue his nefarious work against the interests of peace and in a position to rebuild Germany's war potential. Although he was a member of the Nazi Party, he was never denazified, and now heads the reconstruction of Germany's war potential.

In 1940, before France's downfall, Poensgen was appointed by General of the SS, Otto Steinbrink, to plan the distribution of the French heavy industry among the German steel magnates.

3. HEINRICH DINKELBACH

Heinrich Dinkelbach is a notorious Nazi, and a member of the board of directors of the Vereinigte Stahlwerke and one who has worked in the closest possible association with Ernst Poensgen to build up Germany's war machine. Not only has he not been arrested, but he is now director of the iron and steel industry in the British zone operating from North Cumberland House in Dusseldorf—the house used to be called the Stahlhaus, up to 2 years ago. By virtue of his new position, he succeeded in freeing 27 of the 31 high officials of the Vereinigte Stahlwerke who were previously arrested as notorious Nazis.

4. ROBERT PFERDMENGES

Once known as the richest man in Germany, Pferdmenges has been the head of a very important bank in Cologne and a close collaborator and friend of Baron Schroeder, the midwife of Naziism. Pferdmenges has actively collaborated with von Schroeder and like von Schroeder, is a Nazi. Today, he is a member of the new German Bi-Zonal Economic Council, in spite of his notorious past.

5. HERMAN ABS (DEUTSCHE BANK)

The big commercial banks in Germany headed by the Deutsche Bank are again in operation. These big banks have played a tremendous role in making the Nazi regime what it was. The head of the Deutsche Bank is Herman Abs, who, under the Nazi regime, was more powerful even than Schacht. Two days before the fall of Berlin, Herman Abs was given the facilities to go through the British lines with seven billions of marks cash in order to establish his business in Hamburg, in the British zone. Ever since he has been acting as adviser on economics and finances to the commander of the British zone, Sir Sholto Douglas. In 1946, the Deutsche Bank, with the help of the Dresdner Bank, granted a loan of 125,000,000 Reichsmarks to the Vereinigte Stahlwerke for the purpose of repairing their damaged plants.

6. WILHELM ZANGEN

Wilhelm Zangen was the brains behind the notorious Mannesmann combine which has played a tremendous role in foreign politics and the expansionist plans of Germany for many years.

Wilhelm Zangen has been the chief administrator for the Mannesmann combine since 1933, immediately after Hitler's coming to power. Zangen was a very prominent member of the Nazi high command. Zangen is now working very closely with the British authorities trying to revive the German tube industry and the international tube cartel of Europe.

7. RUDIGER SCHMIDT

Rudiger Schmidt was, and is, the brains behind Harpener Bergbau, one of the most important iron and coal components of the Frederick Flick concern. While Flick is now being tried as a war criminal, Schmidt has been in charge of the Rheinisch-Westphalische Kohlen Syndikat, the biggest coal cartel in Germany.

Nothing has happened to the cartel which controls 75 percent of Germany's hard coal production. Rudiger Schmidt, although a Nazi was placed in charge of the export division of the R. W. K. S. shortly after the occupying powers entered Germany. He has been closely tied up with the international coal cartel and the British coal interests.

8. DR. WOLE WITZLEBEN

Dr. Witzleben has been one of the highest officials of the Siemens Electrical Trust, the biggest in Germany and the most important electrical trust in Europe. The Siemens Co. was instrumental in installing the most efficient gas chambers and electrical devices for the purpose of exterminating the victims in Auschwitz and Buchenwald.

He is a very prominent Nazi and had close contacts with the high Nazi officials. Despite the fact that he was found guilty of the crimes by German denazification courts, the British authorities insisted that he be returned to the company because his services were indispensable. He is now active again, collaborating with Dr. Philip Jessen, the financial and political genius of the company, in coordinating the operations of the Siemens Co. in the four occupied zones of Germany.

9. JOHAN BENKERT

Johan Benkert has been the engineer assisting Witzleben in devising the most efficient instruments to exterminate victims in the concentration camps. He, too, was convicted by the denazification courts, but ordered reinstated to his former post by the Britisn authorities.

10. BRUNO POHLMANN

Bruno Pohlmann has been an engineer working very closely with Benkert and Witzleben. He was convicted by the German courts for the same crimes and ordered reinstated to his former post along with Benkert and Witzleben. All three were also found guilty of having used slave labor and of having committed atrocities against workers in the concentration camps at Buchenwald and Auschwitz.

11. DR. HARALD RASCH

The idea of procuring RFC loans to Germany was elaborated by Harald Rasch who was deputy director of the German bizonal committee up to a few months ago. The same Harald Rasch was, during the war, the administrator of the Mannesmann combine which was the chief looter of occupied Europe in 1940. Not only was he not arrested as a war criminal but was also appointed deputy director of the German Bizonal Economic Committee.

Although Rasch is no longer with the German Economic Committee, his plans for priming Germany industry with billions coming from RFC, and his ideas for rebuilding German heavy industry are beginning to materialize.

12. HELMUTH VITS

Helmuth Vits is the brains behind the Vereinigte Glanzstoff Fabriken, the rayon combine of Germany, and was closely identified with the economic plans elaborated for the Nazis regime. The VGF has several branches in the United States, but these German branches have been cloaked as American and the cloaking was done by Helmuth Vits. Vits is a notorious Nazi but was never denazified and the VGF is very active again—particularly in the British zone and Vits himself is acting as adviser to the British zone for the purpose of rehabilitating the rayon industry.

13. DR. REINHOLD MAIER

Dr. Maier was appointed minister president of Wurttemberg-Baden. In 1933, he was a member in the Reichstag and voted in favor of giving Hitler full powers. When he voted for Hitler, he made the following comment: "It is our hope and desire that the German people under Nazi leadership may bring the struggle to win freedom and new strength to a successful conclusion. We feel ourselves at one with the views expressed by Hitler here today."

When Dr. Maier was asked what he was going to do about the decartelization program he replied: "There is really nothing much to worry about now. Cartels are only effective where there is overproduction. Germany industry is not now overproducing."

14. WILHELM SIMFENDOERFER

Wilhelm Simfendoerfer was a well-known propagandist during the Hitler regime. The Laenderrat of Wurttemberg-Baden approved the appointment of Simfendoerfer as Minister of Culture on the strength of Maier's statement that he was indispensable to the success of administering Wurttemberg-Baden.

15. DR. JOSEPH BAUMGARTNER

Minister of Agriculture of Bavaria—Dr. Baumgartner, in a recent speech made before leaders of the Christian Socialist Union at a secret meeting in Munich, echoed the lies of Hitler and Goebbels. He bluntly boasted that he would sabotage American military government directives. He declared in part, "I am absolutely opposed to the export of additional valuable food into other laender (states) of the American zone or into the British zone. * * * It was simply decided by the bizonal food agency that Bavaria would have to furnish so and so many thousands of tons of fat within such and such a time. I refused, of course. The result was that these gentlemen got behind General Muller (Brig. Gen. Walter J. Muller, USMG of Bavaria) who ordered me to supply the fat. My answer was: 'You can, of course, put me in jail but I will not obey even this order of yours.' * * * But almost the greatest difficulty is in the fact—I hope we are among ourselves—that today almost only third and fourth-rate Americans are here in Germany * * * it can be observed everywhere that the majority of important Americans here consist of Freemasons and Jews."

16. HANS VON SCHLANGE-SCHOENINGEN

Schlange-Schoeningen is a close personal friend of Alfred Hugenberg who has contributed so much to Hitler's coming to power. He hails from East Prussia, was a prominent Junker, a large estate owner and a very prominent man in the Nazi Party in eastern Germany.

He was appointed in charge of agriculture in the British zone by the British commander. It is worthy of note that the deliveries of food in the British zone have been more delinquent than in the other western zones. Von Schlange-Schoeningen is now fighting against Dr. Baumgartner for the top post in the agricultural ministry of the new bizonal committee.

17. GUSTAV KILPER

Gustav Kilper was a very prominent Nazi under Hitler in Wurttemberg-Baden and was made deputy director of the Ministry of Economics in Wurttemberg-Baden at the special insistence of Rheinhold Maier, who claimed that the implementation of the plans elaborated by the Bizonal Committee of Economics would be a failure unless Kilper was made a very high official.

18. JOSEPH BEYERLE

Joseph Beyerle was a prominent member of the SS and had a high court post under the Nazi regime. At the insistence of Maier, Beyerle was made minister of justice of Wurttemberg-Baden.

19. WALTER WIDMANN

Walter Widmann was formerly chairman of the racial prosecution court at Wurttemberg-Baden and enjoyed very high prestige under the Nazi regime. He was appointed in 1946 as director of the provincial court

because of his close association with the Minister President R. Maier.

20. ANTON PFEIFFER

Secretary of State of Bavaria, he voted for the enabling act which gave Hitler his dictatorial powers, and during the war served in Hitler's counterespionage service. He openly admitted, in 1946, that 62 to 80 percent of the verdicts rendered by the denazification courts were erroneous. Yet, when his failures and neglect of duty were reported to American officials, the latter said, "Be careful. He is an old-line reactionary, and a strong Nationalist. If you offend him, he might resign."

21. MINISTER PRESIDENT LAHR

The minister president of the North Rhine Province which comprises most of the coal production of the Ruhr is Dr. Lahr, formerly closely connected with the German steel cartel. Dr. Lahr justified the low production of coal in his province on the ground that the total allocation of steel was only 5,500,000 tons per year. Therefore, he claimed that there was no necessity for Germany to produce coal for exports, since Germany is not going to be the blacksmith of Europe as she was before the war.

Republican Congress Delivers—Eightieth Congress During Its First Session Established Solid Foundation for Prosperity and Happiness in Reversing Ruinous New Deal Trend—United Republican Party Kept Its Pledges

EXTENSION OF REMARKS
OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. HALLECK. Mr. Speaker, the Eightieth Congress has reversed the ruinous New Deal trend and established solid foundations upon which our people may pursue the American way of life and have prosperity, security, peace, and happiness.

The Republican Party has delivered. We have responded to the will of the people. We have demonstrated that ours is a united party, with a sound, forward-looking program in contrast with the divided Democratic Party dominated by quarrelsome, radical masters.

The era of "rubber stamp," spendthrift Congresses has been ended. The people now have a Congress whose record shows that it is doing what the Constitution intends that the legislative branch shall do—think through problems that confront our Nation, and backed by the wisdom of the people, solve those problems.

This is a Congress that considers economy to be a virtue—a Congress well advanced in its comprehensive program for clearing away the debris left by 14 long years of New Deal Democrat misrule, and for buttressing the American way of life.

Back in December 1945 the Republicans of the Senate and House of Representatives joined in issuing a Statement of Principles, Policies, and Objectives. It was the platform on which Republicans sought election to the Eightieth Congress. The Declaration said:

Today's major issue is between radicalism, regimentation, all-powerful bureaucracy, class exploitation, deficit spending, and machine politics, as against our belief in American freedom for the individual under just laws fairly administered for all, preservation of local home rule, efficiency and pay-as-you-go economy in Government, and the protection of the American way of life against either Fascist or Communist trends.

We believe that genuine social and economic progress can be achieved only on these American constitutional principles and it is our purpose to give our citizens this clean-cut choice.

In the election last November, voters throughout the length and breadth of our land sent to Congress Senators and Representatives who were dedicated to those principles, policies, and objectives. The election resulted in a landslide victory for the Republican Party.

President Truman, whose administration had been repudiated by the people, promised to cooperate with the Republican Congress in compliance with the verdict of the people. He has not kept that promise.

Instead, he has given the signals for opposition by bureaucrats and New Deal Democrats in Congress. He has made the tragic mistake of abusing the Presidential veto power in his efforts to thwart the will of the people and an overwhelming majority of Congress.

The issue in last November's election was clear. For nearly 14 years, under the New Deal, we had regimentation, all-powerful bureaucracy, radicalism, machine politics, and vote-buying. Professing to deplore prejudices among our people, the New Dealers did their utmost to set class against class, race against race, and to exploit for political advantage the prejudices that they had promoted in their striving to destroy the American way of life.

For years they had followed the policy of their radical masters to tax and tax, spend and spend. Promising the more abundant life, the New Dealers, by badgering business, by regimenting the people, by confiscating capital, that would otherwise go into productive enterprises and by discouraging investment in new and enlarged businesses, had restricted output and limited job opportunities.

Through their spendthrift policies and maladministration generally, the New Dealers by the time of the 1946 elections had brought our country to the brink of disaster.

And the Truman administration is still doing business at the old stand, fighting every step of the way against cutting the outrageously high cost of government, against tax relief, against sensible labor-management relations, and against other essential action to improve the lot of our people.

For our part, we Republicans believe that America can develop in the future as it has done in the past. By providing for every citizen an opportunity to improve himself, and by encouraging him to do so for the benefit of himself and his children; by making the Government his servant, not his master; by promoting output of things we need and things that make life pleasant in such vast quantities that all can enjoy them at low cost.

We believe in a government that gives essential services, but that does not play a meddlesome part in the life of every citizen or try to control him.

In our declaration of principles we said:

Government can help its people to prosperity by lightening the burdens of debt and taxes, laying down the rules of fair play, and protecting those whose own strength and resources are not sufficient to protect them.

That is the solid road upon which the Republican Congress has been traveling. It is the road upon which America has become the greatest nation on earth. There is no room for communism, fascism, socialism, and new dealism—a combination of all the alien isms—in our American way of life.

COMMUNISTS ARE WEEDED OUT

The years of driving, exposing, and battling by the Republican Party to get rid of disloyal persons in the executive branch of the Government are beginning to bear fruit. They are now being weeded out of the Truman administration under our relentless pressure.

The House of Representatives passed a comprehensive act to purge disloyal persons out of the Truman administration. The Senate will complete action on it during the next session. President Truman belatedly gave lip service to the fact that his administration is shot through with disloyal persons. He could get rid of them if he would cut through the radical master minds of the hodgepodge Democratic Party and order a purge of the Government household.

Such a purge would be welcomed by the American people. That is the kind of purge the American people want, not attempts to purge sincere, patriotic legislators such as the purge of a forthright, anti-New Deal Democrat in Missouri, which has produced one of the most revolting election frauds in the country's history.

The Republican Party is determined to see that the law breakers are brought to justice despite opposition of the administration.

And our investigating committees of Congress are busy in many other directions looking into the almost daily charges of corruption, confusion, and communism in the Truman administration.

We believed that the cost of Government could be cut and the Republican Congress did cut Government expenditures. The Eightieth Congress made the best economy record of any Congress in a quarter of a century. Twice we passed tax-reducing bills only to meet Presidential vetoes.

When the Eightieth Congress convened last January, the Republican Party began at once to give effect to the principles and policies endorsed by the people. Its program now is well advanced. Many specific measures implementing that program already are law. Others are far along in the legislative process and we will complete action on them during the next session of Congress.

The many far-reaching measures enacted by the Republican Congress are having their intended effect. For the first time in many years, the Federal Treasury has a surplus of revenue over outgo; employment has reached an all-time high and there has been a reduction in production-stopping labor-management disputes.

Across the country there is a greater confidence in our future, a feeling of greater freedom from Government meddling and interfering, a greater assurance that the best interests of our people as a whole, not those of any party or group, come first. America is going forward again.

The Eightieth Congress has provided generously for relief and rehabilitation of war-devastated countries, not only because it is the decent thing to do but because our national security is involved. We have kept our obligations to the United Nations, joined the International Refugee Organization, and in other ways have left no doubt we Republicans are alert to the needs of the situation.

Now, let us examine in detail principles, policies, and objectives stated by us Republicans before our victory in last November's elections and see what the Republican Congress during its brief 7 months of existence has done to give them effect.

GOVERNMENT EXPENDITURES

This is what we pledged:

Economy in Government spending must be assured. Extravagant Government spending now advocated by the administration in every field can only lead to ruin. Programs involving expenditure of Federal funds should not be undertaken unless the justification therefor is clearly established.

Bureaucracy, with its thirst for power and self-perpetuation, must be drastically reduced. The number of Government employees must be cut to an efficient minimum.

We have kept that pledge.

President Truman submitted to Congress budget estimates calling for expenditure of $37,500,000,000 during the fiscal year ending June 30, 1948. He recommended in excess of another billion before Congress adjourned. Compare those astronomical figures with the total Government expenditures in prewar years. Expenditures for fiscal year 1933 totaled $5,143,000,000; for 1934 they were $7,100,000,000; and for 1939 fiscal year the Government spent $9,027,000,000. The Republican Congress not only called a halt on the New Deal Democrat trend; we reversed the procession.

The President insisted from start to finish that Congress vote him every dollar that he asked. He used every political weapon at his command. The New Deal propaganda machine worked overtime, manufacturing scare stories and trying to confuse the issue. The President sent a parade of bureaucrats before committees of Congress to argue against every proposed cut. He marshalled every available vote in Congress in favor of his spend-and-spend program.

Democrats generally in Congress fought stubbornly to restore cuts. Almost to a man, and on every occasion, they voted against reductions. They did their best to defeat our economy program.

We knew the budget must be cut. Notwithstanding new demands upon us, such as that for $400,000,000 for aid to Greece and Turkey, we cut the President's 1948 estimates by $2,766,000,000, and that is only part of the story. We rescinded funds that would otherwise have been spent amounting to $442,500,000. We made recoveries for the Treasury that the President did not recommend amounting over all to $911,700,000.

This makes a total cut below the 1948 fiscal year estimates of the President's budget of $4,120,200,000, and that is about as much as the entire cost of Federal Government in 1933, when the New Deal came to power.

In addition, we made cuts that were effective in making savings in the operations of the last fiscal year, amounting to $359,740,568.

Thus, the total savings to the Federal Treasury accomplished by the Republican Congress were $4,479,940,568.

This is a bullet-proof, conservative summary of the economies effected by the Republican Congress during its brief span of life. All the sharpshooting by New Deal Democrats and their communistic fellow travelers in their mourning against slashes in the padded Truman budget cannot tear down this accomplishment of the Republican Party.

ECONOMY DRIVE WILL CONTINUE

The Appropriation Committees of the Congress found the Truman administration's fiscal affairs in a chaotic condition. Money was being tossed here, there, and everywhere in a grand spree on the taxpayers' chest.

There were 1,980,000 persons on the civilian pay roll of the Government on January 1, 1947. Under our reduced appropriations, there will be a reduction of about 300,000 from what it was when the Republican Congress took over last January.

We have been careful in our economy program not to discontinue any necessary function of the Government. We received no cooperation from the Truman administration. The appropriation committees of Congress had to pry information out of unwilling bureaucrats and draw upon our own fund of knowledge as well as that of experts not connected with the Government in order to do the job the people said by their votes could and must be done.

Through scientific handling of appropriation bills we have begun to get the Government down to size and to get men and women whose services are not needed by the Government back to useful civilian employment where they are needed.

One of the first major accomplishments of the Republican Congress was to modernize our archaic legislative machinery through what was known as the Legislative Reorganization Act. Committees were consolidated, duplication lopped off, and procedures established for more efficient lawmaking. This set us back a month in getting our legislative program underway.

We established a bipartisan commission to recommend a similar plan for the executive branch of the Government. This commission consists of 12 members, 4 appointed by the President, 4 by the President pro tempore of the Senate, and 4 appointed by the Speaker of the House of Representatives. The commission is to report within 10 days after the Eighty-first Congress convenes in 1949—that is, after the next Presidential election.

The Eightieth Congress has made the biggest reduction in Presidential budget estimates since the budget system was established in 1923. We will continue our economy program during the next session of Congress and when the people in 1948 elect a Republican President, who will cooperate with a Republican Congress, we will finish the job.

TAXES

This is what our Declaration of Principles and Policies said on taxation:

Our tax burden must be equitably distributed. Taxes must be so imposed as to stimulate creative enterprise, not destroy it, and to afford the individual adequate purchasing power. Tax reforms and taxpaying must be simplified. There must be an incentive for business to expand production and employment for the individual to invest his savings in such expansion.

We kept our pledge to do all in our power to provide the tax relief our people demand and so well deserve. President Truman denied the people that relief through a flagrant abuse of the Presidential veto power.

It was an abuse of the Presidential veto power because the Founding Fathers never intended that this instrument should be used for that purpose. The drafters of our Federal Constitution included the veto power with great reluctance. It was one of the compromises that became necessary. Fresh in the minds of the Founding Fathers was the absolute power of kings at that time to veto actions of legislative bodies.

However, to effect our Federal system of checks and balances it was decided to include the veto instrument. Its primary purpose is to enable the Chief Executive to act on behalf of the people should a Congress during a period of high feeling over a passing issue trample the rights of the minority and enact measures encroaching upon the Executive branch of the Government.

None of these conditions prevailed during consideration of the tax-relief bills by the Eightieth Congress. There were public hearings and the issues were threshed out openly. Finally, the Congress by huge majorities passed its tax-reducing bills.

The Federal Constitution is specific in assigning the power to raise revenue to the Congress. It is a common saying that "Congress controls the purse strings." Only one President before the present incumbent had the temerity to veto a revenue bill. He was the late President Roosevelt, and the Democratic Congress indignantly enacted the measure over his veto.

Some of the Democrats in the Eightieth Congress who so meekly voted to sustain President Truman's vetoes of our Republican tax-relief bills, were vociferous in their denunciation of the Roosevelt veto. They called it tyrannical, a shameful invasion of the prerogative of

Congress to decide how and when tax changes shall be made.

The Roosevelt veto was overridden, but President Truman managed to muster a minority large enough in the Senate to force sustaining of his veto of our second tax-relief bill. The House of Representatives previously by more than a two-thirds majority had voted to override.

Twice we passed tax-relief bills. The President's veto of the first bill was sustained by the House of Representatives by a mere two-vote margin and thus killed the bill and obviated a vote by the Senate.

So eager were we Republicans to obtain tax relief for the people that we modified our bill in an effort to win approval by Mr. Truman. In his first veto message he said that it was the wrong time for tax reduction. The bill had made the effective date July 1, 1947. Our second bill was identical with the first bill, excepting one change—a change in the effective date to January 1, 1948. Again Mr. Truman denied the people tax relief.

Again he said that this was the wrong time to lighten the people's tax burden. It was bad enough for him to take that attitude, but still more serious are the implications in his setting himself against the will of the people and the great majority of the Congress in a field of legislation reserved to the Congress.

It will be very serious, indeed, for our country if we permit one man—though he temporarily holds the office of President—to measure his judgment against the collective wisdom of the people generally and of the Congress in expressing that will. Congress must hold onto its taxing power if our republican form of Government is not to be grievously impaired.

TAX BILL FAVORS "LITTLE FELLOW"

President Truman and his small band of opponents of the Republican tax-reducing bills grossly misrepresented the provisions of the bills. They tried to smoke screen their weak position by saying the bills favored the more fortunate in worldly goods over the less fortunate.

The paramount fact is that our Republican tax-reducing bills gave the greatest percentage of relief to persons in the low-income brackets. The bills provided a 30-percent reduction of the tax for individuals with surtax net income of $1,000 or less; a varying 30 percent to 20 percent on net income between $1,000 and $1,400; 20 percent on net income between $1,400 and $302,000, and a reduction of 10.5 percent on net income in excess of $302,000.

And here are some more facts that no amount of misrepresentation can obliterate: of the entire $4,081,000,000 of annual tax relief provided in the bills 63 percent was for persons receiving income of less than $5,000 a year. That 63 percent was divided 44.1 percent for those receiving less than $3,000 and 18.9 percent for those receiving between $3,000 and $5,000.

A greater percentage of reduction was provided by the Republican Congress for persons in the lowest-income group, because they have suffered most from the rising cost of living.

In addition to the fact that 2 years after the conclusion of hostilities the people are obviously entitled to relief from high wartime taxes, we Republicans are anxious to reduce taxes in order to reduce the cost of living.

The cost of government represented by taxes is one of the largest items in the cost of living. The American people now are taxed about one-third of the entire national income for the support of Federal, State, and local governments, and about 80 percent of that cost is represented by the Federal Government.

We are paying more to be governed or misgoverned than we pay for food. The total of all taxes is now about $50,000,000,000 a year, while in 1946 the total food bill for the Nation was between $36,000,000,000 and $39,000,000,000.

Taxes enter into the cost of everything a consumer buys, whether it is an automobile or a haircut.

We did succeed in preventing an increase in the present social-security payroll tax from 1 percent to 2.5 percent on January 1, 1948. We froze the 1-percent levy, which applies equally on employers, until 1950. The taxes saved for the people as a result of that action will amount to $2,000,000,000 annually, divided equally between employees and employers.

TAX-CUT FIGHT TO CONTINUE

There are other vital matters to consider in connection with the Republican Party's battle to lighten the tax burden. Through the years the New Deal Congresses used the taxing power to help make over America—to destroy small businesses and foster monopolies, and thus edge our country into national socialism.

Had our bill become law, it would have stimulated investing in enterprises that produce goods we need. It would have provided jobs in those enterprises, and it would have increased the wage earner's purchasing power. We could have cut taxes and still have reduced the national debt substantially.

The Republican Party will continue to fight for lightening of the tax burden, which was made heavier by almost annual increases in levies during the tragic New Deal era.

If taxes are not too high now they were not high enough during the war when billions of dollars of borrowed money was spent. The evidence is abundant that taxes now are much too high and the people are right in saying so.

We are going to do all we can to overhaul the entire tax structure, with a view to equalizing the burden and eliminating ambiguous provisions that lead only to contests in the courts.

Continuation of wartime tax rates in peacetime is intolerable.

LABOR-MANAGEMENT RELATIONS

We Republicans, in our preelection Statement of Principles, Policies, and Objectives, said:

We reaffirm our belief in the right of labor to organize and bargain collectively with employers as one of the cornerstones of competitive enterprise. The processes of such bargaining must be protected and strengthened if we are to have real jobs and prosperity for all.

For that purpose we believe that governmental decisions must not be substituted for free agreement, but governmental machinery to promote peaceful settlement of disputes should be improved.

Demands of either side must be kept within the bounds of reason and fairness and both sides must recognize the rights of the general public.

The desired end of bargaining between management and men is a contract. Once that contract is made, it should and must be equally binding upon both parties as to agreements made.

Free collective bargaining and contracts resulting therefrom must not be nullified or destroyed by resort on either side to willful violence or unlawful destruction of property.

Those principles and policies are embodied in the Labor-Management Act passed by the Eightieth Congress. The people said they were sound when they elected the Republican Party to control the present Congress. We have enacted them into law in response to the will of the people.

For years, Congress had studied defects in our laws dealing with labor-management relations. In 1940 after searching investigation, the House of Representatives by a vote of more than 2 to 1 passed a bill amending in many important ways the National Labor Relations (Wagner) Act. New Dealers on the Senate Committee on Education and Labor kept that bill from coming to a vote.

Last year, Congress passed the Case bill, but the President vetoed that.

Again, this year, the Congress reviewed the problems arising out of our labor laws and the way Government agencies administer them. It passed the so-called Taft-Hartley Act.

Yielding to pressure from politicians, left-wingers, and labor barons who resisted every proposed change, however minor, and who made no constructive suggestions, the President vetoed the act.

Congress passed the act over the President's veto. Nearly four-fifths of all the Members of Congress joined in voting to override the veto, whereas only a two-thirds majority in both branches of Congress was necessary to enact the measure, despite Mr. Truman's objection. In the final vote on the bill a majority of the participating Democratic Members of Congress joined the wellnigh unanimous Republican membership in support of the measure.

The House of Representatives overrode the President's veto, 331 to 83, only 1 vote short of 4 to 1. The Senate vote was 68 to 25, or 6 more than a two-thirds majority of the 93 who voted.

Voting in the House of Representatives to override the veto were 225 Republicans and 106 Democrats. Voting to sustain the veto were only 11 Republicans and 71 Democrats.

In the Senate the division by parties was: Republicans for overriding the veto, 48; Democrats, 20. In favor of sustaining the veto were 3 Republicans and 22 Democrats.

Those who voted for it included members of unions, labor leaders, longstanding friends of labor. They and all the others who voted for it did so because the Taft-Hartley Act preserves all the rights that the Wagner Act gave them,

added to these rights and assures to employees in exercising their rights greater protection than they ever had before.

Unable by quoting the act to prove it to be unfair, those who oppose the act used extreme, extravagant, and irresponsible epithets in attacking it, and tortured and distorted the language of the act in an effort to make it seem to say things that it does not say.

The President adopted these epithets and distortions in vetoing the act. Now, the truth is catching up with these misrepresentations, and workers are learning that the law is for their benefit. Far from purging Congressmen who voted for the act, it seems probable that, when they learn the full truth about the act, workers will purge the labor leaders who, by opposing it, sought to deprive them of benefits it provides.

WORKERS' RIGHTS DEFINED

In the Appendix of the CONGRESSIONAL RECORD—page A3345—I analyzed the provisions of the new labor law in detail. I shall refer here only to its more important clauses.

It preserves in the same language that appears in the Wagner Act, the rights of workers to organize and to bargain collectively, and just as the old act did, it forbids employers to interfere with the employees, or to threaten or coerce them when they exercise these rights.

It forbids unions to beat up workers, or to threaten or coerce workers to force them into a union, or force them to choose one union when they wish to choose another.

It guarantees free speech to both employers and unions, allowing them to talk to workers as long as they do not threaten workers or try to bribe them to join or not to join a union.

It forbids employers and unions, by agreement between themselves, to force workers to join the union and to pay dues to it unless the majority of the workers, by secret ballot, have voted in favor of the agreement, and even then it forbids depriving a man of his job by denying union membership to him as long as he is willing to pay initiation fees and dues.

It forbids employers to check off union dues unless the worker has voluntarily authorized the employer to do so.

When employers and unions establish funds for the welfare of workers and their families, it requires them to do so under arrangements that will make certain that the money will be used for these purposes and not for other purposes of the union leaders.

It requires unions and employers, when labor contracts come to an end, to negotiate for 60 days before engaging in a strike or lock-out.

It forbids unions, by jurisdictional strikes and boycotts, to try to get control over employees who have not chosen the union as their bargaining agent, or who have chosen another union as their bargaining agent.

It requires unions, in order to be recognized as labor organizations under the Wagner Act, to tell their members how much money they take in, where they get it and what they spend it for, and to disclose what they pay their officers, how much they charge for dues, the grounds on which they suspend or expel members, and other matters that the members are entitled to know.

It exempts foremen and other supervisors from the provisions of the Wagner Act, and requires the Board to regard them as employers, not as employees.

It forbids the Labor Board, which administers the Wagner Act, to compel skilled workers to bargain through an industrial union when they wish to bargain through a craft union.

It requires unions, in order to be recognized as labor organizations under the Wagner Act, to file affidavits of their officers saying the officers are not Communists or fellow travelers.

It forbids corporations to use stockholders' money for political purposes and forbids unions to use members' money for political purposes.

It makes unions subject to suits for damages, the same as corporations and other organizations, when they break their contracts or engage in unlawful activities.

It enables the President again to delay for a time strikes that imperil the public health or safety, as he did in the great coal strike early this year.

It makes the Conciliation Service an independent agency, directs it to try to prevent strikes—it cannot forbid strikes—and authorizes it to take a secret ballot of employees before a strike if the union is willing.

It requires unions, as well as employers, to bargain in good faith when employees choose the union as their bargaining agent.

It requires the Labor Board to use fair procedures and to render fair decisions, whether the cases involve charges against employers or charges against unions.

It sets up a joint committee of Congress to study labor-management relations. If defects in the law appear we will change the law. We will not stubbornly resist change as the New Dealers did for so long.

Now these are not unfair provisions. They are not drastic, oppressive, or punitive. By their campaign of vilifying and abusing the new law, politicians and labor leaders who wish to control the workingman, and to use him for their own selfish purposes, have persuaded some workers that the new law is bad.

But the fact remains that public opinion polls, both before and after Congress passed the act, show that not only the public generally but also workers and even union members themselves overwhelmingly approve of the principal clauses of the act.

The law is a good law. The law will not prevent all strikes, but if maladministration does not sabotage it, it will bring a greater measure of peace to the industrial scene than we have known for many years.

NATIONAL DEFENSE

The Republican Party declared:

We stand for a well-trained and fully equipped Army, Navy, and Air Force adequate to meet any emergency under future conditions of warfare. It must be supported by the most scientific research, a strong industrial system, and adequate reserves of trained men with the best weapons and equipment.

The Eightieth Congress has kept that pledge.

National defense was one of the major problems inherited by the new Congress. The armed services were in the throes of transition from the wartime basis to a peacetime establishment. There was much confusion in plans and purposes, no coordinated, effective program upon which all hands were agreed. That was not an unusual situation in a New Deal-Democrat administration.

Democratic Congresses for years had talked, just talked, about unifying the armed services in the interests of efficient, economical, and effective national defense. But the Republican Congress acted.

We passed the so-called Army-Navy unification law which sets the pattern for a tightly coordinated, hard-hitting fighting force on land, sea, and in the air should our Nation's security be threatened by attack.

Under this new law we have a Secretary of Defense and secretaries for coequal Army, Navy, and Air Force departments. It is the duty of the Secretary of Defense to integrate the functions of the branches. Over all is a National Security Council headed by the President.

We appropriated $5,482,529,633 for the military establishment and $3,268,766,100 for the Navy. Special emphasis was placed upon research in development of more effective weapons and better equipment. The Air Force, now given the recognition of a co-equal arm of defense, was given ample funds for development of better planes and to have enough in the event of emergency.

We passed an act to overhaul the Army promotion system from one of automatic promotion by seniority to one of selection by merit. The act also codifies and improves the Navy promotion system.

This act is designed to increase career opportunities so as to attract capable men to the services. It opens opportunities for commissions to enlisted men, permits accelerated promotion of especially qualified officers, and puts limitations on the number of high-ranking officers.

We passed many comparatively minor measures for strengthening our national defense. Among them was an act to establish a United States naval postgraduate school at Monterey, Calif. Another act authorizes the War and Navy Departments to pay salaries up to $15,000 a year for 45 positions requiring the services of the most highly qualified scientists available.

We liberalized enlistment terms to attract more volunteers, established a permanent Army and Navy Nurse Corps as part of the regular services and a Women's Medical Specialists Corps in the Army.

We authorized armed forces personnel to wear decorations given to them by friendly or neutral foreign governments, and we equalized the rights to leave of absence for Federal employees who are members of the armed forces Reserve Corps or National Guard.

The Eightieth Congress also authorized the War and Navy departments to pay expenses of personnel of the services in the Olympic games.

WAR VETERANS

In our Republican Statement of Principles, Policies, and Objectives, we made this pledge:

A grateful nation demands that those who fought in its defense, their widows and orphans, must never be forgotten. The best medical care and rehabilitation, education, and training for all desiring it, and efficient assistance in securing homes, farms, businesses, and real jobs must be provided for the veteran. Nothing in the Federal program should lessen the responsibility of each local community to provide for the return to civilian life of its gallant sons and daughters in a spirit of understanding, helpfulness, and dignity.

We kept that pledge.

The Republican Congress passed a bill to provide for the cashing of the terminal-leave bonds held by the veterans. These bonds are a part of our outstanding national debt. The Congress passed the bill notwithstanding the opposition of the Treasury Department. The Department contended that payment of these bonds would be inflationary.

Why is the retirement of veterans' bonds any more inflationary than the retirement of any other Government bonds?

When the President vetoed the tax-reduction bills, he advocated payment on the national debt, on the ground that a tax reduction would be inflationary. According to the President's reasoning, when the people spend their own money as they deem best it is inflationary, but it is not inflationary for the Government to take their money and spend it.

And when the Republican Congress proposed to pay the national debt bonds held by the veterans, the President contended that it would be inflationary. Knowing that the Congress would summarily override any veto of the bill, the President signed it.

The last Congress passed a law to give enlisted men of World War II bonds as their terminal-leave pay. The Republican Members of Congress contended at that time that it was unfair to require an enlisted man to wait 5 years to receive his pay for terminal leave, while officers were paid in cash. When we Republicans obtained a majority in Congress, we promptly corrected this injustice.

Some 9,000,000 of these bonds have been issued, and the cost of those which have been issued is now approximately $1,800,000,000. The Congress has extended for a year the time for applying for the bonds or cash, and it is estimated that around 12,000,000 veterans will receive this pay at a cost of $2,500,000,000.

Not only does the bill correct a great injustice to the enlisted men, but it also provides immediate assistance to our veterans in their adjustment to civilian life. Some can use the money for school. Some can use it in starting a small business. Some may find it helpful in paying on their home. It is estimated that the average bond issued is worth $240, which the veteran may continue to hold or cash as he sees fit.

The Republican Congress is keeping its pledge to the veterans. The Congress appropriated $6,964,457,080 for the Veterans' Administration for the fiscal year 1948. It is the largest single item in the Federal budget. We are determined that our gallant sons and daughters have the maximum possible assistance to establish themselves in a free country.

In his mesage to Congress on January 6, 1947, the President stated that "except for minor adjustments, I believe our program of benefits for the veterans is now complete," and the Director of Veterans' Administration has filed reports against scores of measures introduced into Congress affecting veterans. In these reports the Director has stated that the proposed legislation is not in accord with the President's program.

CONGRESS RESPONDS TO VETERANS' NEEDS

But notwithstanding the position taken by President Truman, as expressed in his message and as represented by the Director of the Veterans' Administration in his reports on veterans' bills, the Republican Congress has passed many measures affecting veterans and their dependents. They include:

H. R. 3961. Increasing the rates of pension payable to Spanish-American and Civil War veterans.

H. R. 1353. To repeal time limit for reinstatement of national service life insurance.

H. R. 1327. To provide for renewal of 5-year level premium term insurance for World War I veterans.

H. R. 3739. Providing for Veterans' Administration facility at Clarksburg, W. Va.

H. R. 1363. Relief for veterans who entered into bona fide marriages technically invalid.

H. R. 2780. Emergency veterans' housing ($35,500,000).

Senate Joint Resolution 115. Providing for continuation of offices of Veterans' Administration in the Philippines.

H. R. 2368. Increasing the revolving fund from $1,500,000 to $3,000,000 for the purpose of making loans to veterans of World War II undertaking vocational training.

H. R. 3398. Extending the time for bringing alien fiancées to the United States.

H. R. 3203. Provides priorities for veterans and families in connection with housing material and rentals.

H. R. 4031. Provides for automobiles for amputees.

H. R. 3149. Expedites admission to the United States of alien spouses and minor children of veterans.

H. R. 2314. Expedites lump-sum payments of Naval Aviation Cadets Act to survivors of deceased officers.

H. R. 4017. Cash payment of terminal leave bonds.

H. R. 479. Provides for refund of income taxes paid for year in which servicemen died while in the service.

S. 1494. To amend section 14 of the Veterans' Preference Act.

H. R. 1544. Provide Gold Star lapel buttons to widows, parents, and next of kin of veterans who lost their lives.

H. R. 3308. Increase minimum monthly allowance for subsistence in cases of vocational rehabilitation for disabled veterans.

H. R. 3394. To provide for return of World War II dead.

H. R. 3448. Amends Federal Home Loan Bank Act to permit banks to accept 25-year mortgages which is the maturity period of many veteran home loans.

S. 272. Establishes certain national cemeteries.

S. 1180. Issuance of Gold Star Mothers commemorative stamps.

H. R. 603. Providing homestead rights for veterans.

H. R. 3501. Amends Armed Forces Leave Act.

H. R. 2181. Amending veterans regulations pertaining to institutional or farm training.

The foregoing meaures were sent to the White House. There are, in addition, numerous other bills that will be considered at the next session. They are in various legislative stages. Some have passed the House and await consideration in the Senate. Others have passed the Senate and await consideration in the House.

The Republican Congress has recognized, and will continue to recognize, the country's obligation to those who served in defense of the American way of life. Our first obligation is, of course, to the dependents of those who made the supreme sacrifice and to those who are disabled. We are keeping that solemn obligation.

Nor shall we forget the gallant sons and daughters who served but were fortunate not to have to bear the physical and mental scars of battle. These young men and women must be assisted in establishing a place for themselves in civilian life. They want the opportunity to make their contribution to wholesome American progress. They want the opportunity to a job with a future, to own their own home, and to raise and educate their family. These vigorous, ambitious young men and women have no desire to become wards of the Government. They do not ask for charity. They ask for opportunity. And the Republican Congress has been following a program to that end.

FOREIGN AFFAIRS

On foreign affairs this is what our Republican Declaration, in part, said:

We support the United Nations organization for international peace. * * * We will engage in essential international relief as a humanitarian obligation and to prevent chaos through misery. * * *

We will seek to find common policies with the other great powers. But we reject great-power domination of the world and the thesis that world peace requires us to endorse alien doctrines or to abandon efforts to seek justice for the weaker peoples of the world. * * *

We consider that the maintenance of a strong, solvent, free America is the basis of our greatest contribution to world order.

Actions of the Republican Congress have conformed to those principles. We have cooperated with the executive branch of our Government in every worth-while undertaking affecting the foreign relations of the United States.

We have not gone along blindly on proposals by the administration. In accordance with our responsibility as the independent legislative branch of the Government, we have considered foreign policy. We shall continue that course.

The Federal Constitution charges the President with the duty to negotiate treaties. They are subject to the advice and consent of the Senate.

Foreign affairs problems are now turning to economic and financial matters. Since the House of Representatives, under the Constitution, has the prerogative of originating all appropriation bills and tariff matters, the House

of Representatives, heretofore assigned a secondary role on foreign affairs, must now be considered a full-fledged partner.

The House of Representatives, in recognition of its responsibility, has committees abroad studying the needs of other countries for United States aid. Committees also are studying the maximum ability of the United States to grant this aid.

The Republican Party, being in control of the Congress, is fully cognizant of its responsibilities to the people on foreign affairs. Peoples of the world should know that the United States foreign policy is defined jointly by our executive and legislative branches of government.

We Republicans are mindful of the fact that our country must be prudently liberal in its help for other countries to recover from the war. Our people know that they are contributing directly to foreign aid, because prices of food, machinery, building materials, and countless other items have gone up in part due to shipments abroad.

In addition to granting loans for foreign countries, the Eightieth Congress has been generous in appropriations for relief to needy peoples abroad.

In one bill we appropriated $1,332,000,000 divided as follows: for Greece and Turkey, $400,000,000; for relief in areas occupied by the United States, $600,000,000, and for relief generally in foreign countries, $332,000,000.

We passed a measure making the United States a member of the International Refugee Organization, with $73,325,000 to carry on. This organization is taking care of displaced persons in Europe.

The Eightieth Congress authorized the President to accept the trusteeship on behalf of the United States over former Japanese mandated islands in the Pacific. They include the Marshalls, Carolines, and Marianas which our gallant troops captured during the war.

We provided the necessary funds to comply with our responsibility as a member of the United Nations.

We authorized the President to enter into an agreement with the United Nations for establishment of a permanent United Nations headquarters in the United States.

Among the other measures on foreign affairs passed by the Eightieth Congress was one granting a Congressional charter of incorporation to the Institute of Inter-American Affairs, with which is combined the Inter-American Educational Foundation, Inc., under supervision of the Secretary of State.

The chartered organization will cooperate with Latin-American Republics in programs of health, sanitation, agriculture, education, and other efforts to help our neighbors help themselves.

The Senate ratified treaties of peace with Italy, Rumania, Hungary, and Bulgaria.

WARTIME CONTROLS

This is what we pledged:

Wartime limitations, restrictions, and controls must be removed. The instant a right or liberty can be returned to the people, it shall be returned. Neither the war nor any other excuse shall be justification for fastening regimentation upon the American people.

We kept that pledge.

The Republican Congress has reversed the trend toward a planned economy, where the Government determines what shall be produced and in what amounts, what the people can buy and when they can buy it. The Congress has enacted legislation to remove Government controls and to accelerate an orderly transition from a wartime-controlled economy to a peacetime free economy.

The Congress has passed a bill (H. J. Res. 222-S. J. Res. 148) to terminate consumer credit controls. Mass consumption goes hand in hand with mass production and consumer credit is essential to mass consumption. American industry has an enormous productive capacity. Both consumer credit and producer credit are essential to a sustained prosperity.

The regulation of installment credit has weighed most heavily on persons of limited income and in many cases undoubtedly excluded them from purchasing essential items, such as refrigerators, stoves, and washing machines, needed to furnish their homes. It has, in effect, given to the man of financial means priority rights to buy whatever he wants and whenever he is willing to pay the price by denying to the individual of limited sources the right to use his credit on the best terms he can secure for the purpose of buying these necessities.

The Second War Powers Act of 1942 vested broad authority in the Executive in the control of the national economy in the interest of the prosecution of the war. Notwithstanding that the war was over, the Congress found that those specific powers continued to exist. Through its Committees on the Judiciary, the Congress carefully examined each and every control, and the Congress has passed two decontrol bills (H. R. 1983 and H. R. 3647) eliminating some products from control entirely and abbreviating the control over certain of the others where essential to implement our foreign policy or expand the production abroad to materials critically needed in the United States.

The Congress has also passed a joint resolution—Senate Joint Resolution 123—immediately repealing 57 wartime statutes, fixing a termination date for 12 others, and terminating the operation of 102 various statutory provisions of permanent legislation.

CONGRESS TACKLES HOUSING PROBLEM

Bureaucratic controls and red tape have been an important factor in the acute housing shortage. When the Emergency Housing Act was under consideration in 1946, the administration claimed that this program would mean the construction of 1,200,000 units in 1946 and 1,500,000 units in 1947.

For the year 1946, however, only around 435,800 new permanent units were completed in buildings of conventional construction and prefabricated construction, and 45,000 units were added through conversions in existing structures. The administration's housing program proved to be a complete failure. Bureaucrats cannot build houses. The only way houses can be built in the needed number is by free enterprise.

The Republican Congress passed a bill—H. R. 3203—which the President reluctantly approved on June 30, 1947. It ended the authority for the remaining controls on the production of building materials and, with one exception, did away with the authority for imposing any controls on the use of building materials. This one exception relates to the construction of buildings for amusement or recreational purposes.

The Truman administration's bungling approach to the housing situation was to create overlapping housing agencies with a fanfare of trumpets each time one was established. The Eightieth Congress authorized the President to consolidate the scattered Federal housing agencies into one housing administration.

New Dealers were loath to release their withering grip on the building industry. We hold that mass production of houses and other buildings cannot be obtained by making the building industry an island of Government regimentation in an otherwise comparatively free economy. One man's price is another's man's cost.

The act of Congress extending rent control to March 1, 1948, with elimination of remaining controls on building materials and authority for increases in rent up to 15 percent when agreed to by property owners and tenants, was designed as a transition measure—to bridge the gap until the newly-released building industry gets fully under way and shows what American initiative can do when given a chance.

Since the enactment of this legislation there has been a marked increase in the number of building permits issued. According to a Department of Commerce report, new construction in July was almost 9 percent over that of June. The July value was estimated at $1,139,000,000 against $1,059,000,000 for June and $982,000,000 for July of last year, when the administration controlled building materials.

Recognizing that the administration has failed miserably in the field of housing, the Republican Congress is proceeding to put into effect a program which will completely solve the housing problem. Two special committees are now at work on it. We have taken the initial steps by the removal of the bureaucratic restrictions and controls.

With the elimination of the numerous Government restrictions and controls on our economy, American production is now moving forward and the people will have real jobs at good wages. They will be able to purchase the things they need and want at prices they can afford. They will enjoy the highest standard of living in all history. That is our objective. Free men will attain that objective.

AGRICULTURE, RECLAMATION, FLOOD CONTROL

In our Republican Declaration of Principles we said:

We have pledged stability of farm prices during the reconversion and readjustment periods. We will carry out those pledges. We will support sound, permanent proposals

to give farmers expanding markets and their fair share of the national income. We reaffirm our long-standing support of soil and water conservation. We shall support measures designed to protect better rural living.

Those pledges the Republican Congress has kept.

The program of the Republican Party to cushion the farmers against the postwar uncertainties and to strengthen their position for the long pull has been well advanced by the Eightieth Congress.

In many ways this Congress has acted to bolster the farmer's economy and like other segments of our population he is benefiting from our over-all, national program. Sweeping studies of the farmer's place in the postwar picture are under way. We shall round out our program on behalf of the farmers during the next session of Congress.

The Department of Agriculture Supply Act appropriates $613,046,826 for a broad field of activities. Major items are:

Soil conservation operations, $38,000,000; rural electrification, $5,000,000, plus a loan authorization of $225,000,000; Federal Crop Insurance Corporation, $15,000,000; Production and Marketing Administration, $265,000,000; Farmers Home Administration, $97,000,000; national school lunches, $65,000,000; research and marketing, $9,000,000; Bureau of Agricultural Economics, $4,375,400; Extension Service, $22,832,950; and national forest protection, $24,014,891.

We continued the Federal crop insurance program on a limited and experimental basis for wheat, cotton, corn, flax, and tobacco. The act clarifies the purpose of the program as a businesslike insurance program rather than a form of farm relief or subsidy, by declaring a policy "to promote the national welfare by improving the economic stability of agriculture through a sound system of crop insurance and providing the means for the research and experience in devising and establishing such insurance."

We amended the Agricultural Adjustment Act provisions on marketing agreements and orders so as to provide more flexibility in the financing and administration of marketing agreements and orders, and to permit a continuity of operation not previously possible. The new legislation is stop-gap in nature pending completion of hearings on a long-range agricultural program.

The Eightieth Congress continued until December 31, 1948, the Commodity Credit Corporation's price-support program for wool, and authorized the CCC to market its existing stock pile of wool below parity prices.

We extended for 5 years the Sugar Act of 1937, which was to terminate December 31, 1947. The extension act authorizes establishment of production quotas for the domestic sugar industry and import quotas for off-shore countries such as Cuba and Puerto Rico. The primary purpose of the act is to stabilize the sugar industry while assuring an adequate supply of sugar for consumers at a reasonable price.

In further compliance with our pledges to the farmers and others, the Republican Congress appropriated $116,718,700 for river and harbor improvements; $288,072,825 for flood control, and $56,400,000 specifically for Mississippi River flood control. This Congress fully appreciates its responsibility to protect life and property against flood waters. We acted swiftly in supplying relief funds and materials during the Midwest floods this year.

For the varied activities of the far-flung Department of the Interior during the present fiscal year the Eightieth Congress appropriated $194,587,850. Major items are:

Western reclamation projects, in addition to available funds of $117,877,501 appropriated in previous years, $104,000,000; Bonneville Power Administration, $8,596,400, plus contract authorization of $4,935,500. Included in the general reclamation fund was $5,180,000 for the Hoover Dam project.

THE PRESIDENCY

Two measures fundamentally affecting the office of the President of the United States were passed by the Eightieth Congress—the so-called Presidential Succession Act and two-term Constitutional amendment.

The Presidential Succession Act places the Speaker of the House of Representatives next to the Vice President in the line of succession, should the President, unfortunately, be unable to complete his term. Whenever there is no Vice President at time of vacancy in the Presidency, the Speaker of the House of Representatives becomes President for the remainder of the unexpired term.

Next in line of succession to the Speaker is the Secretary of State and Cabinet members in the order of the creation of their respective departments.

The proposed Constitutional amendment now before State legislatures for ratification provides that no person shall be elected President more than twice, and that no person who has held the office of President, or acted as President for more than 2 years of a term for which another person was elected President, shall be elected more than once.

DOMESTIC AFFAIRS

The sound, forward-looking pledge of the Republican Party to buttress our national economy by enacting measures to supply the needs of the various productive segments of the Nation has been kept.

In giving effect to these pledges the Eightieth Congress enacted hundreds of measures. They included the following:

National Science Foundation: The measure provided for establishment of a 24-member National Science Foundation, under a director appointed by the Foundation, to encourage and coordinate scientific research and education by grants, loans, scholarships, and other forms of assistance to individuals and organizations. Within the Foundation were to be divisions including national defense, mathematics, physics, and engineering. President Truman vetoed that meritorious legislation after Congress adjourned.

Safety codes in coal mines: Establishes a code of safety standards in coal mines, adopting the Federal Mine Safety Code contained in an agreement between the Secretary of the Interior and the United Mine Workers of America. This legislation is an interim measure pending fuller consideration by Congress of details.

Mineral Leasing Act for acquired land: Extends mineral leasing laws, now applicable to public-domain lands, to all lands, with certain exceptions, acquired by the Federal Government; centralizes in the Department of the Interior the function of stimulating the exploration of new petroleum reserves and of promoting the development of oil and gas on acquired lands.

To stimulate production of domestic mines: Extends for 2 years, until June 30, 1949, premium-price payments on strategic metals and minerals—copper, zinc, and lead, with manganese to be added to the program—and authorizes use of $70,000,000 of Reconstruction Finance Corporation funds to make the payments. President Truman vetoed that act after Congress adjourned.

Interstate compact to conserve oil and gas: Grants consent for a 4-year extension of an interstate compact which has been in force 12 years. The compact has been ratified by 16 oil-producing States. It is designed to conserve oil and gas resources and maintain stability in these industries.

Pacific fishery resources: Authorizes a program of investigation and research to develop fishery resources and promote fishing industries in Hawaii and Pacific Islands acquired during the war and now under United States trusteeships. This program is designed to improve the welfare of native inhabitants and also develop resources of areas vital to the security of the United States.

Coast and Geodetic Survey: Clarifies and completely organizes the laws and practices relating to the functions and duties of the Coast and Geodetic Survey, a bureau of the Department of Commerce. Some of these laws were archaic and ambiguous. The new law adds authority to collect and disseminate geomagnetic data of vital importance to sea and air naviation—information the War and Navy Departments want the Survey to supply.

Coast Guard aviation stations: Authorizes an increase in the number of aviation stations which may be operated by the Coast Guard, thereby permitting greater efficiency in air-sea rescue work.

Surplus airports and airport facilities: Permits transfer or sale of surplus airports and facilities by the Federal Government to States and local governments in such manner as will foster development of civilian aviation and preserve for national defense purposes a strong, efficient and properly maintained nationwide system of public airports.

Surplus property for flood damage relief: Provides methods for transfer of surplus federally owned surplus property to State and local governments by gift or sale for alleviation of damage and distress caused by floods or other catastrophies. This property includes such durables as machinery, water and sewer pipes, and such articles as medicines, blankets, clothing, and bedding.

Small business representation: The Senate and House by adoption of a concurrent resolution called upon all Federal Government agencies to give fair representation to small businessmen on Government policy-making boards.

Portal-to-portal pay suits: This legislation, initiated by Congress and reluctantly signed by President Truman, smashed the so-called portal-to-portal back pay suits racket involving $6,000,000,000 in suits that threatened to bankrupt many companies and throw men and women out of jobs.

The Eightieth Congress—A Report to the Speaker and My Constituents

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. MILLER of Nebraska. Mr. Speaker, as the first session of the Eightieth Congress draws to a close, it is well that we consider its accomplishments and relate them to the welfare of our country and to the several districts we represent. While Congress legislates for the whole country the laws it passes do not have the same application in all districts. I, therefore, feel that each one of us should make a report to the people we represent. In so doing we not only inform our own constituents but we make it possible for all the Members of this House to understand the viewpoint of the several parts of our great Nation.

The Eightieth Congress convened with certain well-defined instructions from the people who elected its Members. They ended the control of that group which had for 14 years followed a course of bringing the lives and activities of the people more and more under the direction and control of the Government in Washington. This change of leadership and the reorganization of the machinery of Congress set the pattern for this session.

Hardly had the reorganization of the committees been accomplished and before they had had time to begin the consideration of the bills referred to them for study, the leaders of the minority, well supported by newspaper and radio commentators, started to belabor the majority for not passing legislation. Of course, they cannot be greatly blamed for they had become used to a regime in which Congress, with a few notable exceptions, had been relegated to a minor role whose main purpose had been to pass legislation drawn up by the executive branch and handed it with a "must" tag attached. Much of this legislation was in the form of blanket grants of power to administrative agencies. Executive orders and departmental regulations became the law by which rigid controls were set up over the people's activities. Appropriations of money were made with abandon to finance socialistic schemes of every kind and without regard to the mammoth debt that was being piled up even before the war started.

The people who guided our destiny and those who reported the activities of Government lost sight of the fact that Congress was intended to be a deliberative body and the branch of Government charged with making its policy. Regardless of the criticism of the press, the complete lack of cooperation of the executive branch, and the active opposition of the minority leadership, the Eightieth Congress has kept in mind the mandate it received from the people and has driven ahead to its great accomplishment. With one notable exception, it carried out that mandate. While its income tax reduction bill passed the Congress twice it failed to become law by Presidential veto. Both times the motion to override failed by a few votes to get the necessary two-thirds majority—the last time in the Senate by 3 votes. This is the first time a President ever successfully vetoed a tax bill. President Roosevelt tried it once but his action was overridden by Congress. The vetoed bill gave a 30-percent reduction to taxpayers in the lower brackets, 20 percent in the middle, and 10 percent in the upper brackets. The taxes of some 49,000,000 people were affected.

What has the Eightieth Congress accomplished? Its record is excellent. It has made a good start in the reduction of a power-hungry bureaucracy to a size more in keeping with the necessities of a peacetime Government. The Democratic administration, excluding all funds for the armed services and the Veterans' Administration, is spending twice as much as was spent for the entire Government operation in 1939. The committees have ferreted out duplication and overlapping. Its greatest accomplishment for future reduction in Government expense was the formation of a bipartisan commission to make a thorough study of the executive branch and recommend reorganization to bring about efficiency to its sprawling bureaucracy. It will make its report to the Eighty-first Congress. After that real reductions can be made.

Congress passed the Taft-Hartley law to bring organized labor under such regulations as would protect the public welfare and the rights of individual workers from the excesses practiced by certain powerful leaders and groups. It did so after long and exhaustive hearings before committees in both Houses, where opportunity was given to everyone concerned to state his viewpoint and make recommendations. Regardless of wild statements of some whose authority would be reduced, the law does not harm organized labor. Demand for this legislation was so strong that the veto of the President was easily overridden in both the House and Senate. A majority of Democrats in both Houses joined the Republicans to do this. It passed a law to outlaw some $7,000,000,000 of portal-to-portal pay suits filed by CIO unions which threatened bankruptcy to many industries.

The reluctance of the administration to relax wartime controls over production and distribution of goods made it necessary for Congress to take action to this end. Rigid Government controls were creating artificial shortages of food, clothing, and housing. The people were tired of interference in their businesses and their everyday lives, and demanded that Congress do something about it. Naturally, the freeing of goods from the rigid controls which were the principal causes of the shortages resulted in higher prices, but the stimulation to increased production will bring about a more stable economy in the long run and at lower prices. The tremendous shipments of food and commodities to foreign countries for relief and rehabilitation, together with the record demand in this country due to high wages and maximum employment, contributed to high prices. Food shipments amounted to 18,000,000 tons and cost $2,300,000,000. We have done much to free the country from black markets and shortages of food, clothing, and housing are being overcome. Certainly, we could not continue bureaucratic control of industry and wages without completely destroying our free economy.

In the matter of foreign affairs, the Congress has continued its nonpartisan approach. It has carried out the President's recommendations for legislation without regard to politics. It passed the International Refugee Organization bill and appropriated huge sums for foreign relief. The Senate approved the treaties requested by the President. Congress approved the Greek-Turkish loan and appropriated money to carry it out, in spite of the fact that the so-called Truman plan was announced before consultation with it. In general, it passed more legislation touching on international problems than has any previous Congress. Because of its inability to get factual information from administrative sources, committees of Congress will make a study of conditions in Europe during the recess. In view of demands that will come in the next session, it is necessary that this be done in the interest of the taxpayers.

For the veterans Congress authorized cashing of terminal-leave bonds, extended to December 31, 1947, the act for facilitating the admission of alien fiancées of members of the armed services; extended the privilege of renewing and reinstating national life insurance policies. It increased the pensions of Civil War and Spanish-American War veterans and their dependents by 20 percent. It appropriated over seven billions for benefits.

Much legislation was passed in the interest of national defense. Among the laws passed were the armed services unification, the National Science Foundation,[1] and the Selective Service Records Act. Congress has submitted the two-term limitation to the Presidency amendment to the States. It passed a Rent Control Act which provides for decontrol next year and sets up machinery for fair adjustments of rents in the meantime. It also lifts restrictions on housing that has already stepped up construction of homes and rental units. In

[1] Vetoed by the President.

1946, under control of the Democrats, the administration had $700,000,000 to spend for emergency housing but produced practically none. Among other measures was an authorization of $15,000,000 [2] for emergency flood control, automatic promotion of substitute postal carriers, freezing of social-security tax at 1 percent until 1950, continued price-support program for wool, and a $400,000,000 increase in the maximum insurance the National Housing Authority may issue on mortgages on new homes.

One of the most important functions of the Congress is to lay before the people the information on how their Government is operating. Only in this way can a government of the people operate successfully. The information is developed in hearings before the regular committees of each House and in investigations of special committees. Upon this information the Congress can intelligently consider and act on legislation. All the committees of the House have held exhaustive hearings on bills they have reported. I want to mention particularly the hearings of the Committee on Education and Labor which gave much time to the consideration of labor legislation and the activities of certain leaders such as Petrillo, the czar of the American Federation of Musicians. The Committee on Un-American Activities has thrown a spotlight on the activities of Communists and fellow travelers and their infiltration into Government agencies. Only by doing this have we been able to force these agencies to get rid of their disloyal employees.

The Committee on Agriculture is investigating the operation of the farm program and laying the ground work for any changes it will recommend for the future. It is seeking a wider use of farm products and a definite parity or support price for agricultural commodities. The Committee on Public Lands, of which I am a member, has been giving careful consideration to the millions of acres of lands now owned by various Federal agencies and which yield no taxes for State and local governments. It is also studying our program of irrigation and reclamation. The Committees are the workshop of Congress.

As residents of the Great Plains area the people of the Fourth Congressional District of Nebraska are interested in what this Congress did toward the development of the natural resources of our country. The future welfare of the whole country depends on these resources and so their development is the duty of the whole country. While I feel that Congress has not done all it could in this respect I am glad to report to my people that it has done a lot. It has tried to furnish all the money that could be economically expended in view of the shortage of materials, high prices, and the high employment rate we are now experiencing. Members of the Nebraska delegation in Congress, in cooperation with the Representatives from other States attempted in every way to acquaint the Congress with the need and to bring about the necessary action.

The Agriculture Appropriation Act carries sufficient funds for planning and technical assistance in soil conservation and crop production. Some cuts were made in the budget estimates for subsidies and incentive payments on the basis that the sound financial condition and high income from farm operations made them unnecessary at this time. These were practices initiated during depression years when farmers were badly in need of help. Resistance to the cuts came principally from the bureaucracies who, regardless of the need, never want to see their functions curtailed. While a small cut was made in the funds REA was authorized to loan to districts, Congress feels it is offset by the provision allowing it to borrow direct from the Treasury and thus save three-fourths of 1 percent interest to the borrowers. A cut was also made for administrative expense but the Congress feels that the elimination of unnecessary supervision and red tape in the administrative set-up will leave sufficient funds for carrying on the program. The Congress will continue to provide all the funds necessary for rural electrification.

The final figure appropriated for reclamation and irrigation, together with the funds obligated for work to be done in this fiscal year and the balances still in the hands of the Bureau, will insure maximum prosecution of this important program. In addition to funds given the Bureau of Reclamation Congress appropriated increased funds for the Army Engineers to step up their part of the work of flood control and development of the Missouri River under the Pick-Sloan plan. Funds were also provided the Bureau of Reclamation for construction of a power line from Bridgeport to Alliance, Nebr., and from Pine Bluffs to Cheyenne, Wyo., that will provide much needed power for REA districts in Nebraska.

It has been most difficult for this Congress to establish a sound fiscal policy for peacetime government. The President's budget of $37,000,000,000 is the largest ever presented to a Congress in time of peace. Every cut suggested by the Republicans was sternly opposed by the administration and the Democratic leadership in the Congress. It now looks like the budget has been reduced by about two and seven-tenths billions. An additional amount up to three billions of former appropriations has been rescinded, which represents money held by the departments and agencies and which would be spent by them if not rescinded. The Republican Party can rightfully claim a $5,000,000,000 reduction from the overstuffed and padded budget the President had to have for the fiscal year of 1948.

The first session of the Eightieth Congress has made a remarkable record, and every member of the majority party and those of the minority who put aside partisanship for the welfare of their country can take pride for the part they had in it. When this session closes I, like most of my colleagues, will return to my district calling on the people in their homes and at their places of business to seek their advice and counsel. I will visit every one of the 38 counties in my district. I have always followed this practice and found it an excellent tonic for the mental congestion brought on by the confusion and pressure in Washington.

[2] Total appropriated for flood control, $122,269,800.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 18, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a statement in support of Federal aid to education which I recently made before the Subcommittee of Education and Labor, which has this matter under study. The statement is as follows:

STATEMENT OF HON. ESTES KEFAUVER, MEMBER OF CONGRESS, THIRD DISTRICT OF TENNESSEE, BEFORE COMMITTEE ON EDUCATION AND LABOR OF HOUSE OF REPRESENTATIVES, IN SUPPORT OF H. R. 2188, A BILL BY MR. KEFAUVER PROVIDING FEDERAL AID TO EDUCATION, TUESDAY, APRIL 29, 1947

Mr. Chairman, since I have been in Congress the matter of Federal aid for public education has been one of my primary interests. I have constantly sought ways and means to raise the standards of education and to assist in plans to relieve the great inequality in educational opportunity that has resulted in illiteracy in many of the poorer States. It is my understanding that for 25 years bills with this major purpose have been before Congress, yet in all this time there is no record of positive or effective action.

I have introduced a bill, H. R. 2188, asking for appropriations to assist the States in financing a minimum foundation program of public elementary and public secondary education, and in reducing the inequalities of educational opportunity offered our youth. I want to devote the time allotted to me to a brief discussion of public education.

Education is important to every boy and girl in this country because it is the only means that they have for relating themselves to the extremely complex social and economic life that has developed out of a war-torn world. It is extremely important to the States and local communities because it is the major means that will enable the maximum development of their human and material resources. It is of utmost importance to the Nation in the maintenance of national security and the building of domestic prosperity. It is vital to the world because only through a well-enlightened people do we have any possibility of creating an enduring peace.

Complete equality of opportunity was the idealistic dream of our founding fathers. It has never materialized fully because we have never provided equality in the educational opportunity offered to all of our youth. Failure to take some positive and effective action on Federal aid to public education at this time would seem to be a tragic disregard and neglect of our primary resource—the youth of America. In many of America's less wealthy States children get one-third to one-half as many weeks of schooling as more fortunate children in wealthier States. The range of educational opportunity offered in this country is now as great as 60 to 1. Actually there are no less than 2,000,000 children in this country who live in areas sufficiently

wealthy to spend 60 times the amount of money that can be afforded to provide the meager education offered to another 2,000,000 less fortunate children. This means that the social and economic opportunity of youth depends almost wholly upon the part of the country in which he is born. In the rural areas of a poor State his chances for an education that will put him in a position to compete on an equal basis with those born under more fortunate circumstances is almost negligible. To me this is a most deplorable situation, in the world's richest Nation that has for so many years exemplified to the remaining nations of the world the value and the force of public education.

I have always thought that we lead the world in the realization of the power and force of public education, yet last year we spent only 1.5 percent of our total national income on education. During this same year Britain spent 3 percent of its total national income for education, while Russia spent 7.5 percent of its total national income for the development of its educational system. When we realize that Great Britain and Russia both learned of the value of educational expenditures from us we realize that we can no longer neglect to provide adequate support of America's public schools.

I could use the time allotted to me this morning wholly in citing to you existing conditions in American education that present what has been popularly termed the crisis in education. I am quite sure that experts will present statistics and other data to such an extent that it will be unnecessary for me to go into detail in describing those conditions. The major cause of this crisis is a teacher shortage which has developed at a time when the demands upon the schools are such that a greatly increased teaching force is needed. This teacher shortage has been brought about by the influence of a number of factors. Unquestionably the first and most important of these factors is the low wage that has been paid teachers for a number of years. Many of our teachers are employed at salaries below that of school janitors, scrub women, garbage collectors, and bartenders. The average annual salary of teachers in my State in 1944–45 amounted to approximately $1,300 and for the Nation as a whole only $1,846. This is a condition that will no longer be tolerated by many teachers. It tends to undermine and destroy the efforts to stabilize teaching as a profession. I know the results of this appalling low-salary condition because of the stream of personal correspondence and visits from school representatives that I have almost every day.

During the war the Federal Government reached into all corners of the country and into all walks of life for manpower to serve its wartime needs. In this emergency the teaching profession magnificently filled its quota. We found classroom teachers in every branch of the armed services on every battle front and serving the country in its every wartime need. But this in itself produced a terrific impact upon the schools, because many of these teachers learned that the advantages, financial and otherwise, in other fields of employment offered greater opportunity, and those whose love for teaching was not sufficiently strong to overcome the self-sacrifice necessary to go back to underpaid and overworked situations have left the profession for good. This situation has been termed the greatest vocational migration of history. Another highly significant factor comes from the pressure of extra population. In the 5 years following America's entry into World War II, 13,000,000 babies were born. Some population experts had predicted only 4,000,000. This increase in population began to be felt in the schools last year as increased enrollments were reported from almost every State. Further increases were reported this year and as this bulge in child population moves upward the demands on the schools for increased numbers of teachers produces conditions that can result only in the disastrous disintegration of our American public schools unless steps are taken at once to alleviate them.

This disaster must not be permitted to happen. The economic strength and security of our Nation, the individual welfare of every citizen, depends more and more upon the educational ability of its citizenry. A significant study made by the education committee of the United States Chamber of Commerce points out that the level of educational attainment of the adult population is a determining factor in the level of income of the country itself. It has been estimated that if the average level of the adult population of 11 of the Southern States having lowest educational status could be increased by only 1 year, which would mean an average of 8½ years of schooling, the increased productivity thereby in these 11 States would raise the total income of the Nation by approximately $4,000,000,000.

Due to the mobility of our population, and especially of our youth, illiteracy is not merely a local liability, but a national one as well. The declining birth rate in all our major cities and the increasing birth rate in rural areas means that as population pressures are brought to bear upon the youth of low economic areas, the migratory trend is toward the city. This is one of the reasons why the removal of inequalities of educational opportunity is a major responsibility of the Nation and consequently the Federal Government.

During the operation of the Selective Service System nearly one-half of the rejections were for educational or health defects. Thus, at a time when our Nation had its greatest need for healthy and intelligent manpower it is estimated that the equivalent of no less than 20 combat divisions were unable to serve the Nation because of illiteracy and educational disqualification.

There is no doubt of the keen Nation-wide interest in the teacher shortage and the critical problems of the public schools. Many editorials have appeared in newspapers over the Nation. Frequent articles have been presented in national periodicals. Even the news reels and the radio have presented to the people what is happening to their schools. It is unfortunate that this partial break-down of the school system was ever forced to public attention through a series of teacher strikes. To me it is disgraceful that this great country should permit our public-school situation to become so desperate that teachers should have to resort to such extreme measures.

I am firm in my conviction that only through Federal aid to supplement State and local effort can the future soundness of our system of public education be assured. To that end I have introduced H. R. 2188. I do not claim that it is the best bill before your committee. I do believe that it contains certain principles which are absolutely essential in the development of a sound system of Federal aid to public education. This bill would establish a minimum program of education which would enable those underprivileged areas of the Nation to assure a minimum expenditure of $40 per year for each school child. At the same time this bill provides every protection to the rights of the States and the local committees in the administration and supervision of their schools, and actually prohibits the Federal Government in any encroachment upon these rights.

America's deep faith in her free public-school system as a sound foundation for our democracy is being put to a severe test at this time. It is my deep and sincere hope that your committee after due consideration of the measures that are proposed will report to the Congress a bill that will accomplish the purposes so long neglected.

War Department Dilatory in Making Reports on Bills

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the Appendix of the RECORD I wish to say that I am greatly disappointed in the service given Members of Congress and congressional committees by the War Department.

On April 22, 1947, the Honorable JOHN MCCORMACK, Representative from Massachusetts, introduced H. R. 3155, to authorize the promotion of certain officers and former officers of the Army of the United States, and on April 30, 1947, Mr. MCCORMACK introduced H. R. 3270, relating to the promotion of certain officers and former officers of the Army of the United States. Reports were requested from the War Department by the chairman of the Committee on Armed Services to whom these bills had been referred, and notwithstanding that these reports were requested at the time the bills were introduced, no report has yet been received from the War Department at this date, the closing date of this session of the Congress.

Mr. Speaker, the Congress has been liberal in appropriating money for the War Department, the sums appropriated seemingly sufficient to cover the cost of carrying on all of the functions of this branch of the services, and it seems to me unpardonable that the Congress does not obtain more satisfaction and consideration from the War Department in matters connected with the business of the Congress in connection with matters in which their constituents are interested. I hope in the future more attention will be given consideration in time for action before Congress adjourns.

Clark Hill Project Supported by Hon. John J. Riley, of South Carolina

EXTENSION OF REMARKS
OF
HON. JOHN J. RILEY
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. RILEY. Mr. Speaker, while I did not have the privilege of attending the hearings before the House Committee on Appropriations when they were considering the Clark Hill project located between my State and Georgia, I very actively supported this appropriation on the floor of the House and attended the hearings when the matter was being considered by the Appropriations Committee of the Senate. My former colleague, the Honorable Butler B. Hare, presented a statement to the Senate Appropriations Committee giving a history of this

project and so nearly expressed the views which I entertain relative to this proposal that I have obtained unanimous consent to include this statement in the extension of my remarks as follows:

STATEMENT OF BUTLER B. HARE BEFORE APPROPRIATIONS COMMITTEE OF THE SENATE, JULY 14, 1947

Mr. Chairman and gentlemen of the committee, the justifications for the requested appropriation are about the same as they were last year and not much different to what they were year before last, when you made appropriations for the 2 years amounting to $5,500,000, and there is not a great difference in the justifications today and those approved by the Congress 3 years ago, when the construction and operation of the Clark Hill project were authorized. However, there is one difference in the situation

Last year, when you appropriated $4,500,000, and 2 years ago, when you appropriated $1,000,000, and 3 years ago, when the Congress authorized the construction and operation of the project, the Savannah River Electric Co., through its officials and other representatives, were either standing on the side line or actually on the firing line urging this committee and the Congress to approve the project, make the necessary appropriations for constructing and operating the project in every detail. But today its officials and representatives are here urging you and the Congress to delete from the bill before you every dollar requested for the further development of the Clark Hill project, giving you 101 reasons or excuses for its request.

Mr. Chairman, I am sure you and your committee are familiar with the history of this project and other similar projects. You are familiar with the justifications for the authorization of this project, and I shall, therefore, not burden you by repeating them, but will undertake to give you my reaction to the excuses—I will not call them justifications—offered why this project should now be deauthorized, after it has been under construction now for about 2 years.

I do not want to be unfair to the power company, but I want to state at the outset that in view of its past conduct, I have some serious doubts as to the verity or sincerity of its present proposal when it offers to reimburse the Government for expenditures already made and then construct and operate the project in its entirety under Government specifications, Government control, Government supervision, and Government direction. I am forced to this conclusion for the reason that this same company obtained a license from the Federal Power Commission to develop this project in 1928 and voluntarily surrendered it 4 years later, or in 1932, the reason assigned for its action at that time being they did not care to be bothered with Government red tape, Government supervision, and Government direction in the construction and operation of such plant, the president of the company saying that his company had decided it would never build another hydroelectric plant. We can all understand why the company would object to Government supervision or direction in handling both the flood-control feature, the navigation feature, and the electric-power feature provided for in the proposal, but I submit if that were a good reason for not developing the project in 1932 when the company surrendered its license it would still be sufficient reason for not developing the project in 1948 should this item be eliminated and a new license granted, because our Government, under the Constitution, is charged with the responsibility of protecting and preserving the waters in our navigable streams, and it will, logically, have just as much Government red tape, as much Government control, supervision, and direction in 1948 as there was in 1932, and this will continue to be so as long as our present system of government continues.

I know that the reason the company now assigns for not building the project in 1932 is that it was not financially able to do so, and, owing to the stringency in the money market, the company was not able to secure the necessary funds. That may be a reasonable excuse, for I am sure the company itself was not able to finance the project, and I am not sure it is any better off today financially than it was at that time. It is true the company has said it is ready, willing, and able to finance the project, but I have not seen where its witnesses have endeavored in any way whatsoever to show the financial standing of this company. They have not even shown its capitalization, its assets, or whether it has liquid holdings of any kind. In fact, I think it is a reflection upon the integrity and the business intelligence of the committee and the Congress to ask them to rely merely upon an unsupported promise and confess they were heretofore mistaken in authorizing this project and appropriating money for its construction. This company may admit its individual financial weakness, but will insist that its affiliates and associates are ready, willing, and able to assist in carrying out any commitment that meets with their approval. I am not prepared to deny that assumption, but it appears to me that if the sole difficulty of this company in 1932 was its financial inability, it could certainly have called upon its affiliates at that time to come to its rescue, because it has been testified that they have built or now have under construction three or four steam-power plants to serve the same or contiguous territory adjoining the Clark Hill area, and that all of these plants will be in operation by July 1948. It occurs to me they should be able to get money to construct a hydroelectric plant as easily as they could get it for use in building steam plants.

POWER COMPANY CHANGES ITS MIND

The Savannah River Electric Co. admits that for a period of 11 years, from 1935 to 1946, it favored and insisted that the Government should develop and operate the Clark Hill project, but says it changed its mind a year ago because the Government or the Congress broke faith with the power company when it provided in the Authorization Act of December 1944 that cooperatives should have a priority on the power to be generated, saying that the power company had an understanding or agreement with the Government that the power company would assist and cooperate in constructing and operating the plant upon the condition that the power company was to have a priority on all of the power at the switchboard when generated. I note from the hearings before the Appropriations Committee of the House a few weeks ago it was emphasized that this was probably the primary reason why the company is now opposing this appropriation, indicating to the committee, however, that the power company would still have no objection to the Government building the project and discharging its administrative duties in connection with the flood control and the promotion of the navigation features and permit the power company to have a prior right on the use, sale, and distribution of the power developed. It would certainly be an ideal situation from the power company's interest for the Government to build and maintain the dam for navigation and flood-control purposes and give the company the exclusive right to use the waters impounded for generating electric power at almost a nominal price for a limited number of years and thereafter to have exclusive right to use the impounded waters as it may elect. In my opinion, that is exactly what the power company would like to have.

But before we get away from this alleged contract or agreement between the power company and the Government, I want to refer to the record and invite your attention to a public hearing held in Augusta, Ga., in October 1935, where the president of the Savannah River Electric Co. testified at length and, in his opening statement, said:

"I did not come here for the purpose of hurting this enterprise. I came with the view of helping wherever possible. I do not want to volunteer anything except with the approval of the committee in charge of it. We did not initiate the petition for the development of Clark Hill. We are not in objection or antagonistic toward it. We wish to cooperate with it to the fullest extent of our ability. I would like to say we are here for the purpose of its support."

While discussing how the electric power would be disposed of following the construction of the plant, Mr. Arkwright, then president of the company, said:

"I assume that some of the load would be allocated to South Carolina and perhaps some to Savannah, but whatever remains, or if you cannot get it absorbed in South Carolina or Savannah, I believe the Georgia Power Co. could, in time, absorb it all."

Proceeding further, and in concluding his statement, Mr. Arkwright said:

"I do not demand that we distribute it. I merely say we have the facilities and the market and are willing to do it if you wish. * * * But, regardless of what plan you may finally recommend, we stand ready to cooperate to the fullest extent in making available to you any information we may have which you may think pertinent to your investigation."

I do not see any agreement there between the power company and the Government or any agency of the Government that the company was to have any prior right whatsoever to the power to be generated. In fact, the president of the company did not request the right to any of the power as a condition or consideration for the support and cooperation of the power company for which he was speaking. On the contrary, he negatived the possibility of an agreement when he said:

"I do not demand that we distribute it. I merely say we have the facilities and market and are willing to do it if you wish."

It is true he wrote a letter 8 years later to the Army engineers in which he said the Georgia Power Co. would be willing to take all the power at the switchboard upon the completion of the project. We should remember this was long after the Army engineers, the Federal Power Commission, the War Department, the Interior Department, and the President of the United States had approved the project and approved it with the understanding if there were any reciprocal understanding, the Government would construct and operate the project free from any obligation whatsoever to the Savannah River Electric Co., the Georgia Power Co., or any other power company. But when the power companies saw the project was to be approved the Georgia Power Co., not the Savannah River Electric Co., came in and made a bid for a prior right to use and distribute the power, but there was no agreement, not even an implied agreement, between the company and the Government, and the reason Savannah River Electric Co. is making this charge is to try and excuse its own breach of faith. We want to emphasize that when President Arkwright wrote the letter about getting all of the power at the switchboard, he stated that the Georgia Power Co. would be in a position to take the power. He did not say he was writing for the Savannah Electric Co., whose officials and representatives are now alleging bad faith on the part of the Government. It appears to me that this Savannah River Electric Co. is serving only as a cat's-paw for the Georgia Power Co., the Commonwealth & Southern Corp. of New York, including other power companies, because this company was organized about 20 years ago, but if it has ever constructed or operated a plant, I have not heard of it. It is my understanding it was incorporated with capital stock of not less than $100,000 and not more than $500,000,

and about the only thing we have been able to learn what it has done in the meantime is to purchase about 40,000 acres of land at a cost of about $700,000. Therefore, from a financial standpoint or from the standpoint of experience, I do not see how it could be possible for the Federal Power Commission, under the law, to approve a license for this company to construct a project which it now claims will cost from $45,000,000 to $50,000,000.

Of course, the power company is now proclaiming from the housetops that if the Government completes and operates this project it will mean the placing of Government in business in competition with private enterprise. This is one of the old and threadbare arguments that has been used on many other occasions since the beginning of our Government. There may be a limited amount of competition when the Government begins operating the plant, but it should be remembered that practically every program heretofore inaugurated by the Federal Government for the benefit of the people has, to some extent, been in competition with some individual or group of individuals in conducting their business. For example, we construct ships in most of our navy yards which, to some extent, competes with the shipbuilding industry, but navy yards are not established with the idea of putting the Government in business or in competition with private enterprise. We manufacture cloth, we make clothing, furniture, shoes, and many other things in our Federal prisons which, to some extent, compete with private enterprise but we do not build prisons for the purpose of putting the Government in business or to compete with private enterprise. Our program of constructing paved public highways competes to some extent with practically every system of transportation, but we do not think of the highways being in business or in competition with private enterprise. Our parcel-post system competes to some extent with the railroads and express companies, but since it is in the interest of all the people we do not consider the Government is in business or in competition with private enterprise. Our public-health programs are in competition with the medical profession to some extent. Our agricultural experiment stations are, to some extent, in competition with scientists, and our agricultural colleges are in competition with private institutions. In fact, the Savannah River Electric Co. urges that the Clark Hill Dam should be constructed to promote flood control and navigation, even though the navigation would be in competition with the railroad, air lines, and other means of transportation, but it does not raise the question of competition so long as the program relates to some other activity, but it objects to the production of electricity at Clark Hill unless it is given complete control.

The Clark Hill project is primarily for flood control and the promotion of navigation; the power feature is only for the purpose of helping reimburse the Government for its expenditure. It is not for the purpose of putting the Government in business and no one knows this any better than the Savannah River Electric Co. Its own president so stated at a public hearing in Atlanta, Ga., October 28, 1946, less than a year ago, when he said:

"The Government is not interested in making or selling electricity. The Government is interested in navigation and flood control. They make and sell electric power as an incident to their control of the river for navigation purposes."

The Savannah River Electric Co. has promised other committees of the Congress that if this appropriation is defeated and the Federal Power Commission should give it another license it will construct and operate this project, but this is not the only promise this power company has made. When it filed application with the Federal Power Commission in 1928 for a license to develop this project, it promised it would develop and operate the project and assured the Federal Power Commission it was ready, willing, and able to do so, but it changed its mind in 1932.

When the Savannah River Electric Co. went to the poor farmers of South Carolina and Georgia and urged them to sell their lands at what now appears to be ridiculously low prices, it promised these people it would construct the largest hydroelectric plant in South Carolina or Georgia, which would solve their flood-control and navigation problems at the same time and furnish them with all of the electric power they could possibly use and it would be at exceedingly low prices, but this company changed its mind.

In 1935, this same power company promised the people of South Carolina and Georgia that if they would get the Government to construct and operate this plant it would cooperate in every way possible. In 1943 when this company urged the Army engineers and the Federal Power Commission to recommend to Congress the development and operation of this project should be by the Federal Government, it again promised these agencies that it would convey to the Government 40,000 acres of land at a price not exceeding its cost, provided the Government would build the plant, but this company has again changed its mind. If you will observe that every time this company has changed its mind relative to the development of this project since its incorporation, the change was made with the hope that it would promote its own selfish interests and not for the benefit of the people, and in the light of these observations, I do not see how any individual or group of individuals could rely upon the promise of this company to do anything in the interest of the public.

However, one of the arguments they submit as to why this appropriation should be defeated and the power company be given a new license is that if the Government does the work it will not pay any taxes to the counties on the lands covered by impounded waters, whereas the power company says that if it is permitted to build and operate the plant its taxes in the counties would be increased and the taxes of the people would be decreased. This illustrates another change of mind or attitude. Last year, and the 10 years previous thereto, when the power company was urging the Federal Government to build and operate the plant it was not telling the people then their taxes would increase if it sold its lands to the Government. On the contrary, reports are, the representatives of the power company were then saying they would take the money received from the sale of lands and enlarge their activities, which would increase their taxes to the point where revenue to the State and counties would be greater than if they retained the lands without the development.

Furthermore, this company insisted there would be a great many new enterprises coming to that area and they would be contributing taxes far in excess of the amount contributed by the power company so long as the lands and power were undeveloped. It is not hard to see that this power company can easily change its mind to fit any situation that may arise, particularly where selfish interests are involved and a mere promise to construct and operate the plant, should this committee defeat the appropriation, may not be worth the paper it is written on. There is no assurance or guaranty, further than a mere promise, that the project would be developed by the power company should an opportunity be afforded. Only a few weeks ago when the vice president of the Savannah River Electric Co. appeared as a witness before the Appropriations Committee of the House he was asked by a member of the committee: "What guaranties can you give that you would proceed with it expeditiously, if the Army engineers were to step out of the picture?" His reply was: "I give no guaranties other than the application and our commitments and our good faith and our good word, which to us is more valuable than any bond." This reply to the inquiry may satisfy some people but I do not believe it will be sufficient to satisfy this committee or any agency of the Government, particularly where $45,000,000 or $50,000,000 may be involved.

SUMMARY

Mr. Chairman, I shall summarize the situation as I see it and conclude my statement. On December 22, 1944, the Congress passed the flood-control bill which carried a provision authorizing the construction and operation of what is now frequently referred to as the Clark Hill project on the Savannah River near Clark Hill, S. C. Two appropriations totaling $5,500,000 for this purpose have been made in the meantime, and construction of the project is well under way.

Last August the Savannah River Electric Co. filed an application with the Federal Power Commission for a license to construct and operate this project, saying the company will reimburse the Government for money expended thereon up to date and then construct and operate the project under Government supervision and direction. The application was denied on the ground that Congress by appropriate legislation had authorized the construction and operation by the Army engineers, the Federal Power Commission, and the Department of the Interior.

A few months later, in the early part of this year, the Savannah River Electric Co. appealed to the Congress asking it to reverse its former action and authorize this company to construct and operate the project. This company elected to use the Appropriations Committee to engineer the appeal to and through the Congress. Since then practically every Member of the Congress has been approached in some way or other and urged to support its request or petition. Less than 2 weeks ago when the bill now before you for consideration was up for consideration in the House of Representatives, an effort was made to eliminate the appropriation item therein for the Clark Hill project with the idea that the item should be eliminated, the Federal Power Commission would then be free to issue a license to the Savannah River Electric Co. to develop and operate the Clark Hill project. I assume the same arguments made there have been submitted to your committee.

When a motion was made in the House by the chairman of a subcommittee of the Public Works Committee to strike from the bill the item carried in the appropriation bill to continue the construction of this project, it was argued that since the Savannah River Electric Co. had offered to develop the project under Government specifications and operate it under Government supervision and direction, the Congress should rescind its heretofore actions and allow the Savannah River Electric Co. to proceed with the construction. A strong appeal was made to the membership of the House, but when the vote was reached only three Members supported the motion.

Mr. Chairman, I want to emphasize the significance of the action of the House in this matter. Although the membership of the House has changed considerably since this project, along with several other similar projects, was authorized in 1944, the action of the House is convincing proof that the philosophy of its membership with reference to this project has not changed in the meantime. In other words, the Savannah River Electric Co. elected to submit its request through the Appropriations Committee of the House; and since it has spoken with an almost unanimous vote showing it is not ready to reverse its former position in this matter, it would appear that your committee will be fully justified in approving the full amount requested by the Bureau of the

Budget, and allow the construction of this project to continue as rapidly as circumstances will permit.

Mr. Speaker, it will be observed that Mr. Hare urged the committee to approve the full amount requested by the Bureau of the Budget—$6,075,000. In view of the action taken by the House when this item was considered here, I believe that the full amount could have been profitably used, but I believe that the appropriation of $5,000,000 approved by the conference committee will be adequate to maintain the construction schedule for the fiscal year ending June 30, 1948. As the appropriations to date are only about 20 percent of the estimated cost of the project, it naturally follows that other appropriations will have to be made in order to complete this undertaking. It is these next appropriations that I wish to emphasize. They should be sufficiently large to complete the project within 2 to 3 years. I agree with the chairman of the subcommittee handling this appropriation, the gentleman from Michigan [Mr. ENGEL], that the cost of such projects is unnecessarily increased by stretching their construction over too long a period. He suggests that, if the Congress is going to authorize such projects, that adequate appropriations should be made to complete a project in the shortest possible time, as this would be in the interest of economy. I am not an engineer, but it has been suggested that, if the construction of the Clark Hill project could be completed in 3 or 4 years instead of 6 or 7, that the Government would save between three and five million dollars. If only $1,000,000 is saved, the Congress would be justified in making the appropriations large enough to expedite the construction just as fast as circumstances permit. Not only would such a course save money, but it would quicken the realization of the benefits which are to be derived from the project.

Anti-Poll-Tax Legislation

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech I made on July 1, 1947, before the House Administration Committee in support of anti-poll-tax legislation:

STATEMENT BY GEORGE H. BENDER, CONGRESSMAN AT LARGE FROM OHIO, BEFORE THE HOUSE ADMINISTRATION COMMITTEE, JULY 1, 1947, IN SUPPORT OF ANTI-POLL-TAX LEGISLATION

Mr. Chairman and members of the committee, I am glad to appear before you this morning to testify in support of the bill which I have introduced to make unlawful the requirement for the payment of a poll tax as a prerequisite to voting in a primary or other election for national officers.

On Friday of this week we will celebrate the one hundred and seventy-first anniversary of the signing of the Declaration of Independence of the United States. For 10,000,000 native-born American citizens, 7,000,000 white and 3,000,000 Negro, that celebration will be a mockery.

Sometimes I think that in place of all the Fourth of July orations that are delivered across the Nation, in place of the lip service which is paid on that day to the Declaration of Independence, we would do better to reread and to reaffirm the simple and fundamental truths which are set forth in that great charter.

In its opening sentences the Declaration of Independence says: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

Let me repeat that basic proposition of the American system; governments derive their just powers from the consent of the governed.

The poll tax is a denial of that basic proposition. Where the poll tax exists there is no such consent. Where the poll tax exists the great majority of the citizens have no voice in the government.

The poll tax was devised for the specific purpose of depriving the majority of the people of a voice in their government. Today, seven States use the poll tax as a bar to free elections. They are Alabama, Arkansas, Mississippi, South Carolina, Tennessee, Texas, and Virginia. In every case the poll-tax system in these States was imposed within the memory of men now living. Let me make that point clear. The poll tax as it exists today in no relic of an earlier period which is being gradually abolished. Just the opposite is true. After a half century of free manhood suffrage, the poll tax was resurrected and was reestablished by fraud and trickery in the 1890's and the 1900's for the express purpose of disfranchising the great majority of the people.

I would like the record to show the dates of the adoption of the poll tax: Mississippi, 1890; Tennessee, 1890; South Carolina, 1895; Alabama, 1901; Virginia, 1901; Texas, 1903; Arkansas, 1908.

The conventions which adopted the poll tax in this period of disfranchisement left no doubt that their purpose was to center the control of the Government in the hands of a minority, and to exclude from the polls the great majority of the citizens, Negroes and white alike.

A delegate to the Virginia convention of 1901 said, and I quote, "There is a mass of vicious and incapable whites which must be debarred from the suffrage. * * * The chief objection which I have heard to this system is that, along with many stupid and vicious whites, some worthy and good citizens will be disfranchised. This is doubtless true."

Just how true this was, was shown by the immediate effect of the poll tax in reducing the size of the electorate.

In Virginia in the last Presidential election before the imposition of the poll tax, some 266,000 persons voted. In the first Presidential election after the imposition of the poll tax, the vote had been cut to 136,000—an immediate reduction of 49 percent.

In Mississippi in the last Presidential election before the imposition of the poll tax, some 117,000 persons voted. In the first Presidential election after the imposition of the poll tax the vote had been cut to 52,000—an immediate reduction of 56 percent.

There were similar immediate reductions in the other States.

The effect of the poll tax has been a continual reduction in the size of the electorate, until today there is not even a pretense of representative government in many poll-tax States.

In the congressional elections of 1946, in the 42 States where free elections were held, an average of 47 percent of the potential voters cast their ballots. In the seven poll-tax States, an average of 9.58 percent of the potential voters cast their ballots.

If we would see democracy flourish in the United States, we cannot rest content with paying lip service to democratic traditions while we violate their very essence and spirit.

Democracy in the United States—and indeed in the world—must either go forward or it must perish. If we are to keep democracy alive, the great heritage of the past must be more than a body of dogma displayed on ceremonial occasions. It must be a guide to present action—not inaction.

When 10,000,000 American citizens are prevented by a poll tax from exercising their democratic rights and duties, the poll tax becomes a symbol of political inequity. When the payment of a poll tax becomes a prerequisite for voting, opportunities for political corruption are created, and democratic processes derailed.

As the foremost democratic Nation, we have a responsibility not only to our own people, but to the peoples of the other lands as well. We can most effectively further the cause of democracy in the world by our devotion to it at home. We can be an inspiration to peoples striving for liberty everywhere. But if democracy in America is allowed to stagnate, if such an obviously undemocratic and often corrupt institution as the poll tax is retained, we will not only seriously undermine our prestige in the world, but we shall have gone far toward discrediting the whole idea of democracy.

As a nation we have been outspoken—not once, but many times—in our insistence that newly established regimes in Europe provide above all else for free and democratic elections. We have announced in the most forthright terms our conviction that free elections are the foundation stone of democracy, and we have regarded the failure to adhere to strict standards in this sphere as sufficient cause to question the nature of a regime and the motives of its principal spokesmen.

Do we expect less of ourselves, the greatest democracy in the world, than we do of these fledgling democracies? Can we demand free elections in Albania, Yugoslavia, and Poland, and countenance thoroughly undemocratic procedures in Alabama, Arkansas, Mississippi, South Carolina, Tennessee, Texas, and Virginia? The existence of the poll tax in these American States deprives us of the moral right to criticize for their undemocratic ways the new governments in the Balkans. It lays us open to the charge of hypocrisy, and renders suspect our reluctance to welcome these peoples into the fellowship of nations.

In insisting on free elections in various European countries, we have not hesitated to interfere in their internal affairs. We have not been deterred by considerations of national sovereignty. If we do not hold in awe the sovereignty of a foreign country, whose people and whose government are independent of us, why are we so reticent where the so-called rights of our own States are concerned? If we demand free elections in Yugoslavia, how can anyone take seriously the argument that respect for States rights should keep us from guaranteeing free elections in our own South?

I observe that the President of the United States, in addressing the National Association for the Advancement of Colored People, on Sunday, June 29, pledged his full and continued support to the extension of civil rights and declared that all citizens, on equal terms, should enjoy the right to share in making

the public decisions through the ballot. Calling attention to the fact that democracy today is on trial, the President said, and I quote: "We can no longer afford the luxury of a leisurely attack upon prejudice and discrimination. There is much that State and local governments can do in providing positive safeguards for civil rights. But we cannot any longer await the growth of a will to action in the slowest State or the most backward community. Our National Government must show the way. * * * We must provide the Government with better tools to do the job."

The anti-poll-tax legislation now before this committee will provide the Government with such a tool. I call upon the President to pledge not only his own full and continued support but also the support of his party to ensure the passage of an anti-poll-tax measure in this session of Congress. An anti-poll-tax law would be a forward step toward guaranteeing political equality to all our citizens. And it would strengthen the case for democracy in the world. Surely such legislation, which is consistent with the finest traditions of our Republic, is worthy of bipartisan support, and no effort should be spared to see that such support is forthcoming. A bipartisan policy in the sphere of extending civil rights would indeed serve the good of the Nation.

Appropriations and Budget Savings

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. TABER. Mr. Speaker, I submit herewith six tables.

The first table contains the budget estimates for 1948, the appropriations actually made, and the savings.

The second table contains the budget estimates for deficiencies, the appropriations actually made, and the savings.

The third table indicates the contract authorizations, the estimates and the increases in contract authorizations.

The fourth table indicates the rescissions. Of the rescissions $442,500,000 were direct savings. Of the remainder $2,684,000,000 were an elimination of funds which the President did not recommend. I am sure that if the bureaucrats had had the opportunity to obligate them they would have done so.

The fifth table indicates the savings that were made by direct recovery into the Treasury and by reduction of the Budget estimates that were made by the Budget after our investigations and hearings had demonstrated that they were unnecessary. Of this $911,711,000, $292,075,000 were changes in budget estimates resulting from our investigations and hearings. In other words, the Government saved the money as a result of our activity.

The last table indicates the over-all savings that we can claim direct credit for and shows savings effected by the Eightieth Congress, first session, as compared with the President's budget estimates. They total $4,480,664,303.

TABLE I.—*Appropriations for fiscal year 1948*

	Budget estimate	Law	Reduction below estimate
Agriculture	$805,141,608	$613,046,826	$192,094,782
District of Columbia	95,793,160	95,504,737	288,423
Independent offices	8,500,497,759	8,188,822,927	311,674,832
Interior	295,463,060	194,587,859	100,875,201
Government corporations	50,137,500	35,040,000	15,097,500
Labor-Federal Security Agency	1,771,614,039	1,674,158,631	97,455,408
Legislative	76,153,077	55,294,435	20,858,642
Military	5,716,791,500	5,482,529,633	234,261,867
Navy	3,513,000,300	3,268,766,100	244,234,200
State, Justice, Commerce, Judiciary	698,788,588	551,175,932	147,612,656
Treasury-Post Office	4,099,123,500	3,216,509,450	882,614,050
Government corporations supplemental	35,500,000	35,500,000	
Emergency appropriation	5,750,000	6,180,000	+430,000
The supplemental	1,925,683,823	1,658,802,197	266,881,626
War—civil	619,727,100	502,123,912	117,603,188
Second supplemental	242,285,460	106,695,100	135,590,360
Total	28,451,450,474	25,684,737,739	2,766,712,735

TABLE II.—*Deficiencies for fiscal year 1947*

	Budget estimate	Law	Increase (+) or decrease (−), law compared with estimate
Urgent deficiency	$179,319,100	$179,645,668	+$326,568
First deficiency	3,082,332,589	2,835,161,509	−247,171,080
Second deficiency	224,528,415	192,438,859	−32,089,556
Second urgent deficiency	61,778,758	72,236,258	+10,457,500
H. J. Res 154	9,000,000	9,000,000	
H. J. Res 159	243,714,587	243,255,607	−458,980
Estimates formally submitted, but not included in any bill	90,805,020		−90,805,020
Total	3,891,478,469	3,531,737,901	−359,740,568

TABLE III.—*Contract authorizations for fiscal year 1948*

	Budget estimates	Recommended	Increases above estimates
Independent offices	$512,968,000	$592,393,000	$79,425,000
Interior Department	21,000,000	20,150,000	−850,000
Labor-Federal Security Agency	2,087,675	77,087,675	75,000,000

Navy bill		403,575,000	403,575,000
The supplemental 1948 bill		360,000	360,000
Second supplemental 1948 bill	325,000,000	389,496,970	64,496,970
Total	890,801,856	4,017,332,946	3,126,531,090

[1] And in addition $132,000,000 contract authority rescinded.

TABLE V.—*Table showing revised estimates, reductions in expenditures, and increase in revenue (independent offices bill)*

Expenditure reductions:		Revised estimates—Continued	
U. S. Maritime Commission:		War Assets Administration, reduction in original budget estimate	$20,750,000
Reductions in specific budget items	$66,861,000	Additional revenue available from sale and charter of vessels not included in budget estimates of receipts (includes $404,300,000 for 1947 and $100,775,000 for 1948 not shown in the budget estimates of receipts)	505,075,000
Allocation from UNRRA, not required in 1948	47,700,000		
Revised estimates:			
Veterans' Administration:			
Printing and binding, reduction in original budget estimate	1,500,000		
Pensions and compensation, reduction in original budget estimate	269,825,000	Total	911,711,000

TABLE VI.—*Savings effected by 1st sess., 80th Cong., not recommended by the President*

1. Direct cuts in 1948 estimates	$2,766,712,735
2. Direct cuts in deficiency estimates	359,740,568
3. Rescissions which we know reduced expenditures	442,500,000
4. Recoveries of funds from agencies and corporations and reduced estimates due to our hearings and investigations	911,711,000
Total	4,480,664,303

In addition there were $2,684,000,000 of rescissions not recommended by the President which bureaucrats might have spent.

Which Is the Correct System of Accounting?

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. MURDOCK. Mr. Speaker, in the title of my remarks today, I use the word "accounting" to mean water accounting in the Colorado River Basin. It is well known that proper legal accounting is necessary for every drop of water taken out of the Colorado River for vital uses in any of the seven States which make up the Colorado River Basin. The Colorado River with its tributaries constitutes the sole source of water for this large basin area. The waters of this river system constitute the "water bank" on which the peoples of these seven States must largely, if not exclusively, depend for existence. The need for water for beneficial uses by the people of these seven States is far greater than the supply, and therefore, strict accounting must be had under existing law. There is a wide difference of opinion as to what system of accounting shall be used, and on that I wish to comment.

Let it be understood that each of the seven basin States could use and would like to have much more water out of the Colorado River than it will probably ever rightfully get. The full requirements or natural demands of each State cannot be met without decreasing the supply to other States in the basin. Therefore, there must be legally a division of the waters of the Colorado River into seven portions, one portion for each of the seven States, as its proper allotment. These seven portions by all the circumstances are not to be equal portions, and while whatever portion is eventually assigned or allotted to each State will be less than that State would like to have, and really does need, the allotment by law must be as nearly fair and just as the mind of man can devise. Such a final allotment has not been made yet to each of the seven States with exactness—at least it has not been made among the four States of the upper basin, although as I read the law it has clearly been made with reference to the three States of the lower basin. The point I wish to emphasize now is that there is a jealous guard being kept over every drop of water taken out of that river, and a strict accounting is being kept, and must continually be kept so that no overdrafts by any State in the basin be permitted. What is the nature of this accounting?

LAW REQUIRES ACCOUNTING

First, let us see what law exists with reference to any apportionment. The basic law of the river which is the Colorado River Compact of 1922, often called the Santa Fe Compact, apportions 15,000,000 acre-feet of water annually at Lees Ferry, Ariz., dividing the same equally into two parts, and apportioning 7,500,000 acre-feet annually to that area in the upper basin above Lees Ferry and 7,500,000 acre-feet annually to that area in the lower basin below Lees Ferry. This apportionment is found in article III, subsection A, of the compact. The following paragraph, which is article III, subsection B, apportions 1,000,000 additional acre-feet annually to the lower basin. Now the total flow of the river at Lees Ferry exceeds that amount, and naturally other disposal is made later in the compact of the unapportioned, or surplus, waters in the stream. Unfortunately, the compact confines itself to these larger divisions of the total supply and does not attempt to apportion water among the seven States, leaving such to subsequent enactments or determinations.

If or when water is taken out of the river to be used in any of the States, it is necessary to keep within the limits of the rightful legal quantity which that particular State may have. For that reason, a very strict accounting must be had, and of course each State must be charged with its draft against its figurative deposit in the "water bank." This accounting is very similar to banking practice of deposits and withdrawals excepting in this case nature does the depositing and man does the checking out. All parties concerned are interested in preventing overdrafts.

TWO IDEAS OF ACCOUNTING

In the controversy over withdrawing water from this river, there have been two opposing doctrines or theories advanced as to proper accounting method, by which to charge each State with the amount of water withdrawn. One of these may be called the depletion method, which is used by the Bureau of Reclamation and sanctioned by most western water authorities. The other may be known as the beneficial consumptive use method, which has been advanced by certain water authorities in southern California. Let me explain each of these as I understand them.

The depletion theory or method is very plain and simple and almost self-explanatory. It is the custom in the West to turn water from a stream bed, or take it out of a stream at the surface, usually by a diversion dam, or it may be taken out by pumps, and carried where needed for irrigation or other beneficial use. By this depletion accounting procedure, the State is charged with the amount of water measured in acre-feet or second-feet to the extent the stream is depleted. Hardly anything could be simpler than that, and I am certain that such procedure is exactly what the lawmakers had in mind and intended should be used in drafting the compact and subsequent legislation.

Now, certain California water authorities propose a different system of water accounting which we will call the beneficial-consumptive-use method, and this method gives a far different mathematical result in contrast with the other. Perhaps the fact that the basic law uses the words "beneficial consumptive use," although in another sense, might at first glance give some sanction to this method. My contention is that the use of the above expression, beneficial consumptive use, in measuring volume or quantity is distorted and misused as a means of accounting withdrawals. That expression, in my judgment, was never intended to be used as a measure of volume of water. Instead, it is a measure of legality or rightful use. We measure water for irrigation in such physical units as acre-feet or second-feet. We use the expression "beneficial use" to determine the character of the disposition of the water and to determine whether it is rightfully so used. Therefore, it is a distortion of language to try to take the expression "beneficial consumptive use," which is a well-understood legal concept in the West, and attempt to make it a measure of volume for accounting purposes, especially on this river. Yet, that is exactly what certain water authorities in southern California are trying to do for their own particular purposes.

BIG DIFFERENCE IN RESULTS

Now what is the difference in end results of these two methods of accounting? Let me give two illustrations, using round numbers for convenience. First, let us take the Gila Basin, lying almost exclusively within the State of Arizona. Let us say that the virgin flow of the Gila River at its junction with the Colorado at Yuma was a million acre-feet annually. However, today every drop of that water is taken out of the Gila and used beneficially and consumptively as it should be. In this river accounting, how much shall Arizona be charged with because of her using all of the Gila water? Because the Gila water supply had been entirely preempted before 1922, when the compact was written, and little is implied about it, it is my belief that it was not intended to be accounted for under that instrument. By the depletion doctrine, Arizona should be charged with the use of 1,000,000 acre-feet of water, if it is to be accounted for at all, other than as illustration. On the other hand, a California water authority with his different idea would say, "Arizona must be charged with 3,000,000 acre-feet of water."

"How does he get that 3,000,000 acre-feet instead of the 1,000,000 acre-feet?"

you may ask. Well, this is it: All along the course of the Gila River in Arizona and along its tributaries water is diverted from the river more than once, and used beneficially for irrigation. Some of that water finds its way back into the river and is again diverted miles below, and again and again, so that a large portion of the water in the Gila Basin is used over and over again. No doubt some of it is used at least 10 times during the course of its journey downstream, until all of it is used completely and disappears, and the river just above Yuma is dry as a bone. Now if you add the sum total of all these uses it will total, let us say, 3,000,000 acre-feet each year—and that is what the California doctrine would charge to Arizona's Colorado River water account. It matters not that there was not that amount of precipitation on the Gila watershed in 12 months. It matters not that that quantity is three times the amount which the Colorado River has been depleted. Under this California doctrine, that is the amount charged against Arizona.

If a family of seven persons all engaged in business have a joint bank account and it is understood that each may check out or withdraw a certain portion of the total deposit, would the family accounting inquire how the oldest son used the money he drew out, or would it inquire merely how much he checked out? It might be that this oldest son, being a thrifty and good businessman, might take out $1,000 and instead of spending it on living expenses might make a good investment so as to make it yield $3,000 extra dollars, which he never deposited in the family account. Must we then charge him with withdrawing $3,000 instead of the $1,000? Such would not be to his liking, and I am sure would not be wise or fair. Certainly it would not be legal according to the first understanding.

ONE METHOD BAD FOR UPPER BASIN

Let us give another case contrasting these two accounting methods. The basic law apportions 7,500,000 acre-feet of water to the four States of the upper basin. Apparently, right now they are using about one-third of that apportionment, and when I say using I mean they are taking out and keeping out above Lees Ferry about one-third of that apportionment. As the Bureau of Reclamation would say, they are depleting the Colorado River at Lee's Ferry by about 2,500,000 acre-feet. Under the depletion theory they might deplete the river 7,500,000 acre-feet, provided only that they keep their obligation to let down water for use below. Therefore, under the depletion theory they have yet about two-thirds of their allotment which they may further take out of the river, provided only that they let a required amount go by for the lower basin.

But how does this look according to the other accounting method? In the upper basin they are doing exactly as is being done in the Gila Basin—water is being used several times. Suppose an investigation shows that all the water that is now being taken out of the upper-basin streams and applied beneficially totals 7,500,000 acre-feet each year. If so, then according to the suggested California doctrine they are charged now with all that they are permitted to have, and legally they cannot take any more out of the river by way of depleting its flow at Lee's Ferry. Which system of accounting—with those differing results—is correct?

FULL USE MUST BE ENCOURAGED

It is my firm conviction that the depletion method is the correct method and is the only logical method to be applied in this river accounting. I believe that to use the other method would be contrary to justice and sound public policy. It would tend to discourage what we want to encourage—that is, the maximum utilization of water in this semi-arid West. Water, being indestructible, is capable of reuse many times, and it ought to be reused as often as possible by every thrifty community in its life-giving, wealth-creating purpose. Of course, it must be used beneficially, as that is our basic criterion, and we want that expression, with all of its legal implications, to be a standard and measure of right and proper use. But if we destroy or ignore its ethical and legal meaning and attempt, as this California doctrine does, to use it in a mathematical sense instead of its plain legal sense, it will be a bar to progress and have a stultifying effect throughout all the reclamation West. Such a meaning, I am convinced, is not in existing law, and it must not be written into any future enactment.

Ceiling Price on Typewriters

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. MILLER of Connecticut. Mr. Speaker, during consideration of the Treasury Department appropriation bill I attempted to have removed from the law the existing price ceiling on the purchase of typewriters. You will recall that we wrote into the law a price ceiling of $77 on "10-inch standard typewriters." I am informed that no one makes a typewriter with a 10-inch carriage. The so-called standard machines for which the Government has been paying $77 in the past actually is an 11- or 11¼-inch carriage.

During the debate on the Treasury Department appropriation I attempted to show that manufacturers of typewriters could no longer provide the United States Government with typewriters at $77 unless they were willing to assume a loss on each such typewriter sold to the Government.

On July 17, 1947, the Bureau of Federal Supply of the Treasury Department released the results obtained from its invitation to bid for supplying typewriters. I have received the following information from the Treasury Department. You will notice that L. C. Smith & Corona Typewriters, Inc., were the only manufacturers who offered standard models at the ceiling price of $77, their bid being $84.70 which includes the Federal tax and their bid is limited to 500 nonportable typewriters for the full year, which I am informed is only half of the number provided by this company last year.

I have not included the bids submitted on portable or electromatic typewriters as, strangely enough, no ceilings have been placed on those models. Some departments of our Government may be very, very short of typewriters by the time Congress reconvenes in January.

L. C. Smith & Corona Typewriters, Inc., offered to supply a total of 500 nonportable typewriters only, for the contract period from July 1, 1947, to June 30, 1948. The prices quoted are the same as for the preceding contract period, and are as follows:

Silent model

Item No.	Maximum paper capacity	Price including excise tax
	Inches	
54-T-6198	11	$96.80
54-T-6208	13½	102.85
54-T-6218	15½	108.90
54-T-6228	19½	114.95

Streamlined standard model

Item No.	Maximum paper capacity	Price including excise tax
	Inches	
54-T-6413	11	$84.70
54-T-6419	13½	90.75
54-T-6434	15½	93.78
54-T-6439	19½	105.88
54-T-6449	21¼	113.74
54-T-6459	27½	125.24

Remington Rand, Inc., did not limit the number of typewriters and offered to supply at list prices as established by them, and prevailing at time of delivery, less a discount of 30 percent on such list prices. There is forwarded herewith a copy of their list containing commercial prices.

The Woodstock Typewriter Co. did not limit the number of machines which it would supply in event of an award of contract, but did stipulate that "This bid is subject to any increases authorized by Congress for the fiscal year 1948 resulting in prices higher than those shown." These prices follow:

Standard model

Item No.	Maximum paper capacity	Price including excise tax
	Inches	
54-T-7398	11¼	$96.90
54-T-7413	13	100.98
54-T-7419	14½	105.41
54-T-7438	18½	134.30
54-T-7449	22¼	151.30
54-T-7460	26½	168.30

The Royal Typewriter Co., Inc., and the Underwood Corp. did not offer to supply other than portable and electric typewriters.

Legislative Record of the Committee on Armed Services, Eightieth Congress, First Session

EXTENSION OF REMARKS
OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. ANDREWS of New York. Mr. Speaker, I report to you and to the House of Representatives a summation of the work of the Committee on Armed Services during the first session of the Eightieth Congress.

At the outset, I point out that this new committee, which originated under the terms of the Reorganization Act of the last Congress, commenced its work in this Congress without tradition, without precedents, without any of the formalized, established procedures which, as they accumulate over the years, simplify to so great an extent the work of any governmental body. All of the operational and policy problems confronting the Committee on Armed Services had to be faced for the first time in this Congress—and, in addition to the many difficulties normally attendant upon the organizing of such a new congressional group, there were also various collateral difficulties unavoidable in the merging into one committee of the preceding historic standing Committees on Naval and Military Affairs.

These many problems were the committee's springboard last January. It is, then, an achievement of no mean proportions that the committee has reduced an outstanding legislative record during the first session of its first Congress. This record was made possible by the remarkable cooperation, the unremitting application to the legislative business at hand, and the complete absence of political considerations, of the members of the committee on both sides. I think it can be fairly stated that few committees have worked with such harmony as has the Committee on Armed Services throughout this session.

To particularize on the work of the committee during this first session, an average of more than one full committee meeting was held weekly throughout the session. Thirty-one such meetings were held in total, revealing thereby the need for a continuity to process the steady flow of legislation from the 12 subcommittees into which the committee is subdivided. These 12 subcommittees held a total of 171 meetings, in open and executive session, during the course of the session. In assessing the intensity of this work you will recall that there were only 126 legislative days in the entire session, so that we had an average of well over one subcommittee meeting for each legislative day. During this time some 150 bills were acted upon of the total of over 425 bills referred to the committee, and of the 150, over one-third, 59 to be exact, were enacted into law.

This new committee initiated an average of one of every six of the laws enacted thus far by this Congress, that is of the approximately 330 laws enacted during the first session of the Eightieth Congress, 59 emerged from the Committee on Armed Services. I consider this record sound evidence of the unremitting application of the committee membership and the excellent guidance and planning of the subcommittee chairman, who, in the final analysis, were responsible for initiating and obtaining floor action on the various bills pending before their subcommittees.

Before going directly into the legislative items handled by the committee, many of which are of national significance, it should be stated that, without exception, the legislation of the subcommittees reported to the full committee, and the legislation reported by the full committee to the House of Representatives, was considered in great detail. Most of the major bills reported were amended severely, either in subcommittee or in full committee, and it is significant that with very few exceptions the subcommittee and full committee deliberations resulted in unanimous reports. By this is emphasized that not only has a large volume of legislation been produced, but sound, fully deliberated legislation which should stand up well over the years ahead.

Below are listed for the information of the House, a tabulation of the committee's bills, divided into various categories indicating the state of completion of the bills on July 26, when the first session of this Congress adjourned:

LEGISLATIVE ACTION OF COMMITTEE ON ARMED SERVICES, EIGHTIETH CONGRESS, FIRST SESSION

BILLS HEARD BY SUBCOMMITTEES

H. R. 2234. Leave of absence for United States employees who are members of the Enlisted Reserve Corps (superseded by H. R. 1845).

H. R. 2536. Procurement, promotion, and elimination of Regular Army officers (superseded by H. R. 3830).

H. R. 2537. Distribution, promotion, and retirement of Navy and Marine Corps officers.

H. R. 1360. Relating to the Board of Visitors to the United States Naval Academy and postgraduate school.

H. R. 3280. Expansion of Army ROTC (superseded by H. R. 4143).

H. R. 3054. Establishing WAC in Regular Army.

House Joint Resolution 77. Maintenance of adequate domestic rubber-producing industry (superseded by H. J. Res. 118).

H. R. 3432. Making certain changes in the organization of the Navy Department (voted to be reported).

H. R. 4038. Enlistment and appointment of women in the Regular Navy and Marine Corps and the Naval and Marine Corps Reserve.

H. R. 1357. Authorizing the sale, loan, exchange, or gift of United States naval ordnance matériel to foreign governments.

H. R. 663. Selection for elimination and retirement of Regular Army officers and retiremen' for members of the Army of the United States.

H. R. 1364. Authorizing the Secretary of the Navy to construct aviation facilities at United States Naval Academy.

H. R. 2359. Construction of water-filtration plant on United States Military Academy reservation.

H. R. 1361. Establishing commissioned grade of Medical Administrator in the Hospital Corps of the Navy (see also H. R. 3215).

H. R. 1373. Reorganizing the Nurse Corps of the Navy and of the Naval Reserve (see also H. R. 1943).

H. R. 1603. Establishing Medical Associated Sciences Corps in Navy Medical Department (see also H. R. 3215).

H. R. 1673. Revision of Army Medical Department (see also H. R. 1943 and 1982).

H. R. 1982. Revision of Medical Department of the Army (see also H. R. 3215).

H. R. 491. To amend the Mustering-Out Payment Act of 1944.

H. R. 1035. To amend the Pay Readjustment Act of 1942.

H. R. 3174. Procurement of physicians and surgeons of the Medical Department of the Army (superseded by H. R. 3851).

H. R. 3254. Additional inducements to physicians and surgeons to make a career of the United States naval service (see also H. R. 3851).

H. R. 3278. Amending Mustering-Out Payment Act of 1944.

H. R. 3540. Payment of claims for medical care and treatment of personnel of Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, and Public Health Service furnished other than by activities of the Federal Government.

H. R. 771. For the relief of Edwin R. Samsey (heard before full committee).

H. R. 1195. Conveyance to the city of Detroit, Mich., of the Fort Wayne Military Reservation.

H. R. 1847. Conveyance to the city of Detroit, Mich., of Fort Wayne Military Reservation (see also H. R. 2183).

BILLS REPORTED BY SUBCOMMITTEES TO FULL COMMITTEE

H. R. 1372. Further amending thirteenth paragraph of section 127a of the National Defense Act.

H. R. 3057. Transfer of part of Fort Douglas, Utah, to the Secretary of Agriculture and conveyance of part to the State of Utah (recommitted).

BILLS REPORTED BY FULL COMMITTEE TO HOUSE OF REPRESENTATIVES

H. R. 3227. Inactive duty training pay for Organized Reserve Corps.

H. R. 4143. Effective operation and expansion of the Reserve Officers' Training Corps.

H. R. 4278. Providing for universal military training.

House Joint Resolution 90. Correcting error in act relating to composition of Naval Reserve (Public Law 50).

H. R. 3049. To continue in effect section 6 of the act of July 2, 1940, relating to exportation of certain commodities.

H. R. 2744. Selection for elimination and retirement of Regular Army officers and equalization of retirement benefits for members of AUS.

H. R. 612. To authorize construction of a research laboratory for the Quartermaster Corps at or in the vicinity of Boston, Mass.

H. R. 3314. Authorizing the Secretary of the Navy to proceed with the construction of certain public works.

H. R. 4122. Authorizing the Secretary of War to proceed with construction at military installations.

H. R. 108. Conveyance of United States Military Reservation at Fort Schuyler, N. Y., to the State of New York for use as a maritime school.

H. R. 2575. Amending Articles of War to improve the administration of military justice, to provide for more effective appellate review, and to insure the equalization of sentences.

H. R. 2313. Providing for detail of United States military and naval missions to foreign governments.

BILLS PASSED BY HOUSE OF REPRESENTATIVES AND PENDING IN SENATE

H. R. 774. Permitting Secretaries of War and Navy to dispose of condemned ordnance,

guns, projectiles, and other condemned material.

H. R. 1366. Procurement of supplies and services by the War and Navy Departments.

H. R. 1380. Amending laws relating to payment of 6 months' death gratuity to dependents of naval personnel.

H. R. 1938. Authorizing appropriation for expenditure by International Children's Fund of the United Nations organization of certain amounts received from services of conscientious objectors.

H. R. 2183. Conveyance to the city of Detroit that portion of Fort Wayne Military Reservation surplus to War Department needs.

H. R. 2964. Conveyance to the regents of the University of Texas that part of San Antonio Arsenal surplus to War Department needs.

H. R. 3051. Amendment of Vinson-Trammell Act.

H. R. 3417. Conveyance to Escambia County, Fla., of a portion of Santa Rosa Island.

H. R. 3735. Authorizing and directing the Secretary of War to donate and convey to Okaloosa County, Fla., United States right, title, and interest in a portion of Santa Rosa Island, Fla.

H. R. 2993. Appointment of additional permanent major generals and brigadier generals of the line of the Regular Army.

H. R. 3484. Transferring Remount Service from War Department to Department of Agriculture.

H. R. 4308. Permitting acceptance of decorations, etc., by members of United States Armed Forces.

BILLS PASSED BY SENATE AND HOUSE OF REPRESENTATIVES AND ENACTED INTO LAW

H. R. 1359. Increasing total authorized number of commissioned officers of the active list of the Corps of Civil Engineers of the Navy (Public Law 62).

H. R. 1605. Providing for appointment of additional commissioned Regular Army officers (Public Law 61).

H. R. 3303. Stimulating voluntary enlistments in the Regular Army (Public Law 128).

H. R. 3830. Promotion and elimination of Army, Navy, Air Forces, and Marine Corps officers.

S. 918. Establishing Office of Selective Service Records to liquidate the Selective Service System and to preserve Selective Service Records (Public Law 26).

H. R. 1365. To establish a Chief of Chaplains in the United States Navy (Public Law 86).

H. R. 1369. Providing for the reorganization of the Navy Department (Public Law 57).

H. R. 1371. Authorizing the Secretary of the Navy to appoint for supply duty only officers of the line of the Marine Corps (Public Law 150).

H. R. 2339. Amending act entitled "An act authorizing the designation of Army mail clerks and assistant mail clerks" (Public Law 136).

H. R. 3471. Authorizing leases of real or personal property by War and Navy Departments (S. 1198 substituted).

House Joint Resolution 118. Strengthening common defense by maintaining adequate domestic rubber-producing industry (Public Law 24).

H. R. 1367. Authorizing the construction of experimental submarines (Public Law 63).

H. R. 3127. Loan or gift of obsolete ordnance to State homes for former members of the armed forces.

H. R. 3315. Authorizing conversions of certain naval vessels.

H. R. 3251. Authorizing naval retiring boards to consider cases of certain officers (Public Law 178).

H. R. 1341. Authorizing the Secretary of the Navy to construct a Postgraduate School at Monterey, Calif. (S. 229, companion bill, was accepted by House).

H. R. 1358. Amending the act entitled "An act to provide for the management and operation of naval plantations outside the continental United States" (Public Law 149).

H. R. 1379. Establishing United States Naval Postgraduate School.

H. R. 1943. Establishing permanent Nurse Corps of the Army and Navy and Women's Medical Specialist Corps in the Army (Public Law 36).

H. R. 3215. Revision of Medical Departments of the Army and Navy.

H. R. 1362. Permitting the counting of all active service under temporary appointments as warrant or commissioned officer in the Navy and Marine Corps for purposes of promotion to commissioned warrant officer (Public Law 134).

H. R. 1363. Amending further the Pay Readjustment Act of 1942 (Public Law 55).

H. R. 1375. Clothing allowance for enlisted men of the Marine Corps and Marine Corps Reserve (Public Law 158).

H. R. 1376. Transportation of dependents and household effects of Navy, Marine Corps, and Coast Guard personnel (Public Law 151).

H. R. 1377. Increasing pay of cadets and midshipmen at the service academies (S. 321 substituted therefor—Public Law 96).

H. R. 1806. Payment and settlement of mileage or other travel allowance accounts of military personnel (S. 276 substituted—Public Law 21).

H. R. 2314. Authorizing lump-sum payments to survivors of deceased officers without administration of estates (Public Law 236).

H. R. 3501. Amending Armed Forces Leave Act of 1946.

H. R. 3851. Additional inducements to physicians and surgeons to make a career of the United States Military, Naval, and Public Health Service (S. 1661 substituted).

H. R. 4017. Amending Armed Forces Leave Act of 1946 to provide that bonds issued thereunder shall be redeemable at any time after September 1, 1947, in cash (Public Law 254).

House Joint Resolution 167. Recognizing uncompensated services rendered the Nation under Selective Training and Service Act of 1940 (Public Law 133).

H. R. 1343. Authorizing the Secretary of the Navy to grant to the city of San Diego a right-of-way over land owned by th. United States within the limits of Camp Gillespie, Calif. (S. 231 was reported and passed in place of H. R. 1343—Public Law 32).

H. R. 1368. Including civilian officers and employees of United States Naval Government of Guam among those entitled to benefits of Public Law 490 of Seventy-seventh Congress (Public Law 64).

H. R. 1394. Authorizing the Secretary of the Navy to convey to A. T. & T. easement for communication purposes in certain lands in Virginia and Maryland (S. 220 substituted therefor—Public Law 18).

H. R. 1370. Conveyance to Los Angeles of easement for construction and operation of a storm drain in and under certain Government-owned lands in that city (S. 235 reported in lieu of H. R. 1370—Public Law 11).

H. R. 1395. Authorizing Secretary of the Navy to convey to the Central of Georgia Railway Co. easement for railway purposes (S. 234 substituted therefor—Public Law 13).

H. R. 1396. Authorizing Secretary of the Navy to convey to Virginia Electric & Power Co. perpetual easement in two strips of land comprising portion of Norfolk Navy Yard (S. 221 substituted—Public Law 19).

H. R. 1807. Authorizing Secretary of the Navy to grant easement to the county of Pittsburg, Okla., to operate public highway over a portion of the United States Naval Ammunition Depot (Public Law 135).

H. R. 1845. Providing military leave for Federal employees (Public Law 153).

H. R. 2248. Authorizing Secretary of War to grant easement and to convey to the Louisiana Power & Electric Co. tract of land comprising a portion of Camp Livingston (Public Law 44).

H. R. 3053. Authorizing Secretary of Navy to convey to Territory of Hawaii easement for public highway and utility purposes (Public Law 212).

H. R. 3056. Permitting Secretary of Navy to convey to Macon, Ga., and Bibb County, Ga., easement for public road and utility purposes (Public Law 207).

H. R. 3191. Extension of benefits of Missing Persons Act to certain members of organized military forces of the Government of the Commonwealth of the Philippines (Public Law 239).

H. R. 3252. Authorizing Secretary of Navy to convey to Long Beach, Calif., easement for State purposes in certain lands within the Navy housing project (Public Law 208).

House Joint Resolution 116. Correcting technical errors in the act of August 13, 1946 (Public Law 71).

Senate Concurrent Resolution 31. Relating to surplus buildings and lands for community purposes (passed House and Senate July 26).

H. R. 1381. Acceptance of decorations, orders, medals, and emblems by United States officers and enlisted men tendered by govments of cobelligerent nations or other American Republics (Public Law 58).

H. R. 1544. Providing lapel buttons for widows, parents, and next of kin of members of armed forces who lost their lives in United States armed services in World War II.

H. R. 1621. Authorizing Secretary of War to lend War Department equipment and services to Boy Scouts of America in connection with World Jamboree of Boy Scouts in France 1947, etc. (Public Law 131).

H. R. 2247. Appointment of Maj. Gen. Laurence S. Kuter as representative of Interim Council of the Provisional International Civil Aviation Organization, or its successor, without affecting his military status (S. 875 substituted—Public Law 3).

H. R. 2276. Authorizing the Secretary of War to pay expenses of United States Army personnel in Seventh Winter Sports Olympic Games and the Fourteenth Olympic Games and future Olympic Games (Public Law 159).

H. R. 3055. Permitting Secretaries of War and Navy to supply utilities, etc., to welfare activities in persons near naval and military activities.

H. R. 3124. Attendance of Marine Band at Eighty-first National Encampment of the Grand Army of the Republic, Cleveland, Ohio (Public Law 141).

H. R. 3394. Evacuation and return of remains of certain persons who died and are buried outside the continental limits of the United States, etc.

H. R. 3629. Transfer to Panama Canal of surplus War or Navy Department property (Public Law 160).

H. R. 4247. Authorizing attendance of Marine Band at national conventions of American Legion and Veterans of Foreign Wars.

House Joint Resolution 92. Authorizing presentation of Distinguished Flying Cross to Rear Adm. Charles E. Rosendahl, USN (Private Law 35).

House Joint Resolution 96. Authorizing President to issue posthumously to the late Roy E. Geiger, lieutenant general, USMC, a commission as general, USMC (Private Law 36).

I think the foregoing tabulation leaves little occasion for doubt as to the efficiency and dispatch with which this new committee of the House is meeting the many complex problems involved in returning the expanded Armed Services to a peacetime basis. To point up the significance of the legislative work thus far performed, I will set forth briefly the

scope and effect of some of the major bills included in the above list.

Without attempting to discuss these bills in order of their relative importance, I will mention first H. R. 2471, a bill authorizing the Secretaries of War and Navy to lease property under their control in furtherance of the national standby facilities program. The practical effect of this bill is to permit the Secretaries to lease 77 industrial plants and shipyards for periods in excess of 5 years to industry, with the requirement that they will revert to Government control, if necessary, in time of national emergency. The bill also permits the retention of some 90,000 machine tools which would otherwise have to be sold as surplus A companion bill, S. 1198, passed the Senate with various amendments which were accepted by the House of Representatives, and, at the time this report is filed, the bill is awaiting the signature of the President.

There is also H. R. 4017, a bill permitting veterans to cash approximately $1,800,000,000 worth of bonds issued to them in lieu of terminal leave cash. The importance of this legislation to hundreds of thousands of people in the Nation is readily apparent, as was the necessity for full deliberation before the bill was reported to the House of Representatives, where it was unanimously passed. Such deliberation was given by the subcommittee and, later, by the full committee when the subcommittee report was rendered.

And then there is H. R. 3851, a bill increasing the pay of doctors and dentists in the armed services and the Public Health Service. This legislation is exceedingly important in view of the present critical shortage of doctors and dentists in the services. This committee and the services are hopeful that this legislation, now awaiting Presidential signature, will alleviate, to a great extent, the present doctor and dentist shortages of the services, which are reaching dangerous proportions.

Another legislative item, not widely known but vitally important to the Nation, is H. R. 1367—now Public Law 63—which authorizes the Navy to construct two experimental submarines in order to benefit from knowledge gained during the war of submarine operations and to incorporate into American submarines the improvements and useful innovations found in captured submarines. The importance of this legislation is not immediate but it may well have untold significance some few years hence when the authorized experimentation has been completed.

The so-called Army-Navy-Coast Guard procurement bill, H. R. 1366, passed by the House of Representatives but still pending before the Senate, is another major piece of legislation which was considered thoroughly by this committee. This bill contemplates the establishment of a uniform method of procurement for all the services and is highly important from the standpoint of standardizing procurement methods. This highly technical, carefully conceived legislation will unquestionably contribute to the efficiency of the services under the new unification measure.

H. R. 2744, still pending before the House of Representatives, is another major bill which received careful examination in this committee before its report to the House. It provides a new, improved system for the elimination of inefficient officers of the Regular Army as well as for the retirement of Regular Army officers and enlisted men. Moreover, it provides, for the first time, for the retirement of officers and enlisted men of the Reserve components of all the services, thus offering substantial inducement to reserves to perform continued reserve service for at least 20 years. This legislation, if enacted, is expected to have a major effect upon the readiness of the Nation's reserves in the event of another war emergency. From this standpoint alone, aside from its effects upon the Regular Army, this will be one of the most important bills pending before the Congress when it reconvenes.

Also markedly affecting the efficiency of the Reserve components of the armed services are two other bills reported by the committee and now pending before the House. They are H. R. 3227 and H. R. 4143, the first providing inactive duty training pay for Army reservists on the same basis as that received heretofore by naval reservists and members of the National Guard, the latter providing for an expanded, better paid, more inclusive Army Reserve Officers' Training Corps. The first bill offers an immediate pay inducement to reservists in addition to the Reserve retirement plan mentioned previously; the latter insures a steady, increased output of Reserve officers from the Nation's colleges and universities—as well as from junior colleges, for the first time. These items are an integral part of the mobilization day plans of the Army and will bear directly on the state of readiness of the Nation should it become involved in another war.

The following are a few more of the major bills acted upon by the committee: H. R. 3501 was reported favorably. This bill eliminates terminal leave for military personnel and substitutes therefor immediate cash payment for all accrued leave up to 60 days, and also corrects outstanding inequities in the old law. There is also H. R. 3315, permitting the Navy to convert existing types of naval vessels to certain new and experimental designs, including troop-carrying submarines, vessels designed to carry out special polar missions, and so forth. I should also mention H. R. 3314 and H. R. 4122, the Navy and Army public-works bills providing for the construction of naval and military facilities within and outside the continental United States, including such items as guided missiles' testing ranges, construction in Alaska, and similar undertakings of great importance to the national defense program.

Another important bill was H. R. 1379, authorizing the establishment of a Naval Postgraduate School, and also H. R. 1341, providing for the construction of a 500-student Naval Postgraduate School at Monterey, Calif., at a cost of approximately $2,500,000. Further, the committee unanimously passed, and the House and Senate subsequently passed, H. R. 3830, the Army and Navy promotion bill, which, for the first time, brings the promotion programs of the services into one piece of legislation. This is in itself a great step forward. In many important respects the bill is an adjunct to the unification or so-called merger bill enacted this session, whereby the services are placed under one administrative head. H. R. 3830 establishes a forward-looking, sound, and yet economical promotion system for the career officers of all the services, which will have a most helpful morale and efficiency effect over the years; also, in recognition of our return to peacetime conditions, it effects sharp reductions in the top ranks of the Army and Navy.

There are also H. R. 3215, creating the Army-Navy Medical Service Corps which gives permanent service status to the various professional groups allied to the duties of the Medical Corps, and H. R. 1943, which establishes, for the first time, a permanent corps for nurses of the Army and Navy.

The committee also passed H. R. 1943, giving Federal employees in the Reserve components military leave so that they may participate in Reserve training for limited periods without personal loss. This is another move in the direction of maintaining a vigorous, efficient, immediately available Reserve Establishment to augment the Regular forces. And, certainly I should not fail to mention H. R. 2575, which is still pending before the House of Representatives. This bill amends the Articles of War and makes extensive revisions in the Army system of military justice. It is of marked importance and will have far-reaching effects on the entire Military Establishment. It was reported to the House of Representatives after more than 2 months of study in the committee.

Finally, there is H. R. 4278, the bill reported to the House on the closing day of the session, which would establish universal military training. I need not, in this report, attempt to emphasize the great importance of or discuss the fundamental questions contained in this basic legislation. Its report to the House brings a specific legislative proposal on this vital subject squarely before the American people for the first time, thus permitting an appraisal on its merits.

As indicated in the above list, there are many more bills which the committee considered thoroughly this session, some of which were reported, some retained in subcommittee, and some still awaiting Senate action. Several series of extensive hearings, not reflected in the above listing, were conducted on such matters as establishing a permanent national synthetic-rubber industry. With respect to the synthetic-rubber program, the committee favorably reported House Joint Resolution 118, which became Public Law 24. This law, while providing adequate protection for the domestic synthetic-rubber industry, eliminates the Government as the sole purchaser of natural rubber for the United States. It should be noted that since the passage of this law, the price of natural rubber has dropped approximately 6 cents per pound with a consequent

saving of millions of dollars to the American consumer. Procurement by Navy ships service stores and Army post exchanges, and Army, Navy, Air Forces, and Marine Corps supply depots were also considered at length.

This summary will demonstrate the wide range of subject matter and the vast importance to the national-defense program of some of the major bills the committee has dealt with this session.

Mention should also be made of those whose various contributions have made this new committee a workable, harmonious unit. I wish to cite Hon. CARL VINSON, the ranking minority member, senior in length of congressional service to all members of the committee, for 30 years a member of the Committee on Naval Affairs and for 17 years its able chairman. Mr. VINSON'S sound advice and wholehearted cooperation contributed immeasurably to the accomplishments of the committee. His service in connection with this new, untried undertaking, has been an example of selflessness, loyalty to the national need, and unstinted sharing of personal talent rarely demonstrated in public life. The committee has been benefited greatly by his association and counsel.

And there are those on both sides of the committee, Republicans and Democrats alike, who individually, on one occasion or another during these past months, have been the sources of strength and understanding that have made the 33-member committee a working team. There is not a member of the committee on either side, who has not at one time or another contributed not only to sound national legislation, but also to the unusual concert and unity of purpose which has characterized the committee's work this session.

For the planning and placing of responsibility that made it possible for the committee to function efficiently, I wish particularly to compliment the subcommittee chairmen. Each was wholly in charge of the legislative subjects before his subcommittee. With 171 subcommittee meetings in 126 legislative days, it will be seen to what extent these chairmanships involve personal attention and constant application to detail. Each of the chairmen has major claim to the progress made by the committee since its first meeting was held; it was their guidance and careful preparation that, in conjunction with their subcommittee members, brought the committee legislation to the floor of the House. For the information of the House, and by way of identification of those who bore the major share of the legislative responsibility within the committee, I list here the subcommittee chairmen, together with the subject matters with which their subcommittees are charged:

Chairman	No.	Subject
Hon. DEWEY SHORT	1	Personnel.
Hon. HARRY L. TOWE	2	Education and training.
Hon. PAUL W. SHAFER	3	Organization and mobilizat on
Hon. WILLIAM E. HESS	4	Heavy munitions.
Hon. CHARLES R. CLASON	5	Air matériel.
Hon. JACK Z. ANDERSON	6	Procurement and supply.
Hon. LEROY JOHNSON (California)	7	Retirement; scientific research and development.
Hon. GEORGE J. BATES	8	Posts and stations.
Hon. MARGARET CHASE SMITH	9	Hospitalization, health (Medical Corps)
Hon. WILLIAM W. BLACKNEY	10	Pay and administration.
Hon. CHARLES H. ELSTON	11	Legal.

In connection with the work of the subcommittees just mentioned, it is important to note that they have operated functionally with respect to all the services and thereby have brought a unifying, coordinated approach to service legislation which has been one of the most valuable, lasting benefits this new committee can render the American people, the Congress, and the armed services themselves. Further in this same connection, the loyalty and conscientious work of the staff of the committee, working with each of the subcommittees, have been the background for all subcommittee action. It is fitting and well merited by the service they have rendered to identify them, as follows:

Robert H. Harper, chief clerk, formerly Army Air Forces.

John R. Blandford, professional staff, formerly United States Marine Corps.

Clinton B. D. Brown, professional staff, formerly United States Navy.

Bryce N. Harlow, professional staff, formerly United States Army.

Robert W. Smart, professional staff, formerly United States Army.

Townsend Hoopes, assistant clerk, formerly United States Marine Corps.

In conclusion, Mr. Speaker, I wish again to express my personal appreciation to all connected with the committee for the excellent work which has been done. The foundations thus far laid auger well for the future.

Memorial Service for Hon. Joseph Jefferson Mansfield, Late a Representative From Texas

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. TEAGUE. Mr. Speaker, Judge Mansfield was my idea of a successful man. He was an inspiration to all whether they had known him during his entire period of 30 years of public service or if their friendship with him was of relatively short duration such as mine. It is to be regretted that we will no longer have the benefit of his experience to guide us in the future.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my humble remarks in memory of Judge Mansfield which have been published by the newspapers in the Sixth District of Texas:

WASHINGTON, D. C., July 23.—When Hon. Joseph Jefferson Mansfield died at Bethesda Naval Hospital here on the night of July 12, a career of public service that is difficult to equal ended.

Judge Mansfield was my idea of a successful man. The following Monday when the House of Representatives held memorial services for him every type of individual and every type of creed represented in that body rose to pay tribute to the gentleman in the wheel chair. The tributes lengthened into the longest memorial services ever heard in the House of Representatives.

House Minority Leader SAM RAYBURN, of Bonham, Tex., in announcing the death of Judge Mansfield to the House said: "I have served in this House with more than 2,100 men and women in 34 years. That shows how fast we change. They have been men and women of high character and lofty ideals, the majority of them of outstanding ability.

"But of all those men and women, none surpassed and few equaled Judge Mansfield in ability or in bigness of soul. God never made a finer man nor greater character than Judge Mansfield. After 30 years of his loyalty to me, and mine to him, the sadness deepens that I will not see him again, nor again see his like as I have few times in my life—towering, good, just, pure patriot."

Judge Mansfield had been in public service nearly all his life. For 30 years he had been a Member of Congress, and his life span had stretched from the time of Abraham Lincoln to the atomic age. The last 25 years of his life was in a wheel chair, paralyzed from the waist downward. A few times I had mentioned his affliction to him, and he would always smile knowingly and say: "But, son, there are so many people in much worse shape than I am."

Here was a man who asked no quarter because of a handicap. He had served faithfully and well his people of the Ninth Congressional District, and he had no enemies in Congress. Here was the epitome of success.

I believe that of all the tributes offered the revered judge, the following from Representative CHELF, of Kentucky, touched me deepest:

"Mr. Speaker, I think the First Psalm must have been written about this great and good man who has just left us:

" 'Blessed is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful.

" 'But his delight is in the law of the Lord: and in his law doth he mediate day and night.

" 'And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper.'

"This I do know—the First Psalm was written to urge and encourage all men to lead and to live the fine Christian life which was that of our dear friend and colleague, Judge Joseph Jefferson Mansfield, of the Lone Star State of old Texas.

"I recited this little verse to the judge on his eighty-fifth birthday and he gave me a warm, firm handshake. The twinkle in his eye indicated to me that he liked the thought it expressed:

"Making friends is a lot of fun
Shaking hands with everyone.
Hearing what each has to say
As we meet them day by day
Swapping smiles and trading cheer
Makes us happy while we're here
For all the joy of life depends
On the art of making friends."

Such a man was Joseph Jefferson Mansfield, the revered, alert little "gentleman in the wheel chair." He will be long missed and forever remembered in the House of Representatives where his 30 years of service will stand like a great white monument.

Reports From War Department Responsible for Members' Bills Not Being Considered

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of the House and my constituents the fact that many of the Members of the Eightieth Congress were unable to obtain consideration and approval of bills for claims for their constituents because the committees considering these bills were unable to obtain reports from the War Department on the same.

On January 9, 1947, I introduced H. R. 761, for the relief of Mrs. Anthony D. Chamberlin, and H. R. 762, for the relief of Dudley Tarver.

On February 20, 1947, the Committee on the Judiciary of the House of Representatives submitted these bills to the War Department and requested a report on the same, and up to the time that the Congress adjourned, July 27, 1947, at 12:55 a. m., no report had been received on these claims, notwithstanding the fact that the claims arose from an accident in which other claimants were involved, and upon which claims the War Department had already made a report, and a settlement had been made, and all that would have been necessary would have been to copy the report on the other claims involved in the same accident and substitute names, as all of the facts and circumstances were identical. No report from the War Department, the claims were not approved.

Uncle Sam Gone Delinquent

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. LEMKE. Mr. Speaker, today I am talking to Americans—not to any foreign nation—not to any foreign element in Washington, New York, Grand Rapids, or St. Paul. I am not talking to subsidized Americans. I am not talking to the hyphenated hybrids in our midst—who would substitute a mongrel flag for the Stars and Stripes.

America, watch your step! There are some things going on in Washington that are not healthy for our Republic. We are allowing the Government of, for, and by the people to slip away from us. Our Nation is being betrayed—sold down the river.

Our Uncle Sam has gone delinquent. He is in his second childhood. He has deserted beautiful Miss Columbia and her 142,000,000 sons and daughters. He has become an international philanderer. He is chasing red, pink, green, and off-colored skirts all over the world. He is squandering the wealth that Miss Columbia and her sons and daughters have created.

The time has come that we appoint a guardian for our Uncle to protect him from his folly, and prevent him from squandering the substance of our Nation—from giving away to gold diggers that which belongs to Miss Columbia and her 142,000,000 sons and daughters—that which belongs to unborn generations.

I know of no better guardian than a candidate for President in 1948, who believes in America first, last and all the time, with justice and decency to all nations, whether they be the so-called 52 peace-loving nations—some of them aggressors—or our vanquished foes. One who believes in the Stars and Stripes rather than in a conglomeration of flags.

A candidate who knows enough to know that the one worlders and the Rhodes scholars have been deflated. A candidate who has not, and will not, hobnob with the former pal of Hitler—Joe Stalin. A candidate who does not believe that our Nation is dead. A candidate who believes in the true grandeur of our Nation. A candidate who is not a "me-too" candidate. A candidate who is not a vacillating turncoat, or a stooge of the international bankers and manufacturers.

I am sorry that such a candidate—such a guardian—is not yet in sight. I know that 80 percent of the American people are getting sick and tired of our Uncle's behavior, and demand such a candidate—such a guardian. They know that our Uncle is the easy prey of the global gold diggers—that he is denuding our Nation. They know that he is leading us into another undeclared war.

Here is the price we paid because of our meddling in other nations' quarrels. We entered World War I, not so much "to make the world safe for democracy" as to save the House of Morgan from a $400,000,000 European overdraft. We won that war—but lost the peace.

In that war, 360,000 of our sons gave their lives on foreign battlefields, or died of injuries, while hundreds of thousands have died since, or are still suffering from disabilities or injuries received in Europe. That war has cost us over $88,000,000,000 to date, and will cost billions more.

We entered World War II—a war that others started and we finished. That war, to date, has cost us over $450,000,000,000. We collected $190,000,000,000 in taxes, and plunged the Nation $260,000,000,000 into the red. Our national debt, with future obligations, now amounts to some $623,000,000,000. This is about four times the total indebtedness of all the other nations. It is more than twice the normal value of all the property in the United States. The end is not yet. If we continue this international lunacy, then it will be just the beginning.

The total expenditures of our Government, from its birth in 1776 to 1933, were less than $90,000,000,000. This included the Revolutionary War, the War of 1812, the Mexican War, the Indian Wars, the Civil War, the Spanish-American War and World War I, up to 1933, and, in addition, all the other functions of our Government. Compare this $90,000,000,000 with the over $887,000,000,000 spent in the last 15 years—the Roosevelt global era.

In World War II we furnished more than half the implements of war to win, and we did more than half the fighting. We lost 309,000, that were killed in battle—another 250,000 died from sickness—another million were disabled physically and mentally for life. We lost at least one-tenth of a generation of people. This is the human sacrifice we made in that war. Worse still, we again lost the peace.

In addition, our multimillionaire State Department made of our Government an international WPA. Under its commitments, we made huge loans—gifts—to Great Britain, France, Latin America, and other nations. Some of these are among the nations that refused to pay back the $15,000,000,000 we loaned them during, and after, World War I.

Recently we loaned Great Britain $4,400,000,000 at about 1½ percent interest. She is to make no payment for 5 years. After that, she is to pay $50,000,000 a year, when and if she feels like it. If she does make a payment, we agreed to spend it in Great Britain. Not a cent to come back to the United States—just a gift.

In addition, we canceled the $34,000,000,000 Great Britain owed us for $650,000,000. That is less than 2 cents on the dollar. This $650,000,000 was deducted from the $4,400,000,000 loan. In other words, we settled the $34,000,000,000, that she owed us, with $650,000,000 of our own taxpayers' money. If that was not financially highjacking us by our State Department, then, I do not know the meaning of the word.

Since the war we have given to 59 nations over $20,000,000,000. The Marshall plan means another $27,000,000,000. In addition, we gave to Russia, plates with which she has printed, to date, over $900,000,000 American money. Our own money is used to strip America of its natural resources.

With our money Russia is buying millions of barrels of our oil, and 350 times as much steel as she bought prior to the war. Little wonder that there is a shortage of gas—a shortage of steel. What is true of Russia is true of other nations.

Prior to the war we possessed 11 percent of the world's natural resources. At present we possess less than 9 percent. Unless large new deposits are discovered we will never again produce sufficient lead, copper, zinc, petroleum, or many other minerals for our own use. These are the crucial political issues to be decided in the 1948 election. There must be no dodging of these issues.

There are some who say they are not interested in politics, but intelligent people know that everything in America is in politics. The housewife, when she cannot get meat, sugar, wearing apparel, or other necessities of life except at ex-

orbitant prices, knows that this is the result of our erroneous foreign policy.

When the veteran cannot get a home, or building material to build one, he knows that the shortage is due to our foreign bureaucratic bungling. When the American farmer cannot get implements with which to produce crops, he knows that these implements are in international politics.

We know that these shortages—the high cost of living—are due to the fact that much of America's needed goods are on the ocean. We know that these goods are bought by foreign nations with our taxpayers' money. This is the result of our Government's foreign policy. We know that America is being sold short. Americans forgotten—foreigners preferred.

I, too, realize that there are grave decisions to be made. But there need not be, if we remember that our first duty is to our own Nation. They are easy decisions, unless we knock-kneed follow a few misguided, silver-topped octogenarians in and out of Congress.

The Republican Party was kept out of the White House for 16 years because it had no positive program—because its candidates were "me-too" followers of the one worlders—globetrotters. The Democrats met a disastrous rebuke in the last election because they too blindly followed blind leaders.

The last election was not a mandate to go back to the Dark Ages, but a repudiation of our foreign policy—a repudiation of an international WPA—a repudiation of selling America short. It was a repudiation of dictatorship, bureaucracy, and regimentation.

The time has come for both parties to again adopt the policy of our forefathers and avoid globetrotting, and foreign entanglements. The time has come for my Democratic friends to adopt the doctrines of Thomas Jefferson and Andrew Jackson. The time has come for my Republican friends to adopt the doctrines of George Washington and Abraham Lincoln. When that day comes, it will be a glorious day for the United States of America.

As I listen to the internationalists—the betrayers of our Nation—I am impressed with their suaveness, but astonished at their fallacious arguments. It is the same old story—arm other nations, finance the world, and they will protect us—will save us from war. How do these gentlemen know on which side the Greeks, the Turks or any other nation will be in the next conflict? Do they not know that an armament race always has, and always will end in war?

Anyway, since when have we become so cowardly that we have to arm other nations to do our fighting—Hessians? I deny that that is essential, or for the best interest of our Nation, or for the peace of the world. In the end it means war.

Whenever the day comes that love for our country and patriotism fall so low that this kind of chicanery is necessary, then the Republic that you and I have cherished and loved—the Republic that the world has looked to as a model of justice and decency to all nations—will be dead. Then we will have surrendered all that is sacred and good to the human race.

Let us no longer be blind followers of deceptive slogans. We were deceived in World War I by false slogans. Then it was "He kept us out of war," "Too proud to fight," "America first," and then "Benevolent belligerency," "A little group of willful men," "War to end all wars," and "Make the world safe for democracy." Time has proven the dishonesty of all those slogans.

In World War II it was "Raise the arms embargo and save our boys," "Give us the tools and we will do the fighting—lend-lease," "The four freedoms," and then "I say again and again and again your sons will not be sent to foreign battlefields." Time has proven these slogans false. There are no four freedoms, and our boys did the fighting and the dying.

Whatever difficulties we face today are of our own making. We went to bed with the former pal of Hitler and we are reaping the reward. Our Presidents and leaders were outgeneraled at Tehran, Yalta, and Potsdam. In place of looking for more entanglements the time has come for Congress to repudiate Yalta, Tehran, Potsdam, and all the other commitments that are not in keeping with decency and honesty among the nations.

History repeats itself. So does war. So do slogans. We are now being deceived into world war III. Now we are told that we—less than 7 percent of the world's population and owing four times as much as the rest of the world together—must become a permanent, international Santa Claus.

We are told that we, who, during the war, stripped ourselves from 11 percent to less than 9 percent of the world's natural resources, must not only feed the world, but must arm and set nation against nation—that we must arm Greece and Turkey, and set them against Hitler's former pal, more recently our pal.

We believe that the United Nations organization might be made the nucleus for cooperation, education, and understanding among the nations of the world. However, to accomplish this, men of vision, courage, and integrity must be appointed to represent America. So far the United Nations organization has been a failure because of the weak-kneed puppets that represent not only our Nation, but other nations.

If our Nation had taken a firm stand at the beginning of this organization, if it had called a spade a spade, if it had insisted that all nations, small and large, should have an equal voice—that no nation, however large or small, should have a veto power—then, we might have approached permanent peace. Then, there would have been treaties of peace long ago.

If our delegates had taken a firm stand for justice and decency—if they had taken a stand against liquidation and aggression, all the small nations would have joined us, and the aggressor nations would have been whipped into line by the just condemnation of world public opinion. If our delegates had demanded that the "four freedoms," with self-determination, be written into the United Nations Charter, then the world would have been safer and the future brighter. If our President had insisted that every nation get back into its own boundaries, and that boundaries be changed only with the will of the majority expressed in an honest election, then world war III would not be hovering on the distant horizon.

America's future policy must again be to build, ever, a greater and stronger nation—to raise, not lower, its standard of living. We will not mingle our standard of living with the poverty of other nations, but we will assist them in bringing their standard up to ours. We will help to rebuild the ravaged nations. We will provide food for the hungry. This out of our surpluses, not out of our necessities. Charity still begins at home. We will cooperate and collaborate with other nations for a just peace. We disapprove of the European vengeance and hatreds which are again being written into the peace treaties.

In conclusion, "my country right or wrong—when right to be kept right—when wrong to be put right"—must again be our slogan. If the Republican Party expects to win in 1948, it must nominate a man who has the vision and the courage to give the voters an opportunity to repudiate national suicide. They must nominate a candidate who can read and understand our Constitution. A candidate who will not accept foreign commitments unless made in a treaty, and confirmed by the Senate in accordance with our Constitution. Eighty percent of our people demand an opportunity to repudiate the foreign policy of our delinquent Uncle Sam.

Speech of Hon. Helen Gahagan Douglas, of California, Before the National Association for the Advancement of Colored People

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following speech made by me before the National Association for the Advancement of Colored People on June 25, 1947, during their national convention here in Washington, D. C.:

The National Association for the Advancement of Colored People has a long record of hard, painstaking work and brilliant achievement. You have every right to feel proud of work well done.

It is indeed an honor and a pleasure to be with you and to address you at this your thirty-eighth annual conference.

You are to be greatly congratulated for you have in fact advanced the well being of the Negro people, and in so doing have insured the greater well being of all minority groups. Your work has helped strengthen our democracy.

I pay my respects tonight to Walter White and the officers of the NAACP for the leadership they have given to local and national problems.

They rightfully deserve and have the widespread admiration and confidence of the American people.

In the last 38 years, the NAACP has combatted widespread undemocratic practices, undemocratic practices which violated the fundamental liberties and human rights of one great segment of our people. Continued violation in our daily living of our belief in the dignity and rights of the individual without protest and constructive resistance would have eaten away the strength of our Nation.

Thirty-eight years ago, many States by means of grandfather clauses and other restrictive devices had embarked on a course which could only have resulted in the total disenfranchisement of Negro citizens.

Thirty-eight years ago, the courts in almost every section of this country disregarded the rights of Negro citizens by recognizing confessions extorted by rack and torture, disregarding the right of the accused to be represented by counsel and to be judged by a jury of their peers.

Thanks to your work and alertness, Negroes who appear before the bar of justice today come nearer to getting justice than at any time in the history of this country.

Thanks to the magnificent victory won by the NAACP in 1944, when the United States Supreme Court decided in the case of *Smith* v. *Albright* that the Democratic Party was not a club, Negroes marched to the polls to vote in what had heretofore been white primaries. One hundred thousand Negro citizens marched to the polls in Georgia this last election for the first time in nearly 75 years, and they voted against the forces of reaction.

Thirty-eight years ago, there was an average of a hundred known lynchings a year despite the fourteenth amendment, which says that no State shall deprive any person of life, liberty, or property without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

We still have a long way to go before democracy is a reality for all our people. But thanks to the work of the NAACP, the crime of lynching has been almost wiped out and an anti-lynch bill has finally been drafted which meets the needs.

I am one of the two sponsors of this bill in the House. Senators WAGNER and MORSE have introduced a similar bill in the Senate.

If Congress will now act on these bills, the filthy crime of lynching and mob violence can be outlawed in these United States.

All right-thinking Americans have reviewed with shame and revulsion the series of mob violences that have taken place recently in certain parts of the country. Mob hysteria which results in mob violence and turns on its victims and takes the law in its own hands because of the difference of race or religion or national origin is a threat to the freedom of every one of us.

We cannot and must not rest until we have a Federal law to handle such violence. It is the obligation and responsibility of those who understand the substance of liberty to act.

The health of our democracy depends upon equal justice before the law for all of our citizens.

How can a government of the people, by the people, for the people permit abuses or violations to any of the people's liberties?

Justice would have been done in the recent Greenville, S. C., case if the present anti-lynch bill before Congress had been on the statute books.

The Greenville case, if the antilynch bill were law, would have been conducted under the jurisdiction of a Federal district court. The significance of a Federal trial is manifold.

The jury would have been drawn from the entire State of South Carolina instead of just from the community of Greenville, which was immediately involved. A jury picked from the entire State would have been free from the immediate pressures of the community where the crime was committed.

Thirdly, both the community where the abduction takes place and the community where the actual violence occurs would be subject to civil suit if this anti-lynch bill is passed.

The local community charged with the responsibility of protecting a person would be liable for failure to do so. When a person is snatched up and hauled off to another community or State, the community where the seizure is allowed to take place would be equally guilty with the community where the crime is committed.

An important feature of the bill provides that whenever a person is injured or loses his life at the hands of a mob, the community responsible pays an indemnity to the injured person or to the family of the deceased.

When the pocketbook of the entire community is tapped because of violations of the law by individuals in the community, there is a new sense of responsibility in the community.

Citizens who must pay for mob violence will think twice before they vote for a sheriff who will allow it. They will build a jail strong enough to retain a prisoner and strong enough to keep out those who would take the law in their own hands.

If this bill passes, it will be a fitting monument to 38 years of hard work by the NAACP.

Each time an antilynch bill has been discussed in Congress, some Representative has gotten up to talk about the invasion of State rights and of the unconstitutionality of antilynch legislation.

Mob rule and constitutional government cannot be reconciled. You have either one or the other. We must not permit the lawless night rider to hide behind the mask of a constitutional sheet.

Our democratic way of life will thrive and grow not by talk, name calling, and buck passing but by diligent service to the established ideals and principles we know to be right and just.

There can be no second-class citizens in our democracy. We must fulfill our promise to ourselves and our hope for the world.

All men want freedom and security, and one cannot be bartered for the other. In our democracy we can have both.

By security I do not mean only the right of life but the right to a decent job at a decent wage for everyone capable of holding such a job.

By security I mean the right to education and the right to achieve and maintain health.

By security I mean the right of the individual to be treated with dignity and respect by his fellow men.

By security I mean that the Government has the duty and the responsibility to provide a decent standard of living for those who through no fault of their own are unable to work because of age, illness, or physical handicap.

The power to pass needed legislation is in the hands of the people.

The people write the laws in our democracy through the men and women whom they elect to represent them in the State legislatures and in the Congress of the United States.

The people can meet, examine, protest—raise their voices—and use the power of their ballot to write whatever legislative program they want and see that it is carried out in the same spirit in which it was written.

If we will stop talking about the poll-tax States and work in the 41 States where there is no poll tax, the people can pass any legislation they feel is required. This business of passing the buck by pointing to the other fellow and what he is doing as an excuse for doing nothing ourselves, will no longer hold water.

For many long years, we have heard that it was impossible to pass anti-poll-tax legislation, FEPC legislation and anti-lynch legislation in Congress because of the Southern Democrats. Well, now we have a Republican Senate and a Republican House. This excuse, never valid, is now stripped of its miserable trappings.

What is holding up Federal aid to education, now?

What is holding up the President's health program, now?

What is holding up the building of homes, now?

What is holding up the antilynch bill, now?

What is holding up Federal anti-poll-tax legislation, now?

What is holding up FEPC, now?

I'll tell you what.

The NAM philosophers and their satellites in Congress worship money instead of men.

When the NAM high command "resolutes" the present leadership in Congress goosesteps it through.

They concern themselves with pennies not persons.

They guard their budgets, not your liberties.

They fight for their tax reductions instead of peace in the world.

They would trade off the United Nations for a price increase on their bag of wool.

They strain at a gnat and swallow a camel.

The job of Congress is to protect the weak from the strong.

The job of Congress is to promote the general welfare and to insure justice for the little as well as the big.

We must have world peace.

We must strike a balance between prices, wages, and profits.

But instead of promoting the welfare of the people, the Eightieth Congress, in the words of Senator MORSE, of Oregon, "Is a Congress to make the rich richer, and the poor poorer."

It is a Congress that labored 5 months, and turned the clock forward in the District of Columbia 1 hour and turned the clock back on Government one generation.

In answer to the greatest challenge that has ever faced man—the building of enduring peace—a challenge in which we are asked to give leadership, not only for ourselves but for the 2,000,000,000 people of this earth, this Congress leaves the impression with our own people and the world that we are rotting with communism from the top of the Government on down.

This Congress, while creating a frenzy of fear over communism, shows in amendment after amendment attached to legislation which it passes, that it has no real understanding of totalitarian methods and rushes often with arms outstretched to embrace them in its frenzy.

The freedoms which have made us strong and tough minded and fearless are being eaten away at the edges little by little in the panic of fear and ignorance.

The Eightieth Congress is a reckless Congress, riding along without brakes on the roller coaster of inflation.

This Congress has utterly failed the people. It has sold them short. It has put in jeopardy the economic health of the Nation, and, as a result, the peace of the world.

The program of leadership of the Eightieth Congress is—

1. Cut taxes for the rich.
2. Break the back of labor.
3. Destroy the agencies of Government, set up to protect and promote the welfare of the people.

Rising prices, housing, FEPC, health, education, development of natural resources, anti-poll tax, scientific research, anti-lynch, power development, and civil liberties are not the concern of this Congress.

But these things are the concern of every family in America, for they affect every family in America. They particularly affect the Negro family.

An economic slump will come down on the Negro people like a ton of bricks, for they are among the first to be discriminated against.

The 1948 election, as every election, is not the exclusive concern of politicians—whether they be Democrat or Republican.

It is the blood and bread of the men and women of this country in whose hands the power to govern is vested.

We in 1947 America—men and women, young and old—cannot choose to go into politics or to stay out of politics.

We are and will continue to be in politics—for our form of society rests upon the joint action of all of us. And that joint action is achieved through politics.

We cannot resign from society. We cannot duck our political responsibilities by failure to participate. The failure to vote in an election has political results.

We may agree by failing to disagree. We may condone by not condemning. We may speak loudly by remaining silent.

We are in politics, all of us, because we live in a democracy. By what we say or fail to say, by what we do or fail to do, each of us has a profound effect upon the course all of us will take in shaping our common future.

There have always been those who feared the people. There are those who fear the people today. They fear their voice at the ballot box.

There is much effort being exerted through sly and slippery methods to frighten and intimidate men and women from thinking and acting for themselves.

The strong suggestion that political action when carried on by politicians and the rich is a lofty pursuit but when indulged in by the small wage earner is somehow subversive must not be allowed to thwart the interest and activity which are essential to our political democracy.

Elections. What are they?

They can't be just the hobby of the union leaguers.

They can't be just the profession of the ward bosses.

They can't be the biannual party of the plantation colonel.

Well, they are and have been—and I say "have been" advisedly.

So what? Had enough? Yes, yes, yes.

With lifted eyes and strong hearts, fearless Americans, worthy of the leadership of Lincoln and Roosevelt will march forward in 1948 with understanding in their eyes and conviction in their souls to the trumpets of clean-up and clean-out.

Our democracy is the most revolutionary government in the world for it is anchored to the people. We are the government, and we are determined to meet the challenge that faces us in the world today.

We are not afraid. We are not going to let little-minded men turn us from the leadership we can and will give to the dawning of the greatest age that men have ever known.

Report to the People of the Eighth Congressional District of Wisconsin

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to include a report to the people of the Eighth Congressional District of Wisconsin on my voting and attendance record during the first session of the Eightieth Congress.

I have prepared this summary for the benefit of anyone who may be interested in my position on legislation which has been considered by the House. It is extremely difficult for anyone to obtain this information without a diligent and lengthy search of the CONGRESSIONAL RECORD. The purpose of this report is to collect in one place and in concise form information which is scattered through some 10,000 pages of that publication. I believe it will prove helpful to my constituents in evaluating my congressional stewardship.

The record includes all roll-call votes, all quorum calls, and my votes on other important measures or measures of particular interest to people in the Eighth District on which there was no record taken. No attempt is made to include all of the hundreds of bills of every character that were considered by the House during the session. The description of bills in the voting record is for purposes of identification only. No attempt is made to describe the measures completely nor to elaborate upon the issues involved. Upon request, I will be pleased to furnish a more complete description of any particular bill considered by the House, as well as a summary of the issues involved and the reasons for my position. The record follows:

Voting and attendance record, Representative John W. Byrnes, Eighth District, Wisconsin, 80th Cong., 1st sess.

Roll call No.	Date	Measure, question, and result	Vote
1	Jan. 3	Quorum call	Present.
2		Election of Speaker (Martin 244, Rayburn 182)	Martin.
3	Jan. 29	H. R. 1030, continuing in effect wartime excise tax rates. On passage (373 to 35).	Yea.
		H. R. 1353, amending National Service Life Insurance Act of 1940, so as to extend the period of reinstatement from Feb. 1, to Aug. 1, 1947. (Passed, voice vote.)	Do.
4	Feb. 6	H. J. Res. 25, submitting to States constitutional amendment limiting tenure of Presidents to two terms. On passage (285 to 121).	Do.
5	Feb. 8	Quorum call	Present.
6	Feb. 18	H. Res. 104, citing Gerhart Eisler for contempt of Congress. On passage (370 to 1).	Yea.
7	---do----	H. R. 1968, Urgent deficiency appropriation. On passage (320 to 25).	Do.
8	Feb. 19	Quorum call	Present.
		H. Con. Res. 20, expressing judgment of Congress that revenues during fiscal 1948 would approximate $39,100,000,000 and expenditures should not exceed $31,500,000,000:	
9	Feb. 20	On passage of rule providing for consideration of resolution (229 to 174).	Yea.
10	---do----	On recommittal to committee with instructions to report back in 2 months (166 to 231).	Nay.
11	----------	On passage (239 to 159)	Yea.
	Feb. 21	S. 568, authorizing Secretary of Agriculture to cooperate with Government of Mexico in eradication of hoof and mouth disease. (Passed, voice vote.)	Do.
12	Feb. 24	H. R. 1700, providing for daylight saving time in District of Columbia from last Sunday in April to last Sunday of September. On passage (124 to 210).	Not voting.[1]
13	Feb. 26	H. Res. 111, granting Committee on Education and Labor the power to subpena. On passage (349 to 29).	Yea.
14	---do----	H. Res. 58, creating special committee to investigate the shortage of newsprint. On passage (269 to 100).	Do.
15	---do----	H. Res. 18, reestablishing a committee to deal with the problems of small business. On passage (270 to 92).	Do.
16	Feb. 28	H. R. 2157, portal-to-portal bill. On recommital to committee with instructions to increase statute of limitations from 1 to 2 years (345 to 56).	Do.
17	Mar. 4	H. Res. 118, providing for investigation by Committee on Expenditures in Executive Departments of any action by department or agency of Federal Government beyond the power and scope of their control. On passage (304 to 42).	Do.
18	---do----	H. R. 2102, providing for a 6-month extension of farm labor supply program. On passage (243 to 110).	Nay.
19	Mar. 11	H. R. 1968, appropriating funds to supply urgent deficiencies in executive departments including provision liquidating OPA by June 30. On passage (342 to 49).	Yea.
20	---do----	H. R. 2436, appropriating funds for the operation of the Treasury and Post Office Departments for fiscal year 1948. On passage (387 to 0).	Do.
	Mar. 12	H. R. 2404, suspending certain import taxes on copper. (Passed, voice vote.)	Do.
21	Mar. 13	Quorum call	Present.
		H. R. 1327, providing privilege of renewing expiring 5-year level-premium term national-service life policies for another 5-year period. (Passed, voice vote.)	Yea.
	Mar. 17	H. J. Res. 118, strengthening common defense by maintaining adequate domestic rubber-producing industry. (Passed, voice vote).	Do.
	Mar. 18	H. R. 2535, amending RFC Act with respect to purchase of surplus property for resale to small business. (Passed, voice vote.)	Do.
22	Mar. 20	Quorum call	Present.
23	---do----	H. R. 2413, amending Federal Reserve Act, extending until 1950 the authority of the Treasury to borrow directly from the Federal Reserve. On passage (308 to 55).	Nay.
24	Mar. 21	H. J. Res. 146, extending sugar rationing until Oct. 31, 1947, and authorizing the Secretary of Agriculture to decontrol when conditions warrant. On passage (286 to 54).	Yea.
25	Mar. 24	H. Res. 160, providing for striking remarks of Congressman ADOLPH SABATH from the CONGRESSIONAL RECORD. On passage (324 to 1).	Do.
	Mar. 25	H. R. 2700, appropriating funds for operation of Labor Department and Federal Security Agency for fiscal year 1948:	
26	---do----	On recommittal to committee with instructions to report back with amendment restoring funds to Veterans' Placement Service (170 to 211).	Nay.
27	---do----	On passage (343 to 39)	Yea.
28	Mar. 27	Quorum call	Present.
		H. R. 1, providing for the reduction of individual income taxes:	
29	Mar. 27	On recommittal to committee with instructions to hold (172 to 237).	Nay.
30	---do----	On passage (273 to 137)	Yea.
31	Apr. 1	Quorum call	Absent.
	Apr. 9	S. 547, providing for annual and sick leave for rural letter carriers. (Passed, voice vote.)	Yea.
	---do----	H. R. 1888, incorporating the American Veterans of World War II. (Passed, voice vote.)	Do.

[1] Absent; would have voted "nay."

Voting and attendance record, Representative John W. Byrnes, Eighth District, Wisconsin, 80th Cong., 1st sess.—Continued

Roll call No.	Date	Measure, question, and result	Vote
32	Apr. 15	Quorum call	Present.
33	...do	H. Res. 178, an open rule, providing for consideration of H. R. 3020. On passage (319 to 46).	Yea.
34	Apr. 17	Quorum call	Present.
		H. R. 3020, Labor-Management Relations Act of 1947 (Taft-Hartley labor bill):	
35	...do	On recommittal to committee with instructions to report back a bill providing for the establishment of a committee to study labor-management relations (122 to 291).	Nay.
36	...do	On passage (308 to 107)	Yea.
37	Apr. 22	Quorum call	Present
38	...do	H. Res. 190, citing Leon Josephson for contempt of Congress. On passage (356 to 2).	Yea.
39	Apr. 23	Quorum call	Present.
	Apr. 25	H. R. 3123, appropriating funds for operation of Interior Department:	
40	...do	On recommittal to committee with instructions to report back with increased appropriations for various projects (140 to 197).	Nay.
41	...do	On passage (307 to 30)	Yea.
42	Apr. 28	S. 736, authorizing Commissioners of District of Columbia to establish daylight-saving time in the District of Columbia. On passage (218 to 145).	Nay
43	Apr. 29	Quorum call	Present
	Apr. 30	H. J. Res. 153, providing relief assistance to the peoples of countries devastated by war:	
44	...do	On passage of amendment decreasing authorizations from $350,000,000 to $200,000,000 (225 to 165).	Yea.
45	...do	On passage of amendment providing no funds can be used in countries dominated by U. S. S. R. and that relief shall be administered by a wholly American commission (324 to 75).	Do
46	...do	On passage (333 to 66)	Do
		H. R. 3203, providing for extension of rent control until March 1948 with provision allowing for voluntary rent increases:	
47	May 1	On recommittal to committee. (189 to 197)	Nay.
48	...do	On passage. (204 to 182)	Do.
49	May 6	Quorum call	Present.
50	...do	...do	Do.
51	May 7	...do	Do.
52	May 8	...do	Do.
53	May 9	...do	Do.
54	...do	H. R. 2616, providing aid to Greece and Turkey. On passage (287 to 107).	Yea.
55	May 12	Quorum call	Present.
		H. R. 1467, increasing penalties for violations of the Espionage Act or the Alien Registration Act. (Passed, voice vote.)	Yea
		H. R. 2181, including "institutional on-farm training" in the education and training program for veterans. (Passed, voice vote.)	Do.
56	May 13	Quorum call	Present.
57	May 14	...do	Do.
58	May 15	...do	Do.
59	May 21	...do	Do.
		H. J. Res. 153 (conference report), providing for relief assistance to people in countries devastated by war:	
60	...do	On recommittal to conference committee with instructions to House managers to insist on House provisions for authorization of $200,000,000 instead of $350,000,000 (170 to 205).	Yea
61	...do	On passage (288 to 86)	Do.
62	May 22	Quorum call	Present
63	May 23	...do	Do
		S. 814, directing Commodity Credit Corporation to support wool prices until Dec. 31, 1948. (Passed, voice vote.)	Yea.
64	May 27	Quorum call	Present
65	...do	H. Res. 218, a rule providing for consideration of H. R. 3601 and waiving points of order. On passage (189 to 170).	Yea.
66	May 28	Quorum call	Present.
		H. R. 3601, appropriating funds for the operation of Department of Agriculture for fiscal year 1948.	
67	...do	On recommittal to committee with instructions to increase AAA appropriations to $300,000,000, school-lunch appropriation to $75,000,000, and REA appropriation to $250,000,000 (174 to 180)	Nay
68	May 28	On passage (315 to 38)	Yea.
69	June 2	H. R. 1 (conference report) providing for reduction in individual income taxes. On passage (220 to 99).	Do.
		S. 993, providing for reincorporation of Export-Import Bank of Washington. (Passed, voice vote.)	Do.
		H. R. 2857, extending 2d-class mailing privileges to bulletins issued by State conservation and game agencies for Department. (Passed, voice vote.)	Do.
		H. R. 3587, establishing a National Aviation Council. (Passed, voice vote.)	Do.
		H. J. Res. 167, recognizing uncompensated services rendered the Nation under Selective Training and Service Act of 1940. (Passed, voice vote.)	Do.
70	June 4	H. R. 3020 (conference report) Labor-Management Relations Act of 1947 (Taft-Hartley bill). On passage (320 to 79).	Do.
71	June 5	Quorum call	Present.
		H. R. 3602, exempting from admission tax admissions to agricultural fairs. (Passed, voice vote.)	Yea.
72	June 6	Quorum call	Absent.
73	...do	...do	Do.
74	June 9	...do	Do.
75	June 10	...do	Present.
76	...do	...do	Do.
77	...do	...do	Do.
78	June 12	Quorum call	Present.
		H. R. 3792, providing for emergency flood-control work necessitated by recent floods. (Passed, voice vote.)	Yea.
79	June 13	H. R. 3342, providing for information service in the State Department (Voice of America). On passage of motion that House consider bill (304 to 28).	Do.
80	June 16	S. 321, increasing pay of cadets and midshipmen at Naval and Military Academies. On passage (304 to 53).	Nay.
		H. R. 3303, providing for changes in the voluntary enlistment provisions for the Regular Army. (Passed, voice vote.)	Yea.
		H. R. 3398, extending period of validity to facilitate admission into the United States of alien fiancées or fiancés of members of armed forces of the United States. (Passed, voice vote.)	Do.
		S. 597, providing for the protection o forests against destructive insects and diseases. (Passed, voice vote.)	Do.
81	...do	S. 814 (conference report) providing support for wool. On recommittal to conference committee (166 to 191).	Nay
82	June 17	H. R. 1, providing for reduction in individual income taxes. On overriding the President's veto (268 to 137).	Yea.
83	...do	Quorum call	Absent.
	June 18	H. R. 3818, continuing the 1-percent rate for employer and employee contributions under the Federal Insurance Contributions Act through 1949. (Passed voice vote.)	Yea.
84	June 19	Quorum call	Present.
		H. R. 966, requiring that corrective action recommended by the Civil Service Commission be taken in connection with veterans who have been discharged from Federal employment. (Passed, voice vote).	Yea.
85	June 20	H. R. 3020 Labor-Management Relations Act of 1947 (Taft-Hartley bill), overriding the President's veto (331 to 83).	Do.
86	...do	Quorum call	Present.
87	...do	H. R. 3342, providing for information service in the State Department (Voice of America). On passage of motion that House consider bill (303 to 63).	Yea.
88	...do	Quorum call	Present.
		H. R. 3444, considering the place of confinement of citizens taken prisoner during the war as within the United States and compensation received considered as received outside the United States for income tax purposes. (Passed, voice vote.)	Yea.
	June 23	H. J. Res. 221, providing for permanent rates of postage on first-class mail matter. (Passed, voice vote.)	Do.
89	June 24	Quorum call	Present.
90	...do	H. R. 3342, providing for information service in the State Department (Voice of America). On passage (272 to 97).	Yea.
		H. R. 3196, extending certain functions of Reconstruction Finance Corporation until June 30, 1948, but restricting lending operations from present $14-$18 billion to $2 billion, and requiring liquidation of $9 billion outstanding loans.	
91	...do	On recommittal to committee with instructions to report back with amendment providing for purchase of GI loans from banks by RFC (154 to 192).	Nay.
92	...do	On passage (334 to 4)	Not voting.[1]
	June 26	S. J. Res. 77, providing for participation by United States in the International Refugee Organization. (Passed, voice vote).	Yea.
		H. R. 775, establishing a Commission on Organization of the Executive Branch of the Government. (Passed, voice vote).	Do.
93	June 27	Quorum call	Present.
94	...do	H. R. 3737 (conference report) providing revenue for District of Columbia. On recommittal to conference committee insisting on provisions that employees of Federal Government who have domiciles in some State shall not be considered a resident of District of Columbia for income-tax purposes (222 to 78).	Yea.
		S. 350, continuing the Commodity Credity Corporation (price-support agency) until June 30, 1948. (Passed, voice vote.)	Do.
95	June 30	H. R. 3961, providing increase in pension rates to veterans of Spanish-American and Civil Wars to compensate for increase in cost of living. On passage (337 to 93).	Yea
96	...do	Quorum call	Present.
97	...do	H. R. 47, enabling the people of Hawaii to form a constitution and State government and be admitted into the Union. On passage (196 to 133).	Yea.
		S. 715, providing annuities for investigatory personnel of the Federal Bureau of Investigation who have rendered at least 20 years of service. (Passed, voice vote).	Do.
98	July 2	Quorum call	Present.
99	July 7	H. R. 4017, providing for cash payment of terminal-leave bonds after Sept 1, 1947. On passage (388 to 0).	Yea.
100	...do	H. R. 3214, revising and codifying United States Code providing among other things that the Tax Court of United States shall be made a court of record. On passage (324 to 23).	Nay.
		H. R. 1180, authorizing coinage of 50-cent pieces in commemoration of the one-hundredth anniversary of the statehood of Wisconsin. (Passed, voice vote).	Yea.
	July 7	H. R. 1995, returning retirement-fund deductions to Federal employees separated from service before completion of 10 years' service. (Passed, voice vote).	Do.

[1] Absent; would have voted "yea."

Voting and attendance record, Representative John W. Byrnes, Eighth District, Wisconsin, 80th Cong., 1st sess.—Continued

Roll call No.	Date	Measure, question, and result	Vote
101	July 8	Quorum call	Present.
		H. R. 3950, reducing individual income-tax payments effective Jan. 1, 1948:	
102	...do...	On recommittal. (151 to 261)	Nay.
103	...do...	On passage. (302 to 112)	Yea.
104	...do...	Quorum call	Present.
105	July 9	...do...	Do.
106	July 10	S. 564, placing the Speaker of the House next in line in the line of succession to the Presidency after the Vice President (Presidential Succession Act). On passage (365 to 11).	Yea.
107	July 11	Quorum call	Present.
108	...do...	H. R. 4051, defining the jurisdiction of FCC with respect to transportation and sale of natural gas for resale in interstate commerce. On recommittal (64 to 254).	Nay.
		H. R. 4075, Sugar Act, 1947. (Passed, voice vote)	Do.
		H. J. Res. 233, authorizing the President to approve the trusteeship agreement for the Pacific Islands. (Passed, voice vote.)	Yea.
109	July 15	Quorum call	Present.
		H. R. 3813, providing for removal from and prevention of appointment to offices and positions in the executive branch of persons found to be disloyal to the United States (loyalty bill):	
110	...do...	H. Res. 267, a rule providing for the consideration of H. R. 3813. On passage of rule (337 to 36).	Yea.
111	...do...	On recommittal to committee with instructions to provide for appeal to the court of appeals (133 to 248).	Nay.
112	...do...	On passage (319 to 61)	Yea.
113	July 16	Quorum call	Present.
114	July 17	H. R. 1639, limiting venue in actions brought under the Employers Liability Act. On passage (203 to 188).	Yea.
115	...do...	Quorum call	Present.
		S. J. Res. 123, declaring in the interpretation of various emergency laws that they shall be construed as terminated and peace established. (Passed, voice vote.)	Yea.
116	July 18	Quorum call	Present.
117	...do...	H. R. 3601, making appropriations for Department of Agriculture for fiscal year 1948 (conference report). Recommittal to conference with instructions to House managers to increase appropriations for loans for REA $225,000,000 to $250,000,000 (196 to 206)	Nay.
118	...do...	H. R. 3950, reducing individual income tax payments beginning Jan. 1, 1948. On overriding the President's veto (299 to 108).	Yea.
		H. R. 3601, making appropriations for Department of Agriculture for fiscal year 1948 (conference report):	
119	...do...	On agreeing not to insist on amount originally appropriated by the House for AAA payments (204 to 187).	Nay.
120	...do...	To amend the Senate amendment on AAA payments by reducing the payments from $258,000,000 to $228,000,000 (218 to 171).	Yea.
121	...do...	On agreeing to Senate amendment to increase appropriation for school-lunch program to $75,000,000 (181 to 195).	Nay.
122	July 18	H. R. 3601—Continued On agreeing to Senate amendment to increase funds for farm tenant loans (172 to 193).	Nay.
123	July 19	Quorum call	Present.
124	...do...	...do...	Do.
	July 19	S. 1508, extending until June 30, 1948, an act affirming intent of Congress that regulation of the business of insurance shall be left to the States. (Passed, voice vote.)	Yea.
		S. 758, National Security Act, 1947, establishing a Department of National Defense (unification of armed services). (Passed, voice vote.)	Do.
125	July 21	Quorum call	Present.
		H. R. 29, making unlawful requirements for the payment of a poll tax as a prerequisite for voting in a primary or other election for national officers:	
126	...do...	Motion that House adjourn (a delaying action to prevent consideration of H. R. 29). (85 to 299.)	Nay.
127	July 21	On passage (290 to 112)	Yea.
		H. R. 4127, liberalizing annuities and benefits to Federal employees under civil-service retirement bill. (Passed, voice vote.)	Do.
		H. R. 3889, establishing presumption of service connection for chronic tropical diseases. (Passed, voice vote.)	Do.
		H. R. 1426, extending veterans' benefits to widowed mothers of certain ex-servicemen. (Passed, voice vote.)	Do.
		S. Con. Res. 14, favoring representation of American small businessmen on Government policy-making boards. (Passed, voice vote.)	Do.
		H. R. 739, providing protection of veterans and career service employees in connection with reductions in force. (Passed, voice vote.)	Do.
		H. R. 1602, establishing a National Minerals Resources Division within the Department of the Interior:	
128	July 22	On resolution that House consider H. R. 1602 (342 to 32).	Do.
129	July 22	On recommittal (114 to 273)	Nay.
		On passage (passed, voice vote)	Yea.
	July 23	H. R. 3682, providing $5,000,000 for 1 year to certain war-industry areas for operation of overburdened school facilities. (Passed, voice vote.)	Nay.
130	July 24	H. R. 4347, appropriating supplemental funds for fiscal year 1948 (second supplemental appropriation bill, 1948). On passage of amendment to increase funds for Committee on Organization of Executive Branch from $500,000 to $1,000,000 (147 to 234).	Do.
131	July 25	Quorum call	Present.
132	July 26	...do...	Do.
133	...do...	H. R. 4269, appropriating supplemental funds for fiscal year 1948 (first supplemental appropriation bill, 1948). On passage of amendment to increase appropriation for Bonneville Transmission System by $1,184,700 (181 to 174).	Nay.
		H. R. 2181, relating to institutional on-farm training for veterans. (Passed, voice vote.)	Yea.

AN EXPLANATION OF TERMS

In interpreting the record, an explanation of parliamentary and legislative terms might prove of value. Some of those terms are explained below:

A. A quorum call consists of a calling of the roll of Members to determine whether or not a quorum—a majority of Members—is present. No business may be conducted when it is found that a quorum is not present.

B. Pairing is a practice whereby two Members of opposite views who know they will be absent agree that, during a specified period, they will refrain from voting in person but will permit their names to be recorded as paired.

First. A general pair covers all matters coming to vote within a definite period of time.

Second. A live pair can be arranged by a Member who knows he will be absent when a particular vote is taken. This is done by pairing with another Member who expects to be present and to vote contrary to the absent Member. It allows, in effect, a Member to cast an absentee vote.

C. Recommital: Generally, on all important bills, a motion to recommit the bill to a committee, with or without instructions, is voted upon by the House before it votes upon passage of the bill. Those who are in favor of the bill usually vote "nay" on the motion to recommit, since recommital means that the bill will be changed, delayed, or even killed should the motion succeed. However, when a motion to recommit is accompanied by instructions, the vote generally indicates whether the Member is in favor of or opposed to the change in the legislation proposed in the instructions and does not necessarily indicate his position on the bill as a whole.

D. The type of bill can be determined by the letters which precede its number. All bills that originate in the House are designated by an H.; those that originate in the Senate, by an S. There are four main types:

First. H. R. (S.) designates a bill which, when passed by both Houses in identical form and signed by the President, becomes law.

Second. H. J. Res. (S. J. Res.) designates a joint resolution which must pass both Houses and be signed by the President before becoming law. It is generally used for continuing the life of an existing law, or in submitting to the States a constitutional amendment, in which case it does not require the signature of the President but must be passed by a two-thirds majority of both Houses.

Third. H. Con. Res. (S. Con Res.) designates a concurrent resolution. To become effective it must be passed by both the House and Senate but does not require the President's signature. It is used to take joint action which is purely within the jurisdiction of Congress. Many emergency laws carry the provision that they may be terminated by concurrent resolution, thus eliminating the possibility of a Presidential veto.

Fourth. H. Res. (S. Res.) designates a simple resolution of either body. It does not require approval by the other body nor the signature of the President. It is used to deal with matters that concern one House only, such as changing rules, creating special committees, and so forth.

E. Rule: Important bills, after approval of the committee concerned, go to the House Committee on Rules where a rule, in the form of a House resolution, is granted governing the amount of debate, consideration of amendments, and other parliamentary questions. Oftentimes, the adoption of the rule is voted upon in the House by roll call.

F. A bill may pass, or be defeated, by one of the following kinds of votes:

First. Voice vote: The Speaker first asks all in favor to say "aye," then those opposed to say "nay." If there is no question as to the result, this is sufficient.

Second. Division: If the result of the voice vote is in doubt, the Speaker asks those in favor to stand, then those opposed to stand. He counts in each instance and announces the result. If he is in doubt, or if demand is made by one-fifth of a quorum, then—

Third. Tellers are ordered. A member on each side of the question is appointed as tellers, and they take their places at each side of the center aisle. Those in favor walk through and are counted. Those opposed do likewise. The result settles most questions, but any Member, supported by one-fifth of a quorum, can ask for a roll call. This privilege is guaranteed by the Constitution.

Fourth. Roll calls place each Member on record on the particular measure involved. Each Member's name is called, and his vote recorded. Roll calls constitute the official voting record of the House. The results of the roll calls are indicated in parentheses in the record above. The "yeas" are shown first; the "nays" last.

Voice of America Rings Loud in Story of Blind Wheat Man

EXTENSION OF REMARKS
OF
HON. EUGENE WORLEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. WORLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of the membership the following article which appeared in the Amarillo News on June 29, 1947, and which I believe will be of interest to the entire Congress and to thinking people everywhere:

VOICE OF AMERICA RINGS LOUD IN STORY OF BLIND WHEAT MAN

(By Lewis Nordyke)

The State Department has been trying to sell the American way of life and government to people all over the world.

It might be a good idea to tell these people the story of R. L. Porter, a blind man, who lives and works at Spearman over in the North Plains wheat belt. The story should include facts about how Mr. Porter started with a handicap and a courageous wife, and, in the competitive American system of economy, has been able to accumulate chattels worth close to a million dollars. It should emphasize his philosophy of work and government, and point up the fact that he is a stalwart in his community, and that he has raised two sons and two daughters who know what the Lord meant when He was talking about the sweat of the brow.

Mr. Porter was born in Illinois, the son of an industrious farmer-stockman, at a time when determined home-seekers were pushing westward in rattling wagons. His forebears were originally from Massachusetts, but his father was a Virginian. Mr. Porter grew up in Illinois, Iowa, and Oklahoma. He entered the University of Oklahoma to study mechanical engineering. He played football and was a star on the basketball team. At the end of his second college year he set out to make some money to pay for his education.

He went to Florida and got a job with a dredging crew. He worked with iron-muscled, sweating men, black and white, who were naked to the waist, and heard eloquent cussing in more than one language. Before long he was operating a machine. The men who were blasting rocks were too slow to suit him and he undertook to help them. He tamped dynamite in a glory-hole drilled in stone. And here he made the tragic mistake of his life. He was careless with dynamite.

A charge exploded in his face, blinding him for life and mangling his left hand.

His father sent him to Philadelphia for an operation which was the only hope of restoring partial sight. It failed. The blind student entered the University of Pennsylvania. He earned his bachelor's degree there, majoring in English, and also won a scholarship to the Harvard Graduate School. He took Harvard's famous English 5, a class open only to students especially invited to enroll.

THE URGE TO HELP

By the time Mr. Porter was ready for his master's degree, the class of 25 had dwindled to 2—the blind student and a scrawny Russian. All the others had drifted into Canada and joined the air force or else had enlisted in the United States Army for service in World War I.

The Allied world was crying for food. Mr. Porter decided that all he could do was push aside a planned writing career and produce beef and bread, and that his home country in Oklahoma was the place to do it.

While attending Penn he had met a girl in Germantown. She was a highly paid secretary in the office of a Philadelphia lawyer and had heard very little of the high, dry plains out west. They married and headed for Oklahoma. They made a fairly good crop the first year and came out with a few hundred dollars.

The Porters borrowed $4,000 from a bank and headed for Spearman. This was in 1919. That part of the country was comparatively new and raw 28 years ago. The Santa Fe had run a line through Spearman and Perryton, connecting up with the main line at Shattuck, Okla. Old Hansford was then the main town in Hansford County. It moved to the railroad and the present Spearman was born.

LAND AND MORE LAND

The Porters made a down payment on land and planted wheat; they bought cattle and pastured them on the wheat through the winter and sold them in the spring. Mr. Porter was convinced that there was entirely too much scooping of wheat, and he did his part of that back-breaking, nose-plugging work. He decided to put in an elevator. He designed it and then had it built to his exact specification; then he operated it. The elevator was considered a phony by many, but it's still working efficiently. Another like it stands beside it.

Since that time, Mr. Porter has operated the elevators and his increasing farm lands. He has a new elevator 15 miles west on the Rock Island. He has a big seed and feed business in connection with his elevators, and he buys wheat. This year he has more than 5,000 acres of wheat that is producing around 30 bushels to the acre. He recently bought a 5,000-acre ranch in Kansas, paying cash. Some of his close friends say he is operating 10 sections, which he owns clear of debt, in Hansford County; that is 6,400 acres.

Mr. Porter is the active manager of all these enterprises. He hires men to work on the farms and at the elevators, but he is the boss. This doesn't mean he sits in an air-cooled office and dictates orders. He wears a blue duck overall and jumper suit, with dusty four-in-hand tie and a battered old hat that weighs three pounds. He helps unload wheat; he operates the elevator machinery. If anything gets out of whack, he fixes it. He eats all over the elevators. He operated feed mills, often poking in grain within inches of whirring machinery that could chop him to pieces. He repairs tractors, combines, and trucks.

A MAN OF KEEN SENSES

When the 1947 harvest started, several farmers didn't know whether their wheat contained too much moisture for storage. "We'll have to take it to Mr. Porter," one said. "He'll know." The farmers had good eyes, but they took their wheat to the blind man, and accepted his word on the moisture content. Mr. Porter can go into a wheat field and out-reckon the average man on the yield. He can feel and smell soil and knows whether it's good. He can sniff wheat and taste wheat and tell you the protein content. He can feel wheat and tell you within ounces of what it will test.

Some time ago several men were guessing at the weight of a truckload of fat hogs. Mr. Porter climbed the truck, felt of the hogs and guessed closer to the weight than men who don't even wear glasses.

Since losing his sight Mr. Porter has determinedly developed his other senses. He depends on his nose, ears and the sensitive nerves of his fingertips. He judges feed and wheat by his nose. When anything goes wrong with the elevator, he is the first to detect it; his sharp ears lead him directly to the trouble.

Some years ago Mr. Porter bought a section of land, paying $30 an acre. Several of his friends and neighbors decided among themselves that the seller had taken advantage of a blind man and sold the land at an extortionate price. The first crop paid for the land. Mr. Porter says that very few persons have tried to take advantage of his lack of sight. He has developed a keen sense of judging humanity. Within a minute after a stranger enters his office, Mr. Porter has him "sized up." The accuracy of his judgment is uncanny. He will cash checks for some strangers, but he turns down others.

FOUR PORTER CHILDREN

Mr. Porter had a lot of help. Mrs. Porter was sick at heart when she saw the bald, windswept plains of Texas and felt the blazing sun. She was so homesick that she wanted to find a little tree, sit down and cry her eyes out. A short time ago one of her brothers visited her for awhile. When he got ready to depart he said: "When I come to the first great big tree, I'm going to park under it for about an hour and just love it."

Mrs. Porter hepled with the farm and elevator, when the matter of raising a family wasn't in the periods of interference. The four children are grown now and she is at the elevators every day. She weighs trucks, sells feed, helps run the elevators, keeps books, and does any other job that needs doing. When one sees Mrs. Porter hurrying about the place directing the burly drivers of big grain and feed trucks, he wonders how many wives of wealthy men would condescend to work at a dusty elevator.

Elsie Ruth was the first youngster. When she arrived, her father fondled her and said: "I wish I had my sight for about a minute so I could see her." Elsie Ruth is connected with the schools at Panhandle. She is a graduate of Texas Christian University and is an accomplished musician and singer.

Chalmers is the oldest boy. He served in the Navy during the war. He is studying engineering at the University of Colorado.

Frank Willard is next to Chalmers. He is a senior band major at Texas Tech. He is developing into a fine musician.

Rose Anne is the baby, and a cute one. She finished her sophomore year at North Texas State Teachers College at Denton last spring. She is specializing in physical education and music.

THE SECRET OF WORK

Before the children reached the average age of juvenile delinquency they were working at the house, on the farms, and at the elevators. They operated plows, drills, combines, trucks. They helped with the cattle that were brought in the late fall for pasturing on the wheat.

Mr. Porter's father stuck with the New England heritage of intelligent industry and frugality. This was hammered into the son from babyhood, and the Porter children got the same philosophy of sweat.

The other day the Porter elevators were extremely busy. An attractive girl in blue overalls and a TCU athletic pullover drove up in a big truck. Mr. Porter had visitors with whom he wanted to talk. "Go out there and run the elevators, honey," he said to the girl. "Keep things moving." The girl was Rose Ann, who has no difficulty planning her time between college sessions. There was a call from one of the farms. A truck was needed. Rose Ann turned the elevators over to her mother and headed for the farm in a truck. Shortly later she returned in a pick-up. Rose Ann can run the elevators by herself. If anything goes wrong, she can find and fix the trouble. She can play music, she can dance, she is a good student. When she was a little one growing up, she could attend a movie once a month, paying the admittance with money she had earned. Not many girls in as wealthy families can run an elevator or drive an International loaded to the brim with $1.85 wheat.

HOW TO END WARS

The inevitable question: "Mr. Porter, how did you do it?" He flaps a little dust out of an ear and rubs his short-cropped mustache. "There is only one way to get along and get things done, and that is by hard, continuous, and intelligent work. If all the young men in the world were taught the importance of productive work, and then taught to work, young men wouldn't have to fly around dropping bombs on people; there would be no famine; there would be no poverty."

The Porter children are pretty good examples.

Mr. Porter dislike cooperatives, mainly because they do not have to pay taxes. He isn't afraid of their competition because he is so well established in so many lines that only a catastrophe could hurt him. But he says the untaxed co-ops are unfair competition for the young man starting out on an individual-initiative basis.

"Co-ops dull the wits of their members," he said. "They seem afraid of keen competition. They contribute nothing to the financing of the country because they pay no taxes. They claim to be nonprofit, but they somehow have the money to expand. The young man who goes out on his own must pay taxes and help finance the country, and he must face the competition of groups of men who, as a co-op, have no tax burden. Keen, but fair, competition that has sharpened wits and inspired initiative is what has made this country great."

Mr. Porter is no New Dealer. He says the business of giving away stuff and squabbling over the number of hours a man works is not a good thing. "The form of government under which this country has become great in every respect made it possible for me to make a living and get ahead," he said. "Under any other existing kind of government, I would have been in an institution, or probably would have been played out by now. I am grateful to a government that makes it possible for every man, even the handicapped, to have a chance. In my opinion, the trend the past several years has been dangerous. We need a government that encourages work and initiative, instead of trying to figure out ways of getting things without work. To be a great country, we must produce; that takes work, and there's no other way. I am grateful for the opportunity I have had."

ABREAST OF THE TIMES

Mr. Porter is well informed. He reads Braille periodicals, books, and papers. He uses the State library's talking books. Mrs. Porter reads newspapers and books to him. Recently the Porters had a vacation in Hot Springs, N. Mex. While on this trip, Mrs. Porter read 13 books to her husband. The Panhandle doesn't have a better informed man on current events, local, national, and international. He is a student of history. One of his favorite men of history is Justice Oliver Holmes. Mr. Porter doesn't attend movies, but Mrs. Porter does and tells him the stories. He depends a great deal upon the radio.

There's a lot of the Puritan in Mr. Porter. And he's thrifty. He is no more extravagant than he was when he owed the Oklahoma bank $4,000. But he has a comfortable home. The Porters live well.

Mr. Porter doesn't like for even a dollar to be idle. The other day friends were asking him why he decided to buy the ranch in Kansas. Mrs. Porter broke in. "I can tell you," she said. "He can't sleep if he has 50 cents in that bank that isn't bringing in something."

Some sharp-eyed Russian, Hungarian, Italian, Greek, Indian, or Chinese might be interested in the sort of thing a Texas blind man has been able to do in a democratic country.

Coordination of All Agricultural Programs

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. HILL. Mr. Speaker, in introducing H. R. 4151, a bill to provide for the coordination of all agricultural programs at the top, or administrative level, as well as at the farm and community level, I had in mind the recommendations made by our farm organizations and also the suggestions of both the House and Senate Appropriations Committees.

Our farm leaders have long recognized the overlapping, duplication, and in many instances, the actual competition of one agricultural agency with another in the desire to develop their own particular plan of farm program. This was reviewed in some detail by both the House and Senate Subcommittees on Agricultural Appropriations. And if agriculture is to avoid criticism in the future and perhaps opposition to its program of development, the time seems ripe for serious consideration and constructive suggestions as to how best to bring about coordination, decentralization, and perhaps an overhauling of the machinery with which we have been working in order to keep all our agricultural activities modern as well as meet the necessities, the changing conditions, and the problems of a postwar world.

Congressman COOLEY, of North Carolina, and I introduced identical bills which we think may well provide the foundation for the construction and development of a streamlined over-all agricultural organization, that will receive the enthusiastic support of our farmers, farm organizations, and everyone interested in the continued prosperity, success, and progress of our agricultural development.

It is the intent and purpose of this legislation to provide more activity by those engaged in agriculture at the county and community level. All agricultural programs could and should be handled insofar as possible at these levels. No necessary farm service would be eliminated. Through the coordination of the various programs, efficiency and dispatch in effecting farm practices should be greatly increased. Not only will dollars be saved, but the future of agriculture be placed on a stable, sound, and healthy basis.

No action would be possible during the first session of the Eightieth Congress. Therefore, sufficient time will be provided for those who wish to offer changes or modifications before final action.

Accomplishments of the Committee on Un-American Activities, Eightieth Congress, First Session

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the Honorable CARL T. CURTIS, of Nebraska, covering the activities of the Committee on Un-American Activities during the first session of the Eightieth Congress:

LETTER TO HON. CARL T. CURTIS BY HON. J. PARNELL THOMAS, CHAIRMAN, COMMITTEE ON UN-AMERICAN ACTIVITIES

JULY 25, 1947.

Hon. CARL T. CURTIS,
New House Office Building,
House of Representatives,
Washington, D. C.

MY DEAR COLLEAGUE: This will acknowledge receipt of your letter of July 14, 1947, requesting a summary of the activities and accomplishments of the Committee on Un-American Activities during the first session of the Eightieth Congress.

While I cannot go into details, I would like to outline some of the major activities and special contributions of the committee in the last 7 months. They can be summarized under the following 10 headings:

1. Prosecution:

Gerhart Eisler was exposed by this committee as the No. 1 agent of the Communist International in the United States and ringleader of the Communist conspiracy which would see a Soviet dictatorship replace the American democratic form of government. His refusal to be sworn in at a committee hearing February 6 led to a citation for contempt of Congress and a court sentence of 1 year in jail and a $1,000 fine. Eisler is now on trial in the United States district court in Washington on charges of passport fraud.

This committee also exposed Leon Josephson as the official procurer of false passports for agents of the Communist International.

He was cited for contempt of Congress after refusing to appear before the committee in Washington and refusing to be sworn in before a special subcommittee in New York. Indicted by a Federal grand jury, he will come to trial very soon in New York.

2. Legal espionage:

Congressman MUNDT, ranking majority member of this committee, called to the attention of the House on January 29 the legal espionage activities of the Soviet Union, with particular reference to a publication by the Amtorg Trading Corp., an official Soviet government agency. The book, entitled "American Construction" but labeled "Saboteur's Manual" and "Espionage Handbook" by high military authorities in America, contains detailed engineering sketches of vital American industrial plants, bridges, dams, and communications. America's tax security rules in contrast to the Soviet Union's strict policies with visitors was noted.

3. Patent raiding:

As chairman of the committee, I presented facts to the House on March 4 showing that the Soviet Union, acting through agencies in this country, has obtained practically every industrial, chemical, and military patent from our Patent Office, although the Soviet Union has refused to part with a single patent of its own. This was part of the Soviet Government's feverish effort to obtain the secret of the atomic bomb.

4. Legislation:

During the week, March 24 through March 28, the committee held public hearings on H. R. 1884 and H. R. 2122, bills to curb or outlaw the Communist Party in the United States. The proposals are still being studied by the committee. Experts on communism as manifested in the United States and abroad appeared as witnesses, among them former Ambassador to the Soviet Union, William C. Bullitt; J. Edgar Hoover, of the Federal Bureau of Investigation; and leaders of veterans, labor, and patriotic organizations. The Communist Party was also given an opportunity to be heard.

Eugene Dennis, general secretary of the Communist Party in America, refused to give his true name and other essential information during the hearings and he was cited for contempt, which was upheld by the House by a vote of 196 to 1. He was convicted of contempt of Congress in the United States District Court in Washington on June 26 and later sentenced to serve 1 year in jail and to pay a $1,000 fine.

5. Hollywood:

A subcommittee of the committee proceeded to Hollywood in May to put in motion an investigation of alleged Communist infiltration of the movie industry. Evidence submitted to the subcommittee during executive hearings May 12 through May 15 by 14 witnesses, including such prominent members of the movie industry as Actors Robert Taylor and Adolph Menjou and Producer Jack Werner, convinced the committee of the need for the full investigation which is now in progress. Public hearings on the Communist problem in Hollywood will be opened in Washington on September 23, with Hanns Eisler, composer, brother of Gerhart Eisler, scheduled as the first witness.

6. Labor:

Thirteen witnesses on labor appeared during the year at open committee hearings, resulting in the exposure of Communist influence within the leadership of Local 248 of the United Auto Workers, CIO, which directed the recent strike at Allis-Chalmers in Milwaukee, Wis.; of the national organization and various locals of the United Electrical, Radio, and Machine Workers of America, CIO; and of Local 22, Food, Tobacco, and Agricultural Workers, CIO, Winston-Salem, N. C.

7. Communist plots:

The role of many official Soviet representatives in the United States as unofficial espionage agents was described at open committee hearings July 22 by Victor Kravchenko, a Communist official high in the favor of the Kremlin who broke away from the party while serving with the Soviet Purchasing Commission in Washington. The committee also heard testimony on Communist operations in the United States from Walter Steele, a representative of the American Coalition of Patriotic, Civic, and Fraternal Societies who has been actively combatting subversive activities for more than 20 years. He submitted 427 pages of testimony and 71 exhibits at public hearings held on July 21.

8. Countereducation:

One of the principal functions of this committee is to serve as a countereducational force against subversive propaganda, so that citizens may not innocently give financial or moral support to un-American activities. On April 1 the committee issued the 56-page report No. 209, entitled "Report on the Communist Party of the United States as an Agent of a Foreign Power," which presented documented proof that the Communist movement here is part of a world-wide revolutionary move to replace American democracy with a Soviet dictatorship. It was so well received by Members of Congress that the House authorized the printing of 25,000 copies.

The committee on April 15 issued report No. 271, entitled "Report on the American Youth for Democracy," which exposed this organization, found on many college campuses in this country, as a Communist front which is a direct successor of the Young Communist League.

Exposure of the Southern Conference for Human Welfare as a Communist front serving the Soviet Union under the guise of improving southern social and economic life was accomplished by this committee when it issued Report No. 592, entitled "Report on the Southern Conference for Human Welfare," on June 12.

Testimony offered at the hearings on Gerhart Eisler was considered of such great value that the House authorized the printing of 2,000 additional copies in pamphlet form. Similarly the testimony of J. Edgar Hoover and William C. Bullitt, during hearings on bills to curb or outlaw the Communist Party, was deemed of such importance that 3,000 copies of each were printed separately and distributed throughout the country.

9. Reference service:

One of the most valuable assets of the committee is its carefully prepared records containing the names of hundreds of thousands of individuals who have identified themselves with subversive movements of the extreme left or extreme right. These records, all based on documented evidence, are the principal source of information for investigative and intelligence units of Government departments. A total of 788 representatives of Government agencies or employees of Members of Congress and congressional committees personally made use of the committee's files between January 22 and July 23, 1947.

During the same period, Members of Congress made 370 separate requests for information and it was necessary to enlarge the committee staff to supply information which they requested.

10. Staff reorganization:

Reorganizing its staff as a result of the reorganization of Congress, the committee took care to assemble a corps of workers who are experts in their various fields. I would like to remind the House that the activities high-lighted in this report were carried on while the committee was accomplishing this reorganization. Now that the staff has been enlarged, the committee can promise more hearings, more reports, and more voluminous files from now on.

As chairman of the committee, I should like to emphasize to the House that never, since I became a member of this committee in 1938, have I witnessed as much cooperation between the committee and all agencies of the Government as exists today.

I should also like to say, however, that I have repeatedly written requests, as a Member of Congress, and as chairman of this committee, to the Attorney General for prosecution of the Communist Party under various Federal statutes. To date, he has not seen fit to act on our suggestions. Although exposure is the committee's chief weapon against subversive activities and individuals and although prosecution is beyond its realm, it takes credit for the exposure which led to the prosecution of three top Communist Party members, Gerhart Eisler, Leon Josephson, and Eugene Dennis. The same exposure and investigation will furnish the basis for additional prosecution before the year is out.

In closing, I want to express appreciation for excellent cooperation from the House Committee on Administration, which has seen to it that the Committee on Un-American Activities was promptly provided with the funds that it needed.

Sincerely yours,

J. PARNELL THOMAS,
Chairman.

Report of the Activities of the Subcommittee on Home Rule and Reorganization of the House Committee on the District of Columbia

---

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. AUCHINCLOSS. Mr. Speaker, under the authority given to Members to extend their remarks in the RECORD I am taking this opportunity of making a brief report about the activities of the Subcommittee on Home Rule and Reorganization of the District of Columbia Committee of the House, of which I am chairman.

It seems most appropriate at this time to advise the Members of the House about the hearings which have recently been held and what has been accomplished, but first of all, I want to pay my sincere tribute to the helpful and fine work which has been done by every members of this subcommittee. The membership, which is made up of ROBERT N. MCGARVEY, of Pennsylvania; JOHN J. ALLEN, JR., of California; HOMER R. JONES, of Washington; JOHN L. MCMILLAN, of South Carolina; CHARLES B. DEANE, of North Carolina; and ROBERT E. JONES, JR., of Alabama, are a fine group of men to work with. We have carried on our activities in a spirit of nonpartisanship, with the determination that some constructive conclusions be arrived at for the good of the Capital City of the Nation.

This subcommittee of the District Committee, acting under the authority of House Resolution 195 adopted by the Congress, first of all directed its attention to the study of the present government set-up in the District of Columbia. This study took the form of rewriting chapter I of the book entitled "The Government and Administration of the District of Columbia," published by the

Brookings Institution in 1929 and written by Laurence E. Schmeckebier and W. F. Willoughby. In this chapter the then present system of the District of Columbia government was described in detail and it was this description which was brought up to date by the staff of this committee.

In connection with this study which covered a period of 2 months a three-dimensional chart, 9 by 12 feet, of the District government was made up and 13 other charts were also constructed of the local municipal organization, and in that way the committee was able to visualize the present operation of the local government.

Too much praise cannot be given to Dr. George B. Galloway and Mr. Clarence M. Pierce, who are the staff director and assistant staff director respectively, in their work for the subcommittee. These men were formerly attached to the Legislative Reference Service in the Library of Congress and Dr. George B. Galloway was executive secretary of the Reorganization Committee of the Seventy-ninth Congress. Their knowledge of government and their close study of the problem before the committee has been of inestimable value in their deliberations.

The subcommittee mapped out a definite program for its work and started off by making a complete review of the present situation which included not only the study of the past investigations by congressional committees and others, but also by inviting all those in Federal and District government service to appear before it and answer specific questions. These invitations were addressed to the President of the United States, members of his Cabinet and many others, amounting to 96 people in all, and either they in person or their representatives appeared before the subcommittee in response to the invitation. They also furnished written statements which have contributed materially to the study at hand.

In addition to this, invitations were addressed to every Member of the House of Representatives inviting them to express their views either by letter or personal appearance. It is with a great deal of gratification to note that response was received from 54 Members of Congress, including the Speaker, the leaders of both the majority and minority parties, and other prominent Members.

The next step in the program will be to digest all this material and construct therefrom a plan of reorganization of the city government, and if possible to submit a scheme for home rule so that the citizens of the District may have something to say about the form of government which they enjoy. This work will be done during the summer months by Dr. Galloway, Mr. Pierce, and such members of the subcommittee who may be available, and it is hoped that a bill may be ready for introduction in the early days of the second session of the Eightieth Congress. It will then be in order to hold hearings on any such bill and it is hoped that the Subcommittee on Home Rule and Reorganization of the Senate District Committee will sit in on the hearings.

In an effort to secure all the available advice on this engrossing and interesting subject, 352 letters are being addressed to institutions of learning offering courses in government, as well as to experts in municipal government, enclosing a pamphlet descriptive of the government of the District of Columbia with the charts thereof, and the request that suggestions and ideas be submitted to the committee for its consideration. It is hoped in this way to secure the expert advice of students of municipal government so that whatever may be the result of our studies we will have the benefit of the views of students of wide experience.

Since June 30, 1947, the subcommittee members have held 20 hearings and have heard 15 local citizens representing various organizations, 31 representatives of Federal departments and agencies, and 42 representatives of agencies of the District government. These individuals testified on 10 different fundamental problems, such as:

First. The general relationship of the Federal and District governments.

Second. The Federal agencies operating in the District of Columbia.

Third. The legal and judicial division of responsibility between the Federal and District interests.

Fourth. The fiscal control and organization of the District.

Fifth. The make-up and functions of the administrative boards, commissions, and independent agencies in the District.

Sixth. The make-up and functions of the self-supporting boards and commissions in the District.

Seventh. The institutional care carried on in the District.

Eighth. Suggested type of local government for the District.

Ninth. A merit system for the District.

Tenth. The propriety of home rule for the District.

It can be readily appreciated that these 10 fundamental problems go pretty much into the heart of the District municipal organization and some most interesting ideas have been suggested to the subcommittee.

The problem which confronts the subcommittee is a unique one and it is doubtful whether its parallel can be found any place else in the world. Since 1878 when the commissioner form of government was installed in the District the municipal system has grown up more or less at will and has a pattern a good deal like a patchwork quilt, each succeeding Congress contributing its thought and its effort to make the government more efficient. To reorganize this conglomeration of agencies and various ideologies of government and to write an original charter for the Capital City of the Nation with the constitutional restrictions involved is a challenge to the wisdom and ingenuity of man.

It is generally recognized that any proposal must embody the absolute right of Congress to have final control over the government of the District of Columbia, because that is in the Constitution of the United States, but, at the same time, it is acknowledged that Congress has the authority to delegate a certain number of its powers to a local government—these powers usually being described as "housekeeping powers." But the fiscal system of the government, embodying such powers as the imposition of taxes, the adoption of a budget, and the borrowing of money, must certainly be presented to the Congress for its approval.

To achieve a constructive change in the District government is a very detailed and intricate job but at the same time it is a fascinating one, and if this committee can report a constructive measure which would meet with the approval of the Congress it will have done a real service for the United States of America. Nothing, however, can be accomplished unless the subject is approached in a nonpartisan manner with every Member of Congress making his contribution to the solution in a spirit of cooperation which will not permit partisan considerations.

Search and Rescue

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. REES. Mr. Speaker, under permission heretofore granted, I am attaching a statement by A. W. Wuerker, lieutenant commander, United States Coast Guard, on the subject entitled "Search and Rescue." This address was delivered by Lieutenant Commander Wuerker at the third annual meeting of the Institute of Navigation, on June 24, 1947:

SEARCH AND RESCUE

There are many who may question the importance of search and rescue to air or marine transport. Of course, to the fatalist search and rescue may be of little or no importance. I contend, however, that the majority of our traveling public and those who man our planes and ships are not fatalists, and that they would be reassured by and rely upon an efficient search-and-rescue organization ready to take over when they get into trouble.

When a person is quite sick, he normally consults a doctor and gets a prescription for his illness. The personnel of the Coast Guard are professionals in the search-and-rescue business, and are always ready for search-and-rescue problems.

ORIGIN OF SAFETY REGULATIONS

Certain standards and practices for safety are self-imposed by private individuals, companies or associations of companies. Other minimum standards are imposed on air and marine transport by the Government. Also, certain safety standards and procedures in design and for operation of Government-owned air and marine equipment may be self-imposed by Government agencies. Superimposed on the above are the standards and recommended practices established through international treaty, such as through the Convention on International Civil Aviation and by the Convention for the Safety of Life at Sea.

Of the above four general categories, the minimum safety requirements imposed by the Government or by treaty on private and commercial air and marine transport set the pattern and are of a direct concern to manufacturers, to operators, and to passengers. Such imposed minimum safety requirements can be segregated into preventive safety and rescue safety.

MEANING OF SAFETY

Safety has been defined as the condition of being free from danger, and it has been construed as those measures taken to prevent accidents. On the other hand, current practice extends this construction to include measures taken to protect lives from further harm after an accident occurs. This applies particularly to air and sea disasters, wherein the measures taken to insure speedy rescue are of great importance if you accept the premise that accidents will happen in spite of all reasonable preventive measures.

PREVENTIVE AND RESCUE SAFETY

For the purpose of this discussion the first interpretation of safety will be called preventive safety, and under the latter, simply rescue safety.

"Rescue safety" and "search and rescue" are one and the same. In order to more fully understand the scope of the subject, it may be well to point out where preventive safety stops and rescue safety begins. Under preventive safety one may include safety measures in design of equipment, in the manner of operation of equipment, in aids to navigation, in ground or surface aids, and in weather services. On the other hand, rescue safety includes search and rescue indoctrination, standardization of emergency procedures, operation of rescue coordination centers, and the operation of rescue vessels, rescue aircraft, crash trucks, and crash boats. In addition, however, rescue safety has a direct effect upon preventive safety measures, for example, in design of escape hatches, flotation, and ditching characteristics, or in communications equipment, in order that rescue may be facilitated.

NATIONAL RESCUE SAFETY

As has been emphasized, rescue safety (or search and rescue) concerns measures taken to protect lives from further harm once an accident has occurred. The measures taken for over-water commerce, for both aircraft and surface vessels, are provided by the Federal agency charged with rescue safety over water. However, Federal responsibility for rescue safety for air transport over land has not been established by the Government.

The Federal statutes have assigned to the Coast Guard the functions relating to rescue safety for the waters of the United States. These functions are too numerous to itemize here, as they go back to the beginning of the Coast Guard in 1790. These functions have grown with the Nation and with our over-water commerce.

Air transport, being in its infancy, does not have the advantage of pointing to 157 years of need for rescue safety. However, the need already has been realized, both by the Air Coordinating Committee and by the International Civil Aviation Organization. The pressing needs of the latter already are having their effect on national aviation policy.

Search and rescue as a military operation is an established fact. Military services among themselves attempt to provide adequate measures for search and rescue to meet their own needs.

The needs and requirements of the search and rescue program for over-water transport, both for aircraft and surface vessel, are well established and are fulfilled by the Coast Guard.

The need for a search and rescue program for domestic civil aviation was realized over 2 years ago, at which time a special drafting committee, of which I was a member, and including representatives of the Army Air Forces, Navy, and Civil Aeronautics Administration sat down and prepared the manual known as ANC/IFR, or Manual for the Control of Instrument Flight Rule Traffic. This manual has been officially approved as a standard for joint Army-Navy-Coast Guard-CAA use by the Commanding General, Army Air Forces, the Chief of Naval Operations, the Commandant of the Coast Guard, and the Administrator of Civil Aeronautics.

The Search and Rescue Subcommittee of the Air Coordinating Committee currently is making a study of the requirements of a search-and-rescue program to meet the needs of domestic civil aviation as well as international obligations of the United States. This study has progressed to a point where certain fundamentals are recognized. First, a complete search-and-rescue program must begin with the indoctrination in search-and-rescue practices and techniques of pilots and crews as well as of all operational personnel. Such indoctrination applies equally to the potential survivors as it does to the rescuers. Second, and most important, effective search and rescue requires coordination. This is based on the well-established fact that no single organization can set aside for search-and-rescue purposes alone all of the facilities required to effect a search or rescue. Protection for public emergencies requires certain minimum facilities, to be sure, as shown by the need for your city police and fire departments. However, when the expense of maintaining a full-time, fully equipped fire department cannot be justified, as in many rural communities, you will find volunteer fire departments established. Coordination is defined as the act of bringing into common and cooperative action all available facilities, both public and private, in the conduct of search and rescue. The search-and-rescue program also includes the requirement of standardization of emergency procedures. Many rescues have actually been accomplished by assisting a distressed airborne aircraft to a safe landing. Finally, when an aircraft has actually crashed or is presumed to have crashed, a search-and-rescue program requires that facilities be provided to physically search for and return the survivors to safety, such as rescue parties, helicopters, or crash boats.

During the war it was found and proven that disasters called for cooperation between all participating agencies which had facilities at their disposal to render aid. The coordination of these facilities called for experience and training. From this current search and rescue, practices were envolved in that the single agency with primary responsibility for rendering aid is the one to coordinate the effort of the other Federal or private agencies having facilities in the particular area.

For example, you are all familiar with the much-publicized rescue of the survivors from the ill-fated Belgian airliner which crashed in Newfoundland last fall. This was no hit or miss proposition. It called for experience and training, and, most important, it called for coordination by the Coast Guard, involving the Army, the Newfoundland Government, United States Red Cross, and civilian facilities.

INTERNATIONAL RESCUE SAFETY

Thus we arrive at the international importance of search and rescue. Although the United States participated in and signed the 1929 Convention on Safety of Life at Sea, it was not until the *Morro Castle* and *Mohawk* disasters precipitated a congressional investigation that the United States in 1936 ratified this convention, being the last signatory to ratify. This investigation, however, did not limit itself to recommending ratification of the 1929 convention, but undertook a comprehensive study of maritime safety standards making detailed recommendations in the form of legislation and regulations to be issued.

It has now been many years since the provisions of the 1929 convention were drafted and, spurred by the war, many developments have taken place to point up discrepancies between present-day good practices and the existing international treaty standards. With this situation before it, a special shipping committee recommended in a report dated March 11, 1944, that immediately upon the conclusion of the war an international conference on safety at sea should be held. Following up the recommendation of the specially appointed shipping committee, a meeting was called of the representatives of the various Government departments whose interest might be affected, and as a result the Commandant of the Coast Guard was designated to undertake the task of preparing for submission the United States' proposals to such an international conference. In the preparation, now taking place, the functions of a group committee on rescue procedures includes instructions to a subcommittee on search and rescue to "* * * consider the establishment through mutual effort or contribution of facilities for the rescue of surface vessels and aircraft flying over the oceans. It should also consider the responsibility of merchant ships to go to the aid of aircraft in distress and vice versa."

Paralleling the accent on international maritime safety, the International Civil Aviation Organization became a reality on April 4, 1947. The preamble to the Convention on International Civil Aviation states, in part: "Therefore the undersigned governments having agreed on certain principles and arrangements in order that international civil aviation may be developed in a safe and orderly manner."

As a result of the ground work laid by the Provisional International Civil Aviation Organization, certain international standards and recommended practices for search and rescue, as well as for the establishment of certain minimum search-and-rescue facilities, have been recommended to ICAO. PICAO also has recognized in the recommended standards the need for and value of coordination. Among the recommended search-and-rescue facilities are rescue coordination centers, defined as: "A center established by the appropriate authority to initiate, coordinate, and terminate search and rescue within a designated area."

The Coast Guard's rescue coordination center at 42 Broadway, New York, which covers the Atlantic and Caribbean coasts of the United States, handles an average of 20 distress cases per day. In the month of April 1947 alone, picked at random, there were 104 cases involving aircraft, and 511 involving vessels or minor mishaps, all of which involved assistance to over 1,000 persons.

It might be of great interest to you to visit this important rescue coordination center.

Those who have worked for the advancement of search and rescue have been aware of overlapping requirements as regards maritime, telecommunications and aviation. Such overlapping occurs particularly in standardization of emergency procedures and equipment. As a result of concerted effort, current proposals contemplate the establishment of a Committee on International Maritime, Telecommunications and Aviation Coordination, or CIMTAC.

In closing, from the statements which have been made, it may appear that the search-and-rescue program today is complete. However, such is not the case. Search and rescue is not static. Methods, procedures, facilities, and equipment are changing and improving day by day, to catch up with and to keep pace with our expanding trade. Therefore, I should like to point out some of the more serious problems of the search-and-rescue picture of civil aviation as it exists today:

1. There is no Federal agency responsible to provide search-and-rescue facilities for civil air crashes on land. Examples are the recent air-line crashes in Maryland and West Virginia.

2. There is no Federal agency responsible for the coordination of search and rescue for civil air crashes on land, for either commercial or private flying.

3. There is no Federal agency responsible for prescribing minimum standards or inspecting local crash facilities at civilian airports.

4. There is no Federal agency responsible for the dissemination of information for the indoctrination of civil pilots and passengers, or of local civil crash truck or crash boat crews in rescue and survival procedures.

5. There is no standard high or very high distress frequency for civil aviation. With most civil aircraft not equipped to transmit on the standard international distress frequency of 500 kilocycles, the result, by way of comparison, is getting the busy signal on the telephone when you are trying to report a fire.

6. There is no federally required passenger briefing as to the location and operation of emergency exits and the operation of safety belts or other safety devices, as is now traditional in marine transport.

Rural Electrification—FEPC

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 19, 1947

Mr. RANKIN. Mr. Speaker, yesterday's CONGRESSIONAL RECORD will certainly be interesting reading for the American farmers.

By a roll-call vote the House denied $25,000,000 to the farmers of this country to build rural power lines to their homes. When the Rural Electrification Administration had asked for $300,000,000, and the Bureau of the Budget had recommended $250,000,000, the House cut it to $225,000,000.

Then on yesterday when I attempted to restore the $25,000,000 recommended by the Bureau of the Budget, it was denied on a roll call. Then without a roll call the same House voted more than a billion dollars for Europe, to help countries that have 90 percent of their farms already electrified, whereas we have less than 60 percent.

So when you go home now, you will find that yesterday's RECORD is going to be read more especially by the farmers than any other one day's issue of the CONGRESSIONAL RECORD since we entered World War II.

Mr. RICH. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Pennsylvania.

Mr. RICH. We should stop making these appropriations and passing these bills and giving this money to foreign countries.

Mr. RANKIN. It is about time to look out for our own people. All this money for rural electrification will come back with interest and will add immeasurably to the wealth of the Nation as well as to the comforts and conveniences of the farmers and their families—to say nothing of the relief from drudgery it will provide.

I hope every farmer in the country reads yesterday's RECORD.

I understand that on next Monday you are going to take up the so-called anti-poll-tax bill, one of the chief planks in the Communist platform, in order to try to harass some of the Southern States.

At the other end of the Capitol they are holding hearings on the FEPC bill, the main plank in the Communist platform. They passed this crazy law in New York, and now it is running the businessmen of New York crazy and driving industry out of the State. Read the analysis of the New York law and the regulations under it at pages 9517–9522 of the CONGRESSIONAL RECORD of Monday, July 21, and you will see what this vicious measure means.

Every State legislature whose members read my speech of February 13 on this FEPC law in New York turned the crazy FEPC down cold.

Here is what they thought of it in Illinois:

FAIR PRACTICES BILLS ASSAILED AT SPRINGFIELD—LEGISLATORS HEAR BUSINESS AND LABOR LEADERS

(By Johnson Kanady)

SPRINGFIELD, ILL., April 15—Representatives of industry, business, and labor today joined in opposing passage by the legislature of any of the four fair-employment-practices bills now before it. Opponents of the measure had their day before the judiciary committees in both Senate and House. Proponents of the legislation, which is designed to outlaw discrimination in employment because of race, religion, color, or ancestry, had their inning last month and will have brief rebuttals before both committees next week.

James F. Stiles, Jr., president of the Illinois Chamber of Commerce, warned against piling State regimentation on top of Federal regimentation, which, he said, already is weighing business down.

"Illinois is one of the few States which offers one of the finest legislative approaches to industrial enterprise," Stiles said. "I hope you will not change it."

UNION LEADER SPEAKS

Herman Heironymous, secretary of the Tri-City [Granite City area] Central Trades Council, representing 16,500 members of 38 local unions, said:

"This bill will do nobody any good. There is no law to make anyone love me if he doesn't want to love me."

Charles E. Terry, secretary of the Boss Co., glove manufacturers, with seven plants, one in Kewanee and another in Brooklyn, N. Y., said of the situation in New York State, which has an FEPC law:

"There are manufacturers in New York considering seriously taking their plants to other States."

Gale Warfield, a representative of Local 50, Chemical Workers' Union (AFL), at Granite City, said:

"The only way it [abolishing discrimination] can be done is by education."

MANUFACTURERS OPPOSED

David R. Clarke, general counsel for the Illinois Manufacturers' Association, summed up that organization's opposition by saying:

"It looks like the creation of petty tyranny—nothing more and nothing less."

Many of the witnesses spoke before both committees, the House Judiciary, headed by Representative Swanson, Republican, of Chicago, and the Senate Judiciary, headed by Senator Thompson, Republican, of Galesburg. Both hearings, because of the large number of witnesses and spectators, were held in the legislative chambers, rather than in the small committee rooms.

Floyd L. Thompson, former justice of the State supreme court, representing 53 business and trade associations in the State, spoke only before the senate, declaring that the proposed laws are "out of tune with American traditions and American concepts of civil rights." His 45-minute address summed most of the arguments advanced by other opponents.

"This Nation has become the greatest on earth because of our political philosophy that the least governed people are the best governed people," Thompson said. "Whenever we have departed from this course and yielded to pressure groups in their design to regulate all human activities by law, we have created problems far greater than the evils at which the legislation was aimed."

Thompson charged that professional agitators of a pressure group requested the drafting and presentation of the FEPC bills and added, "The small minority for this restraint of freedom of action, with few exceptions, never produced anything and never gave employment to anyone."

He charged that when the New York act became law in July of 1945 it had been stated that 15,000 complaints were ready to be filed.

"Everybody braced himself for the flood," he said. "There was scarcely a trickle in the first 2 weeks, 5 out of 14,000,000 complained."

TELLS OF COST OF PLAN

"Do-gooders who think they have a mission to look after others, the new bureaucrats, saw their jobs threatened and those suffering from a minority phobia began to beat the bushes to drive in the game so the customers would not be disappointed," he said.

"Strain as they might they were able to scare up only 162 complaints before November 15, 1945.

"This is the answer to the slander of American employers.

"To settle the first 500 cases in New York cost $500,000," Thompson said.

Thompson said that denial of the right of an employer to ask certain questions on employment applications would help Communists to infiltrate their agents into labor groups.

"Perhaps that is the reason the Communist Party in Illinois was among those on proponents' day in March."

Highly Combustible Fabrics Must Be Eliminated From Interstate Commerce to Properly Protect the Public

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. JOHNSON of California. Mr. Speaker, every year a great many people are fatally or seriously burned by highly combustible fabrics. There seem to be no reliable statistics as to the definite number, but we do know that a great many people are burned every year because they wear fabrics which they have every reason to believe are safe.

In the Seventy-ninth Congress, I introduced a bill to give the American public the necessary protection against the sale and shipment of these dangerous fabrics. That bill was supported by the National Dry Goods Association.

In the Eightieth Congress, I introduced H. R. 601, which has for its purpose the

protection of the public against the danger from the sale of combustible fabrics used in clothes. It is substantially the same as my former bill. This bill was considered by the Interstate and Foreign Commerce Committee of the House of Representatives and testimony was presented in support of my bill and another bill, known as the Arnold bill.

For some reason, the National Dry Goods Association had a bill drafted and Mr. ARNOLD, of Missouri, introduced the same in the House, and Senator CAPEHART, of Indiana, introduced it in the Senate.

My bill is a simple bill. It effectively bars dangerous combustible fabrics from interstate commerce. It provides for certain penalties for violations of the law. It also provides that the Attorney General or any United States district attorney may bring an injunction suit prohibiting the sale of dangerous combustible fabrics in interstate commerce, where the indications are that the fabric would be dangerous if used for wearing apparel.

The determination of what fabrics are dangerous and, therefore, should be excluded from interstate commerce, is governed by a test described by the National Bureau of Standards in its Circular No. C-455.

My bill would, I think, administer itself and effectively eliminate, at a very nominal cost to the Government these dangerous fabrics. No one wants them, whether they be manufacturers or retailers. The retailers especially object to these fabrics. When they sell clothes, the natural warranty is that the fabrics of which the clothes are made are safe and that women and children need have no fear when wearing these clothes. Numerous lawsuits have been filed against retailers as well as wholesalers and manufacturers claiming damages because of injuries incurred in the burning of clothes made from dangerous fabrics.

The Arnold bill is a sort of NRA bill, which would be administered by the industry through the Federal Trade Commission. This means that the industry would try to police itself by agreeing on the standard to be applied to test the combustibility of fabrics. However, months have elapsed and they have been unable to agree, and I doubt if they will ever agree on a test.

It seems sensible to me to set down a simple test, such as provided in my bill, and have the test made by an independent agency, such as the Bureau of Standards. The cost of this administration would be nominal.

I, therefore, sincerely hope that when Congress reconvenes, that we may find some way to have my bill enacted into law for the protection of the public. While the industry is trying unsuccessfully to get together the public is still exposed to this danger, and not a week passes but what someone suffers because we have not effectively banned dangerous, combustible fabrics from the market. In order to understand the problem, I am making my bill, H. R. 601, with suggested amendments, a part of this statement so anyone that may read it will see exactly what is proposed and how simple and effective it undoubtedly will be. I changed the original so the bill will apply only to wearing apparel, as most cases of injury or death come from the burning of clothes made from dangerous, combustible fabrics.

This is the bill, as amended:

SUGGESTED REVISIONS OF H. R. 601

A bill to prohibit the transportation of certain highly combustible fabrics in interstate commerce, and for other purposes

SECTION 1. *Be it enacted, etc.*, That it shall be unlawful for any person to make use of any means or instrumentality of communication or transportation in interstate commerce for the immediate or eventual purpose of selling or offering for sale or for delivery after sale of any highly combustible fabric as defined in this act.

SEC. 2. (a) Whoever violates the provisions of this act shall, upon conviction thereof, be subject to a fine of not more than $1,000 or to imprisonment for not more than 1 year, or to both such fine and imprisonment.

(b) Whenever in the judgment of the Attorney General or any district attorney of the United States any person has engaged in, or is about to engage in, any acts or practices which constitute or will constitute a violation of this act, he may make application to any court of the United States of competent jurisdiction for an order enjoining such acts or practices, and upon a showing that such person has engaged in or is about to engage in any such act or practice, a permanent or temporary injunction, restraining order, or other order shall be granted without bond.

SEC. 3. As used in this act the term—

(a) "Person" means an individual, corporation, partnership, association, or other organized group of persons, or any legal successor or representative of any of the foregoing; and

(b) "Highly combustible fabric" means any woven, knitted, net-type, or felted fabric, or films, or other materials serving the same purposes, either as yard or piece goods or as articles for personal wear, which flashes or burns in the horizontal position, with any nap, pile, or hazardous coating on the upper face, at a greater average rate than one inch per second, the size and conditioning of samples and method of testing to be in accordance with the procedure prescribed in National Bureau of Standards Circular No. C455, entitled "Flame Proofing of Textiles": *Provided*, That if flame proofing is applied to meet the requirements it shall have permanence, as indicated in procedures to be established by the Secretary (of Agriculture, Commerce) to enable them to be met for the projected useful life of the fabric.

SEC. 4. The provisions of this act shall not apply to fabrics designed and used exclusively for purposes other than articles for personal wear.

SEC. 5. The provisions of this act shall not apply to individual shipments of any fabrics destined exclusively for purposes other than articles for personal wear.

SEC. 6. The provisions of this act shall not apply to shipments of fabrics to destinations where they will be processed or finished to meet its requirements.

SEC. 7. Shipments made under any exemption covered in section 4, 5, or 6 of this act shall be clearly marked on the outside to show the fabric to be highly combustible, the ultimate use of the fabric or purpose of the shipment, and the number, title, and section of the act under which shipment is made. The same information shall be given on bills of lading covering the shipment and any other shipping manifests.

SEC. 8. This act shall take effect 1 year after the date of its passage.

Navajo Indians

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mrs. BOLTON. Mr. Speaker, I wish to extend my remarks by inserting a letter I have written to the chairman of the Committee on Public Lands together with a letter written to committee members by Mrs. Charles H. Dietrich, president of the New Mexico Association on Indian Affairs, telling of the needs of the Navajos, the largest of the Indian tribes:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 29, 1947.

Hon. RICHARD J. WELCH,
Chairman, Committee on Public Lands,
House of Representatives,
Washington, D. C.

MY DEAR MR. CHAIRMAN: I have received a letter from Mrs. Charles H. Dietrich regarding the utterly unbelievably tragic situation of the Navajos. Having once served on Indian Affairs, I fear I cannot but believe in the accuracy of her statements, particularly as I know Mrs. Dietrich, and would have complete confidence in any statement she might make.

If nothing else can be done before winter, surely the Public Lands Committee can insist that the Indian Commissioner provide the necessary food, clothing, blankets, etc., to keep these people through the winter.

Our methods with them have been increasingly shocking. There was perhaps a certain amount of reason in the original creation of the reservations. The settlers had cause to fear them. But there is no reason whatever to make their lot harder with the years. There is no excuse for an enlightened people as we claim to be to turn those reservations into concentration, or, if you prefer, displaced persons camps.

I therefore hope that you will insist upon some immediate action.

To bring this to the attention of the membership, I am extending Mrs. Dietrich's letter and my own in the RECORD.

Hoping your summer will be a satisfying one, I am

Sincerely yours.

LETTER SENT TO COMMITTEE MEMBERS

JULY 18, 1947.

DEAR MR. ———: We are happy over the interest you express in our outline of suggestions for cutting expenses of Indian administration without sacrificing services.

I have just returned from the Navajo Tribal Council meeting at Window Rock, Ariz., which affords an opportunity for observation, consultation, and visits with Indians, Indian Office personnel, missionaries, and traders. I want to emphasize the dire needs of the Navajos at this time. All relief money was expended by April, although it had been used almost too frugally. There was a limit of $6 a month for one individual, or $5 each where there were two or more in a family on relief. The States of Arizona and New Mexico give no help to Indians, even under social security. Traders charge exorbitant prices for foodstuffs.

The Government stock-reduction program, along with removing sheep and horses, killed off all the prairie dogs and other wild animals which have sustained the Navajos in previous crises. A few sections of the Reservation

have pathetic fields of stunted corn, and some hundreds of men (out of 60,000 population) have secured off-reservation jobs on railroads. A few hundred families have summer employment on the Bluewater irrigation project (privately owned), where indecent housing and sanitation resulted in 40 cases of typhoid last summer. These typhoid carriers were handling carrots and lettuce shipped to eastern markets. The pay there is so low that no money is left at the end of the season to carry the families through the winter.

There is no work, no hope, in the greater part of the reservation. I am convinced that our generous, humane Government doesn't help these people only because the conditions of poverty and disease are not known by Congress and can hardly be imagined.

I hope it is not too late to secure surplus commodities of clothing, blankets, mattresses, and above all, food, to keep these people alive this coming winter. How does one go about securing surplus commodities? The welfare worker at Window Rock told me she put in an application for blankets and mattresses a year ago, but has had no response. Hungry Navajos see carloads of potatoes being shipped through Gallup, N. Mex., on their way to be destroyed.

I do not believe in relief where prevention is possible, but there is as great an emergency on the Navajo Reservation now as there is in Europe. I hope when the appropriation measure is passed it will carry an adequate sum for Navajo relief.

There is one welfare worker for the whole reservation, which is four times the size of Massachusetts, and no field nurses. Nurses should go into the hogans (one room houses) where crippled mothers who may also have trachoma, and children with incipient tuberculosis from undernourishment, must be persuaded to take treatment. The children must now be started on the way to becoming self-supporting adults or they will develop diseases and handicaps which will make them public charges all their lives.

There is no place, except at a few missions, where orphaned and crippled Navajo children can be cared for * * * not only on the reservation but anywhere in the United States. The States of New Mexico and Arizona say that Indians are not State charges, and the Federal Government makes no provision for their care.

As you cut the trimmings in Indian administration—photographers, historians, anthropologists, extra personnel in duplicating offices—please do not forget the human services which this country owes the Indians as much as to foreigners, and the need to educate and prepare the Indians, particularly the Navajos, to support themselves by some economy other than that based on land. Otherwise the need for relief expenditures will increase from year to year. However, temporary relief before winter must be provided by this Government, or the churches and women's clubs, and so forth, will have to be asked to furnish private assistance for the wards of the United States Government. We must not postpone help any longer.

I wish you could find time during the recess to visit the Navajo Reservation, but get off the main roads, so that you can see for yourself the needs of these people and also the possibility, through development of resources such as irrigation and small scattered industries, of making them economically secure and an asset to the Nation.

Sincerely yours,

Mrs. CHARLES H. DIETRICH,
President, New Mexico Association on Indian Affairs.

SANTA FE, N. MEX.

Deficit Spending Again in Fiscal Year 1947

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. REEVES. Mr. Speaker, in a burst of enthusiasm the Truman administration has announced that for the first time in years the budget was balanced in the fiscal year ended June 30, 1947, and that the Treasury was left with a surplus of more than three-quarters of a billion dollars. True enough, the published statement of the Treasury Department shows total receipts of $43,258,833,000 during the year as against total expenditures of $42,505,045,000, leaving a budget surplus of $753,787,000.

But included in the total receipts is $2,885,777,763, representing the proceeds of sales of surplus property. This is a liquidation item and not an income item. It must be deducted from the total receipts in any honest evaluation of the fiscal performance of the administration during the past year.

Deducting the money received from the sale of surplus property leaves only $40,373,056,000 of actual income as against total expenditures of $42,505,045,000, and the result is that, measuring actual income against actual expenditures there was an actual net deficit of two billion one hundred and thirty-one million in the fiscal year.

The Truman administration has followed the familiar New Deal pattern of deficit spending. The only way it could make ends meet was to sell off some of the property owned by the Government and spend the proceeds. On that theory it could sell the Capitol building or a national park and claim the proceeds as income.

No, economy is a false front with the Truman administration. It is insolvent fiscally, as well as morally and politically.

Russian Aims in Postwar World

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. REED of New York. Mr. Speaker, under leave to extend, I am inserting excerpts from an article by S. H. Scheibla in the Wall Street Journal May 28, 1945. I would like to know, as would many others, what Russia has done since 1945.

INDUSTRIAL RUSSIA
(By S. H. Scheibla)
(Verbatim excerpts)

Officials are convinced that for the future the Soviet Union must be granted rank second only to the United States as a world economic power. * * *

Russia's industrial planners are not only set to expand production within the boundaries of their Eurasian nation; they are beginning already a program of drawing upon the strength of their neighbors. * * *

* * * Of course Russia has suffered vast war damage. * * * Yet officials here report that the volume of Soviet industrial production has increased during the war. * * *

* * * Supplementing its economy with lend-lease imports, the Soviet Union during the fighting was all but able to stop production of consumer goods. Men and materials could be diverted * * * to expansion of heavy industry * * * the capacity of the electric power stations put into operation during 1944 in the mushrooming Ural industrial region nearly equals the aggregate capacity of all stations built during the first 5-year plan.

Russia also has made strides in prospecting new sources of raw materials * * * 200 new coal mines were sunk during the war. Equal attention has been devoted to other minerals. * * *

* * * * * *

* * * In the older industrial areas * * * the Soviet engineers have a good start at reconstructing plants whose movable machinery had been evacuated. * * * Since liberation in late 1943, south Russia alone has restored 13 blast furnaces with aggregate capacity of 8,135 cubic meters by the beginning of this year.

* * * Instead of bringing back evacuated equipment * * * new facilities were installed. * * *

* * * For the time being, however, Russia will not approach the productive capacity of the United States.

* * * Marshal Stalin has stated that the Soviet goal is to produce 60,000,000 tons per year * * * he can perhaps do it in a decade, perhaps sooner * * * it is a goal doubling or trebling prewar Russian output * * * it remains lower than present American annual capacity of some 95,500,000 tons of steel. Before the war, our capacity was about 81,500,000 tons.

To supplement its domestic strength, then, the Soviet has already begun to tap the resources of its neighbors. * * *

Simplest has been the annexation of the Balkan States, eastern Poland, and parts of eastern Rumania. * * *

At the other end of the scale are Russia's relations with Sweden. Bilateral trade has just been resumed; the Swedes are making delivery now on orders taken from Russia in 1940. They will be of most direct use in reconstruction and expansion, including railroad equipment, machine tools, high-grade steel, ball bearings, and small motors. In exchange, Sweden gets Russian oil products, manganese ore, and grain. Only about $25,000,000 is involved in this exchange, but it's a beginning.

Russia has begun trade with Finland. * * * The reparations agreement signed December 17, 1944, provided that Finland would deliver $300,000,000 in materials. This was broken into $100,000,000 of machinery and railroad equipment, $60,000,000 in new ships and $15,000,000 in old ships, $100,000,000 in timber, cellulose, paper, and wood products, and $25,000,000 in copper wire and copper cables. The payments are to be spread over a period of 6 years, with deliveries of $50,000,000 of goods each year.

For trade in addition to the reparations, Russia signed an agreement with Finland on January 31, 1945. The Soviet agreed to deliver to Finland by June 1 of this year 5,000 tons of wheat, 25,000 tons of rye, 1,000 tons of sugar, 50 tons of chocolate, and 250 tons of other sweets. In return, Finland agreed to send Russia nickel, cobalt, and sulfur ore, and to repair Soviet vessels, bringing the total value of the transaction to $2,260,000.

A second trade agreement, signed a few days ago, involved a volume of $17,000,000; it will give Russia wood products, particularly prefabricated houses and wood pulp, in exchange for exports to Finland of 30,000 tons of grain, and some salt, oil, and consumer goods.

Yugoslavia will work hand in hand with Russia * * * a trade agreement was reached, but its details are shrouded in uncertainty here. * * * Russia was to get copper, concentrates of lead, zinc ores, and lard, in exchange for kerosene, cotton, and agricultural machinery.

* * * Rumania has oil; Czechoslovakia before the war exported to the world about $55,000,00^ of iron and steel annually, including manufactures, as well as considerable textiles and glassware. But Hungary's exports were mostly wheat, meat, and poultry, and Bulgaria's prewar trade agreement with the U. S. S. R. emphasized hogs, rice, hides, tobacco, and rose oil.

* * * The Danes * * * have an interrupted pact to supply cranes, Diesel motors, cement-plant equipment, and other machines, in exchange for timber, oil products, and other raw materials.

The economic plan Russia is hatching for Poland is at least as obscure as its political program. Shifting its boundary westward to the Oder River, however, would plainly bring considerable heavy industry—previously German—within the country. Foundries, chemical plants, oil refineries, and steel mills will be gained. And, depending upon arrangements, Poland's gain can be Russia's gain.

* * * The eastward movement of prisoners of war, classified by occupation, has been started on a vast scale, and apparently the Russians intend to exploit this labor. * * * This may be matched by the movement of portable German industrial equipment, while other industry will remain in the Russian zone of occupation and produce for Russia.

A top prize in this zone of occupation will be a good portion of the Silesian industrial combine, which is located on the former German-Polish-Czechoslovakian border and normally produces about 125,000,000 tons of coal and 4,000,000 tons of steel each year. The coal could be especially valuable, since it is not a great deal less than was produced in all Russia before the war.

Six large shipyards in the expected Soviet zone of occupation could produce river vessels for Russia's internal transport and help build up her merchant marine for world trade. Railway equipment, boilers, steam engines, fertilizer, rayon, and textiles are other products of this region.

If Russia should be willing to abandon its prewar bilaterial system of trade * * * she will find big export markets for industrial goods on her own account in Iraq, Iran, Turkey, and China. * * *

The United States Government is acutely aware that Russian buying and selling, if used for political purposes * * * will be on a large enough scale to cause dislocation in other lands.

* * * Lend-lease * * * has sustained the Russian economy in war. We have sent $2,700,000,000 in industrial products and materials; $1,100,000,000 in motor vehicles and parts; $1,500,000,000 in agricultural products, and a quarter billion dollars of watercraft, aside from munitions. For the future, the Russians are asking credit.

What Is Over the Horizon?

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. MURDOCK. Mr. Speaker, this question which I have posed has nothing to do with foreign affairs, nor even with our Nation-wide domestic affairs. Just now I am thinking of possible improvements to make Arizona and neighboring portions of the Pacific Southwest more productive, and more habitable. Having given most of my congressional attention and thought to reclamation in the southwestern corner of our country, I am, of course, still thinking in terms of the traditional type of reclamation. However, just now I want to comment on other possible types of reclamation.

It is a physical fact, often noted by all who are thinking on the problem, that there is a great deal more good land which might be tilled in this semiarid southwestern region than there is water for such land. Without adequate water these millions of acres of good land cannot be tilled and made productive under our traditional type of reclamation. Therefore, as the matter now stands it is a problem of selection to reclaim the best portions of the tillable lands according to the supply of water which is available. Following out that plan, there is, of course, great water controversy between the States, especially in the Colorado River Basin, and the same thing applies to other basins. For that matter, there is controversy between different parts of the same State within the same basin. However, that is not the problem I have in mind here.

In view of the foregoing facts, I have felt that a new type of agriculture must be resorted to to get maximum results and the greatest possible production out of the lands in the semiarid Southwest. This new type of agriculture should use less water for the same monetary value in production, and that may be accomplished, in my opinion, by making the available water supply go further in satisfying needs and also in producing crops which require less water, but which are also valuable. How could these two things be done? That is, how can we make the available water supply go further and how can we add agriculture production in that area which will require less water per unit than the present production requires? I may not know the answer, but I think the Pacific Southwest must find these answers or be cruelly limited in its population growth.

SUBIRRIGATION AND UNDERGROUND STORAGE

Possibly one answer to the foregoing question is subirrigation. I believe subirrigation may be applied to much of the area that has been recently or is now being irrigated by surface irrigation, and I believe that the amount of water per acre needed for any given crop can be greatly reduced by subirrigation. It may be that some crops will not do so well with subirrigation as with surface irrigation, and if so that would be a limiting factor. On the other hand, perhaps many crops would do better with subirrigation than with surface irrigation, and certainly in our hot, dry climate there would be less water required with subirrigation because less would be lost through evaporation. In fact, the evaporation losses are enormous in all of the hot agricultural valleys of the Pacific Southwest. Surely we ought to find some way to minimize evaporation losses.

Speaking of the evaporation losses brings to mind a possible change in our reclamation technique other than applying subirrigation to growing crops. I have reference now to underground storage of water. Up to this point in our reclamation program we have built great dams on our rivers and created vast reservoirs or artificial lakes in which the floodwaters are stored to be later used for irrigation and incidental power production. Forty-five years of successful functioning of the Bureau of Reclamation amply attest the wealth-creating power of such a program. I would not change from that plan to any great extent, for reclamation is possible on these variable and intermittent streams of the West only by impounding floodwaters in their season and holding them for use in the growing seasons. The power produced as these waters pass the dam is a tremendously important wealth-producing feature. The thing I would like to stress, in addition to this traditional part of the program, is more underground storage wherever possible.

I am not talking now about subirrigation, but deeper, more extensive underground storage of water to avoid evaporation losses. Water is indestructible, it travels long distances and arrives at the point underneath where it is needed in many instances without the need of open canals or even man-made open or closed aqueducts. Given cheap electric power for pumping and a sensible system of regulation of water use, the water can be lifted from its underground storage for irrigation. Some of that is being done today, and I expect to see more of it in the future. Of course, it is expensive to pump water, but the saving in water because of the underground storage will go far toward paying the cost of pumping. Needless to say, we will have to add to our store of knowledge more and better scientific information on geology and hydrology to add this later development to our total program of reclamation.

NEW CROP POSSIBILITIES

Undoubtedly, new crops must be introduced into the semiarid region which will produce as much economic wealth as is now being produced and which will require much less water than present crops require. I believe that is a possibility. Most of the plants that we grow in our semiarid regions are importations from other lands. I have heard it suggested that safflower, a native of India which requires very little water, can be grown in this country and is highly profitable. It might prove more profit-

able and require less than half the water in comparison with some of the crops which it might displace. This is one of the things for the agriculture experts to figure out.

In my own mind, I feel sure that before long a species of cactus known as yucca is destined to become a valuable crop in various parts of the Southwest, where it grows naturally on the desert. There is no doubt about the value of its products. The only question is—and I think that has almost been solved—in regard to the harvesting of yucca foliage and extracting its products with labor-saving machinery at low cost. American engineers may be depended upon to accomplish this latter feat.

If the harvesting of the natural yucca from the desert can within the near future be profitably done, the next step would be the cultivation of yucca as a row crop. I am informed by scientists that that is easily possible, and there is no reason to suppose that yucca under cultivation would require any more water than it requires in nature growing on the desert. Of course, yucca and bear grass grow naturally only in certain areas, limited by soil, climate, and altitude, but there is a vast portion of the southwest where this favorable combination exists.

During the war we made some effort in the growing of guayule to provide natural rubber. It is true that at that time we came to depend almost entirely upon synthetic rubber, but never was there a moment during the war when we were shut off from the natural rubber supply of the tropics that we failed to utilize every bit of natural rubber we could get. Tire manufacturers today will tell you that a little natural rubber with the synthetic rubber is best for all kinds of tires, especially large ones. The president of one of the large tire manufacturing companies is very enthusiastic about guayule and is of the opinion that we ought to grow it even if we have to subsidize it heavily for the first few years. I am not given to making predictions, but I will venture to guess that in spite of all our synthetic rubber technique, and in spite of our peacetime return to natural rubber from the tropics, we will continue to depend upon natural rubber grown in this country to an increasing degree. Guayule is the best plant that we can grow for that purpose.

RESEEDING AND ARTIFICIAL RAINFALL

I have many times called attention to the work of Dr. Lytle S. Adams, who has developed a method of pelletizing seed and distributing the seed pellets rapidly over a large area from airplanes. In the drier regions, as in southern Arizona, Dr. Adams uses a drought-resistant grass seed, an importation from Africa known as Lehman's love grass. This grass seed is very small, requiring 6,000,000 or 7,000,000 seeds to weigh a pound. In sowing this seed from airplanes, it is necessary to encase it in pellets of good earth to which fertilizer and other elements have been added.

The pellets carry the seed where they should be and preserve them and give the seed every possible chance of germination. This particular grass can thrive on less than 8 inches of rainfall. It is a very nutritious and promising kind of grass, and Dr. Adams' method seems likely to be a very effective way of revegetating vast areas which have been overgrazed, denuded, and subjected to erosion. This reseeding work is in its infancy, but it is full of promise for millions of acres of range land, fit only for grazing, throughout the Western States.

Another scientific accomplishment which may be just over the horizon has actually been tried out with success both in Arizona and Australia. I refer now to a method of causing rain from clouds which otherwise would not precipitate their moisture. Less than a year ago a scientist caused a snowstorm by dropping a few pounds of dry ice from a plane flying over a cloud. This technique has been recently applied especially in the deserts of Australia and to a smaller degree in Arizona. It is found that clouds heavily laden with moisture, if caught at just the right stage where a slight change in temperature will cause precipitation, may be made to yield their moisture by dropping dry ice into the cloud from planes flying over it. Who can foresee the possible results of such technique?

I talked this over with Dr. Adams, who is already successfully sowing pelletized grass seed from the air, which seed requires little moisture to dissolve the pellets and cause the seed to germinate. This method alone gives a great impetus toward replanting the vegetation, but after it germinates in a hot, dry country it is then still at the mercy of the elements. If, to the great assistance which the airplane distribution of pelletized seed gives the vegetation toward a start, we could add a systematic furnishing of showers or light rains, we could further guarantee the growth. All of these things may seem fantastic, but easily within the realm of possibility under known natural laws.

CONCLUSION

Supposing that these things can be done, what will it mean to all the States of our Pacific Southwest? It will mean that this area—the Nation's sun parlor, heretofore appealing to the rich or to the sick—will present an invitation to people of moderate means in all walks of life to make their homes where they can make a living and enjoy climate and scenery vastly different from that in the community in which they were born. There has been a great trend in population growth in the cities of the Southwest, Los Angeles being a notable example. GI's are flocking into Arizona and California in great numbers, and they would like to make their homes in that part of the country. They cannot do so unless industry is developed to support this large population. Nature furnishes a challenge which we must accept. In so doing we must develop new industries, new means of livelihood, new wealth-producing facilities that will make possible an expanding population to the benefit of the entire country as well as the States involved.

Lincolniana

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mrs. BOLTON. Mr. Speaker, last week, at a solemn ceremony in the Library of Congress, the Robert Todd Lincoln collection of the papers of Abraham Lincoln, were declared open and free to all who might desire to inspect or use them for scholarly purposes. This invaluable collection was bequeathed to the Nation by Abraham Lincoln's son upon condition that it should remain sealed for 21 years after his death, and the time limit having elapsed at midnight on July 26, 1947, it has become part of the Nation's historical heritage.

Lincoln scholars who inspected some of the 18,000 letters and documents of the collection, do not expect that they will bring about any important revision of their estimate of Lincoln himself; nor cause any marked change of their historical interpretation of the roles played by members of Lincoln's war Cabinet. But future biographers of this singularly great, and singularly American figure, will resort to this new accretion of material pertaining to him while it is inconceivable that there should be ever a time when Americans will not return to Lincoln for renewed faith in themselves and their stupendous experiment in democracy whose like has not been seen upon this earth.

It was in this sense that Roy P. Baseler, one of the eminent Lincoln scholars present at the opening of the Robert Todd Lincoln collection, spoke. He said:

> I believe that America will continue to follow Lincoln's belief that the wealth and power which have accrued to the Nation in our quest for freedom and equality is not an end in itself, but is a byproduct, to be used as a means of furthering the quest. Our wealth and power cannot justify our democracy before the nations of the world, now or ever. But our democracy can justify our wealth and power, by utilizing it in the quest for a better world for all men everywhere. We shall have failed of the historic destiny which Lincoln saw for us unless we recognize with him that, as he said, "The struggle of today, is not altogether for today—it is for a vast future also."

Every American reveres the name of Lincoln as he reveres the name of Washington. But those of us who serve in this House have an especial pride in him for he served here as a Member from Illinois in the years 1847–49. Let us remember as Representatives of the American people, in these days when heavy responsibilities rest upon us, the spirit of this man who, through black and weary months of reverses, petty bickerings, and ineffective effort, never faltered; who stood firm when men around him lost their courage and deviated from their purpose; was clear-minded in the midst of confusion; a monument of resolve in the midst of defeat and magnanimous in

the face of victory. And in those unhappy moments when we may be led astray to say or to do those things that promote, not the national welfare but some selfish interest, let us have resort, as Lincoln said in his first inaugural, to "the better angels of our nature."

No one of us can hope to add luster to Lincoln's name or height to his stature. Yet it may not be amiss to say, in these troubled days of ours, that among all his superlative gifts, none was greater than his gift of understanding. It is that gift of intuition, of prescience, of penetration, and divination, which, greater than logic, far transcends logic, and becomes prophecy. It is the gift of being able to look into the hearts of men to the far horizon where shadowily march the generations unborn. In its presence legalisms become shabby, the expedient shameful, the utilitarian shoddy. We are inestimably the richer because this gift was Lincoln's. We may indeed owe our survival as a nation to it; and if we are to endure greatly we shall have to resort to it and each of us, in his own way, emulate it.

For these reasons, as well as those of scholarship, the turning over to the people by the Robert Todd Lincoln Collection of the papers of Abraham Lincoln, is an important event in our national life. We shall have need of greatness in the days to come, and these papers, yellowed, smudged, and interlined with the writings and annotations of Lincoln, are some of the outward evidences of the inward greatness of Abraham Lincoln who was a man entirely typical of the new people that had grown up after the War of Independence.

Reflections on the Merger Bill

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. JOHNSON of California. Mr. Speaker, having been a member of the air service in the First World War, I have had an interest in military aviation since 1919. At that time, we could foresee that the air branch of the armed services had a tremendous future. As time rolled on, General Mitchell, the commander of the Air Forces in the AEF, and for whom I flew, brought the problem of developing and giving proper recognition to the Air Forces to a sharp focus. In fact, he talked so much about it and was so indiscreet in what he said, that he was finally separated from the Army.

Some of the things that General Mitchell said are prophetic when looking at them from this vantage point. He pointed out that in any future war, Alaska would be a key station, which we can now clearly understand. He pointed out that the Air Forces would develop their armament and weapons to the extent where war would be very devastating. He indicated that the emphasis would be, not so much at striking and destroying the opposing armed forces but at destroying the industrial and production centers of the enemy. All this came to pass in 1944 and 1945. We can now see that the Air Forces are the key to victory, in the event we should be unfortunate enough to get into another war. The destructive capacity of weapons which can be carried by air is simply awful. Scientists have practically told us that the human race, operating through its armed forces, has the power to destroy itself.

All during this time, we have struggled to make an autonomous place for the Air Forces or to unify our entire armed forces. That really was the plea of Gen. William Mitchell, namely, that we have unification of the armed forces who had the single problem of protecting and securing our Nation against aggression. The present bill is a step in that direction.

In the bill, specific legislative protection is given the Marine Corps. To me it is a mistake to give a legislative guaranty to the position of any unit or branch of the armed services. I believe it is fundamental that no segment or portion of the armed services has a vested right to its continued existence. From time to time, we must test its usefulness and necessity in the light of changing conditions and responsibilities. If any branch cannot justify itself under the changed situation, it must be eliminated or modified. Measured by what the Marine Corps did in this war and the glorious victories which they produced, they will be useful for a long time, perhaps, forever. However, to give legislative autonomy is a different thing entirely than merely providing administrative machinery for the continuance of any specific branch of the armed services. Once a segment of the armed services gets legislative protection, it is very difficult to change or eliminate it, even though future necessity should make that necessary, and frequently those who seek legislative sanctuary for their particular group know this.

Another provision provides that the Navy shall have its own independent air force. I think it is quite evident to men who are trained in air warfare, that this bill is merely a step in the ultimate merger of the Air Forces, under one head. The thinking of some of the leading airmen in the Navy, as well as the thinking of the leading airmen in the Army, is that to bring the maximum protection, the Air Forces must be integrated into one cohesive unit. Modern war is all-out war operated on the main line with everything we have. It is not operated on parallel tracks with cooperation between the conductors.

In 1931, one of my predecessors, Hon. Forrest C. Curry, Jr., introduced a bill—H. R. 261, Seventy-second Congress—providing for one Department of National Defense, in other words, providing for a merger similar to what we enacted recently. He was an air-service officer in World War I and later became a close friend of General Mitchell. It was 13 years after the war ended before Mr. Curry's proposal was submitted in concrete form to the Congress. That bill provided a separate Air Force. Its officers were to come from the officers of the Army, Navy, Marine Corps, and the Coast Guard. In other words, there was an integration of all personnel, of the various branches of the services, who were in aviation. This is what I predict will happen to the air branch of our armed services.

We must never forget that national defense is one single problem. We must fix the policy and grant the power to handle the problem in such a manner that there will be fluidity in its administration. The one who has the responsibility for carrying out a mission must be able to weld together all the elements or groups necessary to successfully carry out the mission. This bill is a step in that direction. Time and experience will indicate what changes will be necessary to give us the most defense for our tax dollar.

Federal Taxation

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. REED of New York. Mr. Speaker, as a member of the Committee on Ways and Means of this House, I should like to present to the Members of this body a few thoughts on the subject of Federal taxation, which I hope you will carry home for your own thoughtful consideration and for discussion with your constituents during the coming recess. I believe you will then agree with me that these matters deserve even more careful study and attention when this Congress resumes its sessions.

For many years, I have insisted, and I believe have demonstrated for the record, that confiscatory taxes always defeat their purpose.

As is well known, this Congress overwhelmingly favors a reduction in personal income taxes at this time. But, unfortunately, those who oppose such a reduction are, in some instances, those who have been indoctrinated with the philosophy and practice of tax and tax, spend and spend.

There is just as much reason to reduce Government expenditures and cut taxes now as there was in doing so following World War I. The program of governmental economy then adopted blazed the way for prompt and substantial reductions in individual income taxes, and for several years of national and individual prosperity.

The rates were so high in 1918 that they had arrived at the point of diminishing returns. The situation today in respect to individual income taxes may be compared to what it was in 1918, except that now it is many times worse. A few figures will show you why the situation is worse, for the individual taxpayer as well as for the national economy.

During the World War I period, say for the years 1914 to and including 1919, the number of individual returns and taxable fiduciary returns with net income never exceeded in any year 5,500,000 returns—Statistics of Income for 1942,

United States Treasury Department, part I, page 234. During World War II, say for the years 1939–47, the number of such returns rose from seven and three-fourths million in 1939 to about forty-eight and one-half millions by 1947—hearings before the Committee on Ways and Means on H. R. 1, March 1947, page 30. In other words, the number of individual tax returns between 1939 and the present time has multiplied almost seven times the 1939 total, or about nine times the highest number of returns attained in World War I.

It is also noteworthy to observe that during the World War I period, no incomes under $1,000 were taxed, and less than 2,000,000 returns were filed with incomes from $1,000 to $2,000. In World War II, however, using the estimates of the Secretary of the Treasury for 1947, taxable income recipients with incomes under $1,000 will number about six and one-third million, and those with incomes between $1,000 and $2,000 will number about twenty million, or about ten times the number in 1919.

I appreciate fully the fact that our population since World War I has increased substantially, that our national income is likewise much higher, and particularly that our cost of government is unprecedentedly higher. Nevertheless, our thoughts must be directed into the immediate future, with the view of minimizing the possibilities of disastrous inflation, because of an unsound spending and taxing policy.

It has been suggested, and I am giving the matter serious thought, that a new approach to Federal income taxation would furnish the incentives that are essential to our present situation and in the immediate future. We need incentive to imagination and to physical labor, incentive to business enterprise and investment, incentive to saving, incentive to the sort of intelligent spending that results in better living. It seems to me that every taxing policy of the Federal Government which has been inaugurated during the past 15 years has stifled or removed the possibilities of these incentives.

We also need, and I am thoroughly of the opinion that this Congress at its next session, if it is to meet its full responsibility to the taxpayers, must pass an income-tax law that is so simple that the ordinary citizen can understand it, and one that the Government can administer without the endless complications and difficulties incident to our existing tax regulations and procedures.

On July 1, 1947, Frank Wilbur Main and M. C. Conick, of Pittsburgh, ranking partners of the accounting firm of Main & Co., presented their plan for Federal incentive income tax to the Committee on Ways and Means. I not only recommend but urge that those who are interested in Federal taxation read and study the record of the proposal made by these gentlemen. Their presentation is clear and concise and free from technicalities.

This plan is unique in that it is based upon an entirely new concept of taxation. They propose that income be taxed as such, rather than the taxation of individuals and corporations. This is accomplished by identical rates for individuals and corporations, with the same general exemptions, the same graduated rates, the same ceilings, and by freeing dividends from taxation in the hands of the recipients. In this way the question as to whether business is done as a corporation, a partnership, or an individual would be forever neutralized.

The plan, it is claimed, would remove the necessity for bureaucratic regulations of the Government in all questions respecting the accumulation of surplus and the troublesome questions arising from the reasonableness of salaries of corporation officers who are also major stockholders.

Other benefits to be expected under the plan include:

First. Maintenance of the current high level of employment and national income, upon an economically sound basis.

Second. Encouragement of investments, particularly in such new and risk-taking ventures as have spearheaded our Nation's progress in every earlier period of its history.

Third. Elimination of the present inequity of double taxation on dividend returns from investments.

Fourth. Provision of more spendable income in the hands of all people, thus definitely raising the standard of living.

Fifth. Securing of adequate revenues for the conduct of the Federal Government, with a balanced budget, assuming that the national income and corporate taxable profits will be maintained at certain levels through the incentives offered by the plan; and, lastly and certainly not of least importance,

Sixth. About 19,000,000 individual taxpayers, with annual incomes under $2,000, will be removed from the income tax rolls.

Frankly, this is the first plan which has ever been presented to my attention as a recommendation toward revamping the entire structure of our Federal income-taxing system. It is not an amendment; it is a new approach. It is an extreme simplification of the whole income-tax subject. That is why I believe it deserves our most serious thought, study, and consideration during the next few months, before we enact our tax law of 1948.

When we reconvene, some months from now, I hope that tax experts throughout the country will give some thought to the plan. Whatever virtue or defects may be discovered in the proposal will be helpful in arriving at a realistic basis of taxation.

The Republican Record on Housing—Four Investigations, But No Houses

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mrs. DOUGLAS. Mr. Speaker, under permission to revise and extend my remarks in the RECORD, I include a résumé of the action taken by the Eightieth Congress on housing.

When the official scorer gets around to recording what the Republican-controlled Eightieth Congress did to relieve the housing shortage during its first session, he is going to put down a great big tragic zero. Only in the column on errors, delay, and confusion will the Republicans possess a high figure—and they earned every entry.

Following years of exhaustive investigation into the domestic housing problem by both Senate and House committees, we find that instead of resulting in legislation to help produce homes the one accomplishment of the Republican leadership is to scrap all facts and give the American people more investigations and no homes in which they can afford to live.

Between now and next January we find in the Republican score sheet a joint committee of the Senate and House Committees on Banking and Currency investigating housing.

A subcommittee of the House Committee on Education and Labor is to investigate construction and labor practices in housing.

The House Committee on Expenditures in the Executive Departments is planning a full-dress investigation of charges against the Federal Public Housing Authority made in a secret report of the House Appropriations Committee. Neither the public nor the agency involved has been told the basis of the charges set forth in the press.

And finally the House Committee on Small Business is investigating Government competition with private enterprise, and will attempt to prove that cooperative or mutual housing is detrimental to private enterprise.

That is the housing action given millions of American families living now in chicken coops, garages, single rooms, doubled up with in-laws and friends, by the Republican leadership thus far in the Eightieth Congress.

Now let us review the record of action on positive recommendations:

First. The Taft-Ellender-Wagner bill, S. 866. This bill, which offered the only real promise for urban and rural housing for families in all income groups, for slum clearance, for aids to private housing and for an extended public housing program, was the subject of extensive hearings both in the last Senate and this year's. Reported by the Senate Banking and Currency Committee, it languished on the Senate calendar, where it still is. In the House, its companion, H. R. 2523, introduced by Representative JAVITS, did not even get hearings in the Committee on Banking and Currency. Too busy. Republican contribution to resolving the housing program: None.

Second. The Douglas-Taylor bill, H. R. 1750 and S. 701, aimed at providing rental housing for veterans and their families, at rentals not to exceed $50 a month, is still in the respective Banking and Currency Committees. Republican contribution to resolving the housing shortage: None.

Third. Still buried in the House Committee on Banking and Currency, without even the decency of hearings, is Representative RABIN'S bill, H. R. 285,

authorizing direct Federal construction of housing. Republican constribution to resolving the housing shortage: None.

Fourth. On rent control, the Republicans really outdid themselves. From such measures as Senator HAWKES' S. 415 calling for periodic increases in rents, Senator WHERRY'S S. 494 calling for outright repeal, Senator BUCK'S S. 590 calling for 10 percent increase, with all controls off at the end of this year, the Congress finally passed and the President was forced to sign a measure which continued rent controls only until March 1, 1948, and which permitted voluntary increases of 15 percent if the tenants signed leases extending beyond 1948. This Wolcott bill also removed the expediter's controls contained in the Patman Act, except for places of amusement and recreation. This act is dedicated to the proposition that the way to get materials to flow into housing is to remove the prohibition against those materials going into commercial purposes. Republican contribution to resolving the housing shortage: None.

Fifth. On February 28 the President sent a message to Congress recommending $50,000,000 for reuse war housing. On March 3 Representative CARROLL, a Democrat, introduced a bill authorizing the $50,000,000. Ultimately, under Republican sponsorship, the bill carrying a reduced authorization of $35,500,000, passed both Houses.

Sixth. The Congress also passed Senator MCCARTHY'S bill permitting the undertaking of certain low-rent housing projects where current construction costs exceed statutory limits, if the local agencies make up the difference—S. 1361. The correct way, that is of increasing statutory limitation, as provided in the Taft-Ellender-Wagner bill, apparently never occurred to the Committee on Banking and Currency of either house.

Seventh. Finally, the President's reorganization plan went through. This is the sole contribution of the Eightieth Congress, and even this—approved despite the opposition of the House—was not of a substantive but of an administrative character.

Now there is a housing record to be proud of.

Indian Rights in the Tongas National Forest in Alaska

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a letter received by me from Mrs. Ruth M. Bronson, secretary of the National Congress of American Indians.

Legislation concerning the Indian rights in the Tongas National Forest in Alaska is a highly controversial issue which will require action in the next session of Congress. A great deal of comment on the subject has been published widely by interested persons. However, the Indians who are affected have not had an opportunity to present their views to the general public. In fairness to these Indians, I am inserting in the RECORD Mrs. Bronson's letter, which is a statement of their views on the matter:

The Honorable WESLEY A. D'EWART,
Chairman, Subcommittee
on Indian Affairs,
House of Representatives.

DEAR MR. D'EWART: The National Congress of American Indians, an organization of Indians and Indian tribes joined together for the mutual benefit of all Indians, including the Indians of Alaska, are opposing the Tongas National Forest bill (S. J. Res. 118; H. J. Res. 205) for the following reasons:

This is not a bill to authorize the sale of national forest timber. The Forest Service has ample authority already to sell its own timber. It needs no new legislation for that. This bill gives the Forest Service the right to take and sell private timber and private lands of private citizens, Indians and whites, whose lands happened to be surrounded or hemmed in by national forest lands. It would put congressional approval upon a breach of faith with private landowners who were assured when the national forests were set up that their rights, whether embodied in patents or not, would be preserved.

If this can be done in a national forest in Alaska it can be done in every State of the Union. If a man's land and timber can be seized and sold by the Forest Service just because it adjoins national forest land, what is to prevent every other bureau in the Federal Government from seizing and disposing of the grazing lands, minerals, and other property of its neighbors?

If property is needed for public purposes, there is a good old American way of acquiring it, and that is by paying for it. Seizing a man's property without paying for it, or even promising to pay for it, is clearly unconstitutional. It was held so by the Supreme Court the last time the Congress attempted to validate this sort of transaction that is here involved—*Jones* v. *Meehan* (175 U. S. 1).

It does not help to say that the proceeds, if any, which the Forest Service gets when it disposes of the lands and timber it will seize, shall be put into a special fund. This is a one-way bank. The bill authorizes the Forest Service to put money into this fund but does not authorize the Forest Service or the landowners or anybody else to take any money out of this special fund to compensate those who are deprived of their property. Taking a man's property by legislative fist and telling him he can sue the Government if he wants to be paid is not the American way of doing things.

The Secretary of the Interior admits that the Indian and other residents of southeastern Alaska, where most of the towns are surrounded by the Tongas National Forest, are entitled to some sort of compensation if their lands and timber are taken. But he says that legislation to allow them compensation would be controversial and should therefore be postponed. Apparently taking their property is not controversial and may be done right away, but paying them for it is controversial and is to be put off to some indefinite future. At least as far as our organization is concerned, taking the property of any American citizen, whatever his race, is highly controversial. There are patriotic organizations, civic groups, and church groups throughout the country who feel just that way about this measure.

RUTH MUSKRAT BRONSON,
Secretary, National Congress of
American Indians.

Harry B. Hawes

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. KARSTEN of Missouri. Mr. Speaker, it is my sad duty to announce the death of Harry Bartow Hawes, a former Member of this body. It was my privilege to know him for many years and his passing is a great personal loss to me.

He was an outstanding public servant and a stanch defender of minorities. After his graduation from Washington University in St. Louis, he served as counsel for the Republic of Hawaii during negotiations for the annexation of the islands to the United States.

At the age of 29 he became the head of the St. Louis Police Board and led a reform movement in that department. Later, he was elected to the lower House of the Missouri Legislature. There he was author of the bill creating the State highway department and chief advocate of a bond issue, which was the basis of the present Missouri highway system.

During the First World War, he served in the Army as a major. His duties took him overseas and he achieved distinction as a soldier in the field of military intelligence.

Thereafter he was elected to the House of Representatives from the old Eleventh District in St. Louis, which is now the Thirteenth District. His service in the House of Representatives was marked with adherence to the fundamentals of our democracy. He was a great believer in the Bill of Rights and during his service the Thirteenth District I now have the honor to represent acquired the name "the Bill of Rights District."

He was an ardent supporter of conservation measures and was author of the Hawes-Cutting bill providing for Philippine independence. It was because of the freedom and independence of the Philippines that we were able to secure the active cooperation of the people of those islands during the recent war. In granting them independence we made a model that other nations might follow. The ineffectiveness of Japanese propaganda in the islands was largely due to the freedom and independence of the Philippines. Freedom was the best answer to the propaganda of Japan.

After serving three terms in the House of Representatives, he was elected to the United States Senate. In that body he rendered distinguished service, not only to the people of his State but to the Nation.

Many will remember him as a soldier or a statesman, but I like to think of him as a philosopher. His writings reflect a deep and absorbing interest in his fellow men. Nothing I might say could describe the character of Senator Hawes better than an excerpt from an address he delivered in St. Louis on December 7, 1919, entitled "In the Matter of Friendship," a copy of which I have in my office.

It carries such a human message that I repeat it here for all of us might profit from it:

IN THE MATTER OF FRIENDSHIP

(By Harry B. Hawes)

All that can be expected of any man is to make the best use of the things that are within his power. Only the contented man is rich; so we must look for the things that bring contentment. And first of these is to find a friend; and if you find two friends you are indeed a lucky man; and if you find three friends—real friends—then you are a rich and powerful man. In prosperity it is easy to find a friend, but in adversity it is most difficult of all things. No matter how small a man's means may be, if he gives of what he has to his friend it is the same as if it was a great amount. A man's pleasures are insured by sharing them with a friend and his griefs are reduced by securing the sympathy of a friend. The counsel of a friend is the best counsel because it will be true advice; for, when received from a mere acquaintance, it may be so filled with flattery that its value will be destroyed, and faithful and true counsel rarely comes excepting from the true friend. It is said that in youth we have visions and in old age dreams, and the vision and the dream may give us an ideal of perfection; but experience and large contact with men compel us to accept the man who measures in his virtues only to the substantial average. If we view a man as a whole and find him good as a friend, we must not be diverted from the happy average—the everyday, human average—by using a magnifying glass upon his faults or frailties. We must, in order to have and hold a friend, accept him as he is, demanding but one thing in return for our affection—his fidelity.

Mr. Speaker, there are a number of Members of the House here today who served with Senator Hawes. I know they, as well as the other Members and his many friends, join me in extending sincere sympathy to the members of his family.

Let's "Despumate" This British So-Called Shortage of Dollars

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1947

Mr. REED of New York. Mr. Speaker, on July 11, 1946, I made some comments on the floor of the House of Representatives with reference to the proposed loan to Britain of $3,750,000,000. I am neither a prophet nor the son of a prophet, yet I challenge any person to successfully question the accuracy of the predictions then made by me.

The facts upon which the predictions were made were present, but like other evidence upon which to base sound conclusions, all were blotted from the public mind by a torrent of propaganda generated by the internationalists and interventionists working both sides of the street.

It is our taxpayers who have been fleeced. The unfortunate part of this fraud upon our country is that the whole scheme is aided and abetted by exporters who are well aware that while United States loans, gifts and credits to foreign countries will enable them to sell their products abroad for a time, yet they know, too, that such economic madness will mean ultimate disaster to our economy.

This hue and cry about a shortage of dollars abroad from which American taxpayers must come forward with more billions to save the Socialist and Communist governments throughout the world does not make sense or bear analysis. Has not Britain been increasing her gold holdings during the current year? The record shows that by the end of 1946 her gold holdings had reached $2,500,000,000. Her holdings are larger now.

Are we to finance a form of government which is failing to produce, while its chief spokesman points to the United States as the last bulwark of a "rotten and decadent capitalistic system"?

Right now, however, our zealous internationalists and snooping interventionists are acting as supersalesmen in urging all countries to pool and bring forward their joint and several demands for loans, gifts and credits for the United States to grant and extend.

I said the following on July 11, 1946, which appeared in the CONGRESSIONAL RECORD of that date:

There has not been brought forward in the history of this Nation any proposition of the character, magnitude, and far-reaching effects which would remotely approach this proposed gift of $3,750,000,000 to Great Britain. Neither has there ever been a proposition surrounded by as much falsity, half-truths, evasions, and distortions as this proposition. At no time, at no point, and in no way, has the presentation of this proposal to the Congress, and the American people, been honest, fair, plain, or helpful. Everything that has been said about it by its proponents has been designed not to reveal, but to conceal, the facts concerning this whole transaction. What we need to do is to despumate this proposition and get a clear look at the essence of it.

The least we can do with the American people, since it is their money we are going to give away, if we accede to this proposition, is to be honest with them. Let us look some facts in the face and, at least be honest with ourselves, and let the people know that this is a gift, and not a loan; that neither the principal nor the interest will ever be repaid to us.

Is this a loan or a gift?

I assert this is a gift—not a loan.

Britain wanted a gift—not a loan.

British spokesmen have made it plain that neither the principal nor the interest will be repaid.

The terms of the gift-loan agreement leave the question of repayment entirely a matter of British discretion.

Abandonment of the British Empire preference policy is entirely a matter of British discretion.

Churchill declared in the parliamentary debates that he regarded Empire preference policy to be British economic lifeblood not to be abandoned even temporarily.

This gift-loan will be exhausted by Great Britain within 18 months. What then? Will she be back for more?

This gift-loan will set the precedent for demands by other nations for similar gifts on similar terms.

If we refuse other nations gifts on like terms we will receive the full force of their disappointment, hatred, and resentment.

In making this gift to Great Britain we will be obligated to open our American markets to low-wage-foreign-products competition with our own laborers, agriculture, and industry.

Again, I assert that it is an outright gift. The British special pleaders came asking for an outright gift. The debates in the Parliament, and the statements by everybody from Churchill down show that the British not only consider it a gift, but that they feel we ought to be stirred by a deep sense of gratitude to them because they are willing to accept this gift.

Do we get anything for this gift of $3,750,000,000 of the people's money?

The answer is, "No"; we do not.

The proponents of this gift have tried to persuade us that the British will give up their empire trade preference policy. There is not a line in the agreement providing for this gift that requires the British to do anything of the sort. Quite to the contrary, the official spokesmen, from Churchill down, have been very explicit in their statements that Great Britain does not intend to abandon her empire trade preference policy in return for this gift of money.

How long will this money last Britain?

Her own spokesmen say about 18 months.

Now we are asked to take a step here which will establish a precedent that will either cost us twenty or twenty-five billions in money gifts to other nations, or the friendship of every other nation in the world that wants us to give them a handout of anything from half a billion dollars up.

If Britain is so far gone that she will disintegrate unless she gets this gift from us, then it must be obvious to every clear-thinking person that Britain is so far gone this gift will not save her.

If we make this gift to Britain, every argument which has been presented in support of this proposition, can and will be presented, with equal force, by every other nation, including Russia and China, that wants us to make gifts into billions of dollars.

There is one phase of this whole business that I, as an American, resent. That is the repeated statements of some Britishers that America vastly increased her wealth out of this war. There is not a scintilla of truth in that statement, and every Britisher with a nickel's worth of intelligence must know that—and does know it. Only by the most distorted reasoning, and certainly not by any logic, can anybody arrive at a conclusion that America attained great wealth out of this war. We are forgiving Britain $25,000,000,000 worth of so-called lend-lease, which was a gift. We are writing off other billions of lend-lease, to other nations, including Russia, to whom we gave over nine billions. We depleted our own natural resources, and ran our national debt to around $272,000,000,000 or $275,000,000,000. Our taxes are the highest in our history. How anybody can make great national wealth out of that set of circumstances is beyond the reasoning of a sane man.

There is something else in this business which I intensely resent as an American citizen; that is the broad intimation from both the British, and a good many of our own misguided people, that in some way we were responsible for this war; that Britain, and France, and Russia, suffered on our account, and for our sake; and that we were slow and cowardly and selfish in doing our share in the war.

This war was not of our making, any more than the First World War was. We were across an ocean attending our own business when the Atlantic war broke out. I for one have not forgotten that it was Mr. Stalin who made the pact with Hitler that allowed

Hitler to touch off this world war. Mr. Stalin's warm and throbbing affection for democracy didn't begin to palpitate until Hitler invaded Russia with an army, whereupon the Russians had to fight in self-defense.

It presents no argument, and certainly no persuasion to me, to have the Britishers tell the world that this was America's war, and that it is our duty now to feed the whole of the war-stricken world; to rehabilitate all the war-devastated countries; to lend all socialistic governments on the planet the money to finance their onslaughts against our American system of free constitutional government, free enterprise, and free society.

Europe has been a battleground for 1,000 years, and when anybody says that this was our war, and that we have either the financial or moral responsibility for it, he simply doesn't tell the truth.

Let's look another fact in the face. Are we going to win the friendship of Britain by this gift?

The answer is no. If our gift of $25,000,000,000 worth of materials, and, far above any consideration of money, if our gift of blood and men, did not win Britain's friendship, and they didn't—then another $3,750,000,000 isn't going to win their friendship.

The best proof of that is the abuse which their leading spokesmen like Keynes and Laski have heaped upon America as the last bulwark, so they say, of a "rotten and decadent capitalistic system."

There has never been a comparable incident in all history for one nation to have the sublime gall to demand that some other nation give it $3,750,000,000, share food and clothing, while at the same time the demands were accompanied by insults as insolent and unveiled as the insults which have been offered America by the leading British spokesmen concerning this gift.

Are we giving this money to Britain in order to strengthen her against her people going Communistic?

If that is the case, then we must expect Russia to perceive that fact, to conclude that we are building up a western bloc against her, and to act accordingly. Such a condition would be a prolific breeder of a third world war.

If we are going to have to buy off with our billions every nation which threatens to go Communistic, unless we stand and deliver, then we can expect America to go bankrupt, because that is nothing more nor less than plain international blackmail. It is the kind of extortion that is practiced by the man who threatens to burn down your house and your barn unless you leave a large sum of money in the old hollow tree at the fork of the road.

Nations, like individuals, who have to be bought off from doing something wrong, have no principles to begin with, and will continue to demand that they be bought off, or else they will do that for which they have been paid to refrain from doing.

I challenge any proponent of this gift loan to show one single, solitary, sound reason which the British spokesmen have agreed to, for the granting of this gift by the United States.

Some of the proponents of this gift-loan point out that Britain is in for a tough time. I desire to point out that America is in for a tough time, too, and that she is in it right now.

One of the assertions with which I have the least patience is that in some strange way this gift will be spent largely in the United States. There is not a line in the agreement that provides that this money, even $1 of it, shall be spent in the United States. Quite to the contrary, Lord Keynes, in his report to the House of Lords on the details of the agreement, specifically pointed out, at some length, that this gift-loan is not tied in with any condition that the money must be spent in America. He specifically stated to the House of Lords that Britain would be free to spend the money anywhere in the world she chose.

The proponents who talk about this money being spent here must imagine that the American people are a nation of idiots. The American people know that if we want this money spent in the United States, we could assure all of it being spent here by giving it to the veterans instead of to the British.

Are we going to be so blind as to overlook the fact that we now have more purchasing power in America than we have goods to be purchased, and that the backlog of that great spending power is supporting the black markets in their thriving condition against the best efforts of the legal authorities to end them?

Britain is in for a tough time. Of that there is no question. So are a lot of other nations in for a tough time. Of that there is no question.

Now let's look at Britain's situation and see what it is.

A writer who recently went over to study the British situation (see Hartley Bratton, Harper's Magazine, May 1946) has told in simple language, and exceedingly well, what the situation is, and what Britain's troubles are.

He points out that there are those who feel that Britain has seen her best days, and that she is in for a long decline. There are some, as he points out, who believe that Britain has been in decline since the First World War and will continue to follow a downward trend until she stabilizes at about the level of Sweden. This writer points out that we must go beyond the effects of the war, and the shortage of dollars, which it is proposed this gift will relieve, to find Britain's trouble. The dollar shortage is really a sympton, and not the real trouble. Some Britons believe that the British ills are so fundamental that it would be better for everybody concerned if the problem were met head on and the job of readjusting to the new conditions of today done right. These people fear that the weakness of Britain will be accentuated if the country coasts along on borrowed money until some new devastating crisis makes the job of readjustment even more difficult.

This writer points out that the trouble in Britain is basically due to the fact that Britain was a pioneer in the industrial revolution. Her antiquated methods of doing things constitute a drag on the national welfare, when carried over into industrial organization and processes. The difficulties are best exemplified in the old industries like coal and textiles. British industrial productivity per man is too low. The causes for this appear to reach into every phase of British life. They involve not only industry, but education, social values, and the whole complex British way of life.

This writer points out that large areas of British industry today suffer from obsolescence and an acknowledged bankruptcy.

Obsolescence is a drag on production. At the same time avoidance of bankruptcy means planned preservation of inefficient management and uneconomic plants. The easiest way of escape from these evils has all too frequently been through fixing prices, and allocating production quotas, which merely avoided but did not solve the problems. The evidence is perfectly plain that the British worker has made incredibly little progress in recent years. An outstanding example is in the coal industry. Being tremendously important, its ability to produce efficiently, and at low cost, is vital to steel, steel processing plants, and a host of other British industries. Taking the year 1913 as the base point of 100, the output per man shift in British mines had reached only 113 in 1938. In the Ruhr mines it had advanced to 164. In the Netherlands mines it had reached 201.

In cotton textiles there was little change in the productivity of labor between 1900 and 1937.

The reason for all this is largely because the owners and directors of these vast British concerns have, in too many cases, lacked any special competence for industrial policy-making.

The British publication, the Economist, more than a year ago said: "British business management is still dominated by the amateurs. It is only in this country that the curious profession of the 'director of companies' still exists. There are thousands of men in this country who make a handsome living by sitting on a large number of boards and directing the affairs of companies to no one of which they can give more than a small fraction of their time and attention. * * * That a sprinkling of such men would be an asset to any board is beyond doubt but that so many boards consist entirely of such men cannot be other than a handicap to wise, energetic, and far-sighted management."

Harold Wilson added another thought in his book, New Deal for Coal. He said of the amateur in the British coal industry that "the greater part of his or her time is given not to companies in other industries, but to varied social and sporting pursuits of the country and town life."

The old landed aristocracy assimilated the sons and daughters of the industrial world in Britain and the conditions imposed upon their descendants, to a very considerable degree, operated progressively to unfit them for business careers under modern English conditions. These miseducated men retained not only ownership but also control of industry. Contrary to American practice, they insisted upon dominating both their managers and their technicians. In so doing they prevented those important workers in industry from doing their jobs to the best of their ability.

This shortage of technical skill, and lack of industrial wisdom is not a mere symptom or a theoretical deduction. A report on higher technological education, prepared by a committee headed by Lord Eustace Percy confirms it. That report finds that the evidence submitted to the committee confirms the fear that the position of Great Britain, as a leading industrial nation, is being endangered by a failure to secure the fullest possible application of science to industries.

The nub of the whole British problem is to increase productivity and get more goods for export at a price which will enable British concerns to meet foreign competition.

There is another phase of the British question which few people have looked at in connection with this proposed gift-loan. That is the fact that the British birth rate is falling. It is now down to danger point. The British are now confronted with the threat that their own failure to reproduce themselves adequately brings into the range of calculation that point in the future when the British people will have faded out.

It comes, therefore, with peculiar ill grace from any Britisher to speak of either the United States as a nation, or its economic system, as the last bulwark of a rotten, decadent capitalistic system.

Now, whatever reasons can be urged now to support this proposed gift-loan of $3,750,000,000 could be brought up again 2 years or 4 years from now in support of a repeat gift of the same amount. If the object of this gift-loan is to save Britain, and if this three billion seven hundred and fifty million doesn't do the trick—and it won't—can we expect otherwise than that Britain will come back in a couple or 3 years or 4 with new demands for money gifts in the billions, based upon exactly and precisely the very arguments, and propaganda, and reasoning employed now in behalf of this proposed gift-loan?

If we set this precedent, have we any right to expect that all the other nations, big and little, who fought on the side of the Allies in the war will not come forward with repeated demands for America's billions? If we refuse to grant these demands to any country other than Britain, how can we possibly escape getting the bitter enmity of those nations we refuse? Do I need to point out to you the attitude of any group of mendicants and their reaction to one who would give one of them generous alms and refuse all the others?

If America is not strong enough to stand on her own national defenses, then America will not survive, because England is a broken reed.

Unless we are ready to give Russia a sum comparable at least to the amount Britain asks, and Russia could establish a good case for twice as much, based upon the arguments Britain uses, how can we avoid sowing the seeds of a third world war between Russia and her satellites, and the countries of the west?

I tell you this whole question goes beyond merely a gesture of friendship and cooperation between two nations speaking the same tongue and establishes a precedent which will either bankrupt us of our money, or rob us of the friendship of all the other nations of the world.

Nobody can question that Britain is moving toward socialism. Nobody can question that Socialist Britain is going to be in competition with constitutional America. Nobody can question that this money will be used by the Socialist Government of Britain to finance its own experiments in the nationalization of British industry. If we want this country to go socialistic, then that proposition ought to be put up to the American people fairly and honestly. It is not American, and it is not honest, to defraud the people of $3,750,000,000 of their money by falsehoods, and half-truths, and distortions of statement, in order to help finance a socialism in England, which is exactly in contradiction to our own constitutional system of government, economy, and society.

It is the right of the people to change their form of government in the United States to socialism if they choose to do it, but it is their right to do it themselves instead of having their money used to finance socialistic governments everywhere else in the world, such as Britain and France, which may, by competition, force the United States further into a trend toward increased government control of our economy and our society.

Why the Legislative Reference Service?

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. DEANE. Mr. Speaker, following the adjournment of the Eightieth Congress, I visited the congressional reading room in the Library of Congress. The purpose of my visit was just to browse around among the books, old and new, and relax. Again, I wanted to personally express my feelings of appreciation to members of the staff of the Legislative Reference Service for the prompt, efficient, and invaluable service rendered me during this session of Congress. This sentiment, I am certain, is shared by scores of other Members.

The question may arise, "Why the Legislative Reference Service?" Certainly this capable group of men and women composing this essential arm of the legislative program needs no defense from me. However, I would feel greatly remiss in my duty if I did not state that during the session just closed I have become intimately acquainted with a dozen or more of the specialists, who, with Director Griffith, represent, in my opinion, a brilliant group of faithful public servants. It is my belief that they are helping Members of Congress as well as the committees of Congress do a better job than would be true if this service was not available.

Before leaving the Library I sought information on the volume of work undertaken by the Legislative Reference Service during the recent session.

Mr. Speaker, I believe you and the Members will be interested in this work load and the accomplishments of this branch of the Library of Congress, which I solicited.

During the first session of the Eightieth Congress the Legislative Reference Service has continued to serve the Members of Congress, but at a greatly expanded rate. Members submitted inquiries to the Legislative Reference Service, for their own use or on behalf of constituents, to the number of 17,000 in 1946; the volume expanded to an annual rate of 30,000 from January through May of this year. The number of inquiries are averaging nearly 2,500 monthly, or about 100 each working day, including Saturdays.

The number of major reports on matters of policy has also increased tremendously since the first of the year. Last year only 20 such reports were compiled by the Legislative Reference Service; this year more than 100 have been prepared at the request of the Congress.

The senior specialists, whose services were made available to the Congress by the provisions of the Reorganization Act, have worked for both committees and individual Members. Between January 1 and March 31 alone 11 of the 18 standing committees of the House and 13 of the 15 Senate committees made use of these specialists. In addition to their work with the committees, the senior specialists were consulted by 99 individual Members, other than committee chairmen, during the first 3 months of the year.

Although answering inquiries and preparing reports constitute the bulk of the activity of the Service, several other valuable functions have been carried on since the Eightieth Congress convened last January.

The digest of public general bills has been made available at regular intervals. Over 300 committee hearings were covered by reporters of the Legislative Reference Service and summaries distributed to Members. The congressional reading room has had an average of 83 users each week; and the number of calls received in the room from members of their staffs now averages 274 a week, 57 percent above the 1946 average. Books and articles bearing on issues before the Congress have been summarized in the public-affairs abstracts. Two hundred and sixty Members of the House and 79 Senators requested this service regularly. The abstracts are also valuable in answering specific inquiries from Members. Finally, members of the staff of the Legislative Reference Service have been invited to consult with individual Members or with committees in order to discuss or clarify certain problems, although they are forbidden to make recommendations.

In short, the Legislative Reference Service has increased its services to the Members of Congress all along the line. There is every indication that the Service is filling in increasingly greater measure the needs of Members for whose use it is intended.

This very brief summary of the work of the Legislative Reference Service answers the question, Why the Legislative Reference Service? If you are among the few Members who have not used this Service freely, I urge you to do so and am confident you, too, will express the feeling of value received.

Republican Tax-Grab Bill Accepted as Election Issue

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. EBERHARTER. Mr. Speaker, below is an outline of my views in opposition to the Knutson Republican tax bill. President Truman said it was "the wrong kind of tax reduction at the wrong time."

Why is now the wrong time?

First. Although I am not an economist, I have noticed that frequently on the same day there are contradictory predictions of further inflation and of imminent recession. So this is not the time to gamble with Uncle Sam's finances on the result.

Second. With incomes at the highest peak in history, it is the proper time to devote any surplus to retirement of our national debt.

Third. There has been very little actual reduction in the President's budget estimates, which must be balanced at all costs.

Fourth. The uncertainty regarding our international responsibilities has increased in recent months. Can we afford to risk the possibility of being financially unable to meet the requirements of the Marshall plan for the economic rehabilitation of Europe?

But, even if it were sound fiscal policy to cut taxes at this time, the Knutson tax bill is undeniably, in the words of President Roosevelt, "tax relief for the greedy, and not for the needy."

Not since the days of Andy Mellon has a tax bill given so much to so few—and so little to so many. Perhaps a few illustrations will best explain the point:

The wealthy taxpayers, totaling 1,948,000 or 4 percent of all income taxpayers, would have received 37 percent

of the tax reduction. The nearly 48,000,000 of small, needy taxpayers representing 96 percent of all Federal taxpayers would have received 63 percent of the relief.

To put it another way, a top 4 percent of the taxpayers in the upper brackets would have received over $1,500,000,000, while the bottom 96 percent of the taxpayers in the low-income brackets would have received only $2,500,000,000 in tax relief.

The average American family of four with an income of $50 weekly would have been given an increase in take-home-pay (after taxes) of 54 cents a week, enough for three packs of cigarettes.

The $100-a-week family would have $2.27 a week more to spend.

The $300-a-week family—this is the salary of a Member of Congress—would have $14 a week more.

The $1,000-a-week family would have received $92.73 a week more.

The tax benefit to the family of four with a million-dollar-a-year income would be over $[illegible],000 per week.

On an hourly basis, the tax benefits provided by the Republican tax bill would have ranged from an increase in spendable income of slightly more than a penny an hour for the man earning $50 a week to $500 an hour for the millionaire.

The $100-a-week man with three dependents would have a nickel an hour increase.

The $300-a-week man with three dependents would have 35 cents an hour increase.

And the $1,000-a-week man with three dependents would have an increase of $2.30 an hour.

The $20,000-a-week—million a year—income man with three dependents would have an increase of $500 an hour.

The Republicans very cleverly and deliberately advertised their tax bill as a 10-20-30 percent reduction plan in order to leave the impression that it was equitable to the low-income groups. These percentages conceal the real effect of the plan to shift the tax burden more heavily upon those least able to pay.

The family of four with an income up to $3,000 received a 30-percent cut in tax liability. Between $3,000 and $100,000 of family income, the cut in tax liability was 20 percent. And above $100,000 of income, reduction was gradually reduced to 10.5 percent.

But this 10.5 percent reduction in taxes meant an increase in take-home pay of 62.1 percent for the millionaire-income family.

The 10–20–30 plan for the family with a $250,000 annual income meant an increase in spendable income of 56 percent.

The 20-percent cut in taxes for the $100,000 family would have meant an increase in spendable income of 33⅓ percent.

And the 30-percent cut in taxes for the $3,000 family meant an increase in spendable income of 2 percent.

In the State of Pennsylvania only 136 taxpayers would have received this maximum increase in take-home pay of 60 percent or more, while more than 3,000,000 residents of the Keystone State would have received an increase in take-home pay of less than 5 percent.

So you see, percentages are misleading. The "10–20–30 plan" sounds pretty good until you look at it in terms of dollars to spend or in percentages of increase in take-home pay.

The Republicans argued that since the wealthy man pays higher taxes now, his share in tax reduction should be greater. However, it would seem only fair to reduce wartime tax rates in the same manner in which they were increased.

Under the Republican tax plan, the upper-bracket taxpayers would have paid just a fraction more taxes than in 1939, while smaller taxpayers would still pay several hundred percent more than they did in 1939. A married person with no dependents and income of $4,000 paid a Federal income tax of $44 in 1939. But under the Republican proposal, he would pay $471, or nearly 12 times as much as he did in 1939.

Most veterans are in this group of taxpayers under $4,000. Must these veterans who fought the war now come home to pay not only their share of the financial cost—the $257,000,000,000 war debt—but the share of the upper-bracket taxpayer as well? That would have been the result under the Republican tax bill.

As the President said in his veto message of H. R. 3950:

"When the time comes to lessen this wartime tax burden, it is only fair that we should follow a pattern which is the reverse of that under which the burden was imposed That is to say, this wartime tax burden should be reduced on a basis that is fair to low-income groups as well as to high-income groups.

"The failure of H. R. 3950 to follow this equitable principle is strikingly demonstrated by the following examples:

"The bill would remove 21 percent of this wartime tax burden for a married couple with an income of $2,500.

"The bill would remove 64 percent of this wartime tax burden for a couple with an income of $100,000.

"The bill would remove 85 percent of this wartime tax burden for a couple with an income of $1,000,000."

The Republican tax bill, once enacted, would have set a pattern for shifting the tax burden and the war debt from those whose incomes provide them with the ability to pay onto the shoulders of those people least able to pay.

Republican members of the Committee on Ways and Means have been advocating an expansion of excise taxes, or even a Federal general sales tax, at the same time they were voting for their income-tax-reduction bill.

So the Republican tax cut plan by itself is bad enough—but when considered with the Republican plan to impose a sales tax, it means real tax relief to the wealthy and a heavy increase in tax burden upon the poor.

It is understandable that most wealthy people should be so bitter because of the President's veto. They elected a Republican Congress which voted them an increase in spendable income far greater than they could hope to receive from their board of directors. But they find that President Truman stands in the way of their tax grab. And they hate him for it. Sometimes I think they hate him almost as much for the tax veto as they hated President Roosevelt for the New Deal legislative program.

I realize very well how welcome tax relief would be for all income groups—and especially for the workers whose family necessities have been subjected to such inflationary price rises since the death of OPA. But it is little help to the family in the lower income group to enact a token income tax cut, and to follow it with enactment of a sales tax upon everything the family buys.

For these reasons I opposed the Republican income tax bill, although I realized that opposition to tax reduction is politically dangerous. I do not believe that any President of the United States elected by the Democratic Party could have signed a tax measure so palpably unjust. Despite the inadequate press coverage of this subject, I think the issue is one that can be taken to the people with good results.

The Appropriations Record

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. TABER. Mr. Speaker, on the 3d of January 1947 the Republican Congress opened. We were told that the President was going to cooperate with the Congress, but he began by sending up budget estimates for appropriations totaling $32,200,000,000 and an estimate for expenditures of $37,500,000,000 for the fiscal year 1948.

We knew that these estimates were way out of sight, but in order to be sure of ourselves we started in using the authority that was provided for the Appropriations Committee in House resolutions. We employed the very best accountants, business analysts, and Government research men in the United States to supplement the regular investigatorial staff of the House Appropriations Committee. At one time we had as many as 40 people on this staff. These men reported to us a complete picture of the organization of the Government by departments and the subcommittees proceeded to consider the bills.

Every executive agency of the Government fought desperately to retain every single dollar that had been placed in the President's budget estimates and it was only by the most searching inquiries that we were able to make the cuts that were necessary to protect the taypayers of the country

We found many items of waste—we found many cases where it was necessary to cut appropriations to restore efficiency in the departments of the Government because they were way out of line with proper requirements.

For instance, we found that there were four majors for every second lieutenant

in the Ground Forces of the Army. We found that they were way out of line in every rank and that the Army was in danger of becoming fossilized because of too many overage officers who had been kept on from the Reserve Officer list that existed during the war.

The cuts that we have been able to make have only partially cured the situation and we found the same situation in all departments of the Government. We found a tremendous volume of cases where economic analysts and long-haired professors had been kept upon the rolls, at enormous salaries, to the exclusion of capable technicians and people who could really do their work.

Many of our members in order to do this job have worked nights and days. We have held the most strenuous hearings that have ever been held in any Congress. We have gone into tremendous detail and our cuts have been made on an intelligent basis and not in an arbitrary manner.

As a result of long and hard study, and I can say that the Appropriations Committee and its staff have worked at least 50 percent more hours than the committee has ever worked before, we were able to cut the 1948 estimates by $2,766,000,000 in direct appropriations. We were able to make rescission of funds that would otherwise have been spent amounting to $442,500,000.

As a result of our investigations and the hearings that were held, the Budget submitted reductions in the President's original estimates and we made recoveries out of funds that the President did not recommend amounting over-all to $911,711,000.

This makes a total cut below the 1948 fiscal year estimates of the President's budget of $4,120,000,000.

In addition to that, we made cuts that were effective in making savings in the operations of the last fiscal year amounting to nearly $360,000,000.

Our total savings to the Treasury of the United States as a result of the operations of the first session of the Eightieth Congress were, therefore, $4,480,000,000.

In addition to this, we made rescissions in appropriations that have heretofore been made amounting to $2,684,000,000, and all of this amount would have been available for obligation by the executive agencies if we had not rescinded them. Whether or not they would have been spent, we do not know, but we believe we have made large savings as a result of these rescissions. None of the rescissions I have referred to were recommended in the President's budget.

I believe that we have reduced the number of personnel in the Government to the point where they cannot have more than 1,600,000 civilian employees as an average through 1948. I believe that we can still further reduce it in the coming session so that we will very nearly approach the idea that I had of reducing the Federal civilian employees by at least 1,000,000 people. The quicker this is done the quicker these people can get back to useful civilian employment.

We knew when we started that we could not do what we wanted to do because of the opposition of the President and the executive agencies. We found, with very few exceptions, that the Democrats failed to offer cuts in the appropriation bills and have generally been found supporting every amendment to increase. One day they would be attacking us for not making sufficient cuts to be effective and the next day they would be offering amendments to increase appropriations.

We have been criticized for not getting bills through faster but the reason for our apparent delay is that we have been doing a job. We are proud of our record of accomplishment. We know that we have not done what we wanted to; yet, on the other hand, we have done what seemed to be impossible.

We know that the taxpayer has been drained dry by 16 years of Democratic misrule and it is hard to change a trend but the taxpayers of America can count on us to continue the road that we have been traveling to place the Treasury in a position to give the people a real tax cut. They must remember that they will have to give us a Republican administration in Washington in order to put the country upon a sound effective business basis.

Never before in the history of the country has a Congress been able to make substantial cuts in the budget in the face of Presidential opposition.

Implications of Our National Debt

EXTENSION OF REMARKS
OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. DEANE. Mr. Speaker, the President has been criticized in certain quarters for vetoing tax legislation presented to this Congress. In the months and years ahead, the President's actions will, in my opinion, be looked upon as the determining factor in restoring the solvency not only of our Government but other countries as well. A financially strong America will mean more financial stability abroad.

The sobering headlines of today's press reveal another economic crisis in Britain. One country after another, except America, is facing such crises.

Lest we become too boastful of our own financial security and pitch out the window a sound tax program, just for the sake of cutting taxes, pause and consider the serious implications of our national debt.

Some Members of Congress who did not vote for tax reduction did so seriously conscious of not only world problems, but the uneasy boom prevalent in America today. We felt that unless every surplus dollar possible was applied to the national debt, and in the event this uneasy boom suddenly exploded, the American economy might well follow that of Britain. Britain through the years has been looked upon as a Gibraltar of strength, financially and otherwise, and while America has not experienced the tangible material damage as Britain, by reason of war, we need to seriously appraise our financial foundations.

With that in mind I have called upon several sources in the Government and from outside to furnish me with data and an analysis on the national debt and these combined findings reveal an interesting yet exceedingly sobering study.

The Federal Government today is in debt to the extent of $258,000,000,000. It owes so much because it borrowed money to pay for relief and recovery from depression and because about two-thirds of the cost of the war was met with borrowed money. The depression increased the debt by $26,458,000,000. The war, of course, was the occasion for most of the increase in debt. War-finance policies increased the debt by $235,532,000,000 between June 1940 and the postwar peak of the debt on February 28, 1946.

I desire to call attention to the table appearing at the close of my remarks indicating the growth of the public debt from 1919 to 1947.

The debt has been reduced $19,600,000,000 since February 1946. The debt now is below its postwar peak almost entirely because money borrowed from individuals for a fairly long period has been used to pay off short-term low-interest rate debt owed to banks. Only a quarter billion of the debt has been repaid through a surplus of Federal receipts over Federal expenditures. The achievement of this surplus and the repayment of debt which it made possible required strong measures. The surplus was obtained only by keeping income-tax rates very near the wartime peak, by applying them to an income of $165,000,000,000, and by cutting Federal expenditures.

How big a $258,000,000,000 debt is may be indicated by a few comparisons—data on which the statements in the following paragraph are based are contained in tables attached to this report.

The debt is more than six times the Government's annual revenues. It is almost half again as large as the annual income of all the people and all the corporations in the country. It is three and one-half times as large as their income was in 1940. It is 27 times as large as the income tax to be paid on 1947 income by persons receiving less than $5,000 per year. It is 34 times as large as the income tax to be paid on incomes above $5,000 per year. It amounts to, roughly, $4,500 per employed person. It is about seven times as large as the debt was in June 1937. If it were to be reduced to its 1940 size within 20 years, the Federal Government would have to spend as much each year in repaying debt as it intends to spend on national defense in the next year.

The debt is large enough to cost in interest more than $5,000,000,000 per year. This is greater than total peacetime Federal expenditures in any year before 1934, with the exception of 1920 and 1921. It is about $1.75 per week for each employed person in the country.

Payment of the interest on the debt will require the imposition of heavy taxes now, even if none of the debt is retired. But if the debt is not retired,

future tax burdens will be larger as interest payments continue undiminished. This idea is familiar enough to any individual who borrows. A borrower saves interest by repaying principal regularly at the same time that he pays interest, instead of waiting until the debt has come due. A Government bond is unlike these private debts, because it is not payable in installments, but there is opportunity for regular redemption. The Government's debt is composed of many types of obligations, some of which are to be repaid—or an extension obtained—each month.

The amounts of the Government debt coming due each month in 1947 are as great as tax revenues under existing laws. The amounts coming due in future years vary each year, but will be affected by the extension of short-term debt coming due in very large amounts in 1947. Obviously most of the debt will have to be extended.

But repayment at a rapid rate of some of the debt, rather than extension of all of it, is desirable when the country's taxpaying ability is at an all-time high, while the revenue machinery is available, and when the money available for private spending is sufficient for further price inflation. Continuation of present income-tax rates probably would bring enough revenue to make possible substantial debt reduction. Wartime individual income-tax rates have been reduced only slightly and wartime excise taxes still are in effect.

Debt reduction will help to put the Government's finances in position to meet any emergencies that develop, will save enough interest to make possible reductions in taxes, and will curb inflation and help avoid depression.

Retirement of debt now when conditions are favorable will eliminate some of the shorter-term indebtedness as well as the problems of getting extensions when these debts come due. It will indicate the Government's intention to continue to honor its obligations and free itself from debt. Possibilities of the Government being forced to borrow at higher rates of interest will be avoided. This will be in the interest of the taxpayer, because interest costs are held down. It will be in the interest of many investors. If the Government should have to pay higher interest rates to get a renewal of some of its loans, the price of its other securities would be forced down because of their lower interest-bearing rate. Investors holding marketable securities then would sustain losses or demand conversion of their securities into others bearing higher interest rates.

With a smaller total debt and smaller interest charge, the Government will be in better position to borrow money in case a depression necessitates construction projects or other aids to economic stability. Investors in Government bonds will be more responsive and ready to buy more for emergency spending if their past holdings have been redeemed when due, if their commitments will permit, and the interest burden cut to a size manageable under the then prevailing economic conditions.

Failure to make substantial reductions of the debt will increase the interest burden on future taxpayers. A reduction in the principal of the debt, of course, reduces the amount of interest for the payment of which taxes must be levied. The savings from which taxpayers would benefit by paying the debt promptly and in substantial amounts depends on how much and how rapidly the debt is paid. The greater and the swifter the current debt reduction the greater the ultimate tax reduction will be.

Let us consider an example of the savings to be made by prompt reduction of the national debt. Say that the debt is reduced until the interest charge each year would be no greater than it was in 1930, and suppose that the reduction is to be made by one of two alternatives—the first of which is to reduce the principal of the debt by $6,900,000,000 per year, and the second to reduce the principal of the debt by $2,800,000,000 per year.

The first of these rates would be possible if income tax rates were not reduced below the present level, other taxes were unchanged, and income payments and Government expenditures were to continue at levels estimated for 1947 and fiscal 1948.

The second of these rates would be possible if income-tax rates were cut as proposed in the tax bill recently before the Congress, under the other conditions assumed above.

The debt reduction in the first amount, i. e., $6,900,000,000 per year, would save present and future taxpayers a total of $115,000,000,000 over the interest cost of the same debt retired at $2,800,000,000 per annum. By the end of 34 years, taxes could be reduced $11,700,000,000 below their present rate. The tax reduction possible if the second alternative were used, $2,800,000,000, would be only $1,900,000,000 at the end of the same number of years. For other examples, see the tables at the end of this report.

There is at present the possibility of further price inflation developing if the debt is not reduced. A large part of the debt has been sold to banks and the total volume of money available for spending consequently has been increased. The total of money in circulation and bank deposits is so large that if it were spent at a rate as rapid as that of prewar years, a great inflation in prices would result.

W. Randolph Burgess, in Commercial and Financial Chronicle, March 13, 1947, page 1411, says:

> Normally in this country the volume of money has been less than half our national annual income—today it is 75 percent of the total income. This is an enormously powerful inflationary force. The problem of whether or not this vastly increased money supply—this diluted dollar—gives us price inflation is fundamentally a problem of the psychology of the American people.

Failure to retire the debt and thereby to reduce the amount of money in circulation could under present circumstances postpone and intensify recession as it did after the First World War. After World War I tax reduction was given precedence over debt reduction. The money supply was not reduced rapidly enough to avoid some measure of constant inflation. The prices of most goods did not drop as rapidly as the cost of producing those goods. Inflation was concealed under a steady price level. This concealed inflation continued until the resulting impoverishment of industrial workers and of farmers whose prices had not been maintained cut off the markets of industry and depression resulted. During the period from 1923 to 1929 the prices of manufactured goods fell from 100 to 96. During the period from 1922 to 1929, the command over goods of all producers increased 3.8 percent annually; for farmers the increase was 2.7 percent; for manufacturing labor 3.1 percent—see F. C. Mills, Economic Tendencies, page 507.

Inflation seems to be contemplated by proponents of tax reduction. They say that—

> In the 1920's every time we reduced income taxes the net revenue of the Government increased * * * it is very probable that a reduction in tax rates for those with incomes over $5,000 will not result in an equal loss to the Treasury. (Congressman KEAN, in Commercial and Financial Chronicle, March 20, 1947, p. 1555.)

H. E. Humphreys, in Commercial and Financial Chronicle, May 1, 1947, page 6, says:

> If income tax rates are reduced now we shall have a better prospect of being able to continue making good-sized payments on the debt.

Their theory is that if the Tax Reduction Act is made effective investors will expand their operations and thus taxable income will be increased. Consequently over a long period, the total of taxes will exceed collections that would be made if present rates were continued.

If this theory is tested by a few computations, based on present facts, it will be possible to see what sort of inflation is contemplated by its proponents. Taxes under the reduction bill, at an estimated 1947 level and distribution of incomes, would yield about $13,232,000,000, or about $8 in each $100 of income paid to individuals. For persons with incomes above $5,000 per year, income taxes would take about $1 in four. If the $3,769,000,000 loss of taxes were to be made good by an increase in incomes subject to tax, the total of income payments would have to increase anywhere from $15,000,000,000 to $40,000,000,000 per year, depending on how much of the added income was added to the tax base.

The expansionary effects of tax reductions are regarded by their proponents as desirable in preventing a recession which may be anticipated. But if a recession is likely to develop, that is reason to retain present tax rates and make great efforts to reduce the debt. If debt reduction requires some readjustment now, the eventual readjustment through recession and depression will be smaller. And the Government will be in better position to go ahead with construction programs and to make well-considered tax reductions, if the size of the debt problem has been reduced. Tax reduction now would tie the hands of the Government and make it incapable of deal-

ing through financial means with present inflationary developments, or of meeting problems of recession if and when they develop.

The justification of the tax cut is that it would add to enterprise funds, and in this and other ways avoid depression. The tax rates applicable to individuals with incomes of a size adequate for initiation of a small business should not at present levels prevent considerable accumulation of funds, and the initiation and expansion of enterprises. The high taxes of corporations, including wartime excess-profits taxes, did not prevent great accumulations of funds. The net working capital of corporations increased about 80 percent—by $25,000,000,000 between the beginning of the war and the end of 1946. The total number of businesses, mainly unincorporated businesses, started since the end of the war has been very large: 649,000 were started between July 1945 and September 1946. There is much other evidence that present taxes have not stood in the way of prosperity, investment, and expansion. Plant and equipment expenditures, nonagricultural enterprises are expected to total $14,000,000,000 in 1947—more than the 1946 level by 15 percent, twice the 1945 level, and 70 percent more than the 1941 level. Net incomes of proprietors are high—the annual rate of their incomes in the first quarter of 1947 being $34,700,000,000, as compared with an annual rate of $27,600,000,000 in the first quarter of 1946, $24,100,000,000 in 1944, and $15,800,000,000 in 1941. The national income in the first quarter of 1947 was at an annual rate of $180,500,000,000, 9 percent above the 1946 level, and 12 percent above the 1944 level.

A reduction in income taxes now would make the whole tax system less equitable, because it would make inequitable excise taxes relatively more important than they now are.

The individual income tax is the most equitable of taxes. It is equitable because, being progressive, it makes each taxpayer pay more as his ability to pay increases. And it is equitable because the tax law defines carefully and precisely what is taxable income, so that the tax is adjusted to the individual position of each taxpayer and hardships may be avoided. Some other taxes, the excises, are not so equitable. Their levy regresses as the taxpayer's ability to pay increases. And their base is not defined to fit the individual circumstances of the consumers who ultimately pay them.

Tax reduction should await debt reduction; and should await a thoroughgoing revision of the revenue system to make it fit the position of the greatly increased number of taxpayers who have been brought on to the tax rolls.

The tax reduction bill recently passed by the Congress and fortunately vetoed by the President and sustained by the Congress proposed a thoroughly inequitable method of tax reductions. It went counter to the most fundamental characteristic of the income tax. That fundamental characteristic is that the tax ought to leave to the person of average income a larger part of his earnings; however, the proposed tax legislation would work in the opposite direction. It would give the wealthy an increase in disposable income several times as large as that given the small taxpayer. Details are shown in the table below:

Net income	Increase in spendable income over 1946	Increase in tax burden over 1939	Net income	Increase in spendable income over 1946	Increase in tax burden over 1939
	Percent	*Percent*		*Percent*	*Percent*
$1,000			$25,000	11.4	191.9
$1,500	2.0	(1)	50,000	19.7	123.7
$2,000	3.1	(1)	100,000	34.2	55.5
$2,500	2.6	(1)	300,000	72.0	16.0
$3,000	2.9	3,700.0	500,000	70.7	12.5
$4,000	3.5	970.5	1,000,000	69.2	7.3
$5,000	3.8	697.5	5,000,000	62.4	.9
$10,000	5.6	321.2			

[1] Percentage increase under H. R. 1 is infinite because no tax was levied in 1939. Tax under H. R. 1: $1,500, $67; $2,000, $133; $2,500, $228.

The Congress will look forward with interest to the study and proposals to be advanced by the experts on tax legislation to be presented to the Committee on Ways and Means at the next session of the Eightieth Congress.

Tax policy should be as bipartisan as foreign policy. Yet the opinions of some of these gentlemen on tax policy have run decidedly opposite from outstanding Representatives in both the Senate and the House of Representatives, who must think in terms of all the people. Surely they will take their job seriously enough to advise with the President's advisers on fiscal affairs. If the experts think only in terms of tax reduction without giving any consideration to a legislative program to further the development of this great country of ours, as well as an equitable distribution of the tax burden, they will have failed to grasp the responsibilities which some Members of Congress had in mind in sustaining the Presidential veto of the recent tax legislation.

Data indicating growth of the public debt

Year	Date of debt	Gross public debt (in thousands)	Interest charge computed (in thousands)	Debt per employed person	Interest per employed person	Debt as percent of national income	Interest as percent of national income	Debt as percent of income taxes		Interest as percent of income taxes	
								Income below $5,000	Income above $5,000	Income below $5,000	Income above $5,000
						Percent	*Percent*	*Percent*	*Percent*	*Percent*	*Percent*
1947	June 30	$258,286,383	$5,374,000	$4,550	$95	143	2.98	2,738	3,414	57	71
1946	Feb. 28	277,912,315	5,479,000	5,377	106	168	3.32				
1945	Sept. 3	262,776,656	5,044,000	5,127	98	163	3.13				
1941	Dec. 7	55,219,520	1,386,198	1,345	34	57	1.43	6,424	2,032	161	51
1940	June 30	42,780,009	1,094,722	1,181	31	55	1.41	22,483	3,241	581	84
1937	June 30	35,802,587	924,247	767	20	50	1.29	49,585	3,348	1,280	86
1933	Mar. 4	20,868,692	719,226	531	18	49	1.70	57,097	6,182	1,968	213
1930	June 30	15,921,892	606,032	351	13	23	.88	159,730	3,411	6,080	143
1919	Aug. 31	26,596,779	1,100,000	627	26	40	1.70	20,446	2,310	8,536	96

NOTE.—Debt is shown as of the end of the most recent fiscal year, at the World War II peak, at the end of war in Japan, at time of Pearl Harbor, at the start of the defense program, at the top of the post-1933 recovery, at Roosevelt's inauguration, at the post-World War II low, and World War I peak of the debt. Other data when possible refer to similar dates. Some data are on an annual basis.

Sources: Public debt and interest charge—Daily Treasury Statements, Treasury Bulletin, and Annual Report of the Secretary of the Treasury; debt and interest per employed person computed from employment data of the Bureau of Labor Statistics and National Industrial Conference Board; debt and interest as percent of national income computed from Department of Commerce data; debt and interest as percent of income taxes computed from data contained in Bureau of Internal Revenue Statistics of Income (various years) and Treasury estimates in Senate Committee on Finance hearings on individual income tax reduction.

"The Mighty Mo" and Her Gallant Commander

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. BOYKIN. Mr. Speaker, since the smoke of battle has cleared away following the termination of World War II, and the history of American participation therein has become clearer, various States and communities of our broad country thrilled with increased pride and gratification because of the splendid heroism of the men and women who went from these States and communities into the storms of conflict. Particularly is this true of the States and cities for whom battleships, cruisers, and other fighting craft were named, and which, under gallant officers and crews, fought with traditional American courage and skill.

The city of Mobile, Ala., in my congressional district, is one of the cities and communities of America which, with reverent pride, contemplates the magnificent combat and operational services rendered by a splendid war vessel bearing the home name of *Mobile*. This cruiser was put into commission about March 24, 1943, and her first commanding officer was Capt. Charles Julian Wheeler, United States Navy, a native son of Mobile.

The *Mobile* participated in numerous operations against the Japanese in the Pacific seas, and Captain Wheeler was in command while the vessel was thus engaged in nearly 30 of these operations and engagements—some of them of the most perilous and decisive character. Among these may be mentioned the following: Marcus Island raid, August 31, 1943; Tarawa Island raid, September 18, 1943; raid on and bombardment of Wake Island, October 5 and 6,

1943; action off Empress Augusta Bay, October 8 and 9, 1943; assault on and occupation of Tarawa Island, November 20 and 21, 1943; air attack on Marshall Islands, December 4 and 5, 1943, with subsequent attack by enemy on task force; bombardment of Watje Island, Watje Atoll, Marshall Islands, on January 30, 1944; assault on and occupation of Kwajalein Atoll, Marshall Islands, together with bombardment of Roi and Namun Islands, January 31 and February 1, 1944; air attack on Truk Atoll, Caroline Islands, February 16 and 17, 1944; carrier air attack on Mariana Islands—Tinian, Saipan, and Guam—February 21 and 22, 1944; support of first landings on Emirau Islands, St. Matthias group, March 20, 1944; carrier attack on Palau, Yap, and Woleai Islands in the Caroline group, March 29–April 1, 1944; Hollandia operation, bombardment of Wake and Sawar Airfield, New Guinea, and operations in support of landings on New Guinea, April 21 and 22, 1944; carrier task force attacks on Truk and Satawan Atolls, Caroline Islands, and support of surface bombardment on Satawan Atoll, April 30, and of Ponape, Caroline Islands, May 1, 1944; capture and occupation of Saipan June 11–24, 1944; first battle of the Philippine Sea, June 20, 1944; third Bonins raid, July 3, 1944; bombardment of Iwo Jima, Bonin Islands, July 4, 1944; capture and occupation of Guam, July 12–August 15, 1944; Palau-Yap-Ulithi raid, July 26–28, 1944; and eight separate and distinct attacks, in addition to the foregoing.

The details of these various engagements and operations cannot be here set forth because of lack of space, but it may be truly said of them that they were of a most vital character; were carried through with the highest degree of skill and courage by officers and men; and that they greatly contributed to the success of the war in the Pacific.

After these operations the gallant cruiser, under succeeding commands, continued the magnificent record of achievement wrought under Captain Wheeler, and survived to tell the story. Though often in the thick of battle, and under repeated and furious attacks of the enemy, the fact that she escaped more serious injury than was the case was due not only to something of chance and luck, but, in no small measure, to the very high degree of skill, seamanship, and courage of her splendid commanding officers and crew.

The *Mobile*, because of her fighting record, was nicknamed by its crew as "The Mighty Mo," a cognomen well bestowed and enduring. Bearing on this feature, I include the following interesting article relative to the cruiser *Mobile* which was published in the Azalea City Times, a Mobile Junior Chamber of Commerce publication, in its issue of April 15, 1945:

MIGHTY MO SNARLS DEFIANCE AT JAPS ACROSS PACIFIC—ENEMY QUAKES UNDER BLAZING GUNS OF CRAFT—CRUISER NAMED FOR MOBILE KEEPS ON FIGHTING

"The Mighty Mo," as her fighting crew affectionately calls the cruiser *Mobile*, is well known to the Japs all the way from those who have felt the hell of her gunfire to those in the top councils in Tokyo.

It may even be that they have heard her war cry of "Mo 'Em Down, *Mobile*," for Tokyo Rose herself has promised vengeance upon this hard-hitting fighting ship.

"The Mighty Mo" has been in there pitching in the central Pacific many times since the first raid on Marcus Island 'way back in August 1943. Her crew proudly wears operation and engagement stars on Asiatic-Pacific ribbons—with more to come—and crewmen look with pride to the silhouettes painted on her bridge.

MOBILIAN FIRST COMMANDER

Christened by Mrs. Harry T. Hartwell, of Mobile, and commanded by Capt. C. Julian Wheeler, United States Navy, of Mobile, she was eager for action and got it. The story of her battle experiences must make the Japs wonder how a ship could hit so often and so effectively over such great expanses of water with such frequency and regularity. Her present commanding officer, Capt. C. C. Miller, United States Navy, has carried on the fighting tradition of "Mow 'Em Down, *Mobile*."

The *Mobile* has ranged over tens of thousands of miles in pursuit of Japs. During one period, not an officer or man of her crew spent more than a total of 23 hours ashore, there was so little time for recreation as she ranged from the Gilberts to the Solomons.

SILHOUETTES TELL STORY

The silhouettes painted in red against a rising sun on her bridge show that she has shot down eight planes singlehanded, destroyed two merchantmen by gunfire, and in company with other warships of her task force has sunk a destroyer, light cruiser, and carrier.

With two destroyer escorts she caused the death of a midget submarine, probably the only cruiser of the war turning the feat.

Many shore batteries have been pinpointed to oblivion by her guns during bombardments in which she has participated. Not once have the Japs laid a hand on her, but she has had her share of being straddled by enemy shore batteries, dangerously close torpedoes, narrowly averted bombs, and cleverly dodged salvos.

CLOSE CALL AT BOUGAINVILLE

"The Mighty Mo" has seen action in major operations, participated in raids, been under day or night enemy air attack, and bombarded enemy territory. It is just that sort of thing that makes Tokyo Rose so unhappy.

It was during a stormy, lightning-filled night off Empress Augusta Bay, Bougainville, that she had one of her close calls. With the other ships of her division and destroyers she repelled a determined Jap air attack in which 10 Bettys (Jap twin-engined planes) were shot down in flames, "The Mighty Mo" accounting for one and assisting in three others.

It was shortly after one plane had snooped its way in that another sneaked in on the port bow. In a flash of lightning those on the bridge saw the splash as a torpedo hit the water. They swung the ship hard left to get out of the path. Seconds later the Jap plane passed over the fantail and breathless moments passed as the *Mobile* looked aft to see if the tin fish would clear. Gun crews reported that the wake just missed the stern.

CLOSEST CALL OF ALL

Topside personnel still smile grimly when they recall the closest call of all. The *Mobile's* task force was making one of its milk runs and our planes had everything well under control. No Japs were in the air and all hands settled down to watchful waiting. Suddenly there was a terrific explosion about 1,800 yards off the port beam, just astern of one of our light carriers.

Immediately they thought somehow a Jap plane had been able to sneak in a run on the task force, and eyes eagerly searched the sky. Almost instantly, however, a torpedo was sighted between the explosion and "The Mighty Mo" and heading on a collision course. The officer of the deck took immediate action to try to parallel the torpedo's course but it was obvious that a hit would result. The *Mobile* was a cold turkey. As the torpedo entered the water after its third jump, it suddenly exploded not 800 yards off the port beam; considerably closer, according to most accounts, especially those below deck.

Apparently a submarine had had its chance and only the *Mobile's* luck saved her.

SILVER SERVICE AWAITS

"Mobile can take deepest pride in the ship which bears her name," declared an officer during a visit here. "She is a fine ship, of which I am proud to have been an officer."

The Mobile Press Register and the chamber of commerce raised funds for the purchase of war bonds for the cruiser, to be converted into cash later for the purchase of a silver service for the ship when the war is over.

CAPT. CHARLES JULIAN WHEELER

Mr. Speaker, the inhabitants of the city of Mobile, as well as those of the entire State of Alabama, are very proud of the magnificent naval record of one of the city's most popular sons, Capt. Charles Julian Wheeler. I wish it were possible to give a detailed story of his entire naval career, but this is not now possible. A few vital points may be, however, mentioned. He was graduated from the United States Naval Academy at Annapolis in 1916 and served throughout World War I in the European zone and for the most part aboard the U. S. S. *Benham*. After the close of World War I, his duties carried him first into Asiatic waters and then over a large portion of the globe, including the Turkish and Mediterranean areas, where he served as aide and flag lieutenant on the staff of Admiral Bristol, commander of the United States naval forces, with principal station in Istanbul. Then after an assignment as communications officer of the Twelfth Naval District, Captain Wheeler was, from 1927 to 1929, aide to the commander in chief of the Asiatic Fleet on the U. S. S. *Pittsburgh*.

In 1931 he went to the command of the destroyer U. S. S. *Waters*, continuing in this capacity until 1934, when he was called to the Navy Department to serve as Atlantic communications officer. In 1936 he was made first lieutenant and damage-control officer aboard the U. S. S. *West Virginia*, and in 1937 he was appointed aide and flag secretary to the commander in chief of the United States Fleet. This was followed by a course in the United States Naval War College, following which he became a member of the staff in 1939.

He again went to sea in 1940, this time as executive officer of the U. S. S. *Astoria*, and he was given command the following year of the U. S. S. *Relief*. Later in 1941 he established the naval ROTC unit at Holy Cross College in Worcester, Mass., and remained as its head until he was assigned to the command of the cruiser U. S. S. *Mobile*.

After his tour as commanding officer of the *Mobile* he became the head of the American liaison naval force, serving with the British Fleet in the Pacific Ocean, under command of Admiral Sir Bruce Fraser, Royal Navy. In this capacity Captain Wheeler rendered out-

standing service and did very much, indeed, to aid the splendid work of the British Fleet in the campaign against the Japanese in these waters. For that service there was bestowed on Captain Wheeler by the British Government the distinguished honor of honorary commander of the Military Service of the Order of the British. The very impressive investiture of the order took place in April last in Rio de Janeiro, Brazil, where Captain Wheeler was and is performing an important naval mission. The presentation of the order was made by the British Ambassador to Brazil, and the bestowal was based on Captain Wheeler's notable record as senior United States naval liaison officer, serving with the staff of the commander in chief of the British Fleet. The duties performed by him in this delicate double role of loyalty to both the British and the American commands were discharged with a tact and discretion that won the unstinted admiration of both commands.

Also, because of his exceptionally meritorious services to his Government as commanding officer of the *Mobile*, operating against the Japanese forces in the Central and South Pacific areas from September 1, 1943, to June 23, 1944; and for his brilliant leadership and skill in handling the cruiser in the numerous campaigns and engagements in which she operated during this period—there was bestowed on Captain Wheeler, by the President, the Legion of Merit. I believe that, in addition, by reason of these and other services of outstanding character rendered by him during World War II, and theretofore, he became the recipient of various other formal honors and citations.

In conclusion, let me repeat, Mr. Speaker, that the people of the city of Mobile and of the entire State of Alabama are very proud of the part played in World War II by the cruiser *Mobile*—"The Mighty Mo"—and of the splendid record achieved by a native son of the city and State, in the person of Captain Wheeler, not only in World War II but, as well, in World War I and in the days of peace which intervened between these two sanguinary eras. His naval career is typical of what has made the American Navy unmatched in all naval history.

The Riddle of the Sphinx

EXTENSION OF REMARKS

OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. HOBBS. Mr. Speaker, the following is an article by Walter Lippmann:

TODAY AND TOMORROW

(By Walter Lippmann)

THE RIDDLE OF THE SPHINX

The vote in the House on the Hartley bill is a spectacular demonstration of the depth and extent of the reaction against organized labor. The intention of the bill is to outlaw all the big weapons of the labor unions—industry-wide bargaining, the secondary boycott, the check-off, sympathetic strikes, the closed shop, mass picketing, the picketing of the homes of nonstrikers, sit-down strikes, feather bedding, immunity under the Sherman Act, the right to spend money in politics, secrecy of union funds, and many special privileges under the Wagner Act. The bill also intends to rearm employers with many weapons, for example, the injunction, which have been taken away from them.

The bill does not attempt to disguise its purpose, which is to reduce drastically the power of organized labor to bargain collectively. Though the bill does not prohibit collective bargaining, it is meant to deprive the unions of a very considerable part of their power when they bargain collectively.

The bill passed the House by a vote of nearly 3 to 1. The Republicans voted for it nearly 10 to 1; among the Democrats there was a majority in favor of it. No doubt not all the supporters of the bill have read and understood the whole 66 pages on which it is printed, and many, we may be sure, who do understand it were recording their general feeling, leaving it to the Senate and the President to work out a bill that can actually become law and can be enforced.

Nevertheless, the action of the House is a fact of great importance, and there is no ground for thinking that it does not represent correctly the feeling, though probably not the informed and considered judgment, of that majority of the people who are not closely connected with organized labor.

To understand this great reaction against organized unionism, we must remember that it was generated in the period of the war and immediately after when the demand for labor far exceeded the supply. When this Congress was elected in 1946 there was not only no unemployment, except for those changing jobs or not willing to take jobs, but there was more than full employment. There was overemployment. Labor was operating in what was for it a seller's market, and that, much more than the legal privileges of the Wagner Act and the New Deal, gave organized and also unorganized labor their unprecedented bargaining powers. The legal privilege helped. But in a period of large unemployment, they could not have been exercised so effectively as they were.

These legal privileges, we must remember, were enacted—also by impressive congressional majorities—after the depression of 1929 and during the thirties when the reservoir of unemployed workers was never less than about 8,000,000. They were approved by the general sentiment of the country, which disregarded the details as in reverse it does now, because then the employers were operating in a buyer's market, and Congress legislated to right the balance.

As a matter of fact, neither the legislation in favor of the unions during the thirties nor the legislation against them now has a more than secondary effect. The controlling condition is the volume of employment—whether the demand for labor is more than or less than the supply. During a period of unemployment labor unions, except perhaps those which have a tight monopoly of special skill, will be weak, and the general sentiment of the country and its politicians will be prolabor and in favor of reform, improvements, and a new deal. During a period like the one of war employment and postwar inflationary demands for goods and services, labor will be strong, unions will use to the full and abuse frequently their power, and the temper of the country will be antilabor and conservative and reactionary.

Labor legislation will reflect, rather than control, the phases of the economic cycle. It was not the Wagner Act but the reflationary measures of the New Deal, and then above all the gigantic war expenditures, which raised labor from the abyss of 1929 to the height of power which it had attained by 1946. It will not be the labor legislation of the Congress but the probable decline of employment which will change labor relations once again.

There is an underlying problem here, for which no solution is known, which is at the heart of the industrial problem throughout the world, and which it would be much more agreeable to ignore. It is, to put it bluntly, whether it is possible to combine high productivity with free labor and full employment. This is the riddle of the Sphinx to which no modern society has found the answer.

The most powerful criticism of the capitalist system made by Karl Marx was that it did not operate without the pressure of what he called the industrial reserve army, that is a large mass of unemployed, upon those who were employed. The threat of unemployment, he said, was what moved men to accept jobs and to do them under the discipline of the employer and at the wages he was willing and able to offer them. The strongest argument for socialism was that this compulsion would disappear because unemployment would disappear. In the thirties, while capitalist countries like Britain and America were suffering from unemployment, the whole world was impressed by the fact that collectivist countries like Germany and Russia had solved the problem of unemployment.

But contrary to the implied promises of Marx, the abolition of unemployment was accompanied by the regimentation of labor. The compulsion of unemployment was replaced by the conscription of labor, the whip of poverty by the whip of the police. Socialism in Russia achieved full employment and substantial production but labor was no longer free.

These countries, we say, are not democracies, and have never known freedom. Therefore the world will watch Great Britain anxiously. For there under the Labor Party the world is witnessing the great experimental test as to whether under full employment which Britain has, with high productivity which she must have to survive, and with free labor which she clings to with deep conviction, an answer can be found to the riddle of the Sphinx. That, rather than whether this or that industry is nationalized successfully, is the historical issue in Britain. The outcome is gravely in doubt. But whatever the result, it will affect deeply and subtly the social thoughts of all mankind.

Mr. Speaker, Walter Lippmann is an outstanding columnist and, which is more, a thinker.

His column of April 19, 1947, entitled "The Riddle of the Sphinx," from the viewpoint of the merely human economist is excellent. The problem he sets forth, however, is exactly what he called it. It is only a riddle of the Sphinx, a graven image, clothed by tradition and superstition with supernatural wisdom utterly lacking. Its stony silence matched its stony stare and the intelligence that posed its questions was, of course, merely that of the man who worked the fraud.

In this instance the riddle propounded was answered long ago by the divine wisdom of Him who created both employers and employees, when He gave those who have ears to hear, the Golden Rule for the solution of every problem of human relations.

Therefore, all things whatsoever ye would that man should do unto you, do ye even so to them: For this is the law and the prophets (Matthew 7: 12).

Every question has three sides—yours, mine, and the right. Multiplicity of man-made laws arises out of erroneous pushes of the pendulum. Divine law

stands—single, simple, needing no change save that of hearts which it enjoins.

Quarrels are but fires of hell; selfishness feeds, love extinguishes, them.

It is inconceivable that any problem can arise between those dominated by the Golden Rule.

Therefore, the sole problem is, not to make admittedly inferior law, but to observe the best; not to write, but to live.

Not only of management, but also of labor and of the public, is the right, the high privilege as well as duty, to see that all get a square deal; justice, not charity; fair treatment given voluntarily, cheerfully, cordially, by compulsion of love, not of law.

Achievements of the Eighteth Congress

EXTENSION OF REMARKS

OF

HON. JOHN SANBORN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. SANBORN. Mr. Speaker, as a freshman Member of Congress I wish to evaluate the work of this first session of the Eightieth Congress. I am not qualified to put this analysis out from the viewpoint of a veteran of many sessions, but I do believe I can look at the work with an open mind. I believe, also, that being a new Member gives me the advantage of not being influenced so much by tradition or set thinking.

Before coming to Washington and the Halls of Congress, I spent nearly 40 years farming fertile land in our great State of Idaho, starting with virgin sagebrush. I was a farmer and dairyman, and knew the value of things interpreted in the light of everyday living. However, I soon discovered that Congress, and particularly the House of Representatives, is very similar to our own State legislature. I know of this comparison, having served my own State in both houses for 14 years. The similarity is in the awareness of Representatives to the needs of our people. And in this great representative form of government, subject to the will of the people, this is a must in the operation and function of the legislative bodies.

I have noted this comparison between State legislative bodies and Congress to emphasize the achievements of the first session of the Eightieth Congress. I believe the greatest achievement of this session is in the enactment into the law the will of the people voiced at the polls November 5, 1946. Of course, this has not been completely achieved because the President has not been disposed to listen to this mandate from the people.

There is one thing certain. This Congress has not loafed on the job. With the ending of this session, there appears on the President's desk about 250 bills to be acted on. The President has already signed into law many other measures passed earlier in the session, and has vetoed several important measures.

Acting upon the mandate from the votes of November 1946, the new Republican Congress made as their basic political objective a program to restore sanity and order in Government, and to restore the Government to the people. The basic economic objective was to create a stable economic climate in which American ingenuity, inventive genius, and productive ability could flourish.

The first major plank in the Republican Congress' program, was to achieve economy in Government spending, and to place Government on a sound fiscal policy basis. A sound fiscal policy is the primary essential to an environment favorable to economic progress. The people of the United States said they had had enough of bureaucratic waste and extravagance, which has burdened the Nation with a $260,000,000,000 debt and destructive taxes. The people demanded that the price of Government be reduced.

The second major plank in the Republican Congress' program was to give relief to the people from the back-breaking taxes placed on their shoulders by the Government spenders. About 30 percent of the national income is eaten up in local, State, and Federal taxes. In other words, the American people, on the average, work 3 days out of 10 for the Government.

The third major plank in the Republican Congress' program was to bring stability in labor-management relations, and relieve the people from the worry of Nation-wide strikes, which impairs the security and comfort of our people. Hanging over the heads of all management was the dreaded portal-to-portal suits.

In brief, the people, through their Representatives, asked for curtailment of extravagant Government spending, reduction of taxes, and improved labor-management relations with a curbing of the powers of certain labor leaders.

Now, what has Congress accomplished?

The Eightieth Congress has achieved the best economy record ever attained by a peacetime Congress in a quarter of a century. It has appropriated a sum not only substantially less than asked in the Presidential estimates but, percentagewise, it has made the biggest cut in expenses since the present budget system was established in 1923. Chairman TABER, of the Appropriations Committee, says it will be found that the Treasury is $4,423,000,000 better off than if Congress had followed the President's estimates.

The Eightieth Congress has passed a tax-reduction bill twice, and twice it has been vetoed by the President. It was a fair bill, giving the largest percentage of reduction to the small wage earners. Of the tax reduction provided by the bill, 61 percent would go to persons receiving net incomes of $5,000 or less, and of this amount, 71 percent would go to individuals with incomes under $3,000. The President vetoed this bill twice—evidently because he is against any tax reduction of any kind.

Now, what about labor-management relations and the Eightieth Congress? One of the most urgent problems before the new Congress was the portal-to-portal suits involving billions of dollars, driving many businesses to ruin. The new Congress almost immediately passed a measure outlawing these suits, bringing security again to many businesses.

In recent years both collective bargaining and the union movement have been in danger. This has been due partly to mistakes of the Government in setting up labor policies, and in applying them, and partly to persons within the labor movement who, to gain personal power or advantage, have followed short-sighted policies of their own, regardless of the effect of what they did upon the labor movement as a whole, upon the welfare of our country, or, indeed, upon the workers themselves.

Our labor relations have been troubled by strike after strike. Some of the strikes were calamitous.

Loopholes in our laws permitted unscrupulous employers and unscrupulous labor leaders to exploit workers, and to deprive them of their rights. The Taft-Hartley Act—passed over a Presidential veto—puts an end to such abuses as these. It will further the purpose of the Labor Relations Act, increase output, and strengthen the protection the Labor Relations Act gives to workers in their organizing and bargaining activities.

The first Republican-controlled Congress in 16 years, has in addition to carrying out its program by balancing the budget, cutting unnecessary Government expenditures, eliminating many Government controls, enacting remedial labor legislation, and trying conscientiously to reduce individual income taxes, passed innumerable measures of general and private nature.

The following bills were acted upon this session:

H. R. 1030, to continue excise taxes.

H. R. 1353, to extend the period during which veterans might reinstate their national service life insurance.

House Joint Resolution 27, to limit the tenure of the President to two terms.

House Concurrent Resolution 20, to place a ceiling on Federal expenditures for 1948.

H. R. 2157, to restrict portal-to-portal pay suits.

H. R. 3020. Taft-Hartley labor bill.

House Joint Resolution 153, $350,000,000 general foreign relief bill.

H. R. 3203, housing and rent-control bill.

S. 938, $400,000,000, Greek-Turkish aid bill.

S. 350, to extend the Commodity Credit Corporation chiefly for the purpose of continuing the price-support program for agricultural products.

S. 1498, to continue price support for wool. When this bill was brought before the House of Representatives there was vigorous debate opposing the passage of this measure. I believe a word of explanation about the wool situation is necessary. Through no fault of the wool industry there is now a tremendous surplus of wool in the United States—enough to endanger further production of wool by the sheep men of this nation. The sheep men are not responsible for this condition. This is part of the results of war. During the war the Government built up a large stock pile of this strategic material. And now, they are faced with

the problem of disposing, orderly and without loss, of around 460,000,000 pounds of this Government-owned wool. This bill allows some support to the wool prices to insure the continued operation of that great western industry.

H. R. 3961, to increase pensions of Spanish-American War and Civil War Veterans and their dependents. This bill provides for a 20-percent increase in certain service pensions—nonservice connected—to veterans of the Spanish-American War, including the Boxer Rebellion, and the Philippine Insurrection; veterans of the Civil War and the widows and children of such veterans. I want to point out that the bill in no way adds any new veterans or new dependents to the pension list. It provides merely a 20-percent-across-the-board increase under the existing law.

The Civil War veterans and their dependents have not received any increase in pension since the year 1930. Many things have happened since then. The cost of living has skyrocketed tremendously since 1930 and I feel these people are entitled to this consideration. At the present time there is a discrepancy between the pensions paid the widows of veterans of these wars and the veterans of World Wars I and II. The pensions for the widows of Spanish-American and Civil War veterans are lower than the pensions paid widows of veterans of World Wars I and II. This bill brings them on more or less of a parity. The average age of the widows of the veterans of the Spanish-American War is approximately 65 to 75 years.

H. R. 4017, providing cash payments for veterans' terminal-leave bonds after September 1.

S. 564, Presidential succession bill. Provides that Speaker of the House of Representatives should become President in event both President and Vice President dies.

H. R. 3813, to provide for investigations of loyalty of Government workers—to exclude all persons of subversive action.

S. 526, to create a National Science Foundation.

H. R. 3682, to continue Federal assistance to schools overcrowded by war-incurred enrollments. The final amount approved by Congress was $2,500,000. Part of this will be allocated to school districts on basis of enrollment.

Mr. Speaker, at this time I would like to extend my appreciation to you and to my fellow colleagues. You presided over the activities of the House in a manner that drew the respect and friendship of the entire membership and added greatly to the success of the session. I wish to express my feeling of good will and admiration for the Republican leadership of the House. CHARLIE HALLECK and LES ARENDS did a fine job. The associations formed during the session will be long remembered.

My work on the Public Lands Committee with assignments on the public lands, mines and mining, irrigation and reclamation, and Insular Affairs subcommittees has been most enjoyable. The Subcommittee on Indian Affairs passed my bill, H. R. 1584, to authorize an appropriation of $150,000 to construct a museum at Fort Hall Indian Reservation at Pocatello, Idaho. The Public Lands full committee passed it out unanimously as did the House. Under the direction of the able Senator from Idaho, Mr. DWORSHAK, this bill passed the Senate and has now become law. This is a real consideration for the people of Idaho and the Northwest and those persons most interested in preserving the handicraft of the American Indian.

Congress sent to the White House last week, the Interior appropriation bill, which authorizes $6,201,750 for development in the State of Idaho. With the $5,953,268 of the unexpended balance, as of June 30, 1947, a total of $12,155,018 will be available for project work in the fiscal year of 1948.

The break-down as to projects is as follows:

Anderson Ranch Dam	$3,874,128
Boise project (drainage)	143,523
Payette division (Boise)	4,098,232
Minidoka project	1,308,277
Lewiston Orchards	500,000
Palisades	2,231,027

Congress also passed several other bills including appropriations to be used in Idaho:

Fort Hall Museum	$150,000.00
Agriculture Forest Pest Control Act (Idaho tussock moth)	375,000.00
George-Barden Act (vocational education)	136,710.00
Smith Hughes (University of Idaho)	38,245.86
School lunches	248,425.00

Extension of Lanham Act—funds for school with war-incurred enrollments.

Total for United States authorized by Congress, $2,500,000.

Part of this $2,500,000 will be allocated to the school districts of Idaho on basis of enrollment.

These appropriations are but an indication of the future of our great State of Idaho. Idaho is a reclamation State and the development of the agriculture industry depends on projects to get the water on the land. In making appearances before the committees to urge consideration for the many projects in Idaho, and in presenting the needs of our State before the Public Lands Committee, of which I am a member, it has been extremely helpful to have the favorable record of achievement that the farmers of Idaho have made.

The cost of constructing irrigation facilities in Idaho up to the beginning of the war, was approximately $103,000,000, of which fifty-three million was supplied from private sources and fifty million by the Federal Government. In addition to repaying $18,000,000 of the Federal investment, more than $7,000,000 from Idaho resource sales has been contributed to the reclamation revolving fund.

There is a great future ahead for Idaho and its people. Only part of the development as a result of the damming of the great Snake River—seventh longest river in the world—has been done. The ground work only, has been done for industrial growth. Through an orderly plan set up by the Bureau of Reclamation, the powers of the Snake can be harnessed. All available water will be captured to bring life to the parched land, so that every possible acre can be put under cultivation. To accompany this will be power development, both Federal and private, to insure adequate power for future industrial development. This method of action will result in the beneficial control of the waters of the Snake without subjecting our people to the autocratic control of an authority.

The first session of the Eightieth Congress has made a wonderful record. In addition to providing for the continued growth of the United States under a balanced economy, there has been a return to sound Government practices. Faith in the legislative branch of our Government has been restored. Yes; the Republican majority has kept its promises to the voters by curtailing Government expenses; reducing withholding and other individual income taxes; enacting a law to improve relationships between labor and management and to protect the interests of the public; ridding the Government of Communists and other subversionists; protecting the interests of the veteran; and limiting the tenure of the Presidential office.

Natural-Gas Legislation

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement concerning natural-gas rates.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. MYERS. Mr. President, in connection with the proposed natural-gas legislation which has been before the Congress, I have here two tables breaking down in the specific case of Pittsburgh and of surrounding areas and adjoining States, the effect this legislation would have on consumer rates if it had been enacted.

Taking just two of the pipe-line companies serving the Appalachian area, the Tennessee Gas & Transmission Co., and the Kentucky-West Virginia Gas Co., these tables show how increases these two firms would be allowed to claim and, no doubt, to obtain through this proposed legislation, would have been passed on to the consumers of certain distribution companies in Pittsburgh, Ohio, New York, Kentucky, West Virginia, and elsewhere.

The increases for consumers shown in these tables would take into account only the gas piped through lines of Tennessee Gas & Transmission and the lines of Kentucky-West Virginia, and do not include increases in rates which intermediate suppliers may have obtained for gas they produce in their own fields.

Table 1, on Kentucky-West Virginia sales, includes a further break-down on sales by its affiliate, Pittsburgh & West Virginia Gas Co., to another affiliate, Equitable Gas Co., of Pittsburgh. This shows an increase to Pittsburgh area consumers of Equitable—on only that gas originating in the Kentucky-West Virginia system—of $1,385,645. Other distributors in the Pittsburgh area receiving Kentucky-West Virginia gas through Pittsburgh & West Virginia Gas Co. would pay an additional $70,000 or more, which would be passed on to their consumers.

Table 2 shows how Tennessee Gas & Transmission Co. sales to Hope Natural Gas Co. would result in increases of $1,238,287 to consumers in Ohio, New York, and Pennsylvania. Other gas sold by Tennessee Gas & Transmission Co. to the United Fuel Gas Co., of Ohio, would cost Ohio consumers an additional $1,544,893.

The total increases to consumers on gas of Tennessee Gas & Transmission and of Kentucky-West Virginia Gas Co. under the proposed prevailing-field-price formula of the natural-gas amendments is shown at more than $4,500,000, nearly $5,000,000.

TABLE 1.—*Kentucky-West Virginia Gas Co.—Gas sales, year 1946, and increase resulting from 15 cents field price*

	Actual sales, M cubic feet	Increased cost to consumers
Sales to other gas utilities:		
Pittsburgh & West Virginia Gas Co (see below)	23, 118, 169	$1, 568, 597
Louisville Gas & Electric Co (Kentucky)	4, 657, 091	315, 990
City of Pointsville, Ky	178, 038	12, 080
City of Prestonsburg, Ky	116, 568	7, 909
Warfield Natural Gas Co	193, 172	13, 107
Inland Gas Corp	375, 412	25, 472
Sundry	60, 726	4, 120
Total sales to other gas utilities	28, 699, 176	1, 947, 275
Residential sales	65, 624	4, 453
Industrial sales	77, 402	5, 252
Total gas sales	28, 842, 202	1, 956, 980
Pittsburgh & West Virginia Gas Co., sales to other gas utilities:		
Equitable Gas Co	27, 631, 917	1, 385, 645
Monongahela Power Co	1, 324, 303	66, 409
Sundry utilities	85, 833	4, 304
Total	29, 042, 053	1, 456, 358
Residential and commercial sales	649, 349	32, 563
Industrial sales	1, 588, 864	79, 676
Total gas sales	31, 280, 266	1, 568, 597

TABLE 2.—*Tennessee Gas & Transmission Co.—Gas sales, year 1946*

	Actual sales, M cubic feet	Total increase to consumers
Sales to other gas utilities:		
Hope Natural Gas Co.:		
State of Ohio (53 percent)	21, 084, 164	$656, 202. 35
State of Pennsylvania (30 percent)	11, 934. 432	371, 486. 24
State of New York (17 percent)	6, 762, 845	210, 508. 86
Total, Hope Natural Gas Co	39, 781. 441	1, 238, 287. 45
United Fuel Gas Co.:		
State of Ohio	49, 630, 695	1, 544, 893. 03
Ohio Fuel Gas Co	909, 159	28, 314. 50
Louisville Gas & Electric Co	3, 676, 565	114, 426. 53
Kentucky Natural Gas Corp	1, 282, 104	39, 909. 96
Tennessee Natural Gas Lines	359, 957	11, 205. 95
Sundry utilities: Pennsylvania, Kentucky, West Virginia, and Tennessee	617, 209	19, 205. 92
Total gas sales	96, 257, 130	2, 996, 243. 34

Message to Congress Announcing the Signing of the Atlantic Charter

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1947

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am inserting the message to Congress by the late President Franklin D. Roosevelt in which he announced the signing of the so-called Atlantic Charter:

To the Congress of the United States:

Over a week ago I held several important conferences at sea with the British Prime Minister. Because of the factor of safety to British, Canadian, and American ships, and their personnel, no prior announcement of these meetings could properly be made.

At the close, a public statement by the Prime Minister and the President was made. I quote it for the information of the Congress and for the record:

"The President of the United States and the Prime Minister, Mr. Churchill, representing His Majesty's Government in the United Kingdom, have met at sea.

"They have been accompanied by officials of their two Governments, including high-ranking officers of their military, naval, and air services.

"The whole problem of the supply of munitions of war, as provided by the Lease-Lend Act, for the armed forces of the United States, and for those countries actively engaged in resisting aggression, has been further examined.

"Lord Beaverbrook, the Minister of Supply of the British Government, has joined in these conferences. He is going to proceed to Washington to discuss further details with appropriate officials of the United States Government. These conferences will also cover the supply problems of the Soviet Union.

"The President and the Prime Minister have had several conferences. They have considered the dangers to world civilization arising from the policies of military domination by conquest upon which the Hitlerite government of Germany and other governments associated therewith have embarked, and have made clear the steps which their countries are respectively taking for their safety in the face of these dangers.

"They have agreed upon the following joint declaration:

"Joint declaration of the President of the United States of America and the Prime Minister, Mr. Churchill, representing His Majesty's Government in the United Kingdom, being met together, deem it right to make known certain common principles in the national policies of their respective countries on which they base their hopes for a better future for the world.

"First, their countries seek no aggrandizement, territorial or other;

"Second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned;

"Third, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them;

"Fourth, they will endeavor, with due respect for their existing obligations, to further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world which are needed for their economic prosperity;

"Fifth, they desire to bring about the fullest collaboration between all nations in the economic field with the object of securing, for all, improved labor standards, economic advancement, and social security;

"Sixth, after the final destruction of the Nazi tyranny, they hope to see established a peace which will afford to all nations the means of dwelling in safety within their own boundaries, and which will afford assurance that all the men in all the lands may live out their lives in freedom from fear and want;

"Seventh, such a peace should enable all men to traverse the high seas and oceans without hindrance;

"Eighth, they believe that all of the nations of the world, for realistic as well as spiritual reasons, must come to the abandonment of the use of force. Since no future peace can be maintained if land, sea, or air armaments continue to be employed by nations which threaten, or may threaten, aggression outside of their frontiers, they believe, pending the establishment of a wider and permanent system of general security, that the disarmament of such nations is essential. They will likewise aid and encourage all other practicable measures which will lighten for peace-loving peoples the crushing burden of armaments.

"(Signed) FRANKLIN D. ROOSEVELT.
"(Signed) WINSTON S. CHURCHILL."

The Congress and the President having heretofore determined, through the Lend-Lease Act, on the national policy of American aid to the democracies which East and West are waging war against dictatorships, the military and naval conversations at these meetings made clear gains in furthering the effectiveness of this aid.

Furthermore, the Prime Minister and I are arranging for conferences with the Soviet Union to aid it in its defense against the attack made by the principal aggressor of the modern world—Germany.

Finally, the declaration of principles at this time presents a goal which is worth while for our type of civilization to seek. It is so clear-cut that it is difficult to oppose in any major particular without automatically admitting a willingness to accept compromise with nazism; or to agree to a world peace which would give to nazism domination over large numbers of conquered nations. Inevitably such a peace would be a gift to nazism to take breath—armed breath—for a second war to extend the control over Europe and Asia, to the American Hemisphere itself.

It is perhaps unnecessary for me to call attention once more to the utter lack of validity of the spoken or written word of the Nazi government.

It is also unnecessary for me to point out that the declaration of principles includes, of necessity, the world need for freedom of religion and freedom of information. No society of the world organized under the announced principles could survive without these freedoms which are a part of the whole freedom for which we strive.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *August 21, 1941.*

America Is God's Last Chance To Make a World

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. SHORT. Mr. Speaker, under general leave to extend my remarks, I include the following address that I delivered at the fifty-sixth annual meeting and dinner of the Pennsylvania Scotch-Irish Society in the Bellevue-Stratford Hotel, Philadelphia, Pa., on March 7, 1947:

Mr. SHORT. Mr. President, members of the Pennsylvania Scotch-Irish Society, my fellow countrymen, and friends from across the sea, it is true my name is DEWEY SHORT, but I am no more responsible for my name than I am my birth. I was consulted about neither. I just happened to be born a few days before the battle of Manila Bay, in 1898, when all the proud parents in America named

their goats, dogs, horses, and kids "Dewey." [Laughter.]

The best part about me, really, is that my great-great-grandfather came from Ireland. [Laughter.] I am a Methodist, a Mason, and a Republican, and stand a pretty good chance of getting into heaven. [Laughter.] And while my last name is SHORT, if you knew my pedigree as well as your good president, George Junkin, or my friend, Fred Reybold, back here, you would have to admit that I am almost as Long as I am SHORT, because my mother's maiden name was Long.

Four Short boys from east Tennessee and four Long girls from southeastern Kentucky migrated into Missouri in 1849, before the Civil War, and most of my mother's people came from old England with a sprinkle of Scotch, thank God, in them; and when those four Short boys married those four Long girls, believe you me there was nothing short in any of the families.

I happened to be No. 8 in a brood of 10. I was a little slow in arriving, but thank goodness, I finally got here, and in these recent years of priorities, of ceilings, and of restriction of production, I have often thanked a benign and benevolent providence that they did not have codes in effect when I was born, or I never would have arrived at all. [Laughter.] Or had I been born, heaven knows Henry Wallace or some other brain truster or cock-eyed New Dealer would have knocked me in the head or plowed me under. [Laughter.]

It is good for a hillbilly from the Ozarks, down in southwestern Missouri, to come to old Philadelphia, this cradle of liberty, this city that is a source of inspiration to all Americans, a city of brotherly love and sisterly affection, as I have found on occasion. [Laughter.] And difficult as it is for Members of Congress in these trying times to run away from Washington, it is a wonderful relief to escape that madhouse even for a single evening, because it is about the only insane asylum on earth that is run by its own inmates. [Laughter.]

Gentlemen, America has recently emerged from the two most brutal, cruel, and devastating wars in history; there is yet no person who can even approximately calculate the millions of lives lost in this recent global conflict, or the hundreds of billions of dollars of the world's wealth that was blown up in smoke and powder. We do know what it cost our own country. We suffered, for the triumph and victory we won in both Europe and Asia, more than a million casualties. Nearly 300,000 of the finest young men of America, the flower of our manhood, gave their last full measure of devotion. Seven hundred and fifty thousand of their comrades have returned home with arms and legs blown off, eyes put out, hope killed in their breasts, and, what is worse, the light gone out of their brains—mere shadows of men they once were or might have been—and as the ranking majority member on the newly-merged Committee of the Armed Services it has been my sad but necessary mission to visit many of these human wrecks in our hospitals and asylums, many of them neurotics who will spend the rest of their days in psychopathic wards. And in addition to a million men, a million casualties, we had thrust upon our backs the astronomical and almost incomprehensible sum of $260,000,000,000 of national debt which your great-grandchildren will be paying long after you have gone and are perhaps forgotten.

I do not know how kindly they are going to feel toward our generation for the horrible mess that we have bequeathed them. You know and I know that even though the shooting stopped nearly 2 years ago in Europe, and more than 18 months ago in Japan, treaties must still be written and peace is still to be secured.

Are we not in great danger of losing the fruits of victory that will flow like sand between our fingers for the second time in our own generation? We must be alert.

You cannot blow the brains of millions of men into the mud, and billions of dollars of the world's wealth up into smoke, steel, and powder without suffering serious political upheaval, social chaos, and economic dislocation.

War pulls nations and individuals up by the roots and disorganizes their whole lives. The problem of readjustment or reconversion of reconstruction is a most complex and difficult one. Often the aftermath or backwash of war, the repercussions of war, are as bad if not worse than war itself. In the wake of war follow hunger and starvation, pestilence and disease, and even revolution itself. What a sad and sick world it is!

I was one of the dozen Members of Congress chosen by the leadership a month before the capitulation of Germany to visit the terrible camps of Buchenwald, Nordhausen, Dachau, Belsen, and Oswiecim and others. We inspected the first three mentioned. You can ride all over Europe, particularly in the Reich, from Mannheim and Ludwigshaven down the Rhine from Darmstadt through Frankfurt, Bonn, Cologne to Aachen and Duren, all through the Ruhr, Essen and Dortmund, practically every city in Germany—Hamburg, Berlin, Leipzig, Dresden, Hanover, Cassel, Karlsruhe, Stuttgart, Munich, Regensburg, and with the single exception of Heidelberg, where I spent a very interesting and profitable year following the First World War—with the exception of that old university town of only 80,000 population, and which had no military value, practically every city in Germany has been blown to bits and laid waste.

The satellite countries of the Nazis that were raped and plundered, likewise are nothing but a heap of rats, rubble, and ruin, such as Hitler promised. Millions of ragged, starving disillusioned people, with faith gone out of their eyes, and with hope dead in their breasts, are wandering tonight throughout every country of Europe, like nomads, with nowhere to lay their heads. Ah, that continent is sick; it is sad.

Last fall with five of my colleagues of the Subcommittee on Aviation, I flew 38,000 miles in 40 days, all the way from Alaska to Australia, spending a week in Japan, a week in China, a few days in Korea, in the Philippines, and over to Bangkok, in Siam, down to Australia, out over those vast stretches of Pacific, visiting the bases and islands that we had captured at such an enormous expense in both men and money.

We witnessed in Japan what we had seen previously in Europe, the Yokohama-Tokyo area with 10,000,000 people, larger than New York or London, absolutely gutted by fire, many square miles of factories silent, a forest of smokeless chimneys, literally burned up and burned down.

Just as in Germany, with its Heidelberg, so in Japan, with the exception of Kyoto, every city of any size or significance—Kobe, Nagoya, Nagasaki, Hiroshima, Osaka, Yokohama—absolutely laid waste; China, torn asunder by civil war, a puzzle which no man can solve, and which I feel will continue to suffer bloodshed and strife for many, many years to come; India, seething with revolt and rebellion; Palestine, a keg of dynamite; Trieste, the hot spot in Europe, with 1 British division, 1 American division, and 11 Yugoslav divisions of Tito's men, equipped with American weapons which we extended our Russia Allies under lend-lease; Korea, the hot spot in Asia, Lieutenant General Hodge with 40,000 Americans keeping the south half or agricultural section of that tragic land, the Russians with 250,000 highly trained, well-equipped troops occupying the northern industrial half, and an iron curtain, impenetrable, set up between them; these conditions do not augur well for the peace of mankind.

Sick! Asia, Europe, ah, yes; even our own Central and South American friends, were it not for the boundless generosity of this great Republic, would find themselves more or less paralyzed today. We flew down to Mexico, to Central America, to Natal, to Rio, and back to our Caribbean defenses. The picture is not pleasant.

Never before, gentlemen, have the American people or the American Congress been confronted with so many baffling, complex, and difficult problems as they are confronted with today. The worries and troubles of most of the generals and admirals ended on VE- and VJ-days; the worries and headaches of the Members of Congress and the statesmen just began—demobilization, reconversion, peacetime military conscription, merger of the armed forces, disposal of surplus property, $100,000,000,000 worth, control of atomic energy, veterans' legislation, strikes, revision of taxes, relief of the poor and distressed, loans to foreign governments—those are just a few of the problems that have confronted us.

I say, I am a Republican. I was a lone wolf in the Seventy-fourth, Seventy-fifth, and Seventy-sixth Congresses, from my great State of Missouri with nearly 4,000,000 people, because in the 1930's we did not have elections; we had public sales. [Laughter.] But I am happy to report to you tonight, coming from right north of the Arkansas border, that for the first time since the Civil War, we have both Republican United States Senators and 9 out of 13 Members of the House, so we have done pretty well considering the fact that the President of the United States comes from my State, the Democratic national chairman, the Democratic Secretary of the Treasury, and half of the other people in Washington.

I was not going to mention politics, but since I was introduced as a Republican, I confess that guilt; however, I am not talking politics here tonight, because in every great crisis the American people, regardless of race, party, or creed, have been big enough, bold enough, and wise enough to place the welfare of our country first, and tonight Democrats and Republicans are in the same boat. We are going to sink or swim together, so we have got to live and get along. God forbid there should be another war. I fear it would be the last.

I am not free to disclose to you some of the secret hearings that I have attended during recent months, but we have got weapons more powerful and destructive than the original atomic bomb, and the next war will be as different from the last as the last one was from the one a quarter of a century ago, in which many of us participated.

It will be a war fought in laboratories and test tubes, by pushing buttons, with guided missiles flying at invisible heights at supersonic rates of speed.

Ever since Lindbergh pushed Paris up into our front yard, new scientific inventions and technological developments, new methods of rapid transportation and communication, have reduced our modern world to a miniature province. Why, it is closer in point of time from Philadelphia to London today than it was from Philadelphia to Washington during the Civil War.

When we came back from Brisbane, we flew over New Caledonia, and spent the night in Fiji—which almost proved to me that civilization is a curse. [Laughter.] They are happy, at peace, and get along with each other on that island. If we civilize them, they will start shooting and raiding each other.

Then we had lunch in Honolulu, where I had the honor of addressing the chamber of commerce—lunch in Honolulu, and the next evening, in Washington, I was having dinner with Mrs. Short.

We stopped only in San Francisco to refuel, and we were traveling in an old ox-cart, a lumber wagon—a C-54. Those boys the other

day flew nonstop from Honolulu to Washington, D. C., in 14½ hours and the next day a boy flew from California to New York in 6 hours flat; so we are going to have to learn to get on with one another, Parson [addressing Dr. Riddle], whether we want to or not. [Applause.] Because the remotest spot—the remotest spot on earth—is only a few hours from you, brother—just a few hours—and you know, up there they have got a lot of tricks; it is a two-way heaven.

I was impressed at Fairbanks, Alaska, where hundreds of our American bombers and fighters were flown by the Russians over into Siberia; I could not keep from feeling that if the Russians could come over and fly our American-made planes from Fairbanks to Siberia, and on to the eastern European front, those same boys could fly those same planes, or some of their own, back to Fairbanks.

I haven't discussed Russia. We hear a lot of silly and idle talk about that country. Of course, you will hear most of the great problems solved by people who know nothing about them—just as we did during the war—the greatest generals, you know, are the armchair strategists. I don't see how in the world we ever won the war with Eisenhower, Bradley, Devers, Patton, Patch, "Bull" Halsey, Nimitz, MacArthur, and those guys. You hear a lot of talk today by diplomats in the pullman smoking rooms and at the bar. Well, I have been farther back under the barn hunting eggs than a lot of them have been away from home [laughter], but when I want to get educated all I do is go in and sit down. I don't like this talk of inevitability of war with Russia. It was my privilege to go all over European Russia back in 1931. The Russian people possess many admirable qualities. All they have known for centuries is hardship, torture, and murder. They have lived under the yoke of oppression and the heel of tyranny; they are tough, and they are hard-boiled cookies. [Laughter.]

I am going to do my best to get along with them. I can imagine no greater tragedy to mankind than armed conflict between the two most powerful nations on God's earth today, Soviet Russia and the United States of America. And yet, having said that, with the help we have given and continue to extend them, I want to issue this warning, that we cannot bury our heads in the sand like an ostrich and ignore stark reality, and hesitate to face naked facts unpleasant as those facts may be. I believe the time has long since passed when we should continue to appease Russia [applause], or coddle her, or pamper her. [Applause].

I am a Missouri Republican; Jimmie Byrnes; is a South Carolina Democrat; but Jimmie Byrnes' foreign policy is 100 percent right, and it should have the backing of all American people regardless of party. I hope that George Marshall will follow that policy as it has been supported by both United States Senators TOM CONNALLY, a Texas Democrat, and ARTHUR VANDENBERG, a Michigan Republican, because politics stops at the water's edge.

Mr. Churchill and Mr. Roosevelt both promised at the height of the war, in order to secure the cooperation and the help of the people in the conquered countries, that when the war was over their territorial integrity would be respected, that they would allow the little peoples in the little countries to decide for themselves, without outside interference, without pressure from abroad, each nation and each people would be allowed to determine through free, open elections the kind of government that they should have. That was a promise. That is why thousands of them risked their necks in those conquered countries to bring about the final victory, and yet, before the capitulation of Germany we found our powerful ally swallowing several of these small nations. What in the name of God would Russia have done at Stalingrad without American help? We gave $39,000,000,000 in lend-lease to Britain, over eleven billion to Russia; we were glad to do it. They fought valiantly and gloriously, but this war was won not merely on the firing front; it was also won on the home front. It was the industrial output and productive capacity of America that largely won this war, and George Marshall, Doug MacArthur, and Ike Eisenhower, all of them, have told me that and have volunteered it—volunteered it. That is what won the war—production in our factories, in our mines, on our farms, and in our forests.

Before Germany capitulated, what happened? This powerful Ally, Russia, seized a big hunk of Finland; she gobbled up all of Estonia, Latvia, and Lithuania, Bucovina, Bessarabia, Ruthenia, the eastern half of Poland, and East Prussia. She demands an outlet into the Mediterranean or the Persian Gulf. She threatens Turkey, she browbeats Iran; and seizes Azerbaijan, the northern province, the richest oil fields on the face of God's earth. That is what she has been doing in Europe.

And her fifth columns, boring from within, in both France and Italy, have carried everything off that could be carried, from Austria, Yugoslavia, Bulgaria, Hungary, and Rumania—every Balkan country with the exception of Greece.

And what about her expansion in Asia? She came into that war 3 days before Japan surrendered. Japan had sued for peace with us through the Russians, but the Russians never advised us about it. They had sued for peace after we had absolutely blasted their cities and devasted their country, before ever dropping bombs on Hiroshima and Nagasaki. Everybody knows that we won that Pacific war almost single-handedly. The Australians helped us, but you know and I know that it was MacArthur, and Kenny, and LeMay, Nimitz, and Halsey, and Kincaid; Spruance and Hodge, and Eichelberger; who traveled all the way from far off Australia, up from Guadalcanal, Leyte, Iwo, Okinawa, through the gateway into Tokyo. Three days before peace was signed, and after the atom bombs were dropped, the Russians joined us in that Asiatic conflict, having refused us for all those years when we were giving her the very instruments whereby to save her own neck at Stalingrad—having refused us bases whereby we could have won the war much sooner, Russia comes in, and why? Was it to pick off the Kuriles—all of them—the south half of Sakhalin, the northern half of Korea? She controls Outer Mongolia. She has raped Manchuria, and what she could not carry off, she has wantonly and deliberately destroyed, furnishing some of our Chinese Communist friends with American-made weapons.

Well, it is all right to trust God, but we had better keep our powder dry. [Applause.] Speak softly but carry a big stick. How are we going to do that in this troubled and uncertain world, and it is troubled and uncertain; it is sad and sick and sorely afflicted; it is wounded. Our British friends bear an almost unbearable burden, their Empire tottering. I have no quarrel with any foreign government that any country has if the people are free to choose it. We have our own. We love it. We have grown great under it. If Britain wants to nationalize or socialize her industries, if she wants state socialism, she is welcome to it. I do not think we should be called upon to finance it, however. [Applause.]

If Russia wants communism, God knows she is welcome to it. I saw a lot of it. If I liked it better than what we have here, I would have stayed there. Sometimes I think maybe I should be a Communist, because I have nothing and am willing to share it with anybody. [Applause.]

We are going to have to stay strong. I have served on the Military Affairs Committee for the past 14 years, since 2 years after I went to Congress, but let me tell you that the defense of a country does not depend altogether upon a strong army, or a superlative navy, or a superior air force. The first line of defense of any country is its financial solvency, not masses of men but a sound economy. That is what is going to defend America.

The President signed the budget for $37,500,000,000, 2 years after the war ended, or the shooting stopped—thirty-seven and one-half billions, four times as much as our prewar peacetime budget. You know and I know—you don't have to be a Scotchman or an Irishman—you know what we need, really, is more Scotch thrift and more Irish wit. [Laughter.]

You know as well as I do that a nation is no different from an individual. Neither can continue to spend more money than it takes in without running into serious difficulty; and yet, since 1933, for fourteen long years we have ended every single fiscal year, on June 30, in the red. Even before we became involved in this last global conflict, our national debt was tripled from 1933 to Pearl Harbor in 1941. It was increased from twenty-two to sixty-six billions of dollars by deficit financing, by piling up a huge national debt, plastering a mortgage upon your children and their children.

Now, the war cost us a million casualties, Mr. President; it has left us with this $260,000,000,000 of debt, but on VJ-day we had in this country the two fundamental, essential ingredients for prosperity. Due to the shortages of war, due to the fact that all our efforts were poured into the making of ships, planes, tanks, guns, and munitions, because they were immediately needed to overcome the imminent peril, the American people, of course, could not buy the goods we ordinarily had in peacetime, and when Japan surrendered we had the biggest pent-up demand for goods we had had in all our history—large amounts of durable goods, consumer goods—houses, radios, automobiles, refrigerators, electrical appliances, food, and all kinds of nylon hose, or what have you? White shirts! [Laughter.] You can't buy one of those things yet.

We had the best domestic market on earth, a pent-up demand for goods, and along with that we had the greatest purchasing power ever in our history or the history of any people in any country on the face of the earth. Due to the extraordinarily high wartime wages, due to the accumulated savings, Government bonds, insurance policies, bank deposits, we had both the demand for goods and the money with which to buy them, and the people were not only willing to buy, but eager, just foolish to buy, willing to pay three or four times its worth for nearly everything they wanted. By every rule of the game, you don't have to be one of the hot-dog boys or Felix Frankfurter, from Hahvahd, which I once attended—I don't always admit that—or you don't have to go to Oxford—which I did for a year, suh—you don't have to be a New Deal economist, to know that by every rule of the game we should have entered immediately or shortly after VJ-day upon an era of unprecedented production and unparalleled prosperity, but for over a year we were bogged down in our reconversion program. And you know why. Because of a whole series of strikes, first the United Automobile Workers, then the steel strike, the Electrical Union Workers strike, then the coal strike, and finally the rail strike that crippled our transportation and tied us up into a hard knot, brought about Nation-wide industrial and commercial paralysis. We had over 107,000,000 man-days lost due to strikes

last year—107,000,000—almost 1 for each of our population.

Now, I believe in unions. I believe in organized labor. I believe in collective bargaining—I mean real collective bargaining—and I even believe in the fundamental right of labor to strike. In fact, I led the fight against the slave labor bill in January 1945, before Germany surrendered. Bitterly opposed as I was to the CIO-PAC, I stood up and fought and we defeated that measure that would have made the President a czar, because we have always believed that America has grown great because of free labor, and I think we can remain great only by keeping labor free. I do not want to put a halter around the necks of our workingmen. But labor is grown up now. It has got to assume the responsibilities of adulthood; and you know and I know, and listen, the great rank and file of the members of the unions know, that a few, a little group, a coterie of power-drunk labor racketeers have gone to the extreme, and unless labor puts her own house in order, the workers of America are going to lose all the benefits they have gained in the past third of a century.

I say to you, and I said it to the coal miners down in West Virgina where I spoke twice last month at Lincoln Day banquets, unions should be incorporated and held liable for breach of contract. They should be held responsible for their acts. And that is what the Congress is going to pass soon: I can assure you of that. [Applause.]

A contract that is not equally binding upon both signatories is not a contract. The sauce that is good for the goose is good for the gander. We are not going to pass punitive or vindictive legislation—God forbid! We are just going to give everybody equality of opportunity under the law. We think that labor organizers should be compelled by law to give a full accounting to the Government of the receipts and expenditures for all moneys that go through their hands, and they should be limited the same as corporations in their contributions to anybody's political campaign. I have little sympathy with sympathetic strikes, and I am positively against jurisdictional strikes. We are going to write a labor law with some teeth in it. [Applause.]

The American people spoke last November. How do you think I've stayed in Congress all these years if the Democrats did not vote for me down in Missouri? Some of my closest and best friends are Democrats, in and out of Congress. In fact, Harry Truman is a good friend of mine. At least I am his. He is very personable, very likeable—breeches cut a little short (laughter)—and a pretty big pair of shoes he is wearing. But he is a good guy; you would like him, too, and I feel sorry for him. I feel sorry for anyone to inherit the god-awful mess that he got. He is to be pitied and not censured.

Now, we are going to pass some labor laws. They are going to be reasonable; they are going to be fair. Why, even our United States Supreme Court is beginning to get a little sense. [Laughter and applause.] I said, on the floor of the House over a year ago, "Just look at it, and you will know why Jesus wept." [Laughter.]

It is true. We were bogged down for over a year due to this epidemic of strikes. We have got to correct that. The other things that bogged us down and retarded recovery were the wrathful, arbitrary, arrogant regulations promulgated daily by the tax-eating bureaucrats down in Washington, men who never met a pay roll in their lives, warming seats, sitting in mahogany chairs with their feet on the desks, trying to tell farmers out in my district how to farm. Heaven knows they wouldn't know which end of the cow to go to get the milk. They tell you businessmen in Philadelphia and out in St. Louis how to run your business. There is no game too tough for the American people to play as long as they know the rules, but when you have the umpire or referee changing the rules at every inning, you cannot tell home plate from first base. That is the reason they have driven you nearly crazy. The OPA—and the CPA is no better—all the priorities, these artificial controls, instead of encouraging production, created scarcity in a land of plenty.

I went for over a year following VJ-day hungry for pork chops, and I could not keep from thinking of those millions of innocent little pigs that Henry Wallace had knocked in the head or plowed under. We had a shortage of everything. Here in this country they produced the implements and munitions of war, the food and fiber that was to clothe not only 12,000,000 men and women in our own armed forces but many of our allies as well. We found ourselves incapable to produce enough to satisfy our own domestic needs for the simple luxuries and even some of the necessities of life.

No, no pork chops. Why? Because no sows; they killed them off. If you haven't got sows, you cannot have pigs; no pigs, no pork; no pork, no grease; no grease, no soap—and no soap, you are just a dirty bum; that is all. [Laughter.]

I like sweetening in my coffee. Can't get sugar. While I had a surplus of plums and grapes last year, most of them went to ruin. Of course we ate all we could; we gave them to the neighbors; but grapes and plums were coming out of our eyes and ears. You can eat only so many in a given length of time. We could not can food. One of the reasons is that the New Deal—these professional uplifters and moral do-gooders—is going to save the world by making every American a ward of the Government. Patronizing, paternalistic dictatorship is all it is. Call it by its right name. I don't care what name it is—a rose smells the same; so does a dead mackerel. [Laughter.] This arrogant bureaucracy is like a mackerel in the moonlight; it shines and stinks, and stinks and shines. [Laughter.]

Why can't you get sugar? They paid farmers down in Louisiana money not to grow sugarcane. They paid the farmers in Michigan, California, and Colorado not to grow sugar beets. No cane, no beets, no sugar. Of course, sorghum came in last fall, if you want to pay four bucks a gallon. My dad used to buy it by the barrel for four bits a gallon. A shortage of this, a shortage of that—why, even a shortage of tissue, toilet paper. Of course we are better off in Missouri than you are in Pennsylvania, because we grow more corn. [Laughter.]

You are a good gang. Do you know what this country needs? It needs more Scotch thrift; it needs more Irish wit, too. We don't want to lose our sense of humor at any time. I don't have much of the world's goods. With what little I have, I did what most of you did, what 80,000,000 Americans did during the war. We donated to the Red Cross, we donated our blood, and we bought bonds. We were urged to buy bonds; and though I am a poor boy, I have considerably more bonds than a man who left a million-nine-hundred-thousand-dollar estate, but urged us to buy them until it hurt. He left 1 $50 bond, 2 $25 bonds, and 200 25-cent stamps, about a hundred and fifty dollars altogether, if you want to know it. I am going to let the dead rest in peace.

I bought bonds. You bought bonds. And in 1940 we had between six and a half and seven billions of dollars in circulating medium—I mean this lettuce—in currency and coin about $7,000,000,000, before the war broke out. Tonight we have more than twenty-seven billions, or more than four times as much, but how much richer are you? You have more money, haven't you? What will your dollar buy? How much is it worth?

When I grow old, as all men must, no longer capable of earning, and am forced to dip into my reserves or to sell my Government bond, I want to be paid back in honest dollars and with a sound currency. I don't want to be paid off in 10-cent dollars.

When I went to the University of Berlin in 1922, the mark stook six to the dollar, and a year later it was more than five billions to the dollar. The Hungarian pengo is there today. Seventeen thousand Chinese dollars to one, in Peiping and Shanghai last fall when I was there, and it is even worse now.

No, sir; we must be militarily strong, but we must also be economically sound and healthy, and most of all, while we need economic recovery, while we need to rebuild materially the Nation, I think most of all we need a new birth of freedom. We need a spiritual awakening in this country. We need a great moral regeneration of freemen, here where liberty was born, here in this Republic, under its Constitution and Bill of Rights, and the guaranty whereby every man can walk the earth his own king, the equal lord of every other man, to go his own way, work out his own will, weave into the warp and woof of the magic days the dreams that haunt the duties that inspire and urge him on.

Last month, sir, we celebrated the birthdays of America's two greatest heroes and noblest sons, George Washington, the father of our country, Abraham Lincoln, its savior; one who founded the Republic, the other who preserved it; one who was born in comparative comfort and wealth, rocked in the cradle of plenty; the other born in the midst of poverty in the back hills of Kentucky.

Washington did not allow his riches to spoil him. He deliberately chose the hard path of duty and service, to a life of ease and comfort. Lincoln was not discouraged too much or overwhelmed by his poverty, and as the fairest lily often springs out of the muddiest hole, so the greatest men frequently come from the most unexpected places. He came from obsure origins and humble beginnings. But both of them proved to the world that here in our beloved land, in this new world—and how infant we are from a long-range historical point of view, only a century and a half old, but in that brief period have grown to be the greatest Nation on earth, because of the Christian religion, and because of our republican form of government, and because of our free economic enterprise—they proved to the world, Washington and Lincoln, that any man, rich or poor, may, if he possesses the moral fiber, the sterling patriotism, the unselfishness to serve, rise because of his own personal worth to the highest office in the gift of a great and free people.

I am not worrying so much. We are going to cut that budget. The House voted to cut it six billions, reducing it to thirty-one and one-half. We perhaps should have cut it more. We are going to have to cut the pattern and then cut the cloth to fit it. You will never in the world balance your budget, or pay a debt, or reduce taxes otherwise. But we are going to cut that budget if you will get after your Senators down there. They are horsing around—some Republicans, too—and I don't like it. The House did a good job; we voted that cut and we are going to stand pat; and we are going to cut income taxes, too. We are going to give you men a little encouragement. [Laughter.] You perhaps do not deserve it but we thrust it upon you.

There is no incentive now to work and make money and turn it over to Uncle Sam to give away to some ne'er-do-well. Take from the haves, give to the have-nots. Tax and tax. Spend and spend. Elect and elect. That was the philosophy for the past decade, and it has brought us not only to financial bankruptcy but to moral ruin. [Shouts of "Right." "Right."]

You bet your life. Stand up, speak out, and be counted. Lincoln said, "If this country

is ever wrecked, if it ever fails, if it is ever destroyed, it will be from within, and not from without."

We can cut that budget without weakening any of our national defense. Don't let them kid you at all on that score. Listening to a lot of blatherskites over the radio and in the press, these columnists and commentators, make you sick. They don't know what they are talking about. There is over eleven billion in the budget for the Armed Services, and in the unexpended balances they have on hand, it gives them almost seventeen billions.

Now, I don't think that Boston or New York or Philadelphia is going to be bombarded soon by the Greek Navy. I just cannot picture the Bulgarian hordes running over the plains of Texas. I know that our British brothers—and we are blood cousins and that is the reason we can quarrel and fuss with each other; we are too darn much alike [laughter]—but they are our cousins, and in spite of our differences, they are our real friends. Canada and Australia are not going to attack us; they are with us in spirit, aim, purpose, and everything else. I am sure that Germany and Japan are not going to be an immediate threat. [Laughter.]

I know that Russia has almost limitless potential possibilities; but you ought to see Russia. The Nazi hordes swept over them. That country is so weak and the people are so war-worn and weary, I don't think the Russian people want to fight anybody. Of course, you have about 40 men over there who will do anything on earth to establish world-wide communism. They will resort to every device of trickery and lie to accomplish their purpose, because the end justifies the means. That is fundamental in their ideology. But it is going to take Russia 25 years to rebuild her cities. Russia is not going to attack us soon.

We want to keep strong and maintain our Army and Navy and Air Force. I had a brother in England with that Eighth Air Force. He helped drop some of those eggs, and he did a pretty good job.

I made a flight with John Sullivan down to San Juan to witness the maneuvers of the Atlantic Fleet; but let me tell you, brother, we had better cut the cost of government to the bone and discharge the army of political parasites who have their noses in the feedbag. Clean them from the trough [applause]—put our own house in order. We cannot forever go on with deficit financing; monetizing of the Federal debt must stop, not next year, but now.

Yes, Lincoln, you are right. If we are ever destroyed it will be from within and not from without. I do not fear our being attacked and destroyed soon by any foreign power. I do fear—I do fear some of the weaknesses within.

Edwin Markham, the greatest poet of our generation, who died only a few years ago, wrote these words long before the last war. He must have had Lincoln's words in mind when he wrote:

"I fear the vermin that shall undermine
Senate and school and citadel and shrine.
I fear the worm of fraud,
The fatted worm of ease,
And all the crawling progeny of these.
I fear the vermin
That shall honeycomb the walls and towers
Of State in unsuspecting hours."

We have vermin, we have rats; we have them down at Washington; we are getting rid of them; but we have a lot of housecleaning yet to do. It will require more than a stiff broom, too. You need a pitchfork and a scoop shovel to clean out that mess.

Yes, Mr. Lincoln, great emancipator, you were right when you said, "We shall nobly save or meanly lose this last best hope of earth."

America is God's last chance to make a world. [The members rise and applaud.]

Address of Senator Jose Gomez Sparza of the Mexican Congress

EXTENSION OF REMARKS

OF

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 25, 1947

Mr. FERNANDEZ. Mr. Speaker, by unanimous consent of the House heretofore obtained, I place in the RECORD the speech of greeting delivered by Senator Jose Gomez Sparza on the occasion of our recent visit to Mexico in connection with the hoof-and-mouth-disease program. Though we went down to observe first-hand the progress of the campaign against the disease and to obtain a first-hand study of the problem which lies ahead, I think the committee accomplished something more which was not on the agenda. The need for confidence between the Mexican officials, and the Mexican and American sides of the Commission in charge of the work, is of the utmost importance. That confidence was enhanced, I think, by the visit of the committee to Mexico, and particularly by the sympathetic understanding which the Mexican people found in Dr. GILLIE, who acted as chairman, and by the fact that they looked on him as an authority because of his training and experience. In various interviews with Mexican reporters, they often described him as the "tall, white-haired man of science" who "punctuates his words by pointing for emphasis with the stem of his pipe." His frank and kindly manner was a good compliment to the same sincere and open frankness of the Mexican Secretary of Agriculture, Sr. Nazario Ortiz Garza.

Before leave taking, we were graciously invited to appear before the Permanent Commission of the Mexican Congress; a Commission composed of Mexican senators and representatives who act during the interim between the sessions of the two Houses. On that occasion, we were addressed by Senator Jose Gomez Sparza, speaking for the chairman of the commission. The speech of Senator Sparza, which I have translated, is as follows:

SPEECH OF SENATOR JOSE GOMEZ SPARZA OF THE MEXICAN CONGRESS

Senator SPARZA. Senator Thye, distinguished Representatives Gillie, Anderson, Miller, Bramblett, Fernandez, and Worley, Senator and Col. Carlos I. Serrano, president of the Permanent Commission of the Congress of the Union, and the members of said commission, I have the distinct pleasure and high honor of greeting you and through you the great and noble people of the United States of America.

From this tribune of the Mexican Parliament, which represents for us the highest expression of national representative authority, please accept, honorable Representatives, the most cordial welcome tendered you sincerely by all the people of Mexico.

Accept it, please, as the homage rendered to you by a nation which has pursued a long and cruel road in quest of independence and freedom.

Never has the good-neighbor policy been made so patent as in the last few months which have elapsed up to this hour.

This is not a diplomacy of gilded phrases but rather of effective action and realistic cooperation.

Two free nations working together during the tragedies of war, continue now closely united in peace. This is fully demonstrated by the object of your presence here on Mexican soil.

I, who had the singular privilege of traveling with you in your visit through Mexican territory, observed with full satisfaction the interest and the desire of your committee to comprehend thoroughly the grave national situation brought about by the existence of the hoof-and-mouth disease in this country.

I saw you at Queretaro and Celaya, at Moroleon and Salvatierra, at Sahuayo and Jiquilpan, directing all your faculties and attention to the problem, not as the accountant who audits minutely every account in the hope of finding some error in addition or subtraction in the rendering of reports, but as the loyal friend who tries in all good faith to assist in the solution of a collossal problem, difficult to resolve.

For that dignity and graciousness with which you treat us and which we hope the Mexican people deserve, please accept, distinguished Representatives, our sincere expressions of affection and gratitude.

His Excellency, President Truman has heretofore won the hearts of the Mexican people by his visit to the tomb of the boy scout heroes of '47.

His Excellency, President Aleman, with his recognized ability as a statesman, has heretofore visited Washington and reaffirmed forever the close unity existing between the two nations.

And now you, distinguished Representatives, in turn are advancing to the greater honor and glory of our two countries along the same path of friendship which will undoubtedly redound to the profit and good will of both nations.

The President of the Mexican Congress, Colonel and Senator Carlos I. Serrano, salutes you and through you the Congress of the American Union—and we pray that you convey our greetings and best wishes to all the Members of the Congress of the United States.

As Congress Winds Up

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. GAMBLE. Mr. Speaker, I present for insertion in the CONGRESSIONAL RECORD an editorial titled "As Congress Winds Up," which appeared in the Daily Times published in Mamaroneck, N. Y., on Friday, July 18, 1947:

AS CONGRESS WINDS UP

A heat-debilitated membership begins this week end to wind up this session of the Eightieth Congress. Senators and Representatives are perhaps as tired as their collars are wilted by the fierce summer humidity of the National Capital. They will welcome relaxation and the opportunity to sound out their constituencies on public opinion.
